EXPLOITING

MOTION PICTURES

MISS KATHLYN WILLIAMS
WITH SELIG

PN 1993
.M74

The year 1912 will be *chronicled* in *film history* as the *NEW ERA* in *picture entertainment.* Upon *January 20th* we will introduce to the American people *CIN-ES films* with the magnificent spectacle

"*BRUTUS*"

being an adaptation from Shakespeare's "Julius Caesar," showing the *death* of *Caesar*, the *flight* of *Brutus* from Rome, the *appearance* of Caesar's *ghost* to Brutus, his *death* upon the *battle field*, and the Battle of Philippi.

On our next regular release date, Tuesday, January 23rd, our offering will be a *CIN-ES* split reel,

The Brave Deserve the Fair
Artistic Venice

Then comes our *URBAN-ECLIPSE* release on Wednesday, January 24th.

A Woman's Wrath

a production of *unusual interest*, giving a most *remarkable example* of dramatic acting by Madame Dermoz.

Following soon thereafter, we will release

Joseph in Egypt

another CIN-ES *marvel*, and a *faithful interpretation* of the Biblical story.

For several months past, *Exhibitors everywhere* as well as the *theatre-going public* have been looking forward to the *next advance step* in the *upward tendency* of the photo-play, and now eagerly welcome *CIN-ES* and the new Urban-Eclipse films.

Beginning with the new era, *KOSMIK* film releases will be as follows:

Every Tuesday, a CIN-ES *Every Wednesday, an URBAN-ECLIPSE* *Every Saturday, a CIN-ES*

This *weekly* program will be *indispensable* to *Exhibitors* whose patrons exact the *very best.*

Kosmik releases will include: *Dramas* staged in *marvelous* magnificence; that grip the *spectator.*
Comedies of that *clean, wholesome* brand that prove the *undoing* of the *pessimist.*
Subjects of every character designed to *spellbind* patrons of the moving picture show.

Watch the Trade Papers and our Advance Bulletins for *Coming Kosmik Classics.*

TERMS OF SUBSCRIPTION

United States, Cuba and Mexico, $2.00 per year; Canada, $2.50 per year; Foreign countries within the Postal Union, $3.00 per year; Single Copy, 20 cents.

Distributing Agent: The Western News Company and its International Branches.

NOTICE TO ADVERTISERS

Changes of advertising copy should reach the office of publication not less than five days in advance of date of issue. Regular date of issue, the 15th of each month. New advertisements will be accepted up to within three days of date of issue, but proof of such advertisement can not be shown.

NOTICE TO SUBSCRIBERS

Remittances should be made by check, New York draft or money order in favor of MOTOGRAPHY. Foreign subscriptions may be remitted directly by International Postal Money Order, or sent to our London office. The old address should be given as well as the new, and notice should be received two weeks in advance of the desired change.

MADAME METHEVIER, ONE OF GEORGE KLEINE'S ECLIPSE PLAYERS.

MOTOGRAPHY

WITH WHICH IS INCORPORATED THE NICKELODEON

VOL. VII. CHICAGO, JANUARY, 1912. NO. 1.

BETWEEN THE YEARS.

THE divisions of time are man-made, and the clock never pauses as one year melts, or perhaps we should say freezes, into another. But there is a period, however short, when the holiday festivities have faded away and we are back in the prosaic, that most of us spend in contemplating either the year behind or the year ahead. And editors, who in all modesty imagine they bear the responsibility of the world on their shoulders, are particularly prone to utter words of alleged wisdom regarding the future, or to draw learned and subtle conclusions from analysis of the past.

It has been our endeavor, in the editing of MOTOGRAPHY, to chronicle every event and development in the field of motion pictures as we went along. Our readers have been able to keep in touch with the progress of the art as well as we, for we have passed the facts on to them as soon as we could. So we shall say little about the lessons of 1911, beyond a passing commentary on the chief events of that year.

No really extraordinary events mark the year in motographic history, although the successful formation of the Motion Picture Exhibitors' League of America comes almost in that category and, no doubt really marks an epoch in the history of the industry. The convention of the Association in August was the first national gathering of picture theater representatives ever held in this country.

There has been a considerable advance in the use of pictures in penal institutions and insane hospitals, while films in church have become almost common. School officials, while not yet active in the application of motography to education, are evincing a rapidly growing interest in the subject, and the questions asked us indicate the practical nature of that interest. By the signs, it will not be long before films are a standard school equipment.

In the industrial field, by which we mean motography applied to the uses of publicity or exploitation, great strides have been made in the last year, for which we must extend credit to a few energetic workers who have specialized and concentrated on that branch.

The year has been marked by a general increase in the output of films, most of the licensed and many of the independent makers adding one or two reels to the weekly product. This new product demanding a market, an excellent export business has been developed, and American films now form a considerable portion of foreign programs. It is to be regretted, however, that a larger portion of the new product has not been devoted to scientific, educational and travel subjects.

No great advance in either talking or colored pictures has been made, in spite of the exploitation of the new Gaumont Chronophone, and of Kinemacolor. It is known, however, that a number of manufacturers are experimenting in these fields, and with so many minds bent in the same direction we may expect some results.

One interesting development of the year has been the two and three reel subject; and while this extension of the photo-drama had, and still has, some critics, it must be conceded that the examples so far produced are exceptionally fine.

An encouraging sign, particularly noticeable toward the close of the year, is the increasing respect of the daily press for the motion picture. Lauditory comment is now almost as common as the reverse was formerly.

For 1912 we are at least safe in predicting further progress along the ascending lines of the past. Especially may we look for a substantial gain in school use, and a more general application of motography to the practical problems of the day. In the entertainment field the coming year will show a further elimination of the inadequate store theater and an increased investment in the better houses. The improvements in the screen, lighting and projection that have been made in 1911 will tend to become standard in 1912. The second annual convention of the Motion Picture Exhibitors' League of America, which will take place in Chicago next summer, will strengthen the organization and disarm the criticism of the skeptics. And with closer organization, a broader use of the art, and a manufacturing body straining every nerve toward improvement, the course of another year should bring the motion picture recognition as the greatest of art-sciences.

ECONOMIES IN THEATER OPERATION.

THE old adage that the best way to make money is to save it applies just as well to the motion picture theater business as to other lines of endeavor. A saving in operation is always equivalent to an increase in earning power, a fact which many large manufacturing industries are making use of. A theater is simply a manufacturing plant, manufacturing and selling amusement, and any economy in operation that can be installed without impairing the quality of the product will pay dividends to the owner. One of the most constant expenses that the manager of a motion picture house has to face is the item for electricity. This item may seem as unassailable as the Rock of Gibraltar, and yet in many instances the cost of current may be appreciably lowered.

Lenses are not generally looked upon as wasteful of current,—they are for the most part accused merely of producing a poorer quality of picture. And yet the fact remains that poor lenses are very wasteful of electricity, owing to the diffraction of light which they bring about.

It is economy in the long run to buy good lenses, for they will soon save the difference in price. In a number of cases which have come to notice, the substitution of ground lenses of the first quality for cheap cast ones reduced the energy bill at once by as much as 30 per cent.

Another point where saving can be gained is the shutter. By using a shutter which opens in several places at a time, on the lines, perhaps, of an iris diaphragm, there will be a considerable decrease in the time required to change each picture, and this will allow more time for each individual picture to be left on the screen, resulting thereby in less dependence on the "persistence of vision," and giving a corresponding saving in energy.

It should always be borne in mind that the area of the picture has a great deal to do with the current used, and that the smaller the picture, the smaller will be the bill for electricity. This should furnish a suggestion for some house managers, for in a number of theaters that have been visited the picture is far too large for either comfort or economy. A smaller picture does not magnify little irregularities in the film, or slight movements of the machine, to such a great extent as a large picture. Because of this increased steadiness, a smaller picture is frequently to be desired not only by the patrons of the theater, but also by the manager, because it costs less. Even a slight decrease in size will sometimes improve the quality of the picture as well as effect a saving in current consumption.

The most satisfactory way of reducing the electricity bill is, of course, to reduce the price of energy. This seems like a difficult nut to crack, but there is no doubt that in many cases it can actually be done. Most plants supplying electric current have two rates, one applying to current used for lighting purposes, the other to current when it is used for power purposes. The power rate is much lower. There is no reason why the electricity used in operating a projecting machine should not be charged at the power classification, yet it frequently pays the higher rate. Sometimes a little argument with the manager of the lighting company will have the desired effect, while in other cases more strenuous remedies must be applied. In some instances a solution was found in the installation of a motor-generator set. The motor is run from the regular current furnished by the lighting company. It operates the small dynamo which generates the current for the arc. In this way, the motor is subjected to the lower power rate, and the saving effected is soon sufficient to pay the cost of the entire installation. Others have solved the problem of cutting down the current expense by installing a dynamo operated by a gas engine, a plan which makes them entirely independent of the lighting company.

It seems rather surprising that more use has not been made of accumulators, for it would seem that a storage battery might furnish a very satisfactory way of cutting down the cost of current. The battery could be charged during the daytime, when there was comparatively little demand for current and no doubt power rates could be secured. Lighting for the hall could be put direct on the lighting company's mains, since this forms only such a small proportion of the total current consumption. Current from a storage battery would be ideal for motion pictures, where steadiness is so necessary to good results.

Current can often be saved in considerable amount by changing the scheme of outside lighting. The popular idea at present is to have as much light outside the theater as possible, the idea evidently being that people are like moths,—that they will plunge, unresisting, into the place with the brightest light. Surely it would be possible to make the place equally attractive with a far smaller current consumption. For instance, the usual arc lamps could be displaced by one mercury vacuum lamp which would cut down the current expense and be even more attractive, owing to its mysterious color. It might also be suggested that the incandescent lamps in the front of the theater be changed to some distinctive color, say red or green. Even though only half as many lights were used, the building would at once have such distinctiveness that it would immediately be called into prominence. The attraction depends more on the quality than on the quantity of light.

There is no doubt that considerable saving can be made in the electricity bills of motion picture theaters without in the least affecting the quality of the picture or the attracting power of the outside illumination. Managers are every day realizing more and more the importance of taking advantage of every opportunity for economizing and the electricity bill is coming in for its full share of the discussion.

THE INDIANA MEETING.

IT is not known whether the Indianapolis convention was the result of some advanced form of New Year's resolution or not, but at any rate it engendered the feeling of good fellowship and co-operation which is generally associated with the holiday season. The getting together of people in the same line of endeavor is always inspiring. It makes them realize that even their competitors are human, that they have the same aims, and must overcome the same obstacles, and it is helpful, considered simply as an experience meeting.

It is worthy of note that petty personal grievances found no outlet in the Indianapolis convention. The questions discussed were broad and pertained to the trade at large, which is as it should be. Getting better service, having a voice in the censorship, and improving the quality of films are questions of interest to every exhibitor, while their solution represents real work to be done.

With a staff of energetic officers, two organizers in the field, and the spirit of organization in the air, we may indeed look for great progress in Indiana. What state will be next in line?

SOME LEGAL DECISIONS OF 1911.

DURING 1911 the higher courts passed upon a number of questions directly pertaining to the manufacture or exhibition of motion pictures. We have space to call attention to only a few of these decisions, and have selected those which seem most interesting.

In September, 1909, *The Nickelodeon* reported the decree of the circuit court in New York finding for Harper and Brother in their suit against the Kalem Company for infringement of copyright in making the film entitled "Ben Hur," after the book of that name by Gen. Lew Wallace. The case was appealed by Kalem and reached the United States Supreme court, whose decision was announced November 13, 1911. The decree of the lower court was affirmed. The following extracts from the opinion of the court as delivered by Justice Holmes are interesting:

The subdivision of the question that has the most general importance is whether the public exhibition of these moving pictures infringed any rights under the copyright law. By Rev. Stat., sec. 4952, as amended by the act of March 3, 1891, chap. 565, 26 Stat. at L. 1106, U. S. Comp. Stat. 1901,

p. 3406, authors have the exclusive right to dramatize any of their works. So, if the exhibition was or was founded on a dramatizing of Ben Hur, this copyright was infringed. We are of opinion that Ben Hur was dramatized by what was done. Whether we consider the purpose of this clause of the statute, or the etymological history and present usages of language, drama may be achieved by action as well as by speech. Action can tell a story, display all the most vivid relations between men; and depict every kind of human emotion, without the aid of a word. It would be impossible to deny the title of drama to pantomime as played by masters of the art. Daly v. Palmer, 6 Blatchf. 256, 264, Fed. Cas. No. 3,552. But if a pantomime of Ben Hur would be a dramatizing of Ben Hur, it would be none the less so that it was exhibited to the audience by reflection from a glass, and not by direct vision of the figures—as sometimes has been done in order to produce ghostly or inexplicable effects. The essence of the matter in the case last supposed is not the mechanism employed, but that we see the event or story lived. The moving pictures are only less vivid than reflections from a mirror. With the former as with the latter our visual impression—what we see—is caused by the real pantomime of real men through the medium of natural forces, although the machinery is different and more complex. How it would be if the illusion of motion were produced from paintings instead of from photographs of the real thing may be left open until the question shall arise.

It is said that pictures of scenes in a novel may be made and exhibited without infringing the copyright, and that they may be copyrighted themselves. Indeed, it was conceded by the circuit court of appeals that these films could be copyrighted, and, we may assume, could be exhibited as photographs. Whether this concession is correct or not, in view of the fact that they are photographs of an unlawful dramatization of the novel, we need not decide. We will assume that it is. But it does not follow that the use of them in motion does not infringe the author's rights. The most innocent objects, such as the mirror in the other case that we have supposed, may be used for unlawful purposes. And if, as we have tried to show, moving pictures may be used for dramatizing a novel, when the photographs are used in that way, they are used to infringe a right which the statute reserves.

But, again, it is said that the defendant did not produce the representations, but merely sold the films to jobbers, and on that ground ought not to be held. In some cases where an ordinary article of commerce is sold nice questions may arise as to the point at which the seller becomes an accomplice in a subsequent illegal use by the buyer. It has been held that mere indifferent supposition or knowledge on the part of the seller that the buyer of spirituous liquor in contemplating such unlawful use is not enough to connect him with the possible unlawful consequences. (Graves v. Johnson, 179 Mass. 53, 88 Am. St. Rep. 355, 60 N. E. 383), but that if the sale was made with a view to the illegal resale, the price could not be recovered (Graves v. Johnson, 156 Mass. 211, 15 L. R. A. 834, 32 Am. St. Rep. 446, 30 N. E. 818). But no such niceties are involved here. The defendant not only expected but invoked by advertisement the use of its films for dramatic reproduction of the story. That was the most conspicuous purpose for which they could be used, and the one for which especially they were made. If the defendant did not contribute to the infringement, it is impossible to do so except by taking part in the final act. It is liable on principles recognized in every part of the law. Rupp & W. Co. v. Elliott, 65 C. C. A. 544, 131 Fed. 730, 732; Harper v. Shoppell, 28 Fed. 613. Morgan Envelope Co. v. Albany Perforated Wrapping Paper Co. 152 U. S. 425, 433, 38 L. ed. 500, 503, 14 Sup. Ct. Rep. 627.

It is argued that the law, construed as we have construed it, goes beyond the power conferred upon congress by the Constitution, to secure to authors for a limited time the exclusive right to their writings. Art. 1, sec. 8, cl. 8. It is suggested that to extend the copyright to a case like this is to extend it to the ideas, as distinguished from the words in which those ideas are clothed. But there is no attempt to make a monopoly of the ideas expressed. The law confines itself to a particular, cognate, and well-known form of reproduction. If to that extent a grant of monopoly is thought a proper way to secure the rights to the writings, this court cannot say that Congress was wrong.

Some months ago MOTOGRAPHY commented on the peculiar ordinance in force in the City of Atlanta, Ga., making it the duty of the proprietor, lessee, or other person in charge of every opera house, or theater, or moving picture show, or vaudeville performance, or similar exhibition, to require ladies who attend such performances to remove their hats before the performance begins and to keep them off during the performance. William Oldknow, operating a picture theater in Atlanta, was convicted in the recorder's court of violating this ordinance and appealed. The Court of Appeals of Georgia affirms the decision of the lower court and says:

The plaintiff in error in this case was proprietor of what is known as a "moving picture show" in the city of Atlanta. This character of amusement has become one of the most popular methods of recreation and pleasure, and is resorted to almost universally by all classes of citizens. The business is clearly lawful, as well as entertaining, and sometimes instructive, and the public has the right to resort to these places, and, while there, to be protected in the full enjoyment furnished by this class of entertainment. It is a matter of common knowledge that the style of modern hats worn by ladies, if permitted to be worn by them while the performance is in progress, will prevent those who may be so unfortunate as to sit in the rear of ladies from seeing the stage or from enjoying the spectacular entertainment there presented, which is a most important part of the performance. Nothing more greatly mars the pleasure of an entertainment, or disturbs the comfort of those who may be so unfortunate as to be located behind these obstructions, or more irritably disturbs or interferes with the comfort of the audience attending the theaters or moving picture shows, than these large hats worn by ladies, which in many cases completely obstruct the view of the performance. The spectacular is the principal part of moving picture shows. The evil aimed at by this ordinance, the mischief it was intended to prevent, and the nuisance it was passed to abate, all clearly show that the ordinance in question is within the police power of the city and is authorized by the "general welfare clause" of its charter.

If the ordinance is lawful, he can enforce it by simply calling to his aid the police of the city to arrest any lady who refuses to obey the regulation and remove her hat. Besides, it is a matter of common knowledge that the ladies of our country are always amenable to reasonable requests conducing to the comfort of others.

The ordinance is not discriminatory because it does not include men within its operation. Men do not need any regulation on this subject. Public opinion, which demands that the man shall take off his hat in the presence of ladies, is sufficient, and does not need the aid of any police regulation. If it were the fashion for men to wear hats of such description as those worn by ladies in this day and to keep them on in public places, could it be doubted that there would be a loud and vociferous demand on the part of the ladies for the abatement of such a nuisance? But we will not extend the discussion. We hold that the ordinance in question, reasonably construed, is clearly within the police power of the city of Atlanta, that it does not discriminate, that it does not impose on the proprietor of such places any unnecessary or unusual hardship, and that it is in the interest of public order and comfort.

In the case of Miller et al *vs.* Miloslowsky, appealed from the district court of Polk county, Iowa, the action is to recover damages to motion picture films. The Supreme Court of Iowa finds for the plaintiff in support of the lower court. It was declared that as bailee the defendant was responsible for the welfare of the films, and it only remained to prove that the damage was caused while in his possession. The admission of expert testimony in this case is interesting. The court says:

The testimony of one of the plaintiffs' witnesses that the "scratches were extended the whole length of the film, showing there was some defect in the machine, the sprocket holes were torn out, showing that the machine had not been properly handled," we think, was properly received. The witness had had long experience with such films, and with their use and handling. In other words, he was an expert in the business, and we think he was shown fully competent to give an opinion as to what caused the injury to the films. Ordinary jurymen know nothing about such matters, or how such films are used or operated. Moreover, the defendant's evidence tended to show that films may be damaged

by the use of defective machines and by improper handling. The evidence sustains the verdict, and the judgment should be, and it is, affirmed.

FOX VS. THE PATENTS COMPANY.

ONE of the most interesting actions recorded in current trade history is the suit of the Greater New York Film Renting Company, William Fox, president, against the Motion Picture Patents Company. At the time we go to press Justice Bijur's decision is not announced, and it is not our function to pre-judge the case. It is interesting to observe, though, that the case involves most of those actions of the Patents Company and the General Film Company which some of the trade have deemed questionable from a legal standpoint. It may be remarked that these more subtle questions of legality are seldom clear to the layman, who is prone to jump to conclusions which harmonize with his personal sentiments. An action may appear dictatorial and high-handed in the extreme, and still be perfectly lawful; while on the other hand one may fracture a statute by a procedure which seems entirely reasonable and within his rights.

So before we pass judgment on the Fox case let us await the decision of a regularly qualified court. We can at least rest assured that the result will clearly define the status and powers of the corporations involved, and settle once for all questions that have been puzzling the trade for the last few years.

THE SPANISH MARKET.

The Spanish market is less known than any in Europe, because, perhaps on account of its slight importance, it has not aroused the interest of those concerned.

The Iberian peninsula includes a very important center, from the point of view of cinematography; in fact, one of the most important in the whole world, without any doubt—Barcelona. It is in this magnificent town that all the agents of film manufacturers have their headquarters; it is from there that export business is done, not only with America, but with the Philippines and all those countries which once were ranged under the gleaming banner of the Kings of Castille.

Barcelona is the only city in Spain where the film business is flourishing; everywhere else, even in Madrid, one only sees films which have been released three or four weeks, which proves undeniably that the public in the rest of Spain is only interested in a secondary way with the great successes of the masterpieces of cinematographic art.

It is certain that a good agent, well in touch with the exporters, and having a wide experience of cinematograph commerce, is a factor of great importance when it is desired to do business in our country. Nevertheless, it is impossible to alter the taste of the public, which naturally has its likes and dislikes; thus I do not think an agent engaged to sell "cowboy films" would have much success. When offered such subjects as these, the Spanish public invariably expresses its discontent in one way or another.

As I have spoken of films which do not please the Spanish public, it is natural that I should say a few words on the films which are successful amongst this same class. Pathe's have for a long time been the best known, although latterly they have had to meet the competition of brands such as Eclair, Vitagraph, Itala, and perhaps also Ambrosio. Gaumont, on the other hand, are much appreciated in Portugal. German brands of films have not succeeded at all up to the present, although for some time they have been considerably improving their position. In short, these are brands with which big firms will have to reckon in the future.

Danish films, with the exception of Nordisk, are only just making their debut, and it would be out of place to judge them on what they are capable of doing. We come next to English films, and I am sorry to say that they have never been to our taste.

This market, which has felt the effects of overproduction before, is agitated by the import of new films, American, for the most part, and by the favorable reception which the public has accorded to long films. One must hope, however, that this trouble will be only temporary, and that the market will soon find itself again in its habitual calm, characteristic of our business.

NEW HOME FOR THE LEAGUE.

On Wednesday, December 20, the Cleveland local of the Moving Picture Exhibitors' League of America, held their first meeting in their beautiful new quarters, located at 1459 West Sixth street. Great surprise was expressed by the members when they came to the meeting and viewed for the first time these new and elegantly furnished quarters which they could really call their own. The committee in charge consisted of S. Lustig, C. M. Christenson and S. Bullock. They were given full power to act, and it is needless to say that they made the most of their duties.

The meeting room was artistically decorated with Christmas greens, heavy green streamers being hung across the large room from the corners of the ceiling, encircling an immense welcome sign which hung directly above the president's chair, which was a large upholstered leather arm chair, in front of which was a quartered-oak stand and gavel. President S. E. Morris accepted his chair with much satisfaction. A large roll-top desk of the latest design awaited L. H. Wilk, secretary, and a desk of the flat variety for F. M. Kenney, financial secretary.

An enormous rug covered the center of a parquet floor. Thirty-six oak chairs were provided, with plenty of room for more, as the occasion demands.

It is the intention of the organization to install a supply department, in the near future, and carry a full line of machine parts, carbons, tickets, etc., and furnish them to the members at actual cost.

Cleveland Local No. 1 was the first organization of motion picture exhibitors in the country, and called the first national convention, which was held in Cleveland, August 1, 2 and 3, 1911.

HOMESICKNESS TO BE RELIEVED.

Families throughout Italy with soldiers at the front have been notified by the government to assemble in their various cities and villages to be motographed. The films will be sent to Tripoli and other war centers and be shown the homesick soldiers in the form of moving pictures.

Christmas and New Year's day are essentially family feasts through Italy and therefore the soldiers are desperately homesick. General Caneva cabled to the government, making the suggestion. The authorities promptly approved it and arranged to have the pictures taken without delay.

Improvements in Theater Equipment

By Charles F. Morris

A FEW years ago, in walking about the streets of a city, one was likely to find, at infrequent intervals, store buildings with curiously recessed entrances. A squeaky phonograph was sure to grind out grand opera and ragtime with equal impartiality and with the same rapidity, while the chances were that a hoarse-voiced barker would loudly tell of the wonders within.

If one were especially adventurous he paid his nickel or dime at the door and was allowed to enter a room as dark as a Stygian night. Instinct, more than the exercise of the senses, led him to a vacant chair or a place on a bench which he was allowed to share along with other adventurous souls who had likewise floundered into their places and would soon flounder out again. The only light in the room seemed to be reflected from a sheet hung on the wall at the front of the house. All eyes were focused devouringly on this sheet, for on it moved a wavering, flickering, shadowy, indefinable something which men marveled at. The only sound was of the squeaky phonograph, while the incessant whirr and clatter of some cumbersome mechanism at the back of the room added to the air of mysticism. This was the motion picture theater of the past.

Front of the Orpheum Theater, Chicago.

In order to see a motion picture theater of the present, one should visit the Orpheum, of Chicago, for the Orpheum is typical of the class of theaters which began springing up three or four years ago when mankind got tired of the motion picture as a curiosity and desired it as a steady amusement diet. The Orpheum is located in the busiest section of Chicago's busiest street, where it is convenient for the man of affairs to drop in for some diversion during his noon hour or while waiting for an appointment. And many of them have been educated into this habit too, for a large part of the Orpheum's patronage consists of business men.

The front of the house looks very much like the front of very many other houses, except that it is larger and finer, being finished in white with numerous lights, an effect which is almost the hall-mark, we might say, or the trade-mark, of motion picture theaters in general. The main floor of the theater is double aisled, the seats being standard opera chairs. The brass railed balcony, with its rows of chairs, extends back and upward to the machine booth. Along the sides of the balcony are boxes of regulation theater type. There is even a gallery up above the back part of the balcony. The house seats 700.

Perhaps the first thing that will impress a visitor to the Orpheum is the fact that even while the pictures are being shown the lights are on so brightly that one does not have to feel his way into a vacant chair. Instead, he follows one of the young lady ushers down the aisle and takes his seat. The indirect system of lighting is used, and a most satisfactory way it is to light a theater. A number of indirect fixtures are used, and while the pictures are being shown, a third of the lights are on. Thus, without lessening the brilliance of the picture, the theater is always light enough for a visitor to recognize his friends or to read a paper, should he be so inclined.

But he is more likely to pay close attention to the program, and it will be well worth his attention, too, for great care is taken to have only interesting things shown. That is the beauty of charging ten cents admission. Your patrons demand more, of course, but on the other hand you have more money to give them what they want. And that has always been the policy of the Orpheum management—to give the people what they want. The performance is practically continuous from 9 a. m. to 11 p. m., each show lasting fifty minutes with an interval of about five minutes between shows.

It is interesting to note that the Orpheum management has made a special study of the ventilation problem. The ventilation plant was installed at a cost of $6,000, and supplies a constant and ample flow of pure air to the body of the theater at all times. Before it is admitted to the room the air is washed, so that the audience breathes air actually purer than that outside the building.

Recent Photograph of the Interior of the Orpheum.

The music is first class. An orchestra is constantly on duty, and a most successful attempt is made to have the music fit the picture. In carrying out this idea, many sound effects are used which, in skillful hands, add much to the enjoyment of a film. A staff of competent singers is employed and two illustrated songs are given each performance. A set of electric bells, judiciously used, forms an occasional pleasing variance in the musical program. In this connection it should be mentioned that the Orpheum management has installed a set of annunciators, or loud speaking telephones. On the extreme left of the cut showing the interior of the theater will be noticed what appears to be a graphophone horn. This is one of the several annunciators. During a song these can be used, when from each horn will come a volume of melody. It is as if the entire balcony were singing the refrain, and the effect is more weird than can be described.

But, when all is said and done, it is the operating booth that is of the most importance, for it is there that the picture is made, and that is really why the people come to a picture theater,—to see the pictures. However, fine the appointments of the theater,—and they all count in gaining patronage,—it should not be lost sight of that in the last analysis the picture is the thing, and that one of the best places to invest money a theater manager has is in his operating booth. The Orpheum operating booth is more than a booth,—it is very nearly a room. It is absolutely fireproof, being built of corrugated iron and lined with asbestos. Everything conforms with the strict Chicago laws. Two projecting machines are installed, the burden of work being divided by using them alternately. This arrangement obviates any necessity for delaying the show should one machine get out of order. Alongside the projectors is the stereopticon, with its own operator. Only first run film is shown.

Expressions of admiration are frequently heard for the owners of the Orpheum, who did not fear to put $160,000 into a motion picture theater. It would take nerve of the highest order but, while its owners are ready to receive all such expressions of admiration, the fact remains that they do not deserve quite all of these encomiums. For they did not have the nerve to put their investment into motion pictures, but opened the Orpheum in September, 1907, as a vaudeville house. It presented vaudeville for just seven weeks. Then the call for pictures conquered, and the Orpheum became the largest motion picture theater in Chicago. The Orpheum is one link in the chain of amusement enterprises operated by

Jones, Linick & Schaefer, George Moore being house manager.

As a study of the highest type of motion picture theaters and as an example of the success which painstaking attention to little details will secure, the Orpheum is extremely interesting. What it is doing should be an inspiration to those theaters which have not yet attained its measure of success.

On the Outside Looking In

By the Goat Man

ABOUT the first question put to me last month was this: "If you are on the outside, how can you talk inside stuff?" Which proves conclusively that my questioner didn't read carefully. You won't find anything in this department that is truly inside information. There isn't anything of that kind to be had in the film business. The licensed and independent groups of manufacturers have no press agents. It is another proof that film-making is an industry—not a show business. You never saw a show without a press agent, so there you are. The proceedings of the manufacturers are not for publication—the book is closed on each meeting and access to their archives are by no means available. Forget it, my friends, there is to be no inside dope from this quarter. I merely intend to give you a near-layman's idea of the film business as it is. I want you to know more about the pictures you see on the screen. How they are made; who makes them; how they are marketed; who markets them; how your exhibitor gets them and what becomes of them after they disappear from your view. I have had a number of letters asking very simple and very difficult questions. This tells me that the public is eager for more light on the subject. I have been careful in writing direct to these people. They are the earnest fans; the real critics; the clergy; the superintendents of penal institutes; members of the boards of education. They are hungry for knowledge that the country exhibitor and many of the city exhibitors cannot supply.

* * *

I do not mean to imply that exhibitors are neglecting some opportunities. They are largely at the mercy of the renter. Their programs are not always what they had hoped for. The service they must accept from the renter is usually the renter's choice—not theirs. And it is not remarkable that many of the exhibitors regard themselves as showmen. They are proprietors of an amusement place. Their patrons come to see the pictures; they see them. If the program is half-satisfying, the "show" was worth a nickle or a dime and they go on their way. A slide may have announced something "extra special" for day after tomorrow, but that has only an indifferent meaning to a large per cent of those who saw it, for day after tomorrow they might or might not attend a picture show and to them what wots it where they go—they will see motion pictures, won't they?

* * *

You may wonder why your exhibitor cannot have full choice in the making of his program. I have explained that a certain group of film makers operates under a license from the Motion Picture Patents Company who control fundamental patents for cameras and projectors. The product of this group of makers is sold through a licensed group of renters, who supply the licensed exhibitors with his daily change of films. Now the renter cannot afford to buy a great supply of duplicate reels. He will naturally buy as few as possible. If a maker produces an exceptionally good film, everybody will want it, when they learn that it is actually extraordinary, and the more progressive exhibitor will want it right away. But his exchange (the renter) has only one or two prints and only one or two theaters can have the picture today, one or two tomorrow and one or two day after tomorrow. The process is slow and unwieldy. By the time your favorite theater gets it, you have seen it somewhere else. The poor picture travels the same route. It costs the renter the same price. It costs the exhibitor the same price.

* * *

Then there is the exhibitors' schedule of prices. The really best place in town, is usually best because it pays a higher rental for film service than its competitors. This exhibitor uses "first run" film, by which is meant, the newest film on the market. For the privilege he must pay all the traffic will bear. There are all sorts of combinations in this film rental game—first run, second run, third run; films a week old, a month old, three months old; mixtures—a first run, a week old and the like. The prices range from low to high, depending on the service employed. In the city, the exhibitor goes to his exchange for today's reels, returning those he used yesterday. In the country, the service comes and goes by express. A reel of film contains 16,000 pictures. The pictures are three-fourths of an inch high and one inch wide—sixteen to a foot. The film is a continuous strip mounted in a metallic spool, the spool and contents weighing approximately seven pounds. Express companies classify it as extra hazardous material, and handle it upon its full valuation of $110. You can depend upon transportation companies getting theirs.

* * *

One of the evils of the business that is subject to certain reforms is film inspection. The renter, upon the return of reels from the exhibitor, must give them examination before turning them over to the next customer. Now a film exchange is one of the busiest places you will find in a week's journey and the element of time is the prime factor. There is usually a customer waiting for a reel that hasn't come in. The inspection is usually hurried. It is usually the task of girls employed for that purpose. The reel to be inspected is set in a rack, the film end fastened to the axis of another reel and by winding the film from one reel to the other, inspection proceeds. Damaged sprocket holes and torn pictures must be cut out and patches are made. Removing as much as twelve inches of film—sixteen continuous pictures, destroys one second's action in the picture. You have seen thousands of cases of such a cutting, for you get the jump on the screen, but no matter—a second's entertainment isn't much when a full reel provides enjoy-

ment for 1,200 seconds. But inspection of films is ordinarily haphazard. There should be longer time at the disposal of the inspection department. I am a believer in clean films and there is available a practical solution of the dirty film business. It should be adopted by all film renters. The clean picture need not be a first-run picture. Film inspection should pass into the hands of more responsible agencies. A film should never go out that will not do its full share in holding the interest of audiences in the picture that will follow. I see all too many rainstorms in fashionable interiors. Houses nowadays have roofs upon them, whether the manufacturers of films needs a roof on his house or not. I dread to think that the artificiality of the film parlor is sufficient excuse for the scratched picture.

* * *

To the gentleman who asks one to be more specific regarding the hopelessness of the outsider getting inside, I simply reply—try it. This correspondent says: "If the business is as simple as you say it is, money and a comparatively small amount of it should turn the trick. If one can buy the cameras and the film stock and the materials and machinery necessary to manufacture, money will also secure talent for production." I tried to show last month that conditions as they exist in America closed the American market. I have repeated something of the condition as it respects the licensed group of makers. The independent maker profits by the policy of the licensed group. While the independent maker has no holding company for his patents, needing nothing to hold something which doesn't exist, he has formed a sales company. His films clear through this alleged selling company. Each manufacturer member is a director in the Motion Picture Distributing and Sales Company. I advise buying a membership before starting a film factory. I do not know that memberships are for sale, but I would try by that method before plunging into the other. I'm sure it would prove cheaper in the end.

* * *

Of course there is always that foreign market. It is wide open. Everybody has a chance there, but the price shrinks. A reel in America sells for $110. On the continent the price does not exceed $80. In London, the renter makes his selection from about one hundred and twenty-five sample prints offered. Eight cents per foot is high. The price ranges downward to cost. And even in the face of this American audiences have watched hundreds of miles of fleeting pictures that were made for the continental market. I am told that American films rank very high abroad —that more than half the programs in foreign countries are made up of American reels.

* * *

I am threatened. I have declared that unless you were on the inside of this film game looking out, you would have to be satisfied by staying outside and looking in. It appears that this theory isn't always good. William Fox, president of the Greater New York Film Renting Company has been on the inside looking out for a long time. He declares under oath that his company's profits amount to $75,000 a year. He has been handling the films of the licensed group of makers, but in his laudable ambition to go ahead on the $75,000 a year basis, he has met with an obstacle. I will watch the fight with keen interest. I am told that Mr. Fox has enough money to wage a hot, legal battle, and that he has the courage of his convictions.

* * *

It is nearly time to whoop it up for the second annual convention of The Motion Picture Exhibitors' League of America to be held in Chicago this summer. Chicago will show the exhibitors a lot of things about film-making that they have never known. There will be three big plants for them to inspect and the convention program will surely be planned in anticipation of these practical side-shows. Chicago will also want representation in the offices of the association—not all of the offices, but at least some of the offices. The Goat Man is a candidate for Christenson's job, but not being an exhibitor himself, he is disqualified.

* * *

But the convention itself will differ a lot from the first one at Cleveland. It will be a business institution from beginning to end. It will have a very large attendance, for no live exhibitor can afford to stay away. The exhibitor has his problems, but he should remember that there are others to be considered. He will learn for the first time, many of him, what constitutes part of the manufacturers' problem. The country exhibitor will learn for the first time what are the problems of the big metropolitan renter, for Chicago has film exchanges of high order. Take my advice and attend the Chicago meeting. Your business will be there when you get back to it and I'm sure you'll have a better notion of what a business it is. The convention habit has been a long time reaching the film industry, but now that the thing has been started, it will be the last habit to be shaken off.

* * *

I am told that one or two very serious efforts are being made to adapt motion pictures to parlor entertainment. I know of nothing offering bigger opportunity for quick returns on investment, providing that the outfit will scale somewhere near to player pianos. The method of supplying the films for home projection will have much to do with the success of the scheme. The price for film service will have great bearing on the whole proposition. If we can afford to buy films outright, much the same as we buy music rolls, or talking machine records there will be no end to the possibilities of motion pictures in the home.

St. Paul Church Uses Films

An innovation in church service is planned by the Rev. P. P. Womer, pastor of the Park Congregational Church on Mackubin street, Kansas City. Motion pictures will be shown with the intention of attracting those who on Sunday evenings spend their time at the theaters.

The pictures will depict sacred subjects. Mr. Womer plans opening the service with an anthem, followed by a scripture lesson and a description of the pictures.

"The idea is an innovation in the West," said the Rev. Mr. Womer. "Of course it may not prove popular at first, but should after a fair trial is given. When the organ was introduced in the churches 100 years ago there was decided antagonism. I will give motion pictures a fair test to see if by their use the church cannot be made as popular as the theater on Sunday evenings."

Technicalities of Scenario Writing

By Robert Saunders Dowst

From The Editor.

THE fact that every scenario, on account of limitations inherent in its nature, is and must be a plot capable of being developed through action alone has a twofold effect upon the writer. To his disadvantage, it narrows the field which he may explore for plot ideas. The only plot available to him is the plot which may be readily understood by an audience when it is played by dumb characters. This test must be rigidly applied. To his advantage, the very limitations of the scenario greatly simplify the technical difficulties in the way of producing a perfect bit of work. It is a simple matter to develop the plot of action, for sequence in point of time is the only convention to be observed.

Simple as plot development through action is, it will not do to be careless. Sequence in point of time is the chief necessity, of course, but some sense of proportion must be shown in accepting or rejecting, condensing or expanding, the various possible scenes. Scenes not imperatively necessary to a proper elucidation of the plot are to be rejected, unless by some underlying element of appeal they will serve to grip and hold the sympathetic attention of an average audience; all scenes necessary to lay bare the story in the eyes of people whose intelligence will certainly not be superhuman must be given, in full and without slighting an essential detail; and scenes which, like the sub-plots of Dickens' novels, add to the interest of the tale while they are not essential to it, must be so cut that they do not overshadow the main thread of the incident.

A valuable aid to the writer confined, as he is, by the narrow limits of the story of action is the letter, telegram, newspaper item or what not from one character to another and shown on the screen. By its use one may bring home to the audience some fact which it is essential that they should know and which it is impossible that they should learn through the movements of the characters in the playlet, and it is used in fully seventy-five per cent of the photoplays produced today, for anything which widens the field open to him is doubly welcomed by the scenario writer in his search for plots. But there are two ways of using the letter, one obtrusive and bald, the other not open to such objection.

Many instances of the first method may be given. To take a plot based on a mistaken identity, that old bromide, suppose A has a daughter C, and an old friend D, who has a son E. A and D wish their children to marry one another, so D, who lives at a distance from A, sends his son to A with a letter of introduction. The plot of the thing is to lie in the fact that A has never seen his friend's son and does not know him from the man in the moon, and in the fact that some bold bad hobo will waylay the son E, rob him of his clothes and his letter, go to A's house, live high, make love to A's daughter while A looks approvingly on. Now, if such a film is to be intelligent to an audience, the fact must be brought out that A has never seen his friend's son, otherwise A would detect the hobo's imposition. Excepting the use of a sub-title the only way to make plain the fact is in the letter of introduction. Hence it will read somewhat as follows: "Dear Friend: This will introduce you to my son Charles, *whom you have never seen.* Any kindness which you may show him will be appreciated." The italicized clause will offend every man in the audience, when the film comes to be shown. It is too obviously an explanation. It ruptures all illusion; makes the thing seem unreal and illogical; and makes the characters seem puppets, jumping this way or that as the author or stage manager wills.

Miss Florence Lawrence, formerly of Lubin Stock Company.

And yet the plot may depend upon a letter in such a way that there is no lack of naturalness. Say A is a jealous husband; B is his wife; C is his brother. C writes an affectionate letter in such general terms that the writer might be any man and sends it to his sister, who reads it, tears it up, and throws it in a waste-basket. A, the jealous man, sees her do so, fishes forth the letter, and pieces it together. Only one bit is missing, but that bit contains the words "your loving brother," and the signature. The letter thus appears to be from a lover of the woman, and the husband so regards it. Later the missing piece may be found in some manner by the couple's baby daughter, and a separation averted. Such use of the letter does not offend, for it is not obviously an author's footnote to make clear a misty place in the plot.

The leader, or sub-title, which is shown before any desired scene, is another method whereby the author may enlarge the number of basic plot-ideas capable of motion picture production. It is well to be chary in the use of these leaders, or rather to select a plot requiring but few of them to be shown. If a scenario requires many and somewhat lengthy leaders, the circumstance is a sure indication of the fact that the plot is too involved to be set forth with sufficient clearness by means of action alone.

However, the leader has its le-

gitimate use. It may be employed to indicate the lapse of time, as "Two Years Later." It may be used to define the relationship between two characters, as "The Jealous Husband," which gives, at the same time, a hint as to the individuality of one of the characters, a bit of information that may be necessary if an audience is to understand the story. In the putative photoplay above, the one in which the hobo takes a peep into paradise, the fact that the father of the girl had never seen his friend's son should have been told in a sub-title rather than in a letter, for the sub-title is detached in the spectator's mind from the actual playing of the story in a way that is not true of the letter. The audience looks to the title and sub-titles for information, and when information is given it in that way there is no incongruity. But it is not the legitimate function of the sub-title to tell the whole story in anticipation of the character's movements. Write no such leaders as "Helen, detecting and understanding her lover's falseness, resolves to teach him a lesson by breaking their engagement." Remember that writing a scenario does not mean writing a book, and that the size of the projection screen is somewhat limited.

Art is perfect in proportion as it draws near to nature. In making use of the various technical aids to plot development the most delicate pains must be taken to hide the machinery of the thing from those who are to see the completed film. If this is not done all illusion will be destroyed, and in the audience there will be a vague feeling of uneasiness, as if they were watching not from the front, but from the wings, and experiencing all the disenchantment of such a viewpoint.

A New Year's Picture Party

Selig's Celebration

ALONG about December 27, a neat little invitation was received by the favored friends of the Selig Polyscope company. It gave no hint or indication of what was to come, and some, maybe one or two, decided they wouldn't attend. And now they're sorry; for they missed the finest little New Year celebration ever attempted in the moving picture business. And once again it was a Chicago man.

Seven thirty on New Year's night found the broad Selig office door unlocked, a uniformed giant to swing the door open and a pleasant faced attendant to indicate just what particular door to enter among the many which open off from the big business office, and you mounted two flights of stairs to be greeted in the spacious lounging room by Harry Gordon, who, with both hands full of programs, insisted that you have one and a good time later.

Hats and wraps disposed of, the laymen and women for the first time sat on real moving picture "props." They were all there—tables from Captain Kate's cabin, chairs from the Two Orphans and the thousand and one other Selig productions, tapestries from notable film stories, covering tables, settees and benches; and the crowd soon filled every available inch of sitting room on the floor.

Stanley Twist, stage manager extraordinary for the night, gave the signal and the scene shifted to the big studio on the floor above.

Imagine, if you can, the big Selig studio divided by "Lost in the Jungle" palms into two parts, auditorium and banquet hall, and then your imagination can possibly find room on one of the three or four hundred seats that were rapidly filled. There wasn't a vacant seat in the house.

Mr. Twist announced that the film "Cinderella" would be followed by some special features not on the program. The lights were dimmed, the purple curtains run aside and you read the first announcement, "Selig presents Miss Mabel Taliaferro in Cinderella." Breathlessly you followed the adventures of the pretty maid, sniffles marking the death of the mother with snorts for the arrival of the widow and her two daughters, groans for their treatment of the dainty girlie and a warm feeling for the prince who makes such a joke of imprisonment.

Prettily told, superbly enacted, with scenery and properties whose breadth of scope and completeness spell Selig, the applause of hundreds was the surest indication of the approval which this perfect film gains from everyone who sees it.

The next number on the program was a song by Miss Myrtle Steadman, a young lady whose face and acting are familiar to film fans the world over. "My Hero", one of the most difficult of the "Chocolate Soldier" pieces, trilled from her throat, lightly, easily, filling that vast hall until even the steel roof beams hummed in approval. Miss Adrienne Kroell followed with a pretty song about a "Beautful Lady" which met with vociferous approval. And the climax of the theatricals, which tickled William N. Selig just as much as the unknowing laymen, was an extemporaneous skit entitled "A Busy Day in the Selig General Office."

DRAMATIS PERSONAE.

Manager ..... B. Thayer
Hi Tower ..... William V. Mong
Big Blonde (Animal Trainer) ... Miss Kathlyn Williams
Mr. Emmett ..... Stan Twist
Squabina Chicken ..... Lillian Leighton
Miss Demure ..... Adrienne Kroell
Camera Man ..... Eddie Kull

The sketch, entirely improptu, illustrated the grasp these player folk have on the detail of the work. The scene opened with the general manager at his desk. Enter Hi Tower looking for the general. Learning that the general was in England he deplored the chance of getting a job and prepared to leave, whereupon the manager hired him as office boy with instructions to see that the players and all employees get down to work and ring the bell at 6:30 a. m.

Hi Tower—Does all them actors and actorines know that they're s'posed to be yere at six thirty?

Manager—Well, they ought to; I've told them often enough.

At this juncture there is a ring at the door and Miss Williams tip-toes across the floor, rings the hand bell and disappears behind the scenes.

Manager—Who's there?

Hi Tower—The big blonde.

Manager—What big blonde?

Hi Tower—The big blonde, the animal trainer.

Manager—Why didn't she get down before this? It's 11:30 now. Go see her and find out. *Exit and re-enter.*

Hi Tower—She says she can't get down no sooner with all them animals to feed.

Another ring at the door. Enter Mr. Emmett, just

back from South America, lugging a big ledger and a huge roll of papers under his arm and carrying a grip.

MANAGER—What are you doing here?

EMMETT—I just came in for some more expense money.

MANAGER—Where's your expense account for what you had?

Here Emmett gravely handed over the ponderous ledger and the roll of papers, explaining that they covered the trip down and back.

MANAGER—How have you been?

EMMETT—Well, I just got over the grip, (*business of stepping over handbag*) but I'm all right now.

EMMETT—While coming up on the train I was met at St. Louis by Weed and as we were getting into Chicago one of those Parmelee men approached Weed for trunk checks. Weed said he had no trunks. "What do you do?" says the Parmelee man. "I sell brains," was Weed's answer. "Shake," says the Parmelee man, "you're the first traveling man I ever saw that didn't carry samples." Say, Mr. Manager, I wrote some daffydils coming up on the train. I'll read them to you:

If Miss Williams wouldn't feed the animals, do you think Miss Greenwood?

If it took all the ashes to fix the sidewalks the night of the ball, how did they Cinderella.

If MOTOGRAPHY was getting along swimmingly would McQuade?

If Mong wouldn't act would Thayer put on Ayers if Clary took the part?

If four hundred came to see Cinderella how many came to Se-lig?

If Captain Kate, Lost in the Jungle wanted to get out would she take a Colum-bus?

If Santschi gets 500 a week how much is Hobart Bos-worth?

If Miss Steadman can reach high C can Miss Greenwood reach A flat?

If Anderson quit his job would that make Essanay *Spoor*?

If Emmett didn't have his part down, what did Stan twist?

If Selig wanted a gardener would Frank Weed?

If Cinderella's stepma had a false nose on, what had Lillian Leighton?

Miss Demure arrives hunting a position as a film actress.

MISS D.—Everyone says I'd do just dandy in pictures.

MANAGER—What can you do?

MISS D.—I can sing.

MANAGER—We can't take pictures of singing. What else can you do?

MISS D.—Well, I can swim and dive and stay under water twenty minutes.

MANAGER—Picture's all over before that. (*Aside, to Tower*) What do you think?

HI TOWER—She's all right, boss go on an' hire her.

MANAGER—She has a pretty face, hasn't she?

HI TOWER—I wasn't looking at her face, boss. *Exit Miss D.*

Hi Tower was interrogated why Miss Greenwood wasn't down and volunteered that she was fixing up her flat, having hired a plumber from Denver.

The final scream was a burlesque on taking a picture, in which the manager and Hi Tower rehearsed "The Four O'Clock Train" under the eye of the camera man. After forgetting his cue, making false entries and under frequent admonitions from the camera man regarding the value of time and light, they decided to "make" the picture, only to find after the scene that the film was light struck; and he dragged forth the awfullest mess of spoiled film imaginable. Reloading the camera, they tried it again, and this time the camera man forgot to close the door. The scene ended with an angry camera man in a riotous tumult.

Everyone was convulsed over this playlet, the big makers and importers as well as the uninitiated folks present.

The floor was then cleared for dancing and everyone proceeded to have a good time at it. They say even George Kleine had one waltz. There were no wall flowers. Every girl was popular and they made the most of it.

After six or seven dances "reveille" was played for a supper call and the dancers filled the interstices left after a New Year's dinner with a dainty repast at prettily decorated tables occupying the half of the studio. Here is the menu:

MENU.

CHICKEN SALAD ROLLS

SALTED NUTS · OLIVES PICKLES CELERY RADISHES

ASSORTED SANDWICHES ICE CREAM CAKES

ASSORTED CANDIES FRUIT PUNCH

COFFEE CIGARS CIGARETTES

Dances filled the remainder of the evening after the supper and "Home Sweet Home" at twelve fifteen found everyone tired, and happy.

One or two touches show the completeness of the attention to detail. The icy walks for two blocks to the nearest car line were carefully spread with ashes, while by special request, street cars were held to accommodate the tired, laughing guests, homeward bound. Mr. Selig's car was at the disposal of those bound for railway or elevated stations and did yeoman service.

A list of those present would be a reprint of Selig's payroll from W. N. himself down to the office boys with their respective fathers and mothers, sisters and best girls.

* * *

Mr. and Mrs. George Kleine appeared to be having a good time.

Mrs. W. N. Selig and her sister, Mrs. Allen, never missed a dance.

Miss Williams, Miss Greenwood, Miss Steadman, Miss Kroell and Miss Leighton all seemed to have a cluster around them and kept busy every minute the music played.

McQuade didn't dance. Maybe he had to have the Highland fling.

MOTOGRAPHY's representatives, Ed J. Mock and A. L. Haase and their respective wives tried everything from soup to nuts both in the dances and banquet.

If they do it again next year, don't miss it. It was great.

Special Shows Urged for Children

A California mother has struck upon an original and somewhat unique idea in connection with moving picture theaters, and the *Sacramento Bee* has taken up the suggestion with the idea of starting a state wide movement, assisted by the various women's organizations.

The character of the numerous moving picture films displayed at the various theaters, while undergoing a severe censorship before being exhibited, are said, in the many instancees, not to be the proper form of entertainment for moulding the mind of the child.

The remedy suggested is to have the different theater managers set aside a specific time at which a specially arranged performance will be given for children.

Just what kind of films should be exhibited at these performances seems to be unanimously agreed among the mothers of the city. They should be educational, yet entertaining; they should be scenic or descriptive of some particular subject. Views of current universal events and many other ideas have been suggested.

It is expected that the motion picture houses will endorse the movement and that action will be taken to secure special films to be used particularly for children's performances.

Meeting of the Indiana Section of the Motion Picture Exhibitors'

Meeting of Indiana Exhibitors

THE Indiana Motion Picture Exhibitors' League held its first convention at the Claypool Hotel in Indianapolis on December 12. The object of the meeting was to effect a permanent state organization for the purpose of mutual protection against unfriendly legislation, and to arrange for more satisfactory relations with exchanges. It was also urged that exhibitors should seek representation in film censorship.

Fifty-five exhibitors were present at the opening session. After an address of welcome by Andrew Smith, vice-president of the Capital National bank, of Indianapolis, and a response by H. S. Dickson, of Winchester, chairman of the convention, M. A. Neff, president of the Motion Picture Exhibitors' League of America, addressed the meeting.

Mr. Neff, in opening his address, called attention to the fact that only a few years ago the moving picture was unknown, while today there are nearly 16,000 motion picture theaters entertaining and educating millions of our citizens. The motion picture has eclipsed in popularity any other line of business ever known.

The motion picture in commerce, education, religion, politics and history has rapidly developed our modern civilization. The historian may write, the lecturer may describe, but the motion picture shows things as they really are, and not as someone else has seen them. Schools throughout the country will soon be teaching history, geography, and other branches of study by means of the motion picture. It will not be long until the churches will be filled to overflowing to see pictures, and hear the lectures accompanying them—and these lectures will be delivered by men, many of whom are now condemning the picture show.

Moving pictures will be an educational factor in army and navy maneuvers, and they will exert a powerful influence in stimulating patriotism. The scenes of the War for Independence and the Civil War, as reproduced in moving pictures, will remain in memory long after the description on the printed page is forgotten. Likewise the films which are now being taken of great historical events will live and be enjoyed by future generations.

Surgery has been advanced many years by the picture. Germs of disease are being shown daily on the curtains, and men of science are enthusiastic supporters of the motion picture. The barefooted boy in the country is fast becoming acquainted with Broadway and State street, and the city boy, who has never seen the country, is learning the manner of living in rural surroundings.

China, bowed down by the tyranny of a despotic government for centuries, has learned to feel the galling sores of her burden through the medium of the motion picture. It has forced the truth home where millions of books and thousands of devoted men and women have failed.

Mr. Neff recently met a gentleman, just returned from China after a stay of two years, who informed him that the moving picture more than all the other forces of civilization was responsible for the present

gue of America at Indianapolis, Ind., December 12, 1911.

movement to overthrow the old despotic order of things.

In Mr. Neff"s opinion, the organization of motion picture exhibitors will become the strongest in the world; but, no matter how strong or whatever the grievance of the members, due consideration and justice should always prevail in their councils. No man, organization or corporation should ever presume to intimidate or force others to submit to them in unjust matters, and the whole people should ever remember that an organization must not be held responsible or condemned for the acts of two or three of its members. There was one Judas, but the eleven remaining apostles were not condemned for his act.

It is the object of the organization to discourage the use of suggestive or low class pictures and to insist on being furnished the best films obtainable—clean, high class and instructive. The exhibitors should have a voice as to the films they receive, and should have representation in national film censorship. The moving picture shows of America do an annual business of $500,000,000. Surely a business of this magnitude should be able to wield a far-reaching influence.

C. M. Christenson, secretary of the Motion Picture Exhibitors' League of America, was the next speaker. He dwelt particularly on the good work which organization has accomplished in Cleveland, his home city.

H. S. Dickson then spoke. He discussed the benefits of hearty co-operation, and sketched briefly the history of the organization movement as applied to exhibitors, especially those of Indiana.

F. J. Rembusch of Shelbyville, followed. As secretary and treasurer of the temporary organization he had considerable to say regarding finances.

With very few changes, the constitution adopted was the same as that formulated earlier in the season by the Ohio League. The name decided upon was the Indiana Motion Picture Exhibitors' League. The initiation fee was fixed at $5.

The officers elected for the Indiana League are: President, H. S. Dickson, Winchester; Vice-Presidents, H. F. Prentice, Terre Haute; Earl Rife, Logansport; Joseph Bommerscheim, Ft. Wayne; R. H. Canon, Muncie, and W. R. Deaton, Warsaw; Secretary, F. J. Rembusch, Shelbyville; Treasurer, John Gavin, Indianapolis.

It was decided to hold the next meeting in Indianapolis on February 6, 1912. Two organizers were appointed to call upon every exhibitor in the state, enrolling members and collecting initiation fees. Charles H. Daugherty, Winchester, will cover the northern, and D. L. Bryan, Rockport, the southern half of the state.

The use of vaudeville acts in a motion picture theater was strongly discountenanced, as was also the use of three reels at a five cent show. Two reels for that admission were recommended.

About five o'clock the meeting adjourned and the members proceeded to the banquet hall where covers were laid for sixty. Mr. Rembusch was toastmaster, and a very good one he was too, for he succeeded in getting speeches out of nearly all the banqueters.

Those present at the convention were: H. S. Dickson, the Dreamland theater, Winchester, Ind.; H. F. Prentice, the Fountain, Terre Haute; Otis Kilby, the Arcade, Winchester; H. L. St. Clair, the Orpheum,

Hammond; Ray Palmer, the New Grand, Washington; F. M. Palmer, the New Grand, Washington; Chas. Powell, the Powell's Redkey; Geo. G. Ball, La Purdette, Lafayette; Chas. H. Daugherty, New Irvin, Winchester; Louis A. Klene, the Arc, Lafayette; C. E. McNairy, the Habit, Tipton; J. E. Anderson, the Court, Tipton; E. L. Rife, the Grand and the Tolego, Logansport; C. E. Adams, the Fairyland, Lebanon; J. W. Downey, the Arc, Monticello; C. H. Williams, the Dreamland, Seymour; A. Chrismer, the Lyric, Connersville; Celby Miller, the Palace, Greensburg; O. B. Simmonds, the Majestic, Muncie; F. W. Simmonds, the Majestic, Muncie; D. L. Bryan, of Bryan Bros., the Picture, Rockport; Joe Bommerscheim, the Gaiety, Ft. Wayne; R. H. Canon, the Royal, Muncie; F. D. Tallman, the Electric, Bunker Hill; M. R. Tourner, the Vaudette, Michigan City; F. J. Rembusch, the Manhattan, Indianapolis, and the Crystal, Shelbyville, Ind.; W. R. Deaton, the Royal, Warsaw; J. F. Trulock, Indianapolis; Edward C. Pachler, Indianapolis; F. L. Walker, the Lyric, Peru; Bert Hicks, the Star, Kokomo; John Larmore, Knightstown; Q. T. Lyons, the New Loreka, Knightstown; Sprague Green, the Lyric, Ft. Wayne; W. C. Yutzy, the Olympic, Lebanon; L. J. Brown, the Pastime, Brazil; W. O. Tarkington, the Lyric, Kokomo; W. L. Overholzer, the Royal, Indianapolis; R. S. Reed, Kokomo; A. M. Dickson, the Princess and the Orpheum, Wabash; C. H. Dickson, the Princess and the Orpheum, Wabash; H. S. Logan, the Eagle, Wabash; G. Lillard Jones, the Ideal, Kokomo; E. Tarkington, the Lyric, Kokomo; Ed. E. Hiatt, the Palace, Frankfort; H. C. Heisler, the Colonial, Ft. Wayne; S. M. Grimes, the Arc and Joy, Brazil; John B. Hubert, the Two Johns, Indianapolis; John A. Victor, the Two Johns, Indianapolis; H. W. Summers, the Orpheum, Anderson; M. A. Neff, Cincinnati, Ohio; C. M. Christenson, the Broadway, Cleveland, Ohio; Jos. H. Gavin, the Illinois, Indianapolis. Four ladies from Kokomo also attended: Miss M. E. Wood, Mrs. Etta M. Albaugh, Miss Emma Tarkington, and Mrs. G. Lillard Jones.

Women's Club Uses Pictures

The Women's Civic Club of Independence, Mo., is making use of moving pictures in its campaign for sanitation and beautifying the city. On one afternoon and evening of each week films selected by the club are exhibited in a local picture show on a partnership arrangement with the proprietor of the theater. The pictures exhibited show unhealthful conditions and the dangers thereof, as well as the unsightliness, and then others displaying changes effected in other cities whereby eyesores and plague spots are converted into attractive and healthful localities. Much interest is shown in the exhibition by all classes, and good results are already discernible.

Scene from Selig's "The Peacemaker," written and produced by the late Francis Boggs. Winnie is divorced from her drunken and abusive husband, Pete Bolan, and is attracted by Paul Gregory, who has rescued her from one of Pete's attacks. Pete tries to shoot Paul, but is himself wounded. As he falls, Winnie realizes she still loves him and they become reconciled.

Who's Who in the Film Game

Facts and Fancies About a Man You Know or Ought to Know

THE flight from banking to wholesale drugs and then to the making of motion pictures, will be dubbed extraordinary. Just to eliminate possible argument, let it be conceded — it is extraordinary. Everybody knows that banking is profitable. A banker takes your money. He makes a memorandum in your book. He gives no receipt. He then loans your money to the man who offers the best security and the highest interest rate. Bankers are the first people in the town to buy automobiles. They are the leading citizens—the first to sign philanthropic subsciption lists.

Wholesaling of drugs is something else. Nobody knows anything about the wholesale drug business except the wholesale drug dealer. The public has a vague notion that it is more lucrative than banking. Buying by the ton or by the barrel and dispensing by the pennyweight or dram would help in emphasizing this idea. Wholesale druggists usually live on irrigated farms and turn their businesses over to long-haired chemists. The w. d. usually meet twice a year, declare dividends, reduce salaries and hurry back to their country estates. It is a business of little action, except as it concerns the piling up of money. Men who like to hustle usually get out of it. These sidelights are injected here to show why a man like Sam Hutchinson would thrown down banking and drugging for motion pictures, for be it known that Hutchinson was considerable of both before he appeared on the horizon of the film game. It is well that you know more about him. His full name is Samuel Sheffield Hutchinson. He was born in Cheyenne, Wyoming, September 2, 1869. His parents went to Wyoming in a prairie schooner with the chickens tied on behind. You have heard about those early hardships, so they will be passed over. You must recall, however, that those hardy pioneers who blazed the western trail ahead of the railroads had courage that some of us lack and that their offspring are very apt to have some of that same spirit coursing through their veins. Indian fighters are the progrenitors of commercial fighters. Sam Hutchinson's father was a banker and he gave his children the benefits of education that go with money. Sam finished his schooling at the Illinois Wesleyan College at Bloomington, Illinois, carrying away with him the degree of Bachelor of Science. His activities at College gave him the presidency of the Interstate Oratorical Association, an organization comprising the best oratorical talent of forty schools and colleges. He is also a member of the Sigma Phi Fraternity.

With an equipment like this, most young men would be satisfied to return home and settle down behind the counter of papa's bank. Young Hutchinson tried it, but he wasn't happy. He came to Chicago, served his banking apprenticeship all over again and landed as note teller of the American Trust & Savings Bank. And then he made his get-away — into the wholesaling of drugs. In 1895 he formed the Hutchinson Drug Company and turned it over to the long-haired chemists, while he busied himself in the investment of profits. It was through the drug company that he found the film business — easiest problem of all. Film makers buy chemicals from wholesale druggists. The Hutchinson Drug Company sold the goods—the accounts showed constantly more and more purchases. Mr. Hutchinson found the reason—a growing, booming business and he whispered to himself—me for that! He found an opening through the Theater Film Service Company and he has found or has created other openings ever since.

He Whispered to Himself—Me for That.

The trade in America and on the continent knows S. S. Hutchinson as the very vigorous head of the American Film Manufacturing Company, one of the youngest and at the same time one of the staunchest of the independent makers. Flying-A films are known around the world. They are typical of their trade-mark—literally flying Americans. The company is about to occupy a new factory and studio, modern in every detail, located at Evanston avenue and Devon street, Chicago. The result will be felt at once.

But the success of American's films must be largely due to the man who devotes his untiring energies to their betterment. Mr. Hutchinson has fine capacity in selecting men to help him in his labors. He is particularly capable as an executive, combining that rare faculty of shifting details to trusted subordinates.

Sam Hutchinson, for he prefers short first names, has only one serious fad—that of his family. He is trying to be a boy with his two rollicking sons. He is making them a real home up on the Lake drive—one that will be a land-mark for the tourists. Every man hopes for the kind of home Hutchinson is building. The wonder is that he had time to think of it! Film manufacturers, like bankers and wholesale druggists ride in automobiles, first because they like to and second because it saves time. Hutchinson gets a lot of pleasure from his. He travels a lot. One must who makes negatives on the Pacific Coast, develops them in Chicago and markets them in New York.

Shows in Vera Cruz

Consul William W. Canada, of Vera Cruz, Mexico, writes that moving-picture shows in his district, while still patronized, have long since ceased to be a novelty. In Vera Cruz, population about 50,000, the largest city in the consular jurisdiction, these shows have taken second rank in the estimation of the majority of the people, and wherever such a performance takes place it is in combination with a more or less theatrical enterprise. Spanish dancers, farces, and general variety business are the principal attractions at present. The Salon de Variedades is the only permanent place of entertainment of this kind in Vera Cruz.

As far as he is informed, other towns of comparative importance, as, for instance, Jalapa, Orizaba, Cordoba, Coatepec, Cosamaloapan, Tlacotalpan, Alvarado, Tuxpam, Papantla, Huatusco, Rio Blanco, and others of 35,000 down to 2,000 inhabitants, have no permanent moving-picture shows. All these places are visited at stated intervals by traveling exhibitors, who do not even own apparatus or films, but are fitted out by the Compañía Cinematrográfica Explotardore, Mexico City.

The Vera Cruz show operates a Pathé apparatus, and nearly all films shown are from the same concern. At long intervals only are American films shown. The fact is that, with few exceptions, pictures of American scenes are never well understood. This is due to the lack of familiarity with conditions as they exist in the United States, and also because the humor or pathos, as the case may be, represented on French films is of a nature that appeals to the people. In Mexico City, where the American element is better represented, matters are different.

It is worthy of mention that the films shown in Vera Cruz are all first class. There is no exception to this. The town has been worked by traveling shows for so long a time that the people will not now accept anything ancient or of inferior grade. This determination of the citizens to insist upon the best was exemplified some time ago when, upon the opening night of a show, well advertised, over 1,000 persons attended; the succeeding evening, when the show was repeated, there were but six persons in the theater.

Scene from Selig's "The Secret Wedding," written and produced by Frank E. Montgomery. Artist Adrian and Bessie Whalen are secretly married. His picture of her, as "The Spirit of the Cliff," gains him fame. Leon, an old sweetheart of Bessie, shows her father the picture and misrepresents the situation. Captain Whalen destroys the picture and orders Bessie and her child out of the house. The matter is finally cleared up and Leon blamed for his duplicity.

Current Educational Releases

A Trip from Colorado Springs to Cripple Creek.—Edison. At first we start up Pike's Peak Avenue to the gateway of the Garden of the Gods. Then we enter the train, which begins to climb over the short line to the summit. At last we reach the Valley of Gold, Vindicator Junction, then Goldfield. A number of far-famed gold mines are seen. By means of the highest electric railroad in the world we reach the town of Altman, the highest incoporated village in the world.

Modern Weapons for Fighting Fire, New York City.—Edison. The rapid progress made in the development of New York's fire department to meet the danger of serious conflagration in its sky scraper district, will prove an interesting subject.

The shipping and water-front buildings are safeguarded by a fleet of nine fire boats which for speed and power are unequaled. When called upon, these boats can each throw from sixteen to twenty-five powerful streams.

The high pressure system installed has been wonderfully successful. Pumping stations have been built in the down town district where the turning in of an alarm puts their powerful pumps into action, which immediately throws a pressure upwards of one hundred and fifty pounds into the mains.

The film illustrates the short time required to get this stream into action.

Another feature is the gradual replacing of horse drawn by motor driven apparatus, it being only a matter of time when the horse will be discarded entirely.

The superiority of motor apparatus is proven in long runs. While the horses probably out-distance the motor in a short dash, it is the motor that will lead in a run of any great length.

Steam pumping engines are being replaced by gasoline pumping engines, which not only throw a more powerful stream, but reach the fire and get into action in a much shorter space of time.

This development of fire fighting apparatus makes New York the best protected city in the country. (375 feet.)

Gorges of the Verdon River.—Gaumont. The Verdon River has carved for itself a wonderful gorge. In this film we can imagine ourselves in a motor car, taking a short trip through this veritable realm of rocks. (200 feet.)

A Cotton Goods Factory in France.—Eclipse. Showing clearly how the raw cotton is woven into cloth, revealing the carding, reeling, winding in bobbins, preparing for weaving, weaving on looms, and measuring for the final inspection. (325 feet.)

Scenes Off the Coast of North Africa.—Gaumont. Showing the curious customs and dwellings of the inhabitants of some of the Canary Islands. (124 feet.)

Codfish Industry, Newfoundland.—Edison. A fair conception of the magnitude of this industry is given in a view of many ships engaged in the trade, as they lay at anchor in the snug little harbor. Other interesting views are shown, especially the drying process, in which thousands of fish are spread on huge frames and allowed to dry in the sun, after which they are ready for shipment to all parts of the world. (340 feet.)

The Ice Formations at Odessa, Russia.—C. G. P. C. A beautiful picture of the mountains of ice and snow formed when the thermometer is 31 degrees below zero.

The Oyster Industry.—Lubin. A film which shows the interesting processes of oyster culture—planting of the beds, dredging, loading of the boats, unloading at the wharf, shucking, canning and shipping. The last scene shows the oyster's finish.

Sea and Landscapes, Denmark.—Great Northern. The waves pictures are remarkable. Views of yachts under full sail, of rugged cliffs, inland hills and valleys are included. Finally is shown a scene of an aeroplane and sunset.

The War in Tripoli.—Ambrosio. This film shows actual scenes of Turkish spies and Arab traitors escorted to be shot; Italian warships in Tripoli Harbor; troops crossing the market place; sailors in the trenches; the day before the battle of Sidi-Messri; two regiments in action; the Hamidje fort after bombardment; the mess at the outposts; Red Cross hospital; officers on guard; an oasis camp.

Making Pianos.—Lux. The film follows the course of construction from the very beginning, and we do not leave the piano until it is ready for a tune.

Greece.—Great Northern. The scenes are of unusual interest. The Corinthian Canal is a striking sight, and the views of Greece from Corfu Harbor are pretty. The villa of the German Emperor is shown. These pictures are colored and the delicate tints are well shown.

Touring Brussels.—Powers. A very good little travelogue, showing the interesting sights of Belgium's capital.

The Logging Industry.—Rex. The crowning scene of this film is a great forest fire. A panoramic view shows the destruction caused by the fire. Then there is a scene showing men felling trees. The men must measure the exact distance and direction the tree will fall. Then is shown the operation of trimming the tree after it has fallen, the donkey engine hauling the logs across the canon by means of cables and loading them on the trucks. A team then hauls the logs from the camp. The logs are then dumped into the water and are finally cut up and marked for the buyers.

A Mid-Winter Trip to Los Angeles.—American. Southern California is indeed the playground of the nation, and this film shows why. Those who have never been to California will enjoy these scenes. Those who have been there will enjoy them all over again. Beautiful Pasadena and Los Angeles are shown, all the points of interest having been secured by the camera man. (1,000 feet.)

Genoa, Italy.—Powers. A European travelogue. The film shows the best views of this quaint old Italian town.

Santa Catalina, Magic Island of the Pacific.—American. Giving glimpses of the wonderful marine gardens of the Pacific as seen through a glass-bottomed boat. Beautiful views of the island are also shown, together with a close-up look at one of the seal rocks covered with seal, contentedly sunning themselves.

Artistic Earthenware in the Making.—Lux. From his very earliest days on this planet man has devoted much time and study to the manufacture of pottery. After centuries of hard work he has made himself some very fine articles, which are both useful and ornamental. On these grounds alone a complete and comprehensive description of the manufacture of artistic earthenware in the celebrated factory at Nevres, France, should prove of the highest value. (347 feet.)

Chinese War Cruiser "Hai-Chi."—Imp. In this film is given a series of views of the Chinese cruiser, "Hai-Chi," as she lay in Charleston harbor a short time ago. Besides the views of the ship herself, there are pictures showing the movements of the great guns, deck scenes, Chinese sailors, Chinese band, and other interesting views.

Howe Gets Beachey Pictures

The sensations of traveling in an aeroplane are almost duplicated by witnessing Lyman Howe's motion pictures taken by Aviator Lincoln Beachey while 1,000 feet above the ground in his machine flying over the city of Wilkesbarre, Pa., the river and farms near it. Beachey operated a moving picture camera and steered his aeroplane at the same time. This difficult feat resulted in some views which have never been surpassed in their bizarre glimpses of the earth from one in the sky.

Another set of interesting pictures were taken by Mr. Howe in Japan and reveal corners of that ancient land which the tourist never sees. Temples 1,000 years old, grotesquely carved sacred fountains, the rapids of the Magdapis river, the school of the famous Samurai, the idols of the old people and other fascinating scenes are shown clearly and entertainingly. Nara, one of the sixty vanished capitals of former Japan, proved a surprise to more than 100 Japanese who attended Mr. Howe's interesting exhibition on one occasion to see what the American exhibitor could show them about their own country.

Flowers are shown in course of development from swelling bud to blooming plant and the transformation is almost magical. There are some oddly posed pictures which arouse laughter. Howe's entire show is unusual and worth seeing.

Scene from Selig's "The Cowboy's Best Girl," written by Everett McNeill and produced by O. B. Thayer. Alice Marson breaks her engagement with Glen Arnold, and he goes West. Three years later he attends a western dance dressed as a girl. Alice is visiting in the vicinity and also attends, dressed as a cowboy. In this disguise she gets into a fight with a real cowboy and Glen interferes. In the melee their hats are knocked off and recognition and explanations follow.

Coming Essanay Westerns

Progress of the Indian Head

AFTER an absence of many months in the West, G. M. Anderson, the producer and leading man of the Essanay western department, returned to Chicago a few days before Christmas and spent the holidays with old friends at Chicago and New York.

When he returns to California he is to be accompanied by a new leading lady and one or two others for the western company. Miss Vedah Bertram, the young lady who will appear in future Essanay western productions, is a charming young woman, whom Mr. Anderson considers a real "find." She is a type of the healthy, out-of-door loving, athletic girl of the west, with a charm and vivaciousness in her personality which is so potent a factor in the success of picture players. She is a graduate of Wellesley College, and though this is her first appearance in motion pictures, she is a scholar in dramatic art and will undoubtedly be able to turn her knowledge to good advantage.

Mr. Anderson believes that western pictures will always be popular with the people. They are generally of excellent quality, with plenty of heart interest in the dramas and the laughable situations in the comedies, added to which is the fact that the scenery and atmosphere is generally most delightful. He himself is author, leading man, and producer of nearly all the productions in which he takes part. The company that he has gathered about him is as capable an organization as can be found in the motion picture field.

The New Essanay Leading Lady.

In the Essanay western comedies and dramas there are a number of characters which have become immensely popular with photoplay audiences, and exhibitors are always on the alert for the "Snakeville" productions. Who has not held his sides over the drollery and fun of Alkali Ike and of Mustang Pete, a duo which always furnishes fun for picture audiences? Then, there is the adventuresome Broncho Billy, who furnishes excitement and thrills in the stories of romance and adventure. Mr. Anderson's fame as Broncho Billy is not confined to our own country, for he is equally popular among the audiences of English theaters, where he is a prime favorite.

The Widow Jenkins Has Many Admirers.

Alkali Ike Wins the Reward and a Wife.

Would the Schoolma'am Dare to Shoot?

Bob Graham is Sworn in as a Sheriff.

There will be many "Snakeville" comedies in 1912 and Broncho Billy will continue to delight picture audiences with his adventures. There are even now three Snakeville comedies ready for early release.

The first of these, "Widow Jenkins' Admirers," features Alkali Ike. In this photoplay he has matrimonial ambitions, which, though resulting as he had carefully designed, results in anything but complete happiness and leaves him free with just cause for divorce. The widow Jenkins is left considerable property by her deceased husband and naturally enough all of the eligible swains of Snakeville, both young and old, seek her hand. Alkali is so persistent that he monopolizes all of the widow's time, but with very little promise of success. However, Alkali conceives a scheme to win the widow. He writes a letter to himself in which it is announced that his grandfather has died and left him $100,000. The widow easily falls for this and they are married. However, the glad wedding bells have hardly ceased ringing when a young lady steps off the train and hands a letter to Alkali. The young lady proves to be Alkali's cousin, with whom he is to share their uncle's large fortune, providing Alkali is free to wed. However, the widow makes him come to time and the young lady is forced to seek out another husband with which to share her future and fortune.

"Alkali's Ike's Love Affair" comes later, when Alkali has been divorced, we must presume, from the widow. Alkali loves buxom Betty Brown but dad objects to Alkali's diminutive stature and his cowardice, for little Alkali, in spite of his bravado, is an arrant coward.

To prove that he is not a coward, Alkali schemes with two friends to pull off a fake hold-up on Father and Alkali. Arrangements are made and Alkali goes to the scene of the ambush to await the exciting event. Alkali has not figured on two real hold-up men and when the thing is pulled off Alkali finds he has captured not his friends but two real desperadoes. While Alkali makes his getaway with his sweetheart, her father takes the bad men to the sheriff's office and turns them over. Here the father learns that a big reward had been offered for the bad men and a bag of gold is thrust into his hands by the delighted sheriff. Not only does Alkali win the reward but his sweetheart as well.

"Broncho Billy and the Schoolmistress" is another adventure of this prince of good fellows. Broncho has a rival in his love for the pretty new schoolmistress in Snakeville. The rival suggests that they play a joke on the schoolma'am by a fake hold-up, just to test her nerve and to see if she would fire the small toy pistol she carries when she visits her pupils after dark. Broncho is chosen to play bandit but is shot down by the rival. The school teacher is accused but proves her innocence by displaying her gun which contains nothing but blank cartridges. The rival is then arrested and told to make himself scarce on the penalty of death if he ever visits Snakeville again. Needless to say Broncho wins the pretty school teacher and Snakeville rejoices.

Under the name of Bob Graham, Mr. Anderson is the leading man in the tragic story, "The Oath of His Office." Bob and Jed Brown are both madly in love with pretty Grace Allen. She accepts Bob, giving him a locket for remembrance. Jed plots to break up the romance and as there seems no way to win Grace honorably, resolves to do so dishonorably. So he steals the locket and returns it to Grace together with a forged note, supposedly coming from Bob. When Bob returns from the round-up to which duty had called him, he finds that Grace had married Jed, having been led to believe from the note that Bob no longer cared for her. Later Bob is sworn in as sheriff of the county. Jed has ceased to love Grace and treats her cruelly. One day he escapes from a crowd of cattlemen after he had beaten his wife nearly to death and begs protection from Bob. In his heart Bob fights a battle with himself. His whole soul cries out for him to join the mob and give Jed the punishment his cruelty so richly deserves. But there is his oath of office. He cannot violate that. Finally duty triumphs, and he gives Jed protection, holding the cattlemen at bay. When Bob later visits the home of his former sweetheart, he finds that he is too late, and that the consciousness of duty well done is hereafter the only reward he can ever have.

Traveling shows in Holland frequently go by water instead of by train or caravan, and this mode of travel allows the means of transportation to be a theater as well. The latest type of traveling show or floating theater in Holland is devoted to the display of motion pictures. The theater proper is 160 feet long and has a seating capacity to accommodate 430 spectators. The entrance is a gangway swung out over the canal bank when the barge is tied up for a performance.

A Blind Boy's Interest in Pictures

Impressions of Cinderella

CINDERELLA, Selig's magnificent three-reel spectacle, has been released, and hundreds of exhibitors have already experienced the pleasure of watching their breathless audiences drink in the delights of the masterpiece. Knowing, from intimate association with the business, something of the stupendous labor involved and the difficulties overcome in the production of such a film, these exhibitors can appreciate, perhaps more thoroughly than the public, the unusual harmony of the result. Miss Mabel Taliaferro herself, who makes such a charming and wholly ideal Cinderella, was amazed at the volumes of work involved in a process seemingly as simple as making pictures. And she is surely in a position to know; for she was one of the few outside the regular Selig forces who, perforce, witnessed the whole preparation, in which she was the most prominent figure.

"Cinderella" Taliaferro and Wolcott Coombs.

But there was another witness, if we may be permitted to use that term, who, though in no way involved in the action, followed with eager interest every operation in the production of the big spectacle. This observer was Wolcott Coombs, the deaf-blind boy from Oklahoma in whom Mr. Selig has found such interesting material for a series of scientific pictures. Coombs, although deprived of those two faculties which we deem absolutely essential to enjoyment of life, has been supplied by a beneficent Providence with an efficient substitute in the form of Professor Harry Virden, who is with him constantly and from whom he has absorbed a more profound knowledge of a variety of subjects than is acquired by most persons of full sense equipment. Strange as it may seem, Coombs is especially interested in drama, and through the books for the blind and the extraordinary application of Prof. Virden, has become familiar with all the classics.

Coombs was intensely interested in the production of Cinderella; and during its preparation he studied every detail, even climbing ladders to feel of the scenery and stage settings, and running his sensitive hands over all the properties and costumes used.

Coombs has mastered the typewriter, and does beautiful work on it. He is therefore able to record his impressions, and without, of course, ever seeing the film itself, he has written a most interesting description of "Cinderella," which we reproduce in his own words:

MY IMPRESSIONS OF CINDERELLA.

One of the first stories I read in the embossed type for the blind was that of "Cinderella." I did not have much of an idea then of kings and palaces—but I did know that when Cinderella attended the grand ball at the palace she was entering a wonderful new world. But that was no more a fairyland to her than the one I stepped into the day Mr. Twist took me up into the big glass studio at the Selig plant and introduced me to Miss Mabel Taliaferro, a little fairy princess in spite of the rough burlap dress she wore. They were waiting for sun, so I was told—and Miss Taliaferro sat down in the stage kitchen and talked with me for some time. I did not blame Prince Charming for braving the king's wrath—not if the original of the old Egyptian folk-story were half as winning as Mr. Selig's Cinderella.

When I first came to Chicago I knew nothing about how moving pictures were made, and so everything was new to me. I was at the studio nearly every day while this film was being taken. It was like being in some great fairyland where one learned many wonderful lessons each day without realizing that he was doing anything but having a good time. The costumes and properties which I saw, representing different periods, added to my knowledge and interest in history. Watching the production of "Cinderella" has also added to my interest in the study of the drama. Now when I attend the theater or read a play it is easy to picture the stage settings and watch the actions of the actors. The scenic artist, and my tutor Mr. Virden, first showed me various small card-board models of the stage settings used in "Cinderella," then we visited the bridge where the scenery is painted, and the carpenter shop where they were making different sets. Up in the studio I studied bit by bit the sets as they were ready for the actors. Then, through my tutor's fingers, I witnessed practically every scene as it was acted in front of the camera. Day after day I understood a little better how much brains and hard work it takes to produce a film like "Cinderella." Besides the actors, there must be skilled stage carpenters to build the scenery, scenic artists to paint it, property men who are always busy. "Doc" and John, the property men, kept me busy looking at furniture, arms, and other properties used in the play. Then there is the director, the camera men, and still others. They are all fine fellows.

I am more anxious for New Year's day to arrive than ever before. I know that I shall understand this picture when it is released better than most people, for Cinderella is a dear friend of mine. The only thing that I could want to make the day perfect would be to have Miss Cinderella Taliaferro watch the picture with me.

Careful readers of this little story will observe that Wolcott Coombs shows promise of a really pleasing literary style, as well as a power of observation enhanced, rather than reduced, by the enforced concentration of his powers on a few faculties. His narrative indicates that he values highly the friendship of Miss Taliaferro, who, indeed, spent considerable time conversing with the boy.

Anyone, by the way, can communicate with him by the simple process of drawing the letters of the alphabet on the palm of his hand with a finger tip. Of course after so conversing for a while with him one becomes adept at the process and adopts abbreviations and signs, which greatly facilitate matters, so that the "talk" may become fluent and even animated. Prof. Virden, naturally, has developed this system until their communications are almost as rapid as the ordinary kind. The photograph shows Miss Taliaferro and Wolcott Coombs talking together in the Selig studio, presumably about the all-absorbing topic, Cinderella.

Professional Theater Loafers

There was a commotion in front of a motion picture theater, says the Chicago *News*. Someone was being ejected, and it was certainly not the deaf and dumb man who objects to the conversation that goes on in the films, for he was putting up a lively verbal remonstrance. Perhaps it was the individual who insists on informing his miserable fellow spectators of the probable outcome of the plot.

"It's our usual class in calisthenics," said the girl who takes in the nickels. "It's just as regular as the gas man. Come around here at this time any afternoon and you'll see the whole performance repeated.

"It's our professional habitue. He doesn't come here to see the pictures, for he has seen them all before a thousand times. The reels of films he has seen would reach from here to Mars and back and he calls all the actors by their first names. He's the man who used to sit on the benches in the park. He used to hang around railroad stations a lot, too. He discovered the free lunch.

"Every morning as soon as we open and the operator gets his machine running in he comes. He usually gets about three-quarters of the way down and takes a wall seat so he can sleep more comfortably. There he sits through the whole performance. But then he has only begun. When the crowd begins to come out and others come in all he does is change his seat. He does this so he won't get spotted.

"They say he never looks at the pictures. The girl who plays the piano has seen a few reels herself, but every now and then she sits up and takes notice. I once heard of an operator who laughed right out loud at one of the films he was unwinding, but there is no case on record where old 'Stick-around' has come across with any appreciation. Of course, when they play 'Dixie' as the cowboys start out to rescue the girl from the Mexicans he joins in the applause, so as not to attract notice, but that's as near as he ever comes to getting excited.

"When the afternoon crowds start coming in then we have to be more strict. We need every seat we've got and more, too, and we need his seat. So down go two ushers to invite him out, and then he objects and starts kicking and biting, but they always throw him out as a matter of course. I haven't the slightest idea where he gets his five cents to come in on in the morning, but he always has it."

Scene from the American Film "The Mormons," which is laid in the early days of Mormonism in the West and depicts clearly the peculiar ceremonies and practices of those early days.

Rev. Father Dawling, of Kansas City, Mo., has established a picture theater in the hall of the parochial school and purposes to give shows on Monday and Thursday nights of each week.

The Board of Education of Brooklyn has decided to give a series of moving picture entertainments in several of the evening recreation centers of the borough devoting one evening a week at each of the centers to this purpose. The pictures shown will be usually four in number and will be drmatic, geographical, literary and historical.

Recent Patents in Motography

By David S. Hulfish

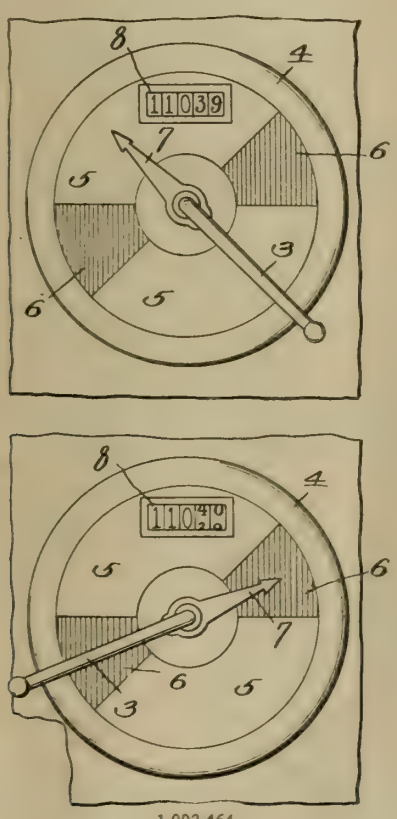
UNITED STATES Patent No. 1,002,464. Attachment for Moving Picture Cameras or Projecting Machines. Charles C. Spinks, Memphis, Mo.

The invention relates specifically to an indicator announcing at the same time the open or closed condition of the shutter and the fixed or moving condition of the film.

The two illustrations accompanying show the devices when operating. The upper figure shows the indicators when the picture film is not moving; the lower figure shows the indicators when the picture film is moving, at which time, of course, the shutter of the camera or projecting machine (as the case may be) should be closed.

The dial *4* is circular and has colored or shaded segments, of which the light segments *5* and *5* indicate the shutter is open and the shaded segments *6* and *6* indicate that the shutter is closed. The hand or pointer *7* is connected with the shutter and is over a light segment *5* when the shutter is open, and over a dark segment *6* when the shutter is closed. This hand therefore shows at all times the condition of the shutter.

At *8* is shown the face of a meter or counter, which is attached operatively to the intermittent mechanism



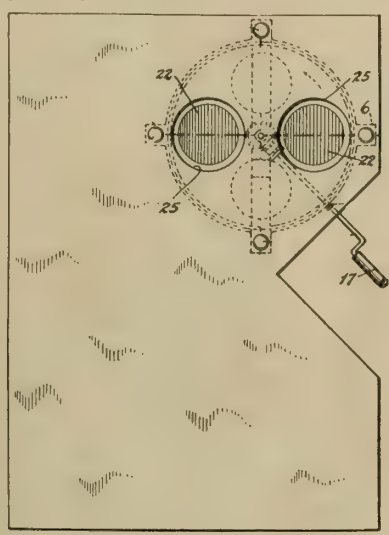
1,002,464.

driving the picture film. When the film moves, the figures of the counter move, as is shown in the lower of the two illustrations.

It will be noted in the illustrations that (upper figure) when the shutter is open the hand *7* is over the light space *5* and the figures of the counter *8* are not moving, but when (lower figure) the counter figures move, indicating that the film is moving, the shutter is closed and the hand *7* is over a dark space. Were the counter figures to move while the hand *7* is over a light space, the shutter would require readjustment.

In a camera, a memorandum of the figures of the counter will give information as to the length of film used and the length remaining in the feed magazine. In a picture projecting machine, the figures will measure the lengths of film projected.

No. 1,002,483. Toy Kinematograph. Alfred Z. Baker, Nutley, N. J. The illusion of moving pictures is



1,002,483.

produced by this device, without moving the pictures at all.

The illustration shows a face view of the exhibiting device. Two viewing windows are shown at *22* and *25*, behind which is a revolving shutter and two pictures in which motion is to be simulated. The shutter is transparent, alternately of red and green or any complementary colors. The pictures are printed in two poses, one over the other, in the same colors as the shutter. By a phenomenon well known in toyland the red picture can not be seen through the red shutter, and the green picture can not be seen through the green shutter. The operation is as follows:

If a woodchopper with his axe raised were printed in red and over this picture were printed in green the same figure with his axe lowered, then when the shutter is green the axe will be seen raised and when the shutter is red the axe will be seen lowered. By revolving the red-and-green shutter the woodchopper will chop wood indefinitely.

The effect of motion obtained by the illusion is very limited, but perhaps is sufficient for the requirements of toyland.

No. 1,002,634. Manufacture of Cellulose Films. Edwin Brandenberger, Thaon-les-Vosges, France.

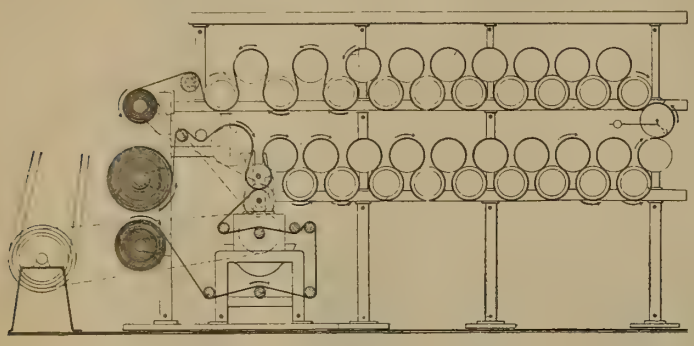
The preliminary description in this patent gives some interesting information concerning the difficulties met in the manufacture of cellulose films such as are used in motion picture work.

The more general portions of the description and the claims of the patent are reproduced below:

This invention relates to a machine intended for drying cellulosic films obtained from a water solution of cellulose, such as for instance cellulosic films obtained from a water solution of cellulose xanthate.

It is known that it is possible to manufacture continuously cellulosic film which, as it is made, can be rolled up, the length of the film in each roll being as great as desired.

After their manufacture, cellulosic films must be dried before they can be utilized industrially. The said drying presents great difficulties in practice. If the cellulosic film is simply exposed to the action of the air, it shrinks and loses all its transparency, becomes warped and absolutely useless for industrial purposes. If it is stretched at its edges while



1,002,634.

being dried it cracks and breaks, either during drying, or at the moment when it is detached.

This invention relates to a machine in which any lengths of film can be treated, the drying taking place in such conditions that the film does not shrink and on emerging from the machine has a remarkable transparency, remaining absolutely smooth at the same time.

In the machine according to this invention the cellulosic film is held during the drying operation at every point by means of parts which, without exercising a great and consequently injurious pressure on it are arranged so as simply to hold the film in contact with rigid surfaces, on both faces.

1. In a machine for drying cellulosic films, the combination of a series of lower driving rollers, mechanical means for rotating the same, and a series of free upper rollers located above and between and resting upon said driving rollers, said rollers of said upper and lower series forming between each other alternately a continuous drying surface for the film.

2. In a machine for drying cellulosic films, a series of lower drying rollers, mechanical means for rotating the same, a series of free upper rollers located above and between and resting upon said lower rollers, and means for preventing lateral movement of said upper rollers, said rollers of said upper and lower series forming between each other alternately a continuous drying surface for the film.

No. 1,003,116. Apparatus for Sale of Tickets. Viggo Marius Madsen, Odense, Denmark.

This exceedingly simple convenience for the cashier is shown in a perspective view in the accompanying illustration. The inventor's description and his first claim are given below:

My invention relates to an apparatus for use in the sale of tickets and other articles.

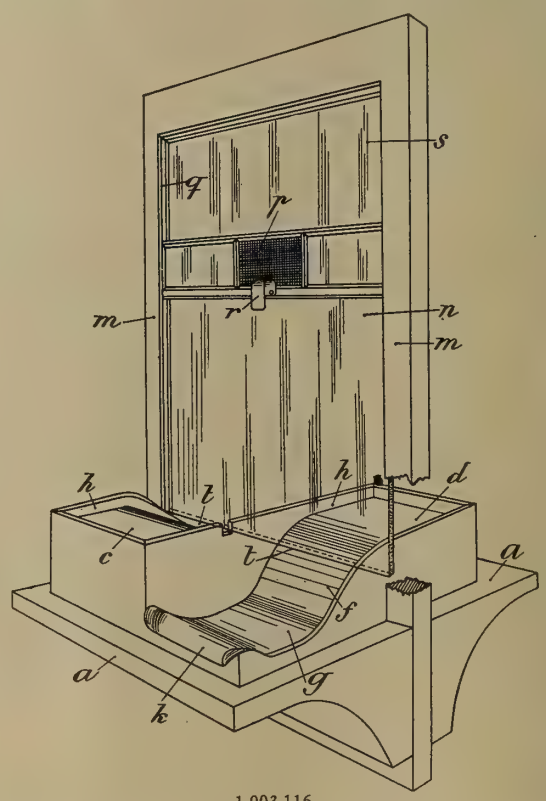
The apparatus consists of two chutes, each having an inclined portion, which inclined portions extend in opposite directions, so that the article to be sold and the money to be passed between the buyer and the seller can be easily exchanged between them. Across said chutes there is provided a partition, preferably made of glass or some other transparent material and extending midway across the chutes in such a way that between the bottom edge of the partition and the inclined faces of the chutes a passage is left free of sufficient depth to permit the passing of articles and money. The partition, being of glass or transparent material, permits the buyer and seller not only to see each other, but also to overlook the chutes in their entire length.

In the accompanying drawing, an embodiment of my new invention is shown, the apparatus being illustrated in perspective. *a* is a table, located in such a way that one end of the table extends into the room where the seller is and the other in the room where the buyer is. On the table there are mounted two adjacent chutes, each having an elevated portion *b* and *c* respectively and a depressed portion *g*, which portions are connected by an inclined smooth plane *f*, the said inclined planes extending in opposite directions. The chutes may be surrounded by upright edges *h* and are provided at the lower terminations of the depressed portions with curves *k*.

In a frame *m* arranged in the wall there is mounted a plate *n* of glass, which plate extends across the two adjacent chutes midway thereof and separates the buyer from the seller. The plate being of transparent material, they can see each other and can also overlook both chutes in their entire extent. The plate *n* is so located with respect to the chutes that between its lower edge and the inclined faces *f* of the chutes there remains a passage of sufficient depth to permit the articles and money to be passed between the buyer and the seller.

The buyer, who may be supposed to stand on the right-hand side of the apparatus shown in the drawing, places his money on the elevated portion *d* of the one chute, and the seller, who may be supposed to stand on the left-hand side of the apparatus, shown in the drawing, places the articles and possible change on the elevated portion *c* of the other chute. The articles and money will glide down the inclined faces *f* of each chute to the lower portion *g* thereof, so that they will come within reach of the buyer and seller respectively.

As shown in the drawing, a wire screen *p* may be arranged in the plate *n* in order to permit conversation between the buyer and seller. The plate *n* may be made in two pieces, in



1,003,116.

which case the upper piece *s* is in fixed position, whereas the lower part is slidably arranged in guiding grooves *q* cut into the frame *m*, so that by means of the handle *r* the lower part of the glass plate can be raised.

By means of the apparatus, as described, the exchange of articles and money can take place very quickly and under the full supervision of both parties. Moreover, if the apparatus is to be used for selling tickets the ticket agent is protected from draft, etc.

I claim:

1. Apparatus for use in selling tickets and other articles comprising two chutes, extending in opposite directions and a partition arranged transverse of said chutes about midway thereof and having its lower edge separated from the chutes to permit the passing of money and articles from one side of the partition to the other.

No. 1,003,774. Stereopticon with Automatic Slide Changer. Ferdinand F. Metzger, Philadelphia, Pa., assignor to Williams, Browne & Earle, Incorporated, Philadelphia, Pa.

The firm to which this patent is assigned is a maker of sundry forms of advertising stereopticons for window display, etc. The device of the present patent is adapted for this work, and is shown driven by a continuously moving electric motor which changes the slides at regular intervals. The apparatus, however, is fully applicable to the projection of a series of slides in a theater, for song or lecturer, if so desired.

The novelty of the device is found in an endless chain of slide carriers into which the slides may be dropped, one slide in each carrier. The machine does the rest automatically.

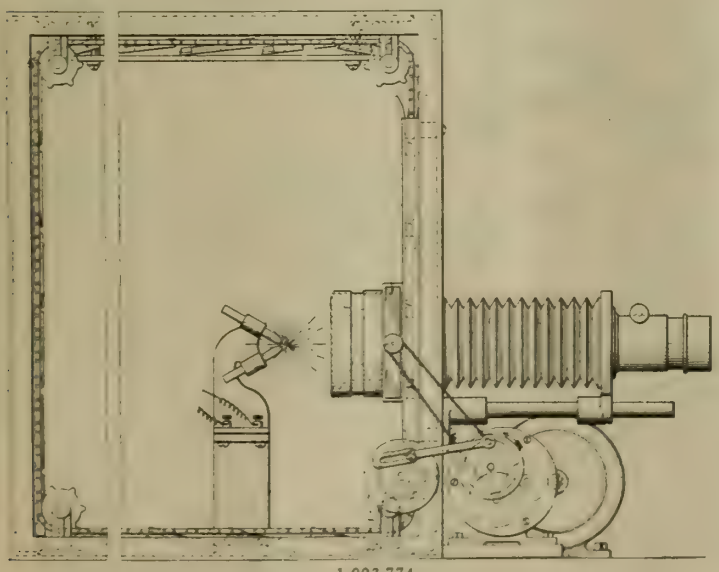
The illustration is self-explanatory as to mechanism, and the claims of the patent are as follows:

1. A stereopticon provided with an endless conveyor having a series of swinging slide, film or plate holders, each of said holders having one end and two sides of corresponding height and both sides in one portion inturned and bent downward into spring clamps below the top or plane of the sides of said holder, in combination with a slide, film or plate adapted to be held in position by the spring clamps of said holder.

2. A stereopticon provided with an endless conveyor having a series of swinging rectangular-shaped holders, each of said holders having one end and two sides of corresponding height throughout and both sides in the front portion inturned and downwardly bent into flat spring clamps below the top or plane of the sides of said holder, in combination with a slide, film or plate adapted to be held against movement by the spring clamps and end of said holder in the travel of said conveyor.

No. 1,004,060. Apparatus for Producing Various Sound Effects for Theatrical and Motion Picture Purposes. Albert H. Moorhouse, Staleybridge, England.

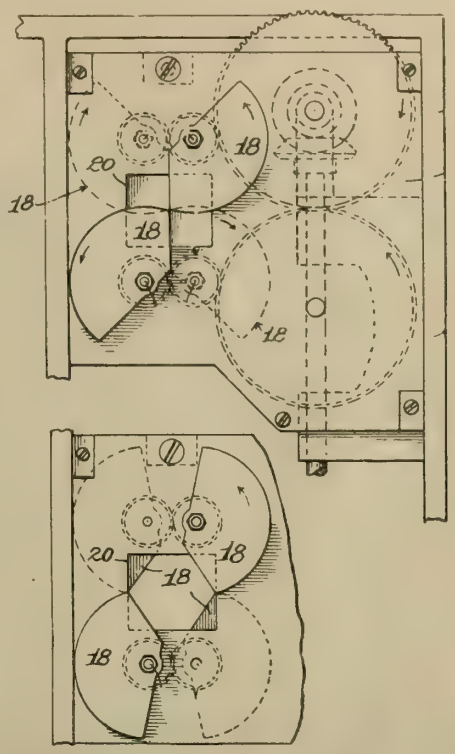
The inventor states that his object is to produce a device which shall be "most effective in use and most compact in construction, being particularly advantageous



1,003,774.

for use in connection with kinematographs for imitating the sounds which would be produced in the scenes that are being depicted."

The machine will produce, at the will of the operator, the sound of a running horse, a galloping horse, a fire engine bell, the rattle of harness, the breaking down of doors, the firing of musketry, cycle bells, door bells, telephone bells, automobile horn, locomotive whistle, policeman's whistle, ordinary whistle, steamboat whistle, siren whistle, rushing and howling wind, fog signal at sea, breaking of dishes, noise of a locomotive, noise of a train, sea waves, surf, storm at sea, firing of cannon, exhaust



1,004,330.

of an automobile, sleigh bells, discharge of blank cartridges, etc., etc.

The following claims are descriptive:

1. In combination, a rotating cylinder having a corrugated surface, bands for partly surrounding said cylinder, means for moving said bands into and out of contact with said cylinder, a plurality of chains, and means for moving the same into and out of contact with said cylinder, substantially as set forth.

4. In combination, a rotating cylinder having a corrugated surface, flexible bands, means for moving said bands into and out of contact with said cylinder, a plurality of chains, means for moving said chains into and out of contact with said cylinder, brush like strips with means for moving the same into and out of contact with said cylinder, corrugated surfaces projecting from said cylinder, brush like strips for engaging said corrugated surfaces, means for moving said strips into and out of their service position, projecting arms upon said cylinder, a rocking lever, a striking surface for engagement by said lever, and means for causing the lever to be engaged by said arms, and to strike said surface, substantially as set forth.

No. 1,004,330. Motion Picture Projecting Machine. Earl M. Wooden, Yonkers, N. Y.

In Mr. Wooden's improved projecting machine there are many novel points of improvement.

The film driving device is provided with a release, by which the film is released from the driving strain whenever the tension exceeds the setting of a spring. The drive will release the film automatically under conditions where otherwise the film must be torn by the undue strain placed upon it.

The shutter is a four-part shutter. It is illustrated in the figures reproduced herewith. The upper illustration shows the shutter closed, the four wings labeled *18, 18, 18, 18*, meeting in the middle of the film window *20*.

When opening the window, they begin to separate at the middle of the window, and as each wing has but one-quarter of the window to uncover, the window is opened very quickly, and again closed with equal speed. The shutter is shown open in the lower figure.

The framing device comprises a carriage which swings or rocks upon the driving shaft. By this means framing is accomplished without changing the position of any of the three sprocket wheels, the intermittent sprocket being turned as the framing carriage is swung. A lever conveniently placed to the operator's hand controls the framing carriage.

A Moving Pictures Sales Campaign

Whenever you can show a manufacturing process by an actual demonstration you have accomplished more than a half dozen good pages of advertising would do—although the demonstration is considerably more effective if aided by the half dozen pages, says C. W. Dearden in *Advertising and Selling*. This fact of demonstration can hardly be questioned. In the case of a manufacturing plant it is considered one of the best forms of advertising to get possible buyers to go over the plant, seeing things just as they are.

It isn't always feasible to bring the public to the plant, but it is practical to bring the plant to your public. This is one of the forms of our advertising this year, and consists of a motion picture lecture. The pictures show every manufacturing operation in a most realistic manner and the explanation or lecture that accompanies the pictures is exactly the same as though a man was being taken through the mills.

Like every other manufacturing plant we are always glad to have visitors. This is not entirely on account of the advertising value, but because such a visit has educational value for the visitor, which makes it easier for him to understand some of the whys and wherefores of the paper business. Consequently, this motion picture lecture to our minds has the same effect. In fact, even though the lecture has only been given a few times, we have seen the results of the educational factor.

The actual advertising, however, both in the lecture and in the pictures, is reduced to the minimum. In fact, it is subordinated to such an extent that it really develops to the point of one drawing his own conclusions. We feel that those who attend a meeting of their organization, whether of printers or advertising men, come for the purpose of learning something; or hearing, at least, something interesting. With this thought in mind, the motion picture lecture naturally is of rather high standard and each person present goes away with the feeling he has seen and heard something of practical value. And this is just where I think the advertising comes in. That is, a man has seen something he will remember and he will remember the Strathmore Paper Company and its products in connection with it.

Our films are a trifle over 1,000 feet in length, making the pictures and lecture last about 45 minutes. The lecture has already been given a few times, as stated above, and proved beyond a feature of the evening's entertainment beyond the ordinary.

Of Interest to the Trade

American Banquets Employees

On Wednesday, December 27, the employees from all but the producing department of the American Film Manufacturing Company, met at a banquet tendered them by the company. There were about sixty, all told, and many were the regrets expressed that the producing company in El Cajon Valley, Southern California, could not be present.

Employees of the American Film Manufacturing Company at Their Annual Meeting and Banquet, Chicago, December 27.

President S. S. Hutchinson, who presided, called in turn upon various department heads for short talks. The policy of the American was thoroughly discussed and plans made for 1912. All employes were asked to give their opinion on the work and to work in harmony. President Hutchinson, after the courses had been cleared away, rapped for order.

"We have come together tonight," said Mr. Hutchinson, "for the purpose of getting better acquainted and for the purpose of promoting a better spirit, founded on mutual regard and an understanding of the principles on which the American stands. This is the first annual banquet. We are really celebrating our first year in business. The management of the American Film Manufacturing Company is planning another banquet and house-warming at the opening of our new factory, which, it is predicted, will eclipse all previous efforts in this line.

"It was only a few years ago that the motion picture business was looked upon with something akin to contempt by other so-called legitimate businesses. The progress made has been phenomenal. We can now take a pride in our vocation and the fact that we have established ourselves on a high plane in the business world. We are educators, if you please. Press and pulpit have arisen in favor of the motion picture. Its pedagogic powers are becoming recognized among educated men and women. It is only a short step from our present position to that of the public school; and surely you will admit there cannot be a nobler kind of work.

"We are anxious for each and every member of this organization, whether a part of the office, factory or producing departments, to appreciate the fact that we are all working toward a common end for a common purpose. We want to make American films not only the best in the independent ranks, but without peer among all motion picture manufacturers."

Manager R. R. Nehls was then introduced by President Hutchinson. He said in part:

"In my opinion, the purpose of this dinner is not only to get better acquainted among ourselves, but to promote a better understanding among the various departments. It is up to the laboratory force to put forth its very best efforts on all American productions. The office is dependent on the work of the laboratory and must assume all responsibility for carelessness on the part of the laboratory force. After all, a substantial business can only be built on merit, and merit in the motion picture business is largely a matter of much care and attention to detail."

J. R. Freuler, secretary and treasurer of the American and head of the Western Film Exchange of Milwaukee, was then called upon. Mr. Freuler

told a number of excellent stories in his inimitable way and one of them, centering about his own advent into the motion picture business, was relished by his audience. The genial and smiling Mr. Freuler was one of the most popular figures in the evening's entertainment, and those of the American force who know him were glad that he could be present, and those who were not acquainted with Mr. Freuler, were equally glad of the opportunity to make his acquaintance.

O. F. Doud, who has charge of the publicity department, was next introduced. Mr. Doud touched on the new advertising policy of the American for 1912 and the success thus far. Then followed a general program of amusement and a general good time, the members of the staff and employees furnishing a quality of entertainment not to be excelled by any professionals. Everybody enjoyed themselves thoroughly and the success of the occasion has made sure frequent repetitions of its kind.

Kleine to Release Cines

The Cines Company, which for some time has been making feature films and releasing them on the open market, has signed an agreement with George Kleine, Chicago, to supply him with films and sell through him exclusively. Mr. Kleine recently returned from a trip to Europe and New York where he made the necessary arrangements.

The Cines company will make two releases per week to take the place of the two Gaumont releases formerly released by Kleine. The releases will be made through the channels of other licensed films and shown by licensed exhibitors only.

The offices of the Cines Co. at 445 Broome street, New York, will be closed and all business transacted through Mr. Kleine's office at 166 North State street, Chicago. Mr. Kleine will still release, according to the present arrangement, the Urban Eclipse films which he has heretofore handled.

Further particulars regarding the plans of George Kleine for releasing Cines (Italian) films are contained in the following communication:

Chicago, Dec. 27, 1911.

Editor Motography:—I find on my return from Europe an unusual degree of interest among moving picture exhibitors and others concerned as to the changes that will be made in our releases, due largely to the various rumors that have been current recently, and I beg to submit the following facts for publication:

Our contract with the Gaumont Company having expired, we shall issue our last Gaumont release on Tuesday, January 16, 1912. All films of this make which have been or will be issued under our license from the Motion Picture Patents Company will remain licensed, and can be shown in any licensed house. The Gaumont Company's films released after January 16, 1912, will not be covered by the Patents Company license.

Beginning January 20, 1912, we shall release two Cines reels weekly, made by the Cines Company, upon our regular release days, Tuesday and Saturday of each week.

We shall continue to release one Urban-Eclipse reel upon Wednesday of each week, as heretofore.

The Cines Company has never been affiliated with organized independent manufacturers. Before making a final contract with the Cines Company, I looked carefully into the merits of its product with special reference to suitability for the American market, and concluded that no other maker not then licensed by the Patents Company showed such high efficiency, both as to the physical plant and also in the organization of its staff. The Cines organization, as a whole, is most advanced, progressive and complete.

The output of the Cines Company averages five reels weekly, from which we will select our two weekly releases. Of the many advance productions that I saw in Rome, fully 90 per cent were subjects certain to please American audiences.

Our first Cines release will be made January 20, 1912, subject Brutus, the film being an adaptation from Shakespeare's Julius Caesar. It includes the death of Caesar, Mark Antony's speech, the flight of Brutus and his fellow conspirators from Rome, the appearance of Caesar's ghost to Brutus, the battle of Philippi, and the death of Brutus.

I am particularly pleased with many of the Cines comedies, 500 to 600 feet in length. They are of a refined character, without vulgarity, and show genuine humor, such as is appreciated by American audiences.

There are a number of films which were especially made for the American market, and arrangements have been perfected by which there will be a continual output of subjects, which will not only embody ideas that are attractive to our people, but which will be staged with all the magnificence, the striking light effects, and the perfect photography of the best European studios.

We have the exclusive rights to Cines films for Canada, the United States, the Philippines, Alaska and all other territorial possessions of the United States.—Geo. Kleine.

Motography acknowledges with thanks, receipt of a de luxe copy of "The Whole Story of Cinderella," by Henry K. Webster. The edition of this splendid little story was limited to 115 numbered copies, of which ours was No. 92. The booklet was sent us by Stanley H. Twist, publicity manager of the Selig Polyscope Company.

Diamond-S Activities

Colin Campbell and Gabe Pollack, chief producer and head of the scenic department of Selig's eastern studios, left last week for Eastern California, where they have gone to reinforce the Selig producers in the Western studio. While there Mr. Campbell will produce some Selig masterpieces, among which will be several intensely interesting animal pieces which will be even better, if possible, than those which were made last year. Mr. Pollack will supervise the scenic departments.

W. N. Selig just returned from Minneapolis, where he went with a large party of motion picture men to see the production of his New Year's release, "Cinderella," as it was put on by Mr. Rothapfel of the Lyric theater in that town, who is known as the "Belasco" of motion pictures. Mr. Rothapfel gave the Cinderella production with the most elaborate settings and a fifty-piece stringed orchestra with special music and lectures. Mr. Selig was very well pleased with the way the film was handled.

The Western governors who were filmed by the Selig Polyscope Company during their recent visit to the East, have extended an invitation to Mr. W. N. Selig to visit each one of them in their respective states.

Among some of the big productions Selig promises for the coming year are "The Danites" in two reels, one of McKee Rankin's greatest dramatic successes, "The Servant in the House," the wonderful play which set all the country talking last year; "Mizpah," Ella Wheeler Wilcox's immortal masterpiece, over fourteen of the well known Hoyt comedies which were so popular on the legitimate stage some years ago, and "The Coming of Columbus," in three reels; a production that cost over $50,000 to produce, and one which, it is promised, will go on record as the most elaborate film ever shown to the American public.

How Sunlight Screens Are Made

The plant of the Sunlight Metallic Cloth Curtain Company is located in Chicago, and is claimed to be the only screen factory in the United States. It covers a floor space of two floors, 60 by 100. On the lower floor of the building, which is 12 feet in height, are located the frame factory and supply and storage rooms. There is also a perfectly equipped demonstrating room 24 by 50 feet. This room contains standard up-to-date equipment, consisting of a suitable fire-proofed operative room equipped with a No. 5 Power's machine and stereopticon apparatus. There is a 45-foot projection to a "Sunlight" screen 10 by 12 feet in area.

In front of the "Sunlight" screen on the ceiling is a double track on which are carried several screens of similar area, including a pure white screen, an aluminum painted screen, a curtalene or blue tinted alabastine screen, all of which are used for comparative demonstration and can be carried back and forth before the "Sunlight" screen for demonstrating purposes.

The room is also arranged to demonstrate the economic feature that is claimed with the use of a "Sunlight" screen. There are two rheostats in series with which the amperage can be controlled at will and there is also installed an ammeter to register the amperage used. Many exhibitors were sceptical about the low amperage it was claimed could be used. On this 45-foot throw it is shown that 10 amperes d. c. is all that is necessary to get the best result.

On the second floor the ceiling varies in height from 24 to 36 feet and is equipped with one thousand feet of overland rail for the convenient handling of screens, and on this floor is also installed the special machinery and equipment which produces the fabric. It is explained that the reason for the perfection of the result obtained on this fabric is due to its special manufacture. The time required for the process is about twenty days and the completed fabric when ready for shipment has gone through five distinct processes. Time has proven that the confidence of the promoters of this company has been justified. The plant is being operated to its capacity. Within a short period of a few months this screen has become established with the best exhibitors over the country.

Any progressive exhibitor who is at present dissatisfied with his picture result should investigate the "Sunlight" screen proposition thoroughly. Such an investigation will undoubtedly prove to him that a "Sunlight" screen in his theater would not only be a permanent and radical improvement, but practically a necessity.

The particular merits of the "Sunlight" screen are:

That with its use a thoroughly well lighted picture field is secured.

All of the minute detail of the film is brought out to a surprising degree.

The proper perspective is secured and the stereoscopic quality of the picture is brought out in a unique manner.

Instead of being high lighted the general effect of the picture on a "Sunlight" screen is a soft, well-lighted effect free from eye strain and pleasing to a degree.

In other words, the "Sunlight" screen evidently secures for the exhibitors the full value of his film in every detail and effect. It became evident to the promoters of this screen proposition in its early stages that in order to secure an entirely satisfactory result, a perfect installation of this pliable metallic cloth must be secured. After many experiments, Mr. Wylie, the manager of the company, invented a special frame which carries a tightening device and secures a perfect installation. This device, while simple in construction and operation, effects a remarkable result. Patent claims have been secured which offer a protection, and with its fabric of high picture making quality and this patent tightening device the company is able to offer to the exhibitor a practically perfect moving picture screen.

Not being willing to have the fabric installed at destination in a manner which would prejudice the best results, the company has adopted the policy of never selling the fabric without the frame, but in order to bring the price of the complete screen down, at least until they were thoroughly introduced, the frame has always been sold at manufacturing cost. This frame is always used for fixed screen or drop curtain. As a drop curtain it is only necessary to purchase that area of fabric that is actually necessary for the picture field. The frame is installed the same as any other theater drop and operated in the same manner and the balance of the stage area not covered by picture is filled in with any theater drop in use.

The "Sunlight" metallic cloth is claimed to be the only fabric that will secure these high picture results that will not crack or scale when used as a roll curtain. The company manufactures a specially constructed roll suitable for use with the fabric with which the best possible installation can be secured. These three methods of installation make it practical to use a "Sunlight" screen in any type of theater and makes the "Sunlight" screen a thoroughly practical commercial proposition.

Champion Moves Office

The offices of the Champion Film Company were removed from their location on 15th street last Thursday, to a suite in the 45th Street Exchange building at 145 West 45th street. Mr. Dintenfass purchased entire new office furnishings for his new headquarters.

The Champion Company has finished the first prints of their aeroplane stories which were produced at the Nassau Boulevard Aviation Field and have decided on a date early in January for their release. The picture features Miss Blanche Scott and Aviator Hammond in the flying machine work. The first two pictures will be called The Aviator's Success, and Aviator and Autoist Race for a Bride.

Kalem in Italy and Spain

The O'Kalem Company, which did such good work in Irish stories while in Ireland the past summer and autumn, has started out for a long tour through Italy and Spain with increased forces. Twenty people are in the company of actors, camera men, etc., all under the direction of Sidney Olcott, who will direct the productions after the arrival on the other side.

The Kalem Company now has four companies in remote quarters of the globe, two being in California, one in Florida and one in Europe. The New York Stock Company has been entirely abandoned for the present and all talent shifted to the four out-of-town companies.

Scene from American Film, "The Gem Stake Mortgage."

Habit

Editors Motography:—All human nature is a slave to habit. If you want to know how easily you fall under the bondage of habit, start doing some particular thing, the same way every day, for a few weeks, and then realize how difficult it is to do it in any other way. This is very true of business habits, especially if the way of doing business has brought some measure of success. In such cases the mind becomes so narrowed as to be incapable of seeing that there is no other way. All the time, however, there may have been many better ways, bringing twice the success, had we not been enslaved by habit to poorer methods.

There is no more glaring example of doing things wrong through habit, than can be found in the moving picture industry.

The manufacturers to start with, continue under habit, the making of films which all too soon will gather dirt to their utter ruination and yet, are incapable of being washed with soap and water (the only detersives which will remove dirt without injuring films).

Manufacturers are apparently slaves to the habit of caring little for the condition of their handicraft after it leaves their studios, although as a matter of fact, a film is a good advertisement for its maker only as long as it is clean. But for the bondage of habit manufacturers might see that their greatest interest, individually and collectively, now and forever, rested in films of the best possible condition as long as they were exhibited.

The public knows not that a clean film is new, or that a soiled one is old; it simply knows that one pleases and the other does not, and the public is swayed by habit to pay most for what pleases most.

A still more deplorable effect of habit can be found in the exchanges. Not one of them does more towards cleanliness than occasionally to wipe the dirt on a film into the scratches yawning to receive it. This is a habit so fixed that it will require great effort, if it is ever supplanted by a weekly system of washing the dirt out of the scratches and off the film altogether.

A slap-dash habit has the exchanges by the throat. Most of whom seem to thing they have no time propertly to inspect, and much less thoroughly to clean a film. They forget there are twenty-four hours in the day for film exchanges, just as for express companies, postal deliveries and other lines giving quick service.

The exhibitor has been forced into a habit of showing, at best, one clean film, one not so clean, and one which can usually be described as something awful. He knows his patrons enjoy most clean pictures, but he is a slave of habit, under which he has come to believe that three clean reels at one time are an impossibility.

There is a glorious awakening in store for the poor exhibitor, when manufacturers shall all make waterproof films, and when exchanges shall all see the necessity of systematically washing them every week or two. Then will the habit of viewing these clean, beautiful photoplays so enslave the public, that the money now donated by them will be generously multiplied many times over. Then shall the film business come into its own in proportions little dreamed of by those of the present day, buried deep in the ruts of habit.—W. A. Daniels.

Wisconsin Seating Co. Enlarges

The Wisconsin Seating Company, which is the new name of the Wisconsin Lumber and Veneer Company, has just erected a large and modern plant at New London, Wis., made necessary by the great demand for their popular line of opera chairs. The firm advertises that they are in a position to furnish anything in theater seating and will be glad to get in touch with theater owners desiring to know more about up-to-date seating facilities.

Scene from George Kleine's Eclipse Film, "A Woman's Wrath."

Lock Up

Every theater exhibitor in this country can use the useful premium that MOTOGRAPHY is giving to new subscribers this month. A keyless lock is something that every one can find a great many uses for.

This keyless lock we are giving away for less than cost is made entirely of brass and will never rust. It is opened by pressing the correct series of buttons. There are eight buttons on the face of the lock and combinations are furnished, using 2, 3 or 4 buttons. Over 50,000 combinations are possible, so there is less chance of any stranger opening the lock than there is a possibility one of his pocket keys would fit the ordinary keyed lock.

One man in Denver, Colo., has a keyless lock snapped in a large ring and offers a dollar to anyone who can open the lock. For over a year people have tried to win the prize, but no one has succeeded as yet.

Many theaters have iron gates in front of their houses which must be locked at night. Why not use this keyless lock? It is as good as a safe lock. Some theaters use it to lock stage exits, operating room, tool chests, film cabinets; in fact there are a dozen places in every theater where this lock will come in very handy.

It was suggested to us, why not put the lock in the theater lobby and offer a series of passes to anyone who could open it? That is only one way the lock would bring you in dollars in advertising benefit.

Every one is sure of his mechanical ability. People in small towns will try hard to win free tickets and the crowd waiting will patronize the house. Lock it through a big ring in the lobby and get the big advertising benefit. The combination can be changed as often as you wish. Read carefully the instructions before making any change in the combination.

By sending in $2.25 for a year's subscription to MOTOGRAPHY, adding six cents extra for postage on the lock, you get this valuable lock and MOTOGRAPHY. MOTOGRAPHY alone is worth the money. It tells you of all the new films that come out. It tells you what the manufacturers are doing.

MOTOGRAPHY tells you how to get the best results out of your projection machine; how to make adjustments; how to remove the "ghost." MOTOGRAPHY gives you the best pictures of the prominent actors.

Remember, the price of the lock is $1.50. A year's subscription to MOTOGRAPHY is $2.00. You get both for $2.25. Add 6 cents extra for postage on the lock.

Schools Call For "Santa Catalina" Film

The American Film Manufacturing Company is still hearing the echo of its remarkable release of December 14, entitled "Santa Catalina." This film created a considerable furore, not only in motion picture circles, but among scientific men and students generally, and was described in December MOTOGRAPHY.

The fact that these pictures are the only ones of their kind has made them valuable acquisitions to the

cause of science and education generally, and the American is receiving requests from public school principals and other educational bodies asking where the film can be obtained for lecture purposes in assemblies and school rooms. The American is to be congratulated on producing this film. The principal dailies in America, through the associated press and kindred news bodies, gave much valuable publicity to the picture.

Warren Kerrigan, the leading man of the American Film Manufacturing Company came in for a full page writeup in the Chicago *Tribune* on Sunday, December 31. Mr. Kerrigan was shown in the center of a large heart, surrounded by reproductions of love letters that he has received during his years as a motion picture actor. The article was headed, "How It Feels to Be a Motion Picture Matinee Idol." It did not publish the writers' names, of course, but that fact may not alter the situation materially.

Despite beliefs to the contrary, the new $50,000 Chicago factory of the American Film Manufacturing Company is now ready for occupancy. The structure was promised by architect and builder for January 15, and the former managed to precede the cold weather by a few days. It is a thoroughly modern property, no expense being spared in providing all those facilities which make for more efficiency and better work. The first actual work will be started in a few days, when the present factory quarters will be vacated. The property is located at Evanston and Devon avenues, Chicago, close to Lake Michigan, where clear air and a maximum of sunshine are assured. The realty secured was purchased from Edward Hines, the lumber magnate, at an extraordinary high price for factory property. This is due to the fact that the neighborhood adjacent to the plant is one of the best in Chicago for residence purposes, and has advanced in value more rapidly than any other. It is believed by President Hutchinson that the realty itself is an excellent investment.

American Players as Firemen

The studio of the American Film Manufacturing Company, in California, ordinarily a scene of activity, was greatly augmented by the appearance of the state fire warden recently. In southern California martial law supercedes the civil law in case of brush fires, and it is only necessary for the warden to tag a man and say "you're it" in order to obtain recruits to fight the fires that rage along the mountain sides and valleys when the sage brush, dry as tinder, affords food for the flames.

Mr. Dwan, the director in charge, was busy rehearsing some scenes completing a picture, so that he could allow Thanksgiving day to all the employes of the company, when the appearance of the fire warden greatly accelerated the action in the scene. Performers and cowboys who every day face the muzzle of a forty-five without flinching, faded away into secret hiding places before the advance of the man with a star.

In their hurry to seek other haunts where fire wardens are conspicuous by their absence, one of the cowboys fell down and the others behind him, stumbling over his prostrate form, soon made a human pyramid five men deep. The man with the star promptly approached the struggling heap and pressed them into service, regardless of the storm of protest that it would interfere with the making of motion pictures. They were hurried to the scene of the fire and for forty-eight hours without sleep or rest, struggled against the advance of the fire fiend.

Their Thanksgiving dinner consisted of dried corned beef served them on the job. At last, dirty and smoke begrimed, they were allowed to return to town and rest. The performers were more fortunate than the cowboys and hurried into town, for they realized that if caught and forced to fight the fire it would sadly hamper the work in the studio, and the compensation paid by the state would never cover the amount lost to the company in time or money. Curious when the fire warden attempts to select the high-salaried company of talented people, and the harm he could do a corporation like the American Film Manufacturing Company, is almost incalcuable. Without looking into the pool rooms or places where men in need of employment congregate and actually seek the fire warden for a chance to earn the compensation given, he immediately decends on the studio of the company, not a single man of whom is a tax payer or a citizen of the state. For the future protection of the company whose interests he represents, Mr. Dwan has taken legal steps to prevent a recurrence of the incident.

The Eclair Company has adopted a unique idea to be embodied in a series of coming releases. The plan is to write scenarios and produce the stories around one of the crafts or professions of the present day. A long list of films of this character will be produced which will be semi-educational in character as well as being made interesting for the story end of the productions.

The Eclair plant in France has added a scientific department. This department is to be under the superintendency of a noted French scientist and will produce films showing microscopic views of various germs and forms of life which have to do with the health of the individual citizen in everyday life. Many of these films will be of the colored variety. They will be shipped at an early date and will probably be released before another month.

A moving picture theater of an unusual character has just been opened in Brussels under a title which being translated means "Touring the World." A different series of films will be shown every week, each series dealing at length with one of the world's great cities, which will be shown in every aspect. In order to stimulate interest in travel, souvenir postcards, showing views taken from the films, and bearing the advertising and announcements of the theater, are being mailed in great abundance.

A letter received by the American Film Manufacturing Company from I. Feinstein, manager of the Jefferson theater, 465 First street, Hoboken, N. J., indicates with what cordial approved American films are regarded by exhibitors. Mr. Feinstein says:

What films do I get first run? American. What films do I want the most? American. What films bring me the business? American. I could write like this all day, and without exaggeration safely say there is no better film made than the "American film." "Enough said." If you have a mailing list, place me on the top immediately and oblige your friend and well wisher.

Among the Picture Theaters

PERSONAL NOTES.

An interesting event of the month in MOTOGRAPHY's office was a call from Harry A. Spoor, European representative of the Essanay Film Manufacturing Co. and a brother of George K. Spoor of that company. Mr. Spoor told some unusually interesting anecdotes about the film business in Europe, and particularly in England, Mr. Spoor's office being in London. He paid MOTOGRAPHY a number of compliments and called our attention to the fact that the cut in the Essanay advertisement in the London *Bioscope* of December 21 was taken from the front cover of November MOTOGRAPHY. Mr. Day of the Essanay company brought Mr. Spoor to our offices and made interesting comments on his narratives of English life.

We are in receipt of a card from W. T. Horne, who operates the "House With the Gold Pillars," in Los Angeles, Cal. The card shows a picture (a printed picture, mind you) of "Old Pop" Quigley and "Kid" Horne arriving at Hotel Davenport, Spokane, in 1913! That is just like Horne, keeping a full year ahead of the game. Its hard to keep up with him, but—Happy New Year for 1914, Horne!

It is stated that Florence Lawrence and her husband, Director Salter of the Lubin company, have left for Europe, the occasion being Miss Lawrence's health.

Jack Standling is reported to have left the Lubin stock company.

May Buckley, favorably known to regular theater-goers, has joined the Lubin stock.

ROLL OF THE STATES.

ARKANSAS.

The National Theater Company of Memphis, has purchased the Lyric and Airdome theaters at Paragould, formerly owned by H. J. Whitsitt.

The Lyric theater, 512 Main street, Little Rock, has been thoroughly remodeled and artistically decorated, a new mirror screen, said to be the largest in the state, has been installed and the house has been reopened with vaudeville and moving pictures. It will be known as the Moon theater and will be under the management of Frank Senyard who proposes to give the public the best in vaudeville and moving pictures. The price of admission is 10 cents for adults and 5 cents for children.

CALIFORNIA.

The Oakland Photo theater is a handsome and up-to-date picture house recently opened in Oklahoma. The house is a model of comfort and convenience. The furnishings, draperies and decorations are all of the French Rennaissance period of architecture. The seating arrangements, opera chairs of upholstered leather and circassian walnut, will accommodate 1,700. The ventilating system is a marvel of skill and ingenuity and in fact the entire equipment is the best to be secured. Some of the special innovations are a ladies' rest room with a matron in attendance, a section reserved in the balcony for gentlemen who desire to smoke, also a section especially reserved for ladies who desire to wear their hats during the program.

The Nestor Film Company, temporarily located at the corner of Gower and Sunset boulevard, Hollywood, recently closed a deal for a five and a half-acre lot on Hollywood boulevard, Benefit and Hoover streets, Hollywood, on which a plant will be established at a cost of between $15,000 and $20,000 for the manufacture of moving picture films. The work of construction will be rushed as the company hopes to occupy its new location during the present month.

The new Mission Moving Picture Theater, seating capacity 400, was recently opened at Santa Barbara.

The Mikle theater, a new moving picture theater, is being erected at Oak Park, at a cost of $14,000.

COLORADO.

The Kauffman Kelly Company, Seattle, Wash., will erect a new $20,000 theater at Palisade.

The new Odeon theater, a handsome new picture house, recently opened at Colorado Springs, is said to be one of the largest and finest motion picture houses in the west. The interior is finished in the arts and crafts style, aiding much in the lighting system, which is on the eye-comfort plan. Men's and ladies' retiring rooms are fitted up in the basement, and the comfort of the patrons has been taken into consideration in all parts of the house. The seating capacity is 720. The ventilation is perfect, there being two large air shafts in the ceiling, each 4 by 10 feet.

CONNECTICUT.

The Orpheum motion picture theater was recently opened at Thompsonville

DISTRICT OF COLUMBIA.

The $125,000 theater erected by the government for the benefit of the inmates of St. Elizabeth's Insane Asylum is now in operation. The theater is to be devoted to the display of moving pictures which are declared to be a great aid in curing insanity. The theater is called Hitchcock Hall, in honor of Ethan Allen Hitchcock, who was Secretary of the Interior at the time the appropriation for the erection of the building was passed by Congress.

A moving picture plant, the first to be established in the Orient, will be erected in Manila in the near future if the plans of the Oriental Moving Picture Company, recently incorporated, are carried out. The new company intends to establish branches where moving pictures may be shown in nearly every town in the Philippines, besides in the larger cities of China and Japan. Branches in Hongkong and Shanghai have already been planned for.

DELAWARE.

The Unique theater of Cumberland recently moved into larger and more commodious quarters and the management will spare no effort to please its patrons.

Scene from "Merely a Millionaire," a Selig comedy written and produced by Hobart Bosworth. Millionaire Brewer and three friends are to attend a ball disguised as tramps. Brewer hires a real tramp to go in his stead. The tramp is complimented on his "make-up," has a gay time, and wins a prize.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

MOTION PICTURES

MISS VEDAH BERTRAM
WITH ESSANAY

REMEMBER

KOSMIK FILMS NOW INCLUDE

Cin-es and Urban-Eclipse

Kosmik films offer a splendid line of dramas, comedies and travelogue subjects, and often magnificent feature productions like "*Brutus*" and "*Joseph in Egypt.*"
Our three releases per week are forming an important part of the weekly program of every progressive exhibitor. Among our best current releases we might mention:

"A Sister's Stratagem"

(*Cin-es release of March 2, 1912*)

An extremely clever comedy of the better class. Full of wit and humor; the outcome is always in doubt until the very last.

"The Chauffeur"

(*Cin-es release of March 5, 1912*)

Another first-class comedy-drama. It has a very clever plot and is especially well acted. Don't fail to book it.

"The Song of the Gypsy"

(*Eclipse release of March 20, 1912*)

The story of a gypsy girl who becomes an opera star, but forgets her benefactor until too late. A strong drama, full of heart interest.

MOTOGRAPHY

WITH WHICH IS INCORPORATED THE NICKELODEON

VOL. VII. CHICAGO, FEBRUARY, 1912. No. 2.

THE EXHIBITORS' CHARITY.

THE poor have long had cause to be grateful to the motion picture. It has brought romance into their narrow lives, and the light of the Great White Way into the dark streets of the tenement districts. It has given them a taste of "life" as they pictured it to themselves—that life, far removed from their daily routine, where men do brave and wonderful things for the sake of beautiful women, where strange rivers flow through scenes of incredible grandeur, where pleasure and wit and adventure take the place, for an hour at least, of care and irritation and sordidness. It has given them a rich man's entertainment at a poor man's price.

Yet there are always some who cannot afford even the picture show—the very poor, to whom the insignificant nickel means the loaf of bread for which they are starving. Every big city has them and contributes for their relief a large but always wholly inadequate sum of money.

It is quite outside the bounds of commercialism that the picture shows should contribute to those who are unable to contribute to the picture show. That they have done so is indicative, first of all, of the big heart of the exhibitor—the broad humanity of the men who, prosperous now, may have felt themselves in past years the pangs of poverty.

The Motion Picture Exhibitors' League of America fixed January 23 as a day of free will offering, and upon that day it turned over to the poor in Chicago the total receipts of all the theaters it represents in that city. The members asked and received permission of Mayor Harrison to turn the money over to him, he in turn to present it to the United Charities for distribution. The amount turned over to the mayor was $3,285.75, approximately 200 nickels from each of 300 theaters. In return for this the exhibitors got the satisfaction of having done a good deed, and the undoubted blessings of the poor. They did not even get the newspaper publicity which usually follows unusual philanthropies, and which was really their due.

In Cleveland the exhibitors gave to charity only one cent from each paid admission, and the amount raised for the Associated Charities of that city was naturally much smaller than in Chicago. It is characteristic of the men in the industry, however, that a voluntary collection at the regular meeting of Cleveland Branch No. 1, Motion Picture Exhibitors' League of America, January 17, netted $64 for the charity.

Notwithstanding the fact that Chicago so far surpassed Cleveland in this philanthropic movement, the Ohio exhibitors received by far the greater amount of publicity. Several of the Cleveland papers gave as much as half a column to the project, even printing the special programs which were prepared for the occasion through the co-operation of the exchanges. What is the matter with the Chicago newspapers?

THE HOUSE ORGAN AGAIN.

ONLY in a very young industry are "house organs" as numerous as they are in the film business. Other and older industries have all had them, have discovered their weaknesses and have discarded them. They will travel the same road in this business; sooner or later those who now print their own little exclusive journals will realize that they are not being read and that they represent a lot of wasted money. Then, and not till then, will the trade paper receive its proper recognition.

An excellent argument against the house organ was presented some time ago in *Advertising and Selling*, by F. V. Clark, business manager of the *Engineering Review*. We reproduce his statement here to give the point of view of a man who has intimate knowledge of the subject:

> This is not an advertisement for the New York Central Railroad, nor is it a socialistic attack on the luxuries of the rich, but let us compare the Twentieth Century Limited with the privately chartered special train.
>
> You want to go to Chicago and you want to go there as quickly as possible and with the greatest comfort, so you charter a special regardless of the great cost. All goes well until word comes along the line that the express is due and you promptly go on a siding to give the regularly scheduled train the "right of way," and have the dissatisfaction of looking from the window of your berth to see one hundred or more men, who have paid far less than you, go whizzing on ahead to the destination for which you are bound. You have the satisfaction of knowing that your train is down on the train dispatcher's schedule as Mr. Smith's special, but is this assisting you in getting anywhere?
>
> It is a gratification to some concerns and individuals who publish house organs to see the name of their company emblazoned on the title pages as the publishers, and to feel that they are playing a distinct part in the dissemination of knowledge.
>
> These people mail their house organs to a selected list, and a considerable portion of them may reach the desk of the man for whom they are intended. He glances at the house organ, remarks perhaps on its beauty and attractiveness and lays it aside for reading at some future time—or, if he knows from experience how unlikely that time is to come—he consigns it at once to the waste basket to which it is ultimately doomed at its best.
>
> The next piece of mail matter is the regular trade journal covering the activities of his field. This is, if it is the right journal, the one paper that he is bound to look through whether he has time or not. If your advertisement is in this paper it reaches its destination on schedule time, the same as the Twentieth Century schedule express does, and is not sidetracked as the special house organ and the special train both are.
>
> Consider again the cost. The Twentieth Century express is a co-operative affair; every one of its one hundred passengers pays his share of the total cost, and in no case does this share approximate anything like the cost of the special.
>
> The established trade journal is also a co-operative affair. Perhaps two hundred and fifty advertisers are sharing the cost of its production. The total cost is far in excess of the house organ, but the cost to each advertiser is but an insignificant fraction of the same.

The money spent in film house organs amounts to several thousand dollars a week. Their efficiency is about ten per cent. Ninety per cent of this tremendous expenditure is thrown away. The sooner these amateur publishers realize that fact, the sooner will they be able

to put part of that money back in the treasury, give a more consistent support to the legitimate trade journals and get real returns on their advertising investment.

Legitimate trade journals have been directly responsible for the upbuilding of hundreds of concerns that lead their respective fields today. The house organ cannot claim a single success traceable to its influence.

ORGANIZATION ABROAD.

ORGANIZATION fever has reached England. An earnest attempt to form an exhibitors' association is being made there, and it will succeed, unquestionably. But the film man's resistivity is high, and the Briton is no exception. Our London contemporary, the *Bioscope,* reports that at the first meeting, on January 24, the attendance was small. Nevertheless, some progress was made, a committee appointed, and the dues decided upon—to be five dollars per exhibitor, and half rates for additional theaters belonging to the same member.

Great Britain needs an exhibitors' association just as much as we do here; and the start is not very auspicious. We would suggest to our English contemporaries that they publish some data showing the progress of the Motion Picture Exhibitors' League of America. This body is now established beyond any chance of mishap, and is growing stronger every day. If the English exhibitors are willing to take an example from their American brothers, let the coming American convention, to be held in Chicago next summer, serve as the signal for the picture theater interests of Great Britain to get together—and stay together!

LONG RUNS.

KINEMACOLOR THEATER, in New York, has run pictures of the coronation of King George and Queen Mary of England nearly 400 times without a break, and as rule the house is filled to capacity. The ordinary picture theaters change films every day for fear of losing patronage if they repeat. What is the answer?

At first thought one may be inclined to put the responsibility for continued attraction on the feature of color which is Kinemacolor's big claim. There is no denying that pictures in natural colors are more attractive to the normal human being than black and white pictures. The tints of nature serve to make more nearly perfect an art already marvelous in its close imitation of life. But we cannot concede that a colored film, in the present state of the art, will fill houses for 400 runs as against a single day's run for black and white. Nor is it probable that the coronation, epochal as it was, had in it enough of interest for Americans to keep them in attendance indefinitely. The only two special features of the Kinemacolor Theater—the topical subject and the color quality—are not sufficient to explain the success of the long run.

The only answer to the problem is that exhibitors in general do not yet know the boundary lines of their business. The greatest competitor of any film released today is the film released tomorrow. In other words, the best film made today could be run and run until it was worn out and in the big cities at least it would always draw a good house. We take off a film not because everybody has seen it, but because a new one is waiting to take its place.

Some recognition of that fact is being manifested in the method of showing the new feature and "state rights" films. Since these are not produced with any regularity or at given intervals, each must be run at least until another is produced to take its place, and sometimes much longer. And there are no complaints that the attendance falls off after the first day.

We have always believed that, in large cities at least, the daily change is a mistake. Under the present system of manufacturing and marketing, of course, the exhibitor must change daily to show even the best selections of the weekly output. But would it not be better for all concerned if the biggest manufacturers turned out no more than one film a week, concentrating all the present effort and cost on that one? This is exactly the reverse of the present tendency, which is to increase the output at all costs. And we are getting some splendid films, even with the rush and pressure of a film a day. But what would we get on the film a week basis with the same material, the same expenditure? Naturally, a a film not less than four, five or six times as good.

Such films, of course, would have to sell at a proportionate price. The exchange man perhaps would have to pay five hundred dollars, or even more, for a reel. But the exhibitor's weekly rental would be no higher; he would merely receive and run fewer films. Th quality would be so much better that he could raise his admission price, and the Kinemacolor and state rights cases prove that he could fill his house. The standard would be raised all around, and that always means better business and more money.

THE POSSIBILITIES OF FIRE.

PICTURE THEATER fires are extremely rare. We have said this before, and only repeat it here to disarm any possible criticism of our somewhat sinister heading. With a total of some 12,000 theaters, we could have a fire a week and still not exceed one-half of one per cent. The proportion is actually very much smaller than that—so small, in fact, as to be practically negligible statistically.

But this freedom from fire is due wholly to careful management and wise precaution. There is the possibility of fire in every public gathering place. While the picture theater is not at all liable to fire, neither is it immune from the chance. And this is not due to any peculiarity in the business, to the use of films or of electricity, but simply because in any group of a hundred or more persons, some one is apt to be careless. Therefore it is wise not to draw too great an inference of security from previous immunity. The price of safety is eternal vigilance.

For purposes of comparison and perhaps of admonition, let us see what the fire danger is in general. The year has started off with fire losses at the rate of a million dollars a day. While much of this was due to the prolonged and excessive cold weather, yet it does not promise well for the reduction in the fire waste which it was hoped to secure in 1912 as a result of the educational work done last year. The 1911 fire losses were $234,337,250, but the loss for January of this year was 50 per cent ahead of the same month last year. As usual, most of these fires were due to the national fault of carelessness. While zero weather may account for the unusual number, most of them were easily preventable. Overheated stoves and furnaces, defective flues, and the thawing of frozen water pipes with burning paper were the chief causes of the cold-weather fires. But it is carelessness approaching criminality to run

stovepipes near wood, to build chimneys improperly and leave them uninspected, to start a bonfire by a lath partition in a home to thaw out frozen pipes, and to do all the other foolish and reckless things that make the fire waste of the country a quarter of a billion dollars a year.

The people have this reduction of the fire waste and its terrible toll of life and property in their own hands. So long as they are indifferent to the ruinous drain upon the national resources involved in this needless waste, so long as they lack the sense of individual responsibility for the proper protection and condition of their own homes and communities, so long will the fires continue and multiply. Abroad, the man who would throw a match into a heap of rubbish, or who would fail to protect an overheated stove or flue, would go to jail. And the fire losses abroad are one-tenth what they are in this country, while the loss of life is nominal in comparison. With the majority of the fires due to carelessness, individual and municipal, the urgent need is the development of a sense of personal responsibility for greater precautions, especially in such a time as this, and January losses of a million dollars a day should help enforce the lesson.

On December 7, 1911, a fire occurred in the Lyric Theater in El Reno, Okla. An inspection and report were made by the Oklahoma Inspection Bureau, whose manager is C. T. Ingalls, and the inspector, L. A. Barley.

The fire originated in the picture-machine booth by the film coming in contact with the lamp house. This was due to the failure of the take-up device to work properly, the film thus being allowed to run out over the machine. The operator was outside of the booth rewinding a film when the accident occurred, but ran into the booth and tried to extinguish the flames with a coat. His efforts were unsuccessful and he was seriously burned in the attempt.

Two extra films outside of the booth were also destroyed. The three reels burned were supposed to be non-inflammable. The machine was operated with a motor and equipped with magazines for booth reels. The booth was of iron construction with a vent pipe to a second-floor hallway. The openings in the booth were not arranged to close automatically, and a small opening on the rear side, although equipped with a gravity door, was not closed during the fire. The operator was also unable to get the main door closed.

This is an unpleasant subject. We are glad to say it is also an infrequent one. The public is safer in a motion picture theater than in a legitimate theater, and just as safe as at home or in hotels. This statement we are prepared to prove, and we recommend that it be brought to the attention of the audience in every picture theater and to the local newspapers in every community. But even the exceptions, like that noted above, should not occur. They need not occur. Care is all that is needed.

MORAL STATUS OF THE PICTURE SHOW.

UNDER the above title Rev. Frank Fairfax says, in the London *United Methodist*:

"We religionists inveigh much and often against the popular quest for pleasure. We set it down as an indubitable mark of the materialism of the age—which is doubtless very true. But hardly any of us would deny the right of people, in these days, to seek some sort of pleasure. The spectacle of the virtuous husband content with his fireside, and a whole group of sons and daughters mightily absorbed in studies or hobbies at home, is rare enough—even in Christian homes; and we are reconciled to an order of things in which it is common for people to pay to be amused. In fact, our churches, almost without exception, cater in small ways for this sort of thing. I would suggest, therefore, that we Christians honestly try to make a distinction between pleasures demonstrably bad, and pleasures not bad, but which our own active life perhaps finds no room for.

"There are pleasures, we must admit, which play a conspicuous part in modern life that cannot, on any honest reckoning, be called bad. I have in my mind a concrete example—the cinemotograph show, picture-drome, electric theater, or whatever it is called. I went to one quite recently. It was handsome outside; highly artistic, in fact. Inside, it was clean, well-ventilated, comfortable, cheap—the 'swells' sitting behind in the sixpenny seats. (I was not a 'swell.') The pictures of the week's events I missed seeing, but was assured that they are always fairly accurate. I chuckled silently at a remark on the programme: 'Keynote—Refinement.' But it was a just advertisement; there was nothing that in the slightest degree pandered to the vulgar mind. While the orchestra was playing some good music, including a selection from the immortal Wagner, we had a variety of moving pictures fully in accord with the management's standard of 'refinement.' There were the comic items, 'Hungry Hank's Hallucinations,' an incongruous dream of a dirty, tattered tramp; "Soldiers Three," the adventures of some Scotch soldier laddies who had a day off; and "Bill Tries to do His Own Washing," the title of which vividly suggests the thing. Anyone who has seen a cinematograph will know, without any detailed description, that for something uproariously funny you cannot better these moving pictures. There were also pictures showing agriculture done by motor, as compared with the old methods. And there were three items 'dramatic' and serious, which deserve special mention. One, 'The Snares of a City,' gave us a shopgirl, lured by the sensualist junior partner, at whose sumptuous hotel she dines but whence she is rescued in time to avert disgrace. There is great joy in the old home when she returns to them; and the satisfaction of the father and mother was reflected unmistakably in the faces of the audience. The next item of the thrilling and dramatic order was a story of heroism amidst troubles with Red Indians; heroism followed by amoristic tribulations, and ending with domestic happiness. Lastly, 'The Cowboy's Innocence,' which 'fetched' the audience more than any other item, was a sterling vindication of the virtues of honesty and courage. Nothing moved the people more than the sight of a little Mexican girl risking her life in order to see justice done to cowboy Bob. And I had always imagined London working-classes as espousing the vulgar and gloring in the detestable!

"The fact is—if we will only take the trouble to find it out—that the people's taste in amusements is distinctly improving. Even the London office-boy has a soul above the unclean. Granted that people have a right to be amused, it is a happy feature that amusement is becoming, in small ways, educative."

The approval of the clergy is always worth while. We may call them narrow minded when they declare against them; but with the majority of the public their decision has great weight.

Illinois Exhibitors' Banquet

The Second Open Meeting

THE second annual open meeting of the Illinois Branch No. 2, Motion Picture Exhibitors' League of America, was held at the Sherman House, Chicago, Tuesday, February 6. The hour was set for eleven o'clock, night, in order that exhibitors might be denied an excuse for non-attendance. Tom Norman said he would stay with the late finishers who were still indulging the Dutch lunch at four a. m. Wednesday, February 7.

It was a harmony meeting—an earnest of the big national convention that will be held in Chicago this year at a time not yet determined upon.

The Chicago exhibitors are getting on. They started out right, barely a year ago. Those who were visitors and guests and members then must have been pleased at the splendid showing of Tuesday night.

It was disappointing that the national officers, president and secretary, failed to appear, but the program was complete even with this curtailment. There were more than two hundred people in attendance and everybody had a good time, because most of them were called upon to say something and that was what they said. It wasn't anything like a grouch conference. Those skeptics who thought the exhibitors would not hold together have at least another thought coming. These open meetings tell too clearly what is going on in the closed meetings. The treasurer says he has money left. Has been accused only recently of being long in his accounts. Confessions like this mean that Chicago exhibitors are becoming acquainted with the knowledge that there is strength in organization; that it is mutually beneficial to pull together; that their interests are pretty much alike.

Convention of Illinois Exhibitors, Chicago, February 6.

After the greetings came the invitation to participate in a sumptuous Dutch lunch that had been prepared by the arrangement committee, consisting of Messrs. Frank, Hull, Gelder and Ascher. It was a place where the rubbing of elbows meant fellowship. Probably an hour of this sort of thing before the assembly repaired to the banquet room and were seated before the officers of the local league. President George Henry courteously announced that F. O. Neilsen would deliver the address of welcome and that Chris Whelan would do the honors as toastmaster, who called upon R. R. Nehls, general manager of American Film Manufacturing Company of Chicago. Mr. Nehls spoke for the welfare of films, looking into the future. He emphasized the importance of interdependent relations as they concern the manufacturer, the exchange, the exhibitor and the public.

W. A. Daniels, president of the National Waterproof Film Company, Chicago, captured the honors of the evening by a comedy address involving licensed trade-marks. He associated the well-known labels with the common hen's egg, keeping well in mind his favorite duck. Mr. Daniels' duck is a duck, not a drake. You can tell it by the lack of curve in its tail. He said:

MR. TOASTMASTER AND LADIES AND GENTLEMEN:—

I presume you have all seen a picture of my progenitor, Daniel, standing calmly in a den of hungry lions, and that you all know his complaisant look came from a feeling that after the feast he would not be called upon to say anything.

As I face the lions in the film business this evening, I gather confidence from a belief that not one of you is hungry, but for all of that, I am sure I do not wear a complaisant look, for to tell the truth I am somewhat disturbed for a subject which I think will interest you. As shop-talk is barred I have been debating in my mind whether to address you on proto-plasmic evolution or metaphysics, but as I know nothing about either of them, I have decided to talk to you upon the subject of eggs; just plain eggs, and point out a few analogies between eggs and the film business.

When you buy eggs always inquire about their condition, never ask when they were released. In selling eggs, no matter how fresh they may be, do not advertise them as "first runs." It is not well either in selling eggs to stipulate for their return in seven months, for the checking of such goods will be bad business. In eating eggs avoid the yolk, otherwise you will get into your system some streaks of yellow.

Some eggs are like some people; they look good on the outside, but when you come to know them intimately you discover that only a very thin outside shell covers a very bad interior condition. There are some bad eggs right in the film business, but I am happy to say that I do not see any of them here this evening.

It is very easy to lay an egg—you just pick it up and lay it where you want it. The great difficulty in the egg business is in the making of them. The process is not patented, but the secret has long been held by a fowl conspiracy. The producer of eggs, like the producer of moving picture films, always keeps in mind the setting. Eggs are all made waterproof, showing the good sense of those who make them.

Speaking of eggs, did it ever occur to you that all of the licensed film trade-marks came from eggs, or else reminded us of them? For instance, there is one trade-mark which is all "splattery" reminding us of an egg dropped from a second-story window. It should not take you long to guess the one I mean. If William Kalem Wright were here I am sure he could guess, and that he would be right. Then there is another trade-mark which would remind us of eggs, if we could only be sure that the sign was of a real rooster and not a Capon. (Thanks for this burst of applause.)

You know all feathers come to us via the egg route, so when we find a trade-mark which is part Indian Head and part feather duster we are again reminded of eggs.

The Bee is noted for its industry and a sharp business end. It is also a prolific egg-maker; the Queen bee in season laying as many as three thousand eggs per day, and it is probably because of this fact that the American Biograph Company adopted for its trade-mark "A B."

The letter "S" is always found in eggs—e-g-g-s. It is also found in films, and soil and scratches, and also makes one of the most appropriate trade-marks in the business.

The Edison signature trade-mark was originally written with a quill, the product of an egg, and their initial "E" stands just as forcibly for eggs as it does for Edison's.

Another manufacturer has seized upon the old Liberty Bell for his trade-mark because, as he says, it first proclaimed the hatching of American freedom. Then we have the Vitagraph mark, clearly an egg product, part American Eagle and part Plymouth Rock.

In polite barn yard society, Melies is pronounced "Me-lays" and the hen which pronounces it with the greatest frequency is counted a star, hence—The Star film trade-mark.

All Italian film trade-marks are from the eggs of the guinea hen. Then there are other foreign marks some of which are imported, but which a German friend of mine tells me are mostly Zu Kleine to talk about. So I will just call your attention to one more of the American products, the renowned Duck. The duck has no trouble in tracing its ancestry to an egg, nor impressing the beholder of the advantages of being waterproof. This is the trade-mark which our office boy Bennie makes speak in a little poem which reads:

Mother, can I go out to swim?
Oh, yes, my duckie daughter,
Since Father has made you waterproof,
You can't be hurt by water.

In conclusion I want to thank you all for the privilege of being with you this evening, and especially for being with you now at the end of my remarks, for I realize that eggs have hastened the departure of many a speaker long before he was half through. I thank you.

At this point the toastmaster referred to his unfinished business, that of reading a mass of telegrams, letters, etc., from friends of the league. Following this change in program, the assemblage was treated to some songs.

Police Censor Tischart told something of the changes that had attended films since his duties required their supervision and inspection. Some of the boys tried to hear him explain the cut-out in "Brutus," which prevented the act of killing Caesar, but it didn't come through. But even at that Tischart has a host of friends who are happy when he is around.

And then some more singing.

Joseph Hopp, president of the Standard Film Exchange, was called upon to tell "The Value of Advertising." He didn't follow his assignment. Joe knows the value, alright, but he didn't divulge any secrets.

All of the branches of the General Film Company were represented and each branch had representatives who expressed delight at being guests of the exhibitors. Following this outburst of sentiment the toastmaster sang, "Silver Threads Among the Gold." And he sang it like a house-afire. A number of exhibitors bid for next week's time, offering a deposit of cash; but the singing toastmaster declined on the grounds that he was booked solid for the season; or at least till C. A. Anderson went fishing.

Among other speakers were John Rock of the Vitagraph Company, James McQuade of the *Moving Picture World*; Ed J. Mock of MOTOGRAPHY; Stanley Twist of the Selig Polyscope Company; William J. Sweeney and Sam Schiller.

The singing of various music house representatives was of superior merit and enlivened the proceedings.

NOTES.

If you can't attend a meeting of motion picture exhibitors, you should send a letter or a telegram, or both. Exhibitors hold their meetings between midnight and daybreak—the element of time cuts no ice—your communication will be read, and what is more, it will be encored.

Joe Hopp was assigned the subject, "Value of Advertising." Hopp shows his longheadedness because he declared for an open market, something that is sure to bring applause from the press representatives.

R. C. Seery was called upon to address the meeting, using for his subject, "Troubles of a New Film Exchange." The announcement followed that Seery had gone home, which was a tribute more eloquent than words. Every exchange has its troubles.

"Pop" Daniels compared the licensed trade marks with eggs, but he stopped with the licensed makers. Stringing the wheeze along, it doesn't require much strain on the imagination to refer to Thanhouser as Hen-Houser; and Nest-or isn't so bad as it might be; and Rep has sprung a cross between the Vitagraph eagle and Pathe's rooster, which is some chicken; and Rex spelled "wrecks" would indicate the condition of a crate of 'em shipped in by express from the country, wouldn't it? And if you will examine carefully you will find feathers on the Flying "A"; and if you care to go further with this thing you might find a place to work in the pip and other poultry affections!

It was unfortunate that W. N. Selig had to be carted away to the hospital on the very day of the festivities. He is still having trouble with his arm, the result of that dangerous assault in Los Angeles when one of his Japanese employes made a target of him.

Toastmaster Whalen is a fine discriminator. He knows how to make his program. That is why he heads his list with the best talent. It gave Nehls and Daniels the honors. When the booking lagged Chris sang his own song.

L. H. Frank, chairman of the Dutch lunch committee, must have had large experience in the preparation of such luncheons, because everything was in the bill of fare from a loose spigot to a dill pickle.

Sam Schiller was there all lit up in his magician's suit of overcoats and with the only speech that ended with an exclamation point.

Did you present your invitation at the door?

John Rock lost the speech that Ben Beadell had prepared for him. That's what follows when you post a hey rube!

Stanley (Chicken) Twist is a better speechmaker than he is a Kelley pool player, anyway!

The delegation that attended the Cleveland convention and dragged out the big Chicago show held a reunion which broke up when somebody yelled "turn on the fan!"

It took Big Bill Sweeney to compliment the ladies. Now what do you think of that sly old rascal? Whatever you think—"tell it to Sweeney." It's his brand and he holds the copyrighted title.

Well, where will you find the best film magazine if this isn't it? Now, everybody, all together—say it! And who, in m. p. trade journalism, can make a better speech than our sandy-complexioned friend McQuade—the best-natured Irishman in town?

The entire affair was passed by the Chicago Board of Censors. Mr. Tischart did the reviewing.

Thought Daniels would duck waterproofing, didn't you? Nix, never!

Isn't Sid Smith the active little conventioner?

You have to hand it to C. A. Anderson. He was bound everybody should have a good time.

A pair of good openers—Neilsen and Nehls.

Scene from the American Film Manufacturing Company's "After School."

The Evolution of a Picture Show

By Mabel B. Ury

From the Twentieth Century Magazine.

B. F. KEITH'S Bijou theater is one of the oldest playhouses in Boston. Many an artist of fame has been applauded within its walls. As long ago as 1835 a theater existed on its present site, known as the Lion Theater. Booth the elder and his contemporary, Barrymore, were among the early attractions. Following its first dramatic effort, it was known as the Mechanics' Institute, and at that time concerts and kindred entertainments were given; in it for the first time in the city the entrancing strains of Ole Bull's violin were heard. Shortly after this the Handel and Haydn Society, which had been giving its oratorios in the hall over the Boylston market, took a lease of the premises and the name of the building was changed to the Melodeon. The Society's first performance was given in it on December 29, 1839, when the oratorio "The Messiah" was produced on its boards.

Old Songs and Dances of Ireland.

Some twenty or thirty years ago it came under the control of B. F. Keith, and it was there that Boston learned to know and appreciate the programs he gave them. When their popularity forced the building of the larger and more modern B. F. Keith's New Theater, the little Bijou was left to be used for casual entertainments, both professional and amateur, for quite a long time.

In 1907, Mr. Keith decided to remodel the building and install motion pictures, and on February 22, 1908, the house was opened for this purpose. On July 6, 1908, after this policy had been maintained for four months, Mr. Keith, believing that Mrs. Josephine Clement could develop in the theater a show which was "different" and which would embody some of the purposes which he had in mind, appointed her manager, instructing her to work out an original entertainment. Certain policies regarding expenses were clearly defined at the start, but a free hand was given in the development of the programs. The house, having been entirely remodeled, was both clean and attractive.

Old Songs and Dances of Germany.

The entertainment had consisted of technically good pictures, selected without too great discrimination, some solo musical numbers, and an accompaniment of decidedly mediocre piano playing. Recognizing the meagerness of the bill, attention was first given to the perfunctory lecture which was a feature of the program. That the lack of interest on the part of the public—in fact the hasty exits at its presentation—was due not to the mere fact that a lecture was being read, but that a stupid lecture was being badly read, was evident enough to make this the first point of attack. A well-trained

Old Songs and Dances of Scotland.

lecturer was secured in the person of Miss Margaret Rand, who brought with her a real interest in the work to be accomplished—that of holding the attention of the audience through the lecture. It immediately became apparent that a good reader could do nothing without good material, and it followed that writers of ability began to supply the Bijou's demand for ten-minute talks properly illustrated. For three years now the camera chats and ten-minute talks have been a recognized and expected feature.

Next, a systematic and careful censorship of the motion pictures was begun. Only pictures of the finest quality received approval; all inane, sensational, and "bloody" material being rejected. Such censorship has not resulted, by any means, in providing a program lacking in interest, for after all undesirable material is eliminated, there still remain many charming, thrilling and amusing pictures. This improvement has been aided by an advance, during these three years, in the work of the motion-picture manufacturer only to be appreciated by one who has made a close study of the subject. The productions of the present day are little short of marvelous.

Mrs. Clement believed that, to make a well-rounded two hours of entertainment, there was need of something to frame or supplement the pictures and lecture. Having already secured the services of three competent pianists, and eliminated to a very large extent the playing of frivolous music in favor of compositions more worthy and quite as acceptable to the audience, all that was lacking seemed to be good singing. No small problem presented itself when she cast about for such a novelty in a ten-cent motion-picture house. The usual avenues of supply did not afford, at the salary she was prepared to offer, material of the quality she desired, and realizing the futility of appealing to agents for this reason, she adopted the policy, which has been maintained ever since, of developing talent within the Bijou walls. It was made known to many people interested that one day a week would be given to hearing all who wished to make application, and it has been Mrs. Clement's policy to refuse no one a hearing, for fear that through indifference some good material might be lost.

The illustrated song was never a part of the program, but in its stead musical numbers, appropriately costumed, found a place.

After the first year, believing that there was no local theater which devoted itself to the production of one-act plays, and having from time to time received manuscripts of merit, it was decided to add, as a regular feature, a one-act play. These are presented each week, and with few exceptions have been produced from the original manuscripts. As the work has developed at the Bijou, it is natural that a group of people have become banded together who are more or less in sympathy with the Bijou spirit, and it is doubtful if there is anywhere in the country an example more worthy of attention and support than this modest organization.

I have been especially interested during the last six months in a novel presentation of the songs and dances

Old Songs and Dances of Italy.

of olden times, which are well-nigh lost to the public of the present day, and it was to find out how they came to be, that I made inquiry of Mrs. Clement.

"The one part of Mr. Yeats' subject at the new Plymouth Theater which appealed to me more thany any other," said Mrs. Clement, "was the statement he made that when people came to the National Theater in Dublin they were not told to forget what they knew, but were helped to make use of such material as they brought with them. It is just this policy which has made the Bijou 'show' what it is.

"It was not planned out and I didn't know it was going to be," she explained. "It just grew. You see, we have really a pretty clever group of young people coming and going at the Bijou and, what is better still, their enthusiasm has not yet been deadened. It happened just this way. Along in the early summer, I needed some Indians to make more realistic a little picture which a young Indian girl wished to present, showing some of the native dances of the Cherokee tribe. Now, of course, we have piano players and lecturers and actors and a stage manager (I might tell you that we do not boast stage 'hands,' and all our work is done without their aid), but to find Indians!—it was a problem. I was determined that we were going to have Indians, so I spent the morning in hailing one and all of the staff as I met them with the statement that they would have to be Indians next week as well as perform their regular duties. They looked a little aghast but allowed that if I said so they would be Indians all right. And, sure enough, they were—a very worthy tribe. It was no joke to get into grease paint and feathers four times a day, besides doing all their regular work, but they did it, and without a murmur. In fact, they confessed to me that they had had a real good time.

Plantation Melodies.

"A long summer stretched out before us and it seemed a pity, when people could do things worth while, that we should content ourselves with a program consisting of solo numbers, with nothing to vary the monotony. Bringing all my people together, I told them what I had in mind and reminded them that although they would, in their routine, do creditable work, it would be along the beaten track and at the end of the season they would really have gained nothing in experience. I suggested that if they were willing to lend their help I would see if we could not evolve some numbers which would give them a chance to grow, and provide for the public, as well, a more interesting entertainment. Unanimously they met my proposition with enthusiasm. I explained that they would have to do their regular numbers and that whatever we did would be extra. I am glad to say that not one took occasion to ask if he would be paid any more. As a matter of fact, as our work progressed they were paid a slight increase that they might be at no financial loss.

"We took account of our members and found that we had sopranos, contraltos, tenors, and baritones. Quartets and trios were possible and the songs of old Ireland offered a field for our first effort, a departure for which I had been unwittingly preparing.

"We found such a wealth of old songs that we well-nigh came to blows as to which was the best, but we finally settled upon a goodly number and began to rehearse. Then came the necessity of costumes. The Boston Public Library furnished us with excellent plates, but the commercial costumer said we were 'too fussy' and if we wanted that kind of thing we would better make them ourselves, which we very promptly did. Here again everybody turned to, the manager included. We purchased and cut and planned and sewed and studied plates and produced costumes, and they cost us very little.

"We begged and borrowed and made our scene, a country wayside with a bit of hay in the field, and a fence. Some of us could not sing but we could act; some could dance; and each one was allowed to do the thing which he could do best.

"One of the piano players, occupied in the evening, proved to be our chief dressmaker, and those who could not sew helped in the general work that those who could sew might be free to sew. All the time our regular performances continued unbroken. These programs consist of some four or five motion pictures, a like number of solos, vocal and instrumental, a lecture, and a one-act play; the time allotted to each 'show' is two hours, and five 'shows' are given daily.

"Almost before we knew it, the 'Old Songs and Dances of Ireland' were offered to the public—and the public liked them! Indeed, it liked them so much that they were kept on two weeks.

"We were not so occupied, however, that we did not begin to say to ourselves 'what next?' Thinking of the brilliant colors and the wealth of music, I suggested Germany. 'We don't know German,' they chorused with one exception. 'Then you must learn it,' said I. 'Very well, ganz gut!' And they did.

"About this time some little public interest was manifested. One incident—a patron, backed by credentials from Harvard to prove that she knew what she was about, came to me, almost apologizing, and said that she was

enjoying 'Germany' so much that she would consider it a privilege if I would allow her a few minutes with the company that she might help them perfect one or two places in their pronunciation. Welcoming all help which is offered, we took a morning in the rehearsal room to the great advantage of the company. For two weeks Germany remained on the program.

"We were beginning to wonder how we could get a Scotch inn and a bagpipe; for we could not overlook the music of Scotland, and kilts had a fascination for our 'wardrobe woman.' Again we borrowed, again we made costumes, and again we rehearsed. Each time we have produced a 'number,' a little story has seemed to build itself. In this group the two barmaids, resting after the day, are aroused by a band of Scotch picnickers who descend upon the inn for supper. During their stay they sing each other songs, dance to the bagpipes, and finally, when exhausted with their own merrymaking, insist upon a song from the barmaids. The outing closes with 'Auld Lang Syne,' sung by the departing visitors, the little barmaids waving a good-bye. 'By request' Scotland, also, remained two weeks.

"We have tried to keep all of these folk-songs and dances as far removed from the conventional as possible. Imagine my horror when some one suggested that it would be a good thing to have some flags from each country and wave them. The suggestion was well meant but——!

"The first dissenting wail was heard (and it was hot weather) when I suggested Plantation Melodies. Visions of black make-up four times a day presented difficulties which had not been met in Ireland, Scotland, or Germany; but when I insisted it had to be, they resigned themselves—and a jollier set of 'nigs' you will search a long time for; some lazy ones, to be sure, but even they woke up for the dance.

"As our scenery had come from the four quarters of the city, it did not quite hang together as a down South picture should, but I felt sure that the introduction of a few trees would lend the needed illusion and I so expressed my belief to our stage man.

" 'We'll get 'em,' was all that was said.

"I quite forgot about the matter until it was time to arrange the stage, when, lo and behold! I found two magnificent specimens awaiting me.

" 'Where on earth did you get these?' I asked. (Of course there would be no need of such question if it were not an understood fact that everything we did must have no expense.)

" 'Well, you know that little usher on the aisle—They live out in the country, and I asked her if her father didn't want to go out and get us some trees, and she said 'sure,' and so he sent 'em in to us.' Those two trees just made that act.

"For our next picture it was necessary to apply ourselves diligently, since Italian songs present many difficulties. Our greatest problem was to know how to make a choice, and in this number of the series we were obliged to include sixteen. For our stage decorations, the outlook was distressing—one back-drop of Venice for Othello, two Mexican houses of our own, and two borrowed houses from heaven knows where, their architecture refusing to offer even a hint. We got them all together as best we could and we covered up the offending spots. A nice little market-booth filled with cabbages (I don't know whether Italy has cabbages or not; we did!) and bananas and oranges and apples and greens and garlic, served in one place, and a fascinating flower booth served in another.

"Good fortune brought us some beautiful Italian draperies, and with their aid how quickly disappeared the Mexican door-marks! A visitor who ought to know, and who is a truthful person, assured me that she had lived in Italy for two years and that it really looked just like it!

"While one has satisfaction in a successful production," said Mrs. Clement, "it is doubly agreeable when one knows that those who have contributed to its success have really enjoyed what they were doing; and this is the strongest feature of the Bijou program—the fact that the people who are making the entertainment are really immensely interested, not only in their own special effort but in the effort of all. There is almost no evidence of petty feeling; in fact, they are all too busy to have time for it.

"These little musical numbers, as I told you in the beginning, have just grown, and everybody in the house has helped. There has been no one person conspicuous; no member is afraid to make a suggestion and no suggestion is considered too trivial to be given attention. The result is enthusiastic co-operation."

While I was greatly interested in all Mrs. Clement had told me, I found myself voicing a popular inquiry:

"That is all very nice and interesting, but do people really want that kind of thing?"

"We have found that they do. Sometimes it is remarked to me by doubting Thomases, 'Oh, you find a special public; but your kind of show wouldn't go anywhere else.' To which I reply, 'How do you know, if you haven't tried it?' The critic naturally follows with the second question, 'Does it pay?'

"And after all, that is a very proper question—'does it pay?'—and how can one better answer that question than by asking another? 'Are such things usually permitted to continue if they don't pay?' "

Minneapolis Houses Officially Approved

The Minneapolis *Tribune* recently found itself in the rather uncomfortable position of the man who laughed first, while the owners of the moving picture theaters have all joined together in the hearty laugh of the man who laughs last.

For some time the *Tribune* has been conducting a vigorous campaign against the picture houses of Minneapolis. For once the reporters were allowed full sway, and a careful reading of the *Tribune* would do much to convince one that from the standpoint of safety, the Minneapolis theaters were about as fireproof as so many card houses. The dangers that the patrons of the picture houses braved when they attended their favorite theater, baffled description. It loudly demanded thorough investigation by a committee appointed by the council.

The *Tribune* got it. A thorough and careful investigation was made by the committee, who reported as follows:

"We, the undersigned, have visited the moving picture houses in Minneapolis and have examined them with a view of finding unsafe and unsanitary features in connection with the theaters.

"We found them as a whole to be safe and sanitary, and as well safeguarded against panic and fire as any class of public buildings in the city. The reports of their construction and danger in case of fire have been unwarranted. With but few exceptions, we found nothing that would require changes of any importance. All were constructed to fulfill the then existing ordinances.

"Arthur Price, Fire Marshal.

"James G. Houghton, City Building Inspector.

"Fred G. Dustin, City Electrician."

On the Outside Looking In

By the Goat Man

FOR a man on the outside looking in, Frederic J. Haskin represents an extraordinary type. I have reproduced everything he has offered on the subject of films because he is well informed and rational. He writes without offending anybody and while he offers absolutely nothing that is new to the men on the inside, the public at large must marvel at the things he says. The Haskin contributions are well worth following. Here is his latest entitled "Making the Films":

Making films for moving picture shows is an enterprise of no mean standing in the manufacturing world. Millions upon millions of dollars are invested and thousands of men and women are employed. It is said that last year the 20,000 moving picture exhibitors in the United States took in at the box office $300,000,000—practically a million dollars for every working day in the year.

What part of the enormous sum found its way into the coffers of the manufacturers is not known, but that it was considerable is manifest by the evident prosperity of the film makers despite the sharpest competition. There are 6,000 licensed moving picture theaters in the United States which recognize the validity of the Motion Picture Patents Company's claims, and each of these pays $2 a week license fee. This item alone brings in $600,000 a year to the owners of the patents, over and above what is paid for the actual use of the films.

The film makers in this country are now turning out an average of sixty reels each week, exclusive of those imported. The commercial unit of the business is the reel. Although formerly the length of film wound on a reel varied greatly, the tendency nowadays is to approximate as nearly as possible 1,000 feet. This means 1,000 feet of celluloid ribbon, one and three-eighths of an inch wide. On this strip are printed the photographs, each being exactly one inch wide and three-fourths of an inch high. This leaves a margin on each side of the photographs of three-sixteenths of an inch, in which are punched at precise intervals the sprocket holes which engage the pins on the sprocket wheel of the projecting lantern and insure a perfect register—that is, that each successive picture thrown on the screen will leave the stationary objects in exactly the same place as they were when the preceding picture was shown. Ordinarily the pictures are projected at the rate of sixteen per second, so that 1,000 feet of film will require nearly twenty minutes for exhibition.

The process of the manufacture of films is not a complicated one. The photographs are taken on a continuous film exactly the same width as the films used for exhibition. The pictures are usually taken in lengths of about 200 feet. These long film negatives are developed according to the usual process. The only differences are purely mechanical, huge centrifugal drying drums and immense tanks being required by the length of the film.

When the negative is developed it is run through a projection machine and thrown on the screen as in an ordinary moving picture exhibition. Since in the negative the lights and shadows of the finished photograph are exactly reversed, the exhibition strikes the novice as a weird and ghostly performance.

If the negative is approved, and after necessary corrections and amendations have been made, the positives are printed. The negative is unwound rapidly before a powerful electric light and the positive is printed on a blank film, unwinding at the same rate of speed. One, a dozen, a hundred or more positives are printed from the same negative. These positives may be in varying lengths, according to the length of the scenes taken. Some parts of them may be required to be cut out, and titles and explanatory notes must be inserted. To do these things the newly printed positives are taken to a finishing room, where they are cut and pasted and finally wound on a reel and packed in a tin box, ready for shipment.

At one great establishment on Long Island the visitor fortunate enough to get inside the great concrete walls—which often do duty as a fortress in a show—may see all sorts of things. There are several varieties of log cabins, a Dutch windmill, one or two stage coaches, a well with an old oaken bucket, an Indian teepee—in short, such a conglomeration of scenery and local color as one never would expect to see within the walls of one yard.

In the property room inside one of the huge buildings there is an assortment of furniture and odds and ends that is at first bewildering, but which soon resolves itself into a veritable exposition of the periods of furniture making, for the producer in the studio must have ready at a moment's notice furniture of the right sort to outfit any house from the period of Helen of Troy down to our own time.

Another huge room is devoted to the purposes of an armory. This room justifies its medieval appellation of a collection of armor, battleaxes, spears, crossbows, and maces that would not disgrace the Tower of London; and with them are hundreds of muskets of the Civil War period, scores of modern army rifles, "hip hardware" of the cowboy variety, and enough other lethal weapons to annihilate the population of Manhattan.

But best of all, perhaps, is the costume department. Here is another huge room, fitted up with innumerable closets containing costumes representing practically every style and fashion from the fig leaf to the harem skirt.

The scene painters claim a large part of the establishment, and a vast variety of stage settings is kept in reserve.

A three-ring circus is a tame affair compared with the film making plant in full action. But after all the most interesting part of the business is the human element involved in taking the photographs.

* * *

Quite by contrast is the Sunday dope in the Chicago *Tribune*, by "A Reel Observer." It isn't usual for a great metropolitan daily to stand for such coarse work. The half column a week that the *Tribune* prints bears the earmarks of a smooth advertising agency responsible for the copy of a New York independent film manufacturer. Where is the censorship board of the Chicago Exhibitors' Association? They might find a hook to hang their hat on in a big publicity way if they could love up to a "A Reel Observer."

* * *

Last month, I pointed to the necessity of regarding with more seriousness the subject of inspection by film exchanges. I apologized for the film exchange because of the hurly-burly of the business, but the greatest fault is due to the kind of labor employed. It so happens that an outsider is always—or nearly always on the outside. You have to stay outside at a film exchange, but the partitions are usually only three-quarters high and sound will travel. This is a sample of monologue one can hear by sticking around the shipping or exchange window of the average film renter:

Oh, girls! I'd the loveliest time with Harry las' night. Well, I should say. We went way down to San Soosey skatin' rink and Harry bought two big lemonades. He said ther' wus sticks in 'em, but I couldn't see nuthin' but straws. Well, any how, I jis' drunk ev'ry drop of mine an' I dunno what happened after that.

Char-lee, hand me number four thirty-two. No, I don't either mean four twenty-three. Skidoo your own self; I guess I know; four twenty-three is that bad man from Texas, and Mary Anderson's brother ac's it, so there now.

Oh, cheese 'n' crust! jis' look at them there sprockets. That new operator at the Bi-jo must uv shot that fil-lum with a gun.

Char-lee, give me a clean rag. No, I don' want to chew it; I jis' want to wipe this fil-lum with it.

Fur Gawd's sake, girls! come 'ere, come 'ere, 'n' jis' look at the oil spots on this Essanay. Sure, it's enough to make a salad.

Say, girls, d'ye know how they take off oil spots over to Lemon-ly's exchange? Well, listen. They jis' rub 'em all over the fil-lum. Simple, hain't it? Watch me do it.

Char-lee, what time is it?

Say, Maggie, I wus on the stage at the Ly-rick th' other mornin' with Harry—you know he's janitor there now. Well, wha' d'ye think? That dirty operator was in his booth, an' he throw'd a spot light onto me, so't all the stage hands could jis' look right thro' my linggery. I wouldn't a cared so much if I'd a had my Sunday ones on.

Oh, pshaw! here's a kissin' scene, without no sprockets

Guess I'll have to cut it out. Mebby I could side-patch it. I do so hate to cut out them kissin' scenes.

Char-lee! O, Char-lee! Did you wash that three hundred and four? Y' know that's a Edison waterproof, and it hain't never been washed none yet. What! Me wash it? Well, I guess not! When I wants to be a wash lady I'll git a job in a lawn-dry. You'll tell the man-ger—tell 'im, tell 'im, tell 'im; what d' I care! He hain't the whole thing 'round here. Fire me; well, I should say nit. I know sump-in 'bout him 'n' that big blond what use'-to work 'round here—better b'lieve me!

Say, Char-lee, what time is it?

Oh, say, girls, you remember Miss Minnie what worked here last summer? Well, she's a manicure now, and she's makin' nine dollars a week reg'lar. Char-lee, you ought to be ashamed a yourself—she's a good girl, Miss Minnie is, and you can bet your socks she don't never do nothing *ir*-reg'lar—'sides, didn't I jis' tell you she wus a manicure?

Say, ain't that lazy expressman came yet? 'Pon my soul, he gets to came later ev'ry day.

Oh, Clara, be careful uv that Seelig Polyscope! Say, girls, d'ye know I use-to think polyscopes was talkin' pictures? Honist, I did. Shut up! Char-lee. Ain't polly's parrots, an' don't parrots talk? Well, I guess any girl could think so what was breakin' into the fil-lum business!

Gee, cats! but this is rotten cement. I wonder what's in it?

Say, Char-lee, I ast you, as a lady, what time is it. Is it? Gee, hurry up girls; Maggie, gimme a couple o' pins. You kin bet your sweet life I don' make no more patches today. Jis' looket my han's. Hain't they a sight? 'Fore I kin clean 'em it'll be past blowin' time, so I guess I'll quit. Gawd knows I've worked faithful today.

Well, it's me for the roller rink again tonight. S'long girls; goo'bye, Char-lee.

It would be foolish to dwell on this painful scene were it not for the fact that this "inspector" received a wage that would tempt a class of young women with better mental capabilities. The trouble is with the surroundings—the semi-public connection. Outside, where I found this bit of pleasant jibberish were the loungers sent there for the daily "change." They were amusing themselves with the latest stories of the street—the air was blue with smoke. They were not particular who heard them and it is highly probable that much they had to offer found its way to the inspection department. When the film exchange manager will go into the subject of inspection, he will find a big job ahead. That he is being gradually forced there is shown by the improvement in film service that can be found if you look for it. Every exchange carries the promise to the exhibitor, but not one in ten delivers the goods.

* * *

Which brings me up suddenly with the "Filmer's Lament"—an incident, or an accident, whatever you please, offered without comment:

THE FILMER'S LAMENT.

Bill Swanson lay on his "pad of hay"
With his think tank full of woe;
His Majestic mien was filmed with spleen,
And his focus was out of throw.

A business frien' dropped in just then
To this Nest-or den of gloom,
And he heard the tale—the film man's wail,
And he said as he paced the room:

"Well, I'd Eclair! Don't tear your hair—
"Go ask the Powers that be;
"They'll Bison enough if they get the stuff
"Through the N. D. & S. C."

"Too late!" he cried. "That has been tried;
"I've lost my self-Reliance;
"'Tis Imp-ossible e'en for a judge to win
"When Lux against his clients.

"To Comet once to my cause for grunts,
"I'm a Champion film producer;
"Yet the Gems I've done with all my 'mon'
"Are Rex when they get to you, sir."

"Brace up!" said his friend, "fight to the end!
"Don't act Solax and blue;
"Your fillums are great; work in a straight
"Metropoli Thanhouser two."

But he fiercely said, as he raised his head:
"That fourth party stuff's too thin;
"I'd rather be inside looking out,
"Than be outside looking in.

"Great Northern lights! I'll sit up nights
"To break this American front.
"There's still a way; I'll go and play
"That Foreign Market stunt."

* * *

I take it that the stuff the "big interests" like is the kind they pay for. An example was offered in a Chicago daily of January 1 in which this item appeared:

A public school teacher, who, at a recent conference complained to her fellow workers that moving pictures made the pupils restless and impatient under text-book instruction, was amazed to have her progressive principal announce that he believed the day to be near when geography, history, hygiene and various sciences would be taught by text-book and moving pictures in combination.

Now the trade press has been printing matter of this sort with uninterrupted and growing frequency and I'm in a position to know that many instructors and clergymen will read the item from this page. You will also recall that Professor Frederick Starr made himself solid with the film crowd nearly three years ago when he delivered his famous eulogy to the fleeting pictures.

Here is an item that endears Frank Munsey, because it appeared in *Munsey's Magazine* last month:

The time has long since passed when a sensible person can sneer at moving pictures, or minimize their importance in the life of the community. There are still many, however, whose attitude toward them is one either of avowed hostility or of suspicion. Recognized as inevitable, the moving pictures are even yet considered as a kind of evil, to be kept down as much as possible.

But while this has been and still is the attitude of most adults whose education has lifted them a plane above the enjoyment of moving pictures, the moving picture audiences and the moving picture manufacturers have together been working out very practical problems of social service by means of the film dramas.

The University of Wisconsin has taken definite measures to incorporate the moving picture machine into its educational extension work.

The educational value of historical pictures, of course, depends upon the accuracy and skill with which they are arranged. This work is being done with great skill and at great expense and pains. If, unaided by the suggestionss of teachers or historians, the manufacturers can turn out educationally valuable historical films for the regular trade, how much more could they do if they worked directly for the schools under expert supervision?

Conditions in Canada

Consular Agent Walter S. Riblet, Nelson, says, according to the information received at his consulate, Nelson, population 8,000, is the only town in the district in which a moving-picture show is in regular operation. Traveling operators exhibit in some of the other towns at intervals. There are four towns in this district having a population of over 1,000 and nine between 300 and 800. The business appears to be very profitable there, and it is reported that a new company is planning to operate in Nelson. There is no moving-picture manufacturing plant in the district.

Aeroplane and Motion Picture Camera

By Israel Ludlow

*From Aeronautics.

DURING the aviation meet at Nassau Boulevard it became one of my official duties to the corporation which was promoting the meet, to dispose of the motion picture rights. In spite of extra efforts, no bid whatever was obtained from any of the various film manufacturers throughout the country. Knowing that such picture rights have been sold in the past, a natural curiosity was excited to discover the reason of the present failure. It was found that the business of taking motion pictures had enormously developed within the past two or three years, and had formed definitely on certain lines from which the manufacturers were unwilling to deviate.

Edward Shaw Behind Motion Picture Camera, and Phillips W. Page, Aviator.

A very profitable market, and practically the only market for the films, were the five and ten-cent motion picture theaters throughout the United States. It is reported that there are over ten million people who attend these theaters daily, and this public demands not a scenic or educational picture, but rather a photoplay which shall have some dramatic climax, or which shall entertain the spectators by its comedy features. The motion picture manufacturers have grown wealthy catering to the public along these lines; and they declared that a simple picture of one or more aeroplanes flying in the sky attracts no more than a picture of an express train or the race of a fire engine down the street, because the human element is lacking.

The owner of one of the great film factories very frankly told me in detail of this situation, and as a result of the friendship thus formed, he suggested that I write a scenario or two in which the aeroplane played a part, and engage the aviator, and his company would produce it. His offer was a very generous one, and I wrote two scenarios which were enacted before the motion picture camera on the aviation field at Nassau Boulevard, immediately following the meet. Lieutenant H. H. Arnold, U. S. A., played the leading part; that is, he was the aviator and substituted for the actor when the actual flying was necessary. A leather coat, knickerbockers, puttees, and goggles gave actor and lieutenant very much the same appearance, and the audience which subsequently saw the pictures projected on the screen, probably never detected the difference.

The plays had strong, simple situations. Their titles fully suggest their plots; "The Elopement" was the story of a young Lochinvar who runs away with his lady-love in the aeroplane. "The Military Airscout" was about a brave officer who succeeded in delivering a message to the commanding general, though his aeroplane was brought down by the aeroplane guns of the enemy, and he was badly hurt in the fall. Other stories: "The Red Cross Nurse," "The Aviator's Success," "Aviator and Automobilist," etc., followed.

A View of Louisiana by the Motion Camera.

Not satisfied entirely with work of this character, and recognizing the scientific possibilities of the combination of the aeroplane and the motion picture camera, the Aviation Film Company was organized. This company put Robert G. Fowler, the cross-continent aviator, under contract to carry a camera on his aeroplane from Texas to New York. The unique qualities of a motion picture taken from an aeroplane were so

striking that little difficulty was experienced in making a contract between this company and a great film concern, which is a member of one of the big sales organizations that have an exclusive contract for the disposal of films to the exchanges, who in turn deal directly with the exhibitors. Mr. Sexton, and E. R. Shaw, a camera man, joined Mr. Fowler at Beaumont, Texas, where on December 17, 1911, the first aeroplane picture in America was made.

Mr. Fowler's contract with us required him to carry Mr. Shaw as passenger, with camera, or in place of Mr. Shaw, an automatic device which would turn the crank of the camera with power transmitted directly from the aeroplane motor. This device was the joint invention of Mr. Robert L. Baird and myself. It was obvious that such a mechanical instrument had economical qualities of great value. It would save the weight of the passenger, and thus gasoline equal in weight could be carried, insuring longer flight, and one life instead of two would be risked.

John G. Hemment, a professional photographer, Frank S. Lusk, and the writer, went to the Burgess Company & Curtis' aeroplane factory, where with their assistance, on December 21, 1911, a mechanism was perfected and successfully tried on a hydro-aeroplane at Marblehead Mass. The device was the result of ten days' or two weeks' experiments, and its value is so great in our minds that it is being patented in behalf of the Aviation Film Company. The device has its possibilities in connection with making a topographical survey of the country for railroads who may want a map of a route to be covered by a proposed line, and on a scouting expedition the military aviator could carry sufficient film to cover his flight, no matter of what distance (this exceptional length of film being one of our improvements over the ordinary camera) and within a few hours the films can be developed and projected on the screen, greatly magnified. The telephoto lens would probably also be added, enabling the aviator to fly at any height. Photographs can also be made when desired, which will not overlap but which join or abut on each other. Examination of these latter pictures, of course can only be made one at a time, but their value is unquestionably great, for the result of any scouting expedition, even hundreds of miles in length, would be certain and exact.

During the first flights at Marblehead, the camera was operated by hand, but for the continuation of the experiments the camera was geared to and run by the motor. By means of a switch attached to one of the uprights, aviator Phillips W. Page was able to start the film revolving and stop it at the completion of a picture. So far as is known, this was the first time in this country that an aviator has taken motion pictures unassisted.

On the following day Page took up Hemment, who has recently returned from a hunting trip in Africa, with Paul Rainey, adding a new sensation to his list of experiences of pursuing game with his motion camera. Flying over the bay at a height of 150 feet, the aeroplane gave chase to a flock of wild ducks, and, after some manoeuvering, the ducks were brought within range of the lens.

Development of the films showed the pictures did not suffer from the motion of the aeroplane.

In an effort to close the Hippodrome, a Keith house, on Sunday, the local exhibitors of Cleveland succeeded in having the service discontinued, both licensed and independent, and thus compelled the house to secure its films in the east and have them shipped.

Exhibitor's Ball in New York

The first annual ball of the Motion Picture Exhibitors' Association of Greater New York proved to be a very enjoyable affair, far exceeding the expectations of the most optimistic. It was held in Palm Garden, which was beautifully decorated in an original and artistic manner. So well did the entertainment committee do its work that all feeling of stiffness and formality was dissipated and a festive spirit of good fellowship seemed to permeate everywhere and no one could resist its influence. The guests were drawn from all walks of life and included many from Chicago, Philadelphia, Boston, Cleveland and Cincinnati.

Quite a lengthy program was given and one of the specially interesting features was the entertainment provided by the leading actors and actresses of the moving picture field.

The officers of the association are as follows: President, Sam Trigger; vice-president, Harry J. Jacobs; secretary, Sidney Archer; treasurer, Arthur D. Jacobs; chairman of the entertainment committee, Dr. Lamberger; chairman reception committee, H. W. Rosenthal; counselor, Tobias A. Kappler.

Picture Men Give Charity Over $3,000

Three hundred members of the Motion Picture Exhibitors' League of America, assembled in Hotel Sherman, Chicago, installed officers, selected committees for the ensuing year and arranged for their annual national convention to be held in August. The following officers were elected: President, George Henry; vice president, C. A. Anderson; secretary, Sidney Smith; financial secretary, Simon Katz. The executive committee, includes Robert R. Levy, chairman; Fred W. Schaefer, secretary; F. Natkin, L. H. Frank, C. H. Hull, Abe Balaban and C. C. Whelan. Robert R. Levy, chairman of the executive committee was intrusted with $3,286.75 collected by the association for general charity distribution and Levy turned this fund over to Mayor Harrison. This amount was realized when the members who own and control some 150 outlying picture theaters turned over the receipts of January 23rd to the league. Prominent manufacturers attended, including George K. Spoor of the Essanay Film Manufacturing company; August Selig of the Selig Polyscope company, and R. R. Nehls of the American Film Manufacturing company.

West Virginia Exhibitors Meet Soon

The Motion Picture Exhibitors of West Virginia will meet in Parkersburg, W. Va., Wednesday, February 28; arrangements for hall, music and entertainment have already been made. The committee on arrangements is P. W. Barett, Star Theater, and F. L. Harris, Bijou Theater. The Board of Trade will co-operate with the committee on arrangements. Headquarters have been established at the Blannerhassett hotel. Every West Virginia exhibitor is not only invited but urged to attend this, the first state convention. A permanent organization wil be effected, a president, first vice-president, second vice-president, secretary and treasurer will be elected. A state censor, legislative committee and insurance committee will also be selected. Every exhibitor is requested to communicate with either the committee or the president, M. A. Neff, Motion Picture Exhibitors' League of America, 1003 Mercantile Library Building, Cincinnati, Ohio.

The Playhouse of the Future

By Ford W. Eaton

EDITOR'S NOTE.—This is the first of a series of articles which will take up in turn, several subjects of much interest, not only to the owners and frequenters of the photo-playhouse as it is conducted today, but also to the entire theater-going public, and particularly to the theatrical profession. This article is a forecast of what must necessarily result from the development of certain lines of research which already have borne sufficient fruit to warrant even more general and far-reaching conclusions. The author has had opportunity to observe much of this research, and his remarks as a rule are conservative and his prophecies are tempered by an unusual grasp of present day conditions.

EVER since the motion picture was introduced, and in fact since the phonograph first made music for a wondering public, there have been prophecies, more or less vague, of the time when a whole grand opera would be "canned" and shipped around the country like any other commodity, to be opened and served to hungering audiences economically inclined. In fact, it has seemed to the layman that there would be little left to do after the talking machine and the picture machine had been sufficiently perfected. It has therefore been a source of some conjecture why inventors have been so slow in preparing what is so obviously in great demand, and for the achievement of which there awaits one of the greatest prizes in the way of commercial success that it is possible to conceive.

Whoever shall introduce a practical and complete artificial play may take tribute from the largest and most liberal clientele in history, for not only will their patrons embrace the entire theater-going public but also the many millions who during the past few years have become regular attendants at the picture playhouses which outnumber the regular theaters fifty to one.

We will not attempt to indicate all of the reasons for the conclusions arrived at and presented herein, but anyone who is familiar with the conditions can readily understand why we speak so positively, at least in regard to the main aspects of this development, whose extent and importance, however, it is still difficult to comprehend.

The field being a new one there is no word in common use broad enough to describe a scene which, though artificial, will depict life in motion, color and relief, as well as all of the sounds and other sense impressions. We shall therefore use the word *Ortografy*,* which may be defined as "the art-science of causing, by artificial means, a pre-arranged series of sense impressions which resemble natural impressions so closely as to create a sense of reality in the mind of the observer."

The word *Ortophy*, similarly derived, may be taken to mean "the ultimate method of depicting life." It will be no more artificial than the ordinary staged drama, for in the latter we now witness chance performances acted under difficult conditions, while in the former we will be permitted to observe exact reproductions of a *best* performance acted under ideal conditions.

IDEAL DRAMA.

The actor of the future will not be obliged to travel long distances and live and act amid disagreeable surroundings, while several carloads of cumbersome "properties" are carted from place to place in order that the public may have a fleeting glimpse of him and his properties while they listen to his oft-repeated phrases and hear a slightly rehearsed orchestra take liberties with the score. Instead he will be domiciled in New York or Los Angeles or Paris or London, and will be available any day from 11 to 2 o'clock, during which hours he will rehearse and enact his part in some ortoplay. It will be necessary to give a performance but once, provided it is satisfactorily done. As in filming the present picture plays most of the acting will be done in the studio, with occasional trips to places where natural scenery may present better advantages.

The ortoplaywright and the ortoplayers must have regard for color and sound in addition to the pantomime, which is about all the motion-picture camera has recorded hertofore. The colors will be directly photographed, although most of the vocal work, as well as incidental sounds, will have been produced previously by performers having exceptionally good voices and specially trained. The instrumental music is likewise recorded either in advance of the filming, or at the same time.

When an ortoplay is completed it can be presented simultaneously in hundreds of places, many of which otherwise would never have been favored with even a single visit of a great actor, much less be treated to many different performances with full companies, orchestras and music. Nothing need be lacking, and, being rounded out with color and relief, as well as normal dialogue and other sounds, the realism is complete.

Lastly, the saving in expense will permit the highest class of performances in the best of houses at a price well within reach.

A GLIMPSE OF AN ORTOPLAY.

In the playhouse of the future there will be no stage, no actors, no orchestra, no scenery or "properties," not even a curtain or proscenium arch, except as they are pictured in vivid relief upon a blank white wall. Nevertheless, as one enters and is seated he may behold all of these and more. He sees footlights glowing dimly upon a gorgeous but restful curtain decorated with artfully suggestive groundwork for the scenes which are to follow. He notes the empty chairs awaiting the arrival of the orchestra, whom he faithfully hears at practice beneath the pictured stage, just as in the days of his youth when comic operas went around the country by the trainload, and it was necessary to transport not only the personalities and impressions which make up a play, but no end of physical encumbrances as well, including the actual bodies of the players and a whole raft of make-believe scenery.

There pervades the pure atmosphere of the theater a slight odor in perfect harmony with the scene before him, and a balmy breeze bearing floral perfumes may be blowing out of the woodland, whose soft and harmonious colors and gently waving foliage help to sooth his mind after the cares of a busy day, and prepare his faculties for the treat which he has come to enjoy.

Presently a door leading from under the stage is seen to open and the drummer of the orchestra makes his way to the corner of cymbals, triangle and crash. He is followed by the 'celloist, who goes to the opposite corner and proceeds to tune up—plink-plank-plunk—

*"Orto" is a Greek word, from the Greek word "orthos," meaning "right."

while the pianist tum-tum-tums for his old G string. The other members of the orchestra have now taken their places, the leader waves his baton, the footlights glow brightly and the curtain rises and reveals a revival of the old comic opera chorus which dad so loved to see. A medly of old time songs greets the reminiscent auditors while the scenery and costumes change with delightful appropriateness, and every little movement is faithfully presented from the Oceana Roll to the big base drummer in Alexander's band.

Suddenly the scene shifts. Gone is the chorus, hushed is the orchestra, and all alone and lonely stands one of the *fin de siecle* Juliets amid a setting of real mountains. She is waiting for Romeo. She says so (fetchingly), but Romeo is nowhere to be seen. However, we soon hear a distant horn and direct our eyes to the point in the distance from which it seems to come. Alternately louder and fainter and from different directions come the bugle blasts as our hero wends his way by mountain path o'er hill and dale.

Presently we hear a louder blast as Romeo makes the last turn in the path and stands before us—and Juliet. The twain exchange greetings, sing a duet, encore with a Tyrolean yodel which echoes all over Switzerland, and exit to a bunch of old-time applause.

When they come back for the bow, some rowdy in the balcony offers an insolent remark reflecting on the cleverness and integrity of the lovers, and Romeo engages in belligerent dialogue with the youth in the balcony (who, it transpires, is also "canned").

Another shift and the orchestra, first melodious, then quiet, has disappeared entirely; so have the footlights and the stage, and we are conscious of a many-colored Aurora Borealis in an Arctic sky, while a chill creeps out over us and we witness Peary and his Esquimeaux, sledges and dogs enroute to the North Pole. We hear the conversation and the natives calling to the dogs, and even the sound of the hammer as the intrepid explorer nails the Stars and Stripes to the pole.

Presto! the ice and snow dissolve, and small wonder, for here we are under a tropical sun, and our belated caravan is approaching an oasis in the desert that is made more real by the hot dry breezes that whisk by our erstwhile chilly persons and swirl the dust of the desert before us.

Hark! 'tis the crack of Mauser rifles from beyond yon hummock. Now the boom of artillery, a hurried dismounting of our little party, the passage of some terrible Turks and treacherous Arabs, and the sweet sounds of the Star Spangled Banner as the Nick Carter Naval Reserves surround the party and escort them to the United States embassy.

So much for future vodevil.

Choosing another theater for our next visit, we are treated to grand opera just about as it used to be seen and heard when the performers were alive and traveling. We witness the great stars in all their classical effulgence, both optical and oral, while the originals can hear our heartfelt applause only by means of telepathy or spiritism.

The last rose of summer will bloom simultaneously for a thousand audiences and that fateful high C will resound with unfailing certainty and clearness, as the Patti of the future crumples the rose's tender petals, in blissful forgetfulness of all save the impending, the ensuing triumph. And remember—the voice is real, the expression real, the colors real, from the foliage in the garden to the delicate tints of milady's cheek and the sapphire blue of the near-autumn sky. Moreover, the voice is the real gift of the singer, whose own real personality is with us just as surely as she was with the camera-man and the stage manager the day before yesterday, or fifty years ago, as the case may be.

REQUIREMENTS.

Upon undertaking the technical development of this new art-science which aims at perfect reproduction of all forms of expression, the following conditions were assumed as necessary factors of the result:

1. There must be presented to the eyes of an observer exactly what he would see were the original before him. This implies a continuous picture, which must have no technical defects, such as flicker or unsteadiness, and which will of course show all the movements of the original, and be in natural colors, and in stereoscopic relief.

2. The audience must be made to hear all sounds which are pertinent to the scene which is being depicted. These sounds must be correct in regard to quality, intensity, sequence and apparent source. In other words they must be properly distributed as well as harmoniously in accord with the picture. The distribution of sounds may be extended to any part of the auditorium, and in a scene which portrays incidents involving coarse vibrations, such as the reverberations of thunder or the jarring of heavy trains, similar vibrations are in order.

3. All other conditions which would have attended an observer of the original, must, as far as possible, be supplied to the audience. For instance, in the Arctic scene just described, what could be more logical than the breath of cold air from the Arctic regions; and when the scene shifts to the Sahara desert, a dry hot breeze is just as realistic. This will be done by novel ventilating arrangements. Similarly appropriate is the odor of flowers at a rose festival, and of incense in an oriental palace, not to mention the stockyards or the Bowery. Even the humidity and the electrical condition of the air can be varied to give an added touch of realism.

4. Technical perfection, or the highest degree of precision must be maintained, and no method or process should be adopted which is not capable of perfection. The method commonly in use for projecting pictures with an intermittently moving film, for instance, must be supplanted by really scientific processes and apparatus and these will also add two entirely new qualities—natural color and relief.

5. Fully as important as the technical requirements are the demands of art. In fact, art is the one prime consideration to which everything must be referred. It is the result that tells, and since we are aiming at a result which should be nothing but pure artistic appreciation, all trace of mechanical intrusion must be avoided.

Moreover, just as in the presentation of drama in the old and current way, wherein cumbersome stage settings have been a necessary part of the playwright's technique, and the artistic "effect" of a scene so often has been spoiled by crude manipulation of properties and lights, even though the players might speak and act faultlessly; so in ortografy and the ortoplay, while we have the advantage of recording only one best performance which may approach perfection, still we have the new difficulty of maintaining harmony of speech and action while reproducing together what may have been produced separately.

The ortoplay involves more artistic considerations than any of the arts, even the drama, for here we depend wholly upon artificial means, and the entire performance, from the scenery to the impersonations, must be filtered through various apparatus by processes that make or mar

the reproduction in accordance with the wishes and skill of the playwright, or whoever may be the artist who shall supervise the presentation.

6. This leads us to the final condition—that the entire reproduction must interpret exactly the ideas and feelings of the artist who conceived it, and hence all technical operations after leaving his hands must be *automatic*—foolproof, as it were. This is another way of saying that otherwise a poor operator might spoil a good show.

ARTISTIC CONSIDERATIONS.

In ideal ortography, when the care of the artist has supplemented precise technical processes, and an appeal is made to the finer sentiments, the effect on the observer may transcend his experience with natural impressions, and transport him beyond so-called reality into ideality. Thus does art come into its fullest expression, and thus is made the broadest possible appeal to the divine sense of beauty, which, in most of us, lies all too far beneath the surface.

But thus also is there required of the technician the utmost skill, and of the artist the widest sympathies, for here we are dealing not with one art, or a fragment of art, but with art itself, and are privileged—yes, compelled—to employ every available artifice in producing a complete and harmonious effect.

The difficulties of harmonizing different sense impressions are well known to artists. A sculptor rarely attempts to color his statues, yet here we have to consider only two closely related activities of the sense of sight, namely, form and color. A hastily drawn pen-sketch may pass for art—but introduce color and detail and a world of technique is required to preserve harmony.

Similarly difficult is it to provide harmonious orchestral accompaniment for a singer, as a single false note will jar the imagination of the audience, which is normally inclined to idealize a fairly good performance.

In other words, the demands of harmony increase very rapidly as new factors are added, hence it is not surprising that most attempts which have been made to harmonize the product of such imperfect devices as the motion picture machine and the talking machine have resulted in little harmony and less art.

TECHNICAL PROBLEMS.

The difficulties which have stood in the way of real achievement have been mostly technical, and as soon as these have been overcome, and a reliable medium of expression has been provided for the playwright and the artist, the artistic refinements in the actual work of producing will be mastered very readily.

These technical problems may be divided into the following classes:

1. *Theoretical*—including the choice of methods, and general plan of apparatus for recording and reproducing the various sense impressions, and the elimination of faulty principles in the design of mechanisms and other media to be used in the work, such as film and records.

2. *Mechanical*—involving consistent design and correlation of all parts whether optical or mechanical, and of all processes, including also electrical, acoustic and chemical problems.

3. *Purely technical*—requiring a very high degree of precision and skill throughout every branch of the work, which covers a wider range by far than any other industry, for here we must have the most exquisitely refined product of the optician, the chemist, the photographer, the mechanic, the playwright, the actor, the musician, the physicist (without whose research the work of the others were in vain), and lastly the artist-manager, or producer, who checks up the result, not to mention the artisans whose work is peculiar to the industry itself and whose skill is depended upon for the final perfection of film and record.

DEFECTIVE THEORIES.

We shall consider first only the theoretical problems for until these have been solved all the mechanical skill and technical refinements in the world will be unable to produce the desired result.

First among the theoretical problems is that of producing a perfect motion picture. Such a picture should be without unsteadiness or flicker, and in natural colors and in stereoscopic relief.

It may well be admitted that this can never be done with the current type of narrow, perforated, intermittently-moving celluloid film, for even though all the other difficulties might some day be overcome there would still be enough unsteadiness and flicker to prevent the desired illusion of reality. On account of the adoption, almost universally, of the long narrow perforated band of celluloid, and the difficulty of introducing any radical departure, real progress in the right direction is under a serious handicap, and for many years we are likely to see the same colorless, flickering and unsteady pictures, and this will continue to stand in the way of perfection even though a phonograph be put behind the picture screen to add its own artificial noises to the lights and shadows of the picture.

Secondly, talking machines as now constructed and used, are not suitable for dramatic work for the following principal reasons:

1. Unnatural quality of sounds.
2. Insufficient volume of sound to fill an ordinary theater.
3. Lack of distribution—the audience is always conscious that a stationery horn is talking for moving actors.
4. Practical difficulty of maintaining synchrony when the talking machine and the picture machine are two separate mechanisms and in charge of two operators.

In the next article the theoretical problems will be analyzed, and then the various attempts at solution, after which will be outlined the essential conditions of success, with a resumé of the most promising line of research which has yet been undertaken in this field.

Films for Chicago School

The first concerted effort on the part of a Chicago public school to inspire school children with a desire for better entertainment was inaugurated with the installation of a new motion picture equipment at the Audubon school, 3500 North Hoyne avenue.

For an hour 450 pupils were entertained with an instructive motion picture exhibition, views of foreign countries, supplemented with songs and selections by the eighth grade orchestra.

"We are going to educate the children to appreciate something better than the films that are shown in the five-cent theaters," said Charles A. Kent, principal. "Every Friday we will show at least two reels of films. Now that the school owns the machine, and most of the pictures are loaned to us, the expense is very little. One evening each month we will give a show which the children's parents may attend."

Mr. Kent operates the machine himself. "The Canals of Venice," "The Illinois Steel Mills," and "Farming with Dynamite" were films shown the first day. The Audubon is the only public school in Chicago which owns a motion picture machine.

France's Picture Theaters

Consul Charles A. Holder, Rouen, says the moving-picture business in France is very different from that in the United States. The business day, commencing at 6:30 in the morning for laborers and at 8 o'clock for stores, is interrupted at midday for two hours so that employes may have time to go home for dinner. They are very busy the rest of the day and as a consequence cinematograph theaters have no performances during the day except on Sundays and fete days. Profits, therefore, must be made from relatively few performances and higher prices for admission are charged; these prices run from about 9 cents to as much as 77 cents. The performance usually lasts two hours, starting at 9 p. m. and ending at 11 p. m. On Sundays and fete days there are usually two matinees, one from 2 to 4 p. m. and the other from 4 to 6 p. m. The attendance is largely made up of more or less regular patrons so that the program is changed only once a week, as a French workingman would seldom think of spending money in this way more than once a week.

The films used in the district are nearly all rented either from the manufacturers direct or from companies in Paris formed for the especial purpose of buying and renting these machines. The best market open to American manufacturers is that offered by these companies.

Consul General A. Gaulin, Marseille, says there are about 35 moving-picture theaters in Marseille, the combined receipts of which were $237,619 in 1910. The machines used are almost exclusively of French make, and are usually hired by the theaters from the local dealers or agents of the manufacturers, the rent running from $9.55 to $17.37 a month. There is room for a good American machine, but very little business could be done with the theaters direct.

Films are also rented from Marseille dealers, who obtain them from the Paris representatives of the manufacturers. Rental prices run from about 4.8 cents per meter (3.28 feet) for new films to 1.9 cents for "fourth week" films.

The leading dealers there would welcome offers from first-class American houses, as they desire to be less dependent upon the domestic manufacturers. A recent attempt at the monopolization of the trade has greatly stimulated the purchase of foreign supplies. Several dealers are seeking connections with firms willing to place their films on deposit, to be returned after exhibition during a sufficient period.

A comprehensive list of cinematograph establishments will be found in the Annuaire de la Cinematographie, published by the Société Fermière des Annuaires, 53 Rue Lafayette, Paris. The price of this publication is 6.75 francs ($1.30).

Consul J. E. Haven, Roubaix, says that in three principal cities of the district, viz., Lille, Roubaix, and Tourcoing, there are perhaps 100 halls and estaminets (saloons) where moving pictures are shown, the latter being very popular, as an entire evening can be spent there pleasantly at a cost of not more than 10 or 15 cents for beer, this being the only expense incidental to the entertainment.

The films used are in nearly every case rented from four film dealers in Lille. They rent for $0.60 to $1.20 per month. The same dealers also rent the moving-picture machines, although in some instances the machine is owned by the exhibitor. All correspondence should be addressed to these dealers and should be in French.

Photoplay Detective Stories

Two Essanay Thrillers

THINGS have been humming melodramatically these days at the Chicago studio of the Essanay Company, and a splendid list of photoplays are booked for release throughout February, as will readily be seen from a glance at the advertisement elsewhere in these pages. Along with the comedies, for which Essanay is justly famous, are listed a formidable array of heart-interest dramas and melodramas, teeming with appeals to the emotions and spiced with subtle thrills and exciting situations.

Standing out prominently among the February bookings are two great detective dramas which touch the top register of perfection both in plot and splendid photography. Motion-picture audiences invariably relish keen sleuth photoplays, and the Essanay Company is proud of having turned out two crackerjacks for the month. Based on virile plots that are extraordinary in many respects, and abounding in tingling climaxes that keep one clinging to the edge of his chair, they should prove winners with every picture audience that has the good fortune to view them.

The first of these, "Tracked Down," deals with a notorious swindler and confidence man, Jim Ford, who

A Subtle Third Degree—From Essanay's "The Little Black Box."

is arrested by Detective Walters and sent to the penitentiary for a term of years. On the way Ford cleverly manages to escape from the train. Walters learns this through a telegram, and swears to run the crook to earth.

A year later the Moores, a wealthy family, meet an Englishman abroad and, on returning home, invite this Englishman to visit them. He does so and is entering the house with his valet when he is seen by Detective Walters who is passing. Walters feels he knows the man, but cannot place his face. Returning to headquarters he

Robbed!—From Essanay's "Tracked Down."

is handed a photo of Ford by the chief of police and ordered to get busy and apprehend him. For a moment Walters stares at the photo of his old enemy, then swiftly takes out a pencil and begins to sketch in a drooping moustache on the shaven face. Instantly he starts in amazement—the Englishman he saw entering the Moore residence is Ford in disguise!

Hastily he explains to the chief. Both realize Ford must be captured before he can rob his victims, but how? Suddenly the chief has an idea and writes a letter to Mrs. Brown, a society woman who is personally acquainted with the Moores, asking her to introduce Walters to the Moores in their home and pave the way for Ford's capture. This Mrs. Brown readily agrees to do, and Walters is introduced to the Moores at the very moment Ford and his accomplices are planning a bold robbery. Walters and Ford come face to face, and both instantly recognize each other. Ford now cleverly gets the Moores and Mrs. Brown out of the room, then he and his pals grab the detective, envelop him in the folds of a coat and bind him to a chair. The robbery successfully accomplished, they escape from the house, leaving the sleuth helpless. He is finally released by a brother detective who has been shadowing the gang's rendezvous on the river-front without result. The theft is discovered and Walters now plans the capture of the crooks in their stronghold. Sending his assistant for aid he goes along to the rendezvous and luckily arrives before the gang. Finding himself without his gun, he pluckily hides and awaits their arrival. Ford and his accomplices enter, jubilant over their success, and the master criminal is dividing the loot when Walters springs from his concealment and a thrilling hand-to-hand struggle ensues with the odds all against the detective. He puts up a brave fight, but is on the point of being overpowered when the other detective arrives with aid, the crooks are corraled, handcuffed and led away to headquarters, while Walters

Scene from the Essanay Dramatic Subject, "Positive Proof."

coolly gets on his hat and coat and departs for the Moore home to restore the stolen valuables. It will at once be seen that this picture is a corker for thrills. A picked cast interpret the characters, Francis X. Bushman playing Ford, the master criminal, and William Walters, the nervy detective.

"The Little Black Box," the second big detective drama for the month, is based upon the delivery of a little black jewel box to the president of the National Jewelry Company. In the outer office three young fellows are employed as clerks. Boardman is a student and reader of exemplary habits, as is also young Sumner. Parks, however, is addicted to late hours and poker playing, with the result that he is usually late in the mornings and does not stand well with the president. Parks takes the box of jewels into the president and watches while he opens them. A little later the president upsets the ink bottle and retires into the lavatory to wash his hands. At this moment a clever robber steals the jewels from the little black box, only the thief's hands and arms, encased in black sleeve-protectors, being shown. Matters now are complicated, because each of the three clerks wears black sleeve-protectors and none indicate the slightest signs of guilt.

A detective is called in and young Sumner, in spite of his protests of innocence, is arrested because he was in the president's office soon after the robbery was committed. The chief of police is not satisfied, however, and makes a personal investigation of Boardman's and Park's roms. Detectives are put on the track of each, and both are tested by the detectives cleverly flashing little black jewel boxes on them at psychological moments. Boardman, alone, shows signs of possible guilt. He is taken before the chief, who sends the detectives away, seats Boardman in a chair and begins a most novel form of "third degree." For hours Boardman remains seated under the watchful eye of the chief without a word being spoken. The young fellow's nervousness increases as each hour slips by and at last, unable to stand the awful silence longer, he shrieks wildly, tears open his collar and falls groveling to his knees as the chief flashes before his eyes the little black jewel box and sternly accuses him of the theft. Boardman gasps out a confession of the robbery and says the jewels are concealed in the springs of his office chair. The chief now calls up the president of the jewelry company, who finds the jewels under the chair and is delighted at their recovery. Young Sumner is released and Boardman is led off to a cell. Francis X. Bushman again does sterling work in the character of Boardman, and Harry Cashman acquits himself splendidly in the role of the police chief.

"Positive Proof," a powerful dramatic subject from the Chicago studio, and "The Prospector's Legacy," a thrilling Western drama, are also numbered among the fine releases of Essanay for February. Both are acted by picked casts and photographed in a way that leaves nothing to be desired in viewing them. The quality of Essanay's photography is always the best and this, together with virile film-plots and splendid interpretation by carefully chosen artists, continue to bring joy to the exhibitor's heart.

Consul George F. Davis, Ceiba, says the principal towns in his consular district are Ceiba, population 5,000; Trujillo, 2,000; and Roatan, 300. None of these towns has moving-picture shows in regular operation, but a contract has recently been closed for the operation of such a theater in Ceiba, with film changes three times a week.

Pictures as an Advertising Force

By Watterson R. Rothacker*

THE superiority of moving pictures as a means of illustration, and the value of illustration to advertising, logically introduce moving pictures as an advertising force. To discuss illustrated advertising in general is hardly necessary before this gathering. I prefer, therefore, to take advantage of the time you have so courteously put at my disposal, by touching on specific instances of moving picture achievement in the advertising field.

The failures in the history of moving picture advertising—and there have been failures—may be broadly attributed to two things; namely, poor production and injudicious presentation. By poor production, I mean failure to realize on the subject by concentrating and accentuating its advertising features;—in other words, careless or ignorant treatment; failure to avoid repetition and ignore dead action; inadequate photography. By injudicious presentation, I mean ill-advised choice or use of circulation. Circulation channels for moving picture advertising should be chosen by the same reasoning process that governs the selection of the avenues through which printed advertisements are aimed. Every advertiser intends his advertisement for delivery to those people most likely to respond to its appeal. Of course, I recognize the publicity idea, that effective blunderbuss that makes a big noise, aims at anything and everything, and scatters its shot so that it is bound to hit something. Let me say here that I am a firm believer in publicity. But for traceable results let us take up the class or zone circulation:

To begin with, it is impossible to exhibit advertising moving pitcures in all the theaters in the United States. The film business is divided into two political factions, one of which will not countenance the exhibition of commercial films in any houses operating under its jurisdiction.

The opposite faction is the combination of independent manufacturers, who take the stand that they have no right to dictate to the theater manager. The independent manufacturers claim that they supply moving picture service to about 50 per cent of the picture houses devoted to this class of entertainment. This percentage is guess work, for the theater managers are continually transferring their allegiance from one faction to the other and back again. The point I wish to bring out is that in outlining a moving picture advertising campaign the rulings and strength of these two factions must be considered and respected. What is more important is the production of your subject so it will be pleasing to the moving picture public and consequently acceptable to the theater manager, who gives it outlet.

For publicity the whole moving picture world is your territory; but for direct results it must be classified. A moving picture illustration advertising an automobile, farming machinery, an expensive travel tour, etc., should be directed at logical buyers. A general circulation would give good publicity but would cost for a large waste circulation. It would be a mistake to say that people who can afford an automobile, are interested in farming, or who could stand the expense of a travel tour, do not frequent and enjoy moving pictures. They do, but it is reasonable to assume that an exhibition of the automobile pictures and of travel pictures before a class of people who are able to satisfy their desire to buy, and of farming pictures before rural communities who have use for that which is advertised more directly influence sales, because the advertising message is delivered to people specifically interested and in a position to materially respond.

Let us assume that the subject has been filmed so that it tells the advertiser's story in a direct manner that interests, explains, educates, and identifies the advertiser's name and serves his purpose. In producing the subject the advertising idea must not be sacrificed for dramatic effect. Nor should the portrayal take the form of a blatant commercial announcement. The happy medium is the perfect harmony that entertains the onlooker while arousing his buying instinct, and makes a definite impression favorable to that which is advertised.

A good subject, primarily, then a capable camera operator, and camera, the right kind of film development, and a generous application of advertising sense make moving pictures that *can* advertise. The judicious handling and exhibition of the finished pictures is what *makes them advertise.*

Let me cite, as an example, the current moving picture advertising campaign we are conducting for the Du Pont Powder Company:

Tell the average layman that dynamite will plough clear land, make ditches, and aid in tree planting, and he *may* believe you. Tell it to the ordinary farmer and he will listen and make a mental note that dynamite is a dangerous citizen. See a Du Pont demonstration and you will be convinced that dynamite is both a useful and tame citizen. Put this demonstration on film and decrease its reproduction cost, increase its scope, without impairing its efficiency. We did this, with the result that the Du Pont "Farming with Dynamite" film was produced and presented before logical prospective buyers who became actual buyers and Du Pont customers because the moving pictures satisfied and broke down their "Show me!" spirit.

This assemblage know much about the Rumely tractor. Everyone has heard more than a little about it. It is worth going a long way to see. The shortest way is quickest, however, and it is over the moving picture route. Suppose that this was a farmer's gathering. We're here tonight, early tomorrow we have to scatter to our respective farms and "get on the job." We are interested in modern methods of farming. Maybe the Rumely Company would hold us over till the A. M. and have a machine ready to demonstrate. Perhaps it would plan individual demonstrations for some future time mutually convenient. But what's the use—the moving picture camera has made a record of a perfect Rumely demonstration. On film it weighs less than eight pounds but its arguments are as heavy as the real thing.

At the recent Chicago Land Show the moving pictures of the M. Rumely Company, the Holt Caterpillar Company, and the Du Pont Powder Company pictorially proved things which otherwise would have been dependent upon mere word description and pure assertion.

In addition to the economical convenience of these demonstrations they have the important advantage of a

*Address delivered before the Ad-Sell League of Indiana at South Bend, Indiana, Friday evening, December 22d, 1911, by Mr. Rothacker who is general manager of the Industrial Moving Picture Company, Chicago.

guarantee of reliable delivery. For, naturally the original demonstration as staged for the camera was perfect, without fault or accident.

Moving pictures have a universal magnetism. Their novelty is attractive. Where they are presented there is only one objective point, the screen upon which they appear. The lecturer or salesman can supplement their explanation and hammer home his closing arguments under conditions which minimize divertising influences.

Cities all over the United States are advertising to attract tourists, homeseekers and investors. In this advertising they lay much stress upon their business and industrial activities and opportunities, their school and social advantages, transportation facilities, etc. Many of these cities can "make good" their claims. Those can use moving pictures with telling effect. We have filmed actual scenes which substantiate and advertise the claims advanced by the Chamber of Commerce of Charleston, S. C.; the Progressive Association of Mobile, Alabama; the cities of Gary, Indiana, Joliet, Illinois, Columbia and Sumter, S. C. and others likewise progressive. These moving pictures show those things which attractively worded booklets and enthusiastic community patriots attempt to conjure to the mind's eye.

The phrase "From Cottonfield to Kitchen" coined by the N. K. Fairbank Company, and "From Camp to Table" used by the Towle Maple Syrup Company, and any ad intended to describe a manufacturing process, recommends itself and lends itself to moving depiction. The only better way to show your manufacturing process is by a personal inspection which is decidedly limited and expensive.

If your land, your factory operation, your city or your machinery is as good as you say it is, and its actual illustration will directly or indirectly add to your prestige or sales, you need moving pictures.

When you buy moving pictures as an advertising investment, bear in mind that their advertising power, while wonderful, must be developed advisedly. Remember also, that the guidance and direction of this developed power is the keystone to your moving picture advertising success.

Norway's Picture Theaters

Consul General Henry Bordewich, Christiania, says there are at present some 20 moving-picture shows in Christiania, the machines for which were imported from France and Denmark. There are two manufacturers of films in the district, and besides their output about 160,000 meters of foreign films are imported, mostly from France and the United States.

Each foreign manufacturer of films has his representative for Norway in the city, who sells films to the local theaters, and these again let them out to other shows in the country at a reasonable fee. Terms for sale of films differ, three months' credit being sometimes given.

The Norwegian import duty on films is 1.2 crowns (32.2 cents) per kilo (2.2 pounds). The import duty on moving-picture machines will vary according to the material from which they are manufactured.

Consul B. M. Rasmusen, Bergen, says there are in his city nine moving-picture shows, at which the receipts in 1910 amounted to $52,000. Comic films seem to be most popular, with historical and scenic pictures next. All machines are French, but films are imported from several countries.

Consul P. E. Taylor, Stavanger, says there are six French and two Danish machines in the eight moving-picture shows in his city. These establishments have an average daily attendance of about 450, and their total receipts yearly run about $40,000. Films are nearly all rented from Christiania.

Several of the shows there buy new machines every year, and the others every other year. The proprietors of the three largest shows said if they could be shown that American machines are superior to those now in use they would not hesitate to buy them, even though the price should be considerably higher.

Russia's Picture Shows

Vice Consul General Ripley Wilson, Moscow, says the theaters there do not combine moving pictures and vaudeville acts, as do many in America, but simply show from three to eight films, depending on the price of admission. The few theaters where one can obtain a seat for 8 cents are patronized only by the poorer classes. The average theater charges 20 to 25 cents for admission, and puts perhaps eight pictures on the screen, of which at least six are imported.

Films of many different services are used, but those of French manufacture seem to be the most popular. Various films made in the United States are also used, and those that depict scenes of western or Indian life are held in high favor by the Russians.

Consul John H. Grout, Odessa, says almost every city or town in his consular district is provided with moving-picture shows and they are particularly well supported in Odessa. Most of the films are from a Paris house that has a branch office in Odessa, but many American films are shown and arouse considerable interest. The language used on films should of course be Russian.

American comics are popular, but all climaxes should be made as plain as possible. There is no doubt that many films made in the United States would meet with good success if properly introduced, but as it is they are all sent through exchange agents in Europe and as a result France and Germany are better known than the United States.

It seems very probable that if scenes from the city and country life of various parts of the United States could be shown they would be popular. For instance, a series of pictures presenting the views that an immigrant would see on his way to the United States and after landing there would probably be well received. Such views would be of interest not only to those who at some future time intend to emigrate, but also to those who have friends in the United States or are interested in the country for other reasons.

Spain's Picture Shows

Vice Consul General Harry A. McBride, Barcelona, says Barcelona has about 70 moving-picture shows, and the number is increasing. There is also a manufactory of machines, which has about 550 machines in use throughout Spain, and one maker of films, whose output, however, is very small.

Consul Robert Frazer, jr., Valencia, says supplies for the moving-picture trade there are principally of French origin, and are practically all obtained through agencies at Barcelona, which is the principal distributing center in the country for machines and films. French films predominate at present, but there are also many Spanish scenes of processions, bull fights, military parades, etc. American films would probably reach this trade best by following the regular channels and obtaining Barcelona agents.

Governor Lectures a Film

The People's Amusement Company has been exhibiting at the People's Theater, Portland, Ore., an educational film showing the trip which the western governors made to the East. An invitation was extended Governor Oswald West to attend a performance and see himself as others saw him through the medium of motion pictures.

The matter was taken up by the governor himself and Melvin G. Winstock for the theater, and arrangements were consummated by which Governor West agreed to appear at the People's Theater Friday evening, January 19, and to deliver an address on his remarkable trip.

Before consenting, however, to comply with the request of the People's, he named a condition, which was that he would do this if the People's Amusement Company would give a benefit performance for the Portland Baby Home. The management very promptly took the governor at his word and notified the committee of the Baby Home, consisting of Mrs. D. C. Burns, Mrs. Henry Ladd Corbett and Mrs. David Honeyman and other benevolent ladies of the city, of the arrangement and asked for their co-operation.

Governor West agreed to be at the theater for the 8 to 9 o'clock show and arrangements were perfected whereby a representative of the Baby Home will be in charge of the box office of the theater for the benefit performance. Not only will the affair be of interest by reason of the charity side of it, but the remarks of Governor West cannot fail to be of great interest to the public at large, as the trip East for Oregon was not only unique in National history, but it did much to attract new interests in Oregon as one of the greatest and most prosperous commonwealths of the nation.

Syria's Picture Shows

Consul General W. Stanley Hollis, Beirut, says there are three moving-picture theaters in Beirut and one each in Damascus, Haifa, and Tripoli. Films are leased from two Paris firms and one in Rome, and reach the houses here after being shown in Egypt. American firms desiring to reach the market with their supplies would have to follow the example of these firms and establish an agency in Cairo or Alexandria, or do business through these firms themselves.

Consul Jesse B. Jackson, Aleppo, says there is but one cinematograph theater in his district, and it obtains all its films under contract with a Paris firm. The films reach there only after being used in a number of other towns and are often in bad condition and out of date. There is apparently room for some strong American competition in this and other Syrian towns, but the hold of the present firms could only be broken by personal solicitation, as the proprietors of the various houses fear to make a temporary change because of possible retaliation. Thorough confidence would have to be inspired in the users of films and proof of better conditions would necessarily have to be shown. If these exactions can be met by American manufacturers, there is no reason why a large business can not be immediately developed.

Scene from George Kleine's Lubrse Film "The Factory Girl"

Scotland's Picture Houses

Consul Rufus Fleming, Edinburgh, says the films used in Scotland are chiefly American and French. A great variety of machines are employed in British moving-picture houses—probably as many as thirty or forty different makes and styles. There is no film factory in the district, as neither light nor atmospheric conditions are ever suitable for manufacturing the best films.

Moving-picture entertainments are regulated by the provisions of the cinematograph act. Unless "nonflam" films only are used the apparatus must be operated within a fireproof closet. Among the regulations made by the secretary for Scotland under the cinematograph act are the following:

Fire appliances adequate for the protection of the building shall be provided and shall include at least the following, namely a damp blanket, two buckets of water, and a bucket of dry sand; in a building used habitually for the purpose of cinematograph or other similar exhibitions they shall also include a sufficient number of hand grenades or other portable fire extinguishers.

Lanterns shall be placed on firm supports constructed of fire-resisting material, and shall be provided with a metal shutter which can be readily inserted between the source of light and the film gate.

The film gate shall be of massive construction and shall be provided with ample heat-radiating surface. The passage for the film shall be sufficiently narrow to prevent the flame passing traveling upward or downward from the light opening.

Cinematograph projectors shall be fitted with two metal film boxes of substantial construction, and not more than fourteen inches in diameter, inside measurement, and to and from these the films shall be made to travel. The film boxes shall be made to close in such a manner and shall be fitted with a film slot so constructed as to prevent the passage of flame to the interior of the box.

Spools shall be chain or gear driven and films shall be wound on spools so that the wound film shall not at any time reach or project beyond the edges or flanges of the spool. During the exhibition all films when not in use shall be kept in closed metal boxes.

Consul John N. McCunn, Glasgow, says the moving-picture business is increasing rapidly, as is shown by the fact that in 1907 there were only 4 picture shows in Glasgow, while now there are upward of 100. Every town of 4,000 or 5,000 inhabitants has its picture show.

Practically every known make of machine is used, and every known film maker is represented. There are no picture machines made in the district and films are manufactured only to a limited extent, such as those showing daily chronicles of local events, etc. There are a number of firms dealing in the exchange and hire of films.

Morocco's Picture Shows

Consul General Maxwell Blake, Tangier, says there is a very promising field for the sale of moving-picture apparatus in Morocco, as the large native population appears very partial to this form of entertainment. At present there is but one such theater in Tangier, but it has made considerable profit.

The best way of establishing the business there would be by providing an agency depot in Tangier, which would also supply the neighboring towns of Gibraltar, Algeciras, and Linea de Concepcion, Spain. A stock of 150 films would be sufficient, 50 films to be renewed each week. Heretofore films showing ships of war, troops in action, melodramatic battles, etc., have been most popular.

Scene from the American Film "The Broken Ties."

Problems of the Operating Room

By William T. Braun

FILM.

FILM STOCK forms one of the most important parts of the motion picture industry. Most operators know that it is inflammable, tears apart easily, and causes more or less trouble, but beyond that their knowledge ceases. If operators understood the composition, manufacture, and process of photography better than they do, the film would be handled more carefully and intelligently. The inside of the modern motion picture factory is a mystery to most operators on account of the difficulty in obtaining permission to go through the plants; therefore a short review of the various stages of manufacture up until the film reaches the exhibitor will not be amiss.

MANUFACTURE OF STOCK.

When the film stock reaches the motion picture factory it consists of strips of celluloid 1⅜ inches wide, 200 feet long, and is coated with a photographic emulsion. The process of making the celluloid film and the emulsion are entirely separate.

Celluloid is made from gun cotton and camphor. The gun cotton is made from raw cotton saturated in nitric and sulphuric acids. After this it is washed and dried. Treating the cotton in this manner makes it a very explosive article. The camphor is then dissolved in alcohol. A layer of gun cotton is placed in a tank over which the camphor is sprinkled. Several layers are placed in the tank in this manner. The gun cotton is dissolved in the camphor and sinks in the form of celluloid to the bottom of the tank. The lumps of celluloid are next worked between hot and cold rollers and then pressed in hydraulic presses and dried. The stock is worked into strips 1/200 of an inch in thickness, 22 inches wide, and 200 feet long.

These strips of celluloid are passed under a hopper having a slit or mouthpiece the entire width of the strip. The celluloid passes under the hopper at a uniform speed and the emulsion flows out upon it, giving it a uniform coating.

A bromide emulsion is used for coating the film to be used for prints, as it is slower than the nitrate emulsion used for coating the stock used for negatives.

These pieces of film are then dried and cut into strips 1⅜ inches wide. The film is packed in tin cans, 200 feet in each, and sent to the motion picture manufacturer.

Film is highly inflammable, but not explosive. It will not take fire unless a flame is applied directly to it, or if a light of great heat intensity, such as the projection arc, is allowed to shine on it for a short time. Film will ignite at the aperture from the heat of the light rays in from three to thirty seconds, depending upon the strength of the light and the condition of the film.

Non-inflammable film is used very little because it deteriorates rapidly with age.

The majority of motion picture manufacturers perforate the film themselves. This accounts for the fact that some pictures are steadier upon the screen than others, although run through the same projection machine. Perforating machines are of two types, reciprocating and rotary. The eight holes for each picture are punched at one time with the reciprocating perforator; the film is then drawn forward and another set of holes are punched. The film is fed forward by an intermittent device, similar to that of the projection machine, between the strokes of the punches. The rotary perforator consists of two drums, one of which has teeth on it similar to a sprocket; the other drum having depressions on its face corresponding to the teeth of the other drum. The strip of film is fed between the two drums and perforated. The rotary perforator will perforate from five to ten times as much stock per hour as the reciprocating machine, but is not as accurate. The perforating of the film is done in the dark room.

PHOTOGRAPHY.

The motion picture camera has many things in common with the projection machine. At the top of the camera is the upper film holder, which carries the roll of unexposed film. This corresponds to the upper film magazine. The intermittent movement of the camera is generally of the claw type, similar to that used on some of the older makes of projection machines. A disk-type shutter is placed between the film and the lens similar to the revolving shutter of the projection machine. The period of darkness is much greater in the camera. A lens of about three inches focus is used on the camera. The crank of the camera performs the same office as that of the projector. There is also a trick crank and reversing crank found on the camera. After leaving the camera the film enters the take-up box, similar to the upper one.

A finder for the focusing window; an indicator showing the amount of film used; a speed indicator showing the speed of the camera, and a heavy tripod completes the principal parts of the camera.

The usual speed of taking pictures is fourteen per second. The camera man must be very careful to turn the crank at the uniform speed. Also the camera is not secured like the projecting machine, so that he must not put his whole weight on the crank as some moving picture operators do. The speed of the crank must be uniform throughout the entire revolution, otherwise some of the pictures will be under or over-exposed. The usual exposure is three-eighths open. This means that when fourteen pictures are taken per second, the lens is open 1/37 of a second for each picture. The trick crank generally takes but half the pictures per second that the main crank does. Consequently, when the pictures are projected upon the screen the action is twice as fast.

When the exposed films from the cameras and the printed films reach the developing room they are wound on drums three feet in diameter. Each drum or holder carries 200 feet of film. The drums are supported over the zinc developing trays and revolved, the film passing through the developer. When the film is developed the drums are placed over the wash trays and turned a few times. After passing through the second wash water they go to the fixing bath.

The film is next washed in running water, and then given a bath in diluted glycerine, after which it is taken to the drying room. The film is wound on drying drums driven by a motor. When the film is dry it is taken to the inspection room.

Titles are made by placing the letters on the top of a table and the moving picture camera is placed above the table. Titles and sub-titles for an entire reel are generally prepared in one strip, developed, and then cut into separate pieces, and spliced in the proper place in the reel.

The finished negative is now cut up into 200 feet lengths and sent to the printing room. The 200 feet length is the standard length of stock furnished by the manufacturers, and all of the film is kept in that length by the motion picture manufacturers until it is ready to ship to the film exchanges; then it is spliced together, making 1,000-foot reels.

There are two types of machines used for printing the positive films from the negatives. The stepping printing machine is similar to the projecting machine, in fact printing may be done on a projecting machine. The negative and raw positive films are placed on separate reels and are fed into the machine together. An incandescent light is placed above the window corresponding to the aperture of the projector. In passing this window the films sides are together, and the negative is placed on top so that the light will shine through the negative upon the positive. There is an intermittent movement and a framing device so that the intermittent may be adjusted. From the printing machine the films pass into the take-up reels.

In the continuous printing machines the films pass in a steady motion from the feed magazine to the take-up. Consequently, the continuous machine prints very much more film per minute than the stepping machine but is not as accurate. The positive print is then developed and washed similar to the process above mentioned for the negative. When dry the prints are carefully inspected and the 200-foot pieces are spliced together into 1,000-foot reels ready to ship.

Many manufacturers stain parts or sometimes the entire 1,000 feet of film. This is accomplished by putting dye in the last rinse water or the glycerine bath.

The coloring of films may be done by hand or by machine. The old fashioned, or simple method is to color each picture of the print by hand with brush and water colors. The process may be improved by the use of a stencil. This stencil is made by cutting out all of the parts of the picture to be colored one color. A separate stencil must be made for every color to be used. This stencil is placed over the positive to be colored and the color applied. In this way more film can be colored per hour.

In coloring films by machine separate stencils are made as described above for each color. The stencil is placed on top of the print and they both pass over a sprocket. A belt covered with colored ink runs over the top of the sprocket coloring all of the print exposed through the stencil. A separate stencil is required for each color, and the film must be run through the machine as many times as there are different colors in the finished picture.

Waterproofing film is accomplished by applying a substance resembling celluloid over the emulsion. This protects the delicate emulsion from becoming scratched or injured by water. After waterproofing both sides of the film are glossy and resist the action of tiny particles of dust which usually cause rain on the soft emulsion. Waterproof film may be washed in water by hand or by special machinery to remove any dirt or grime which has collected on it. In this way the film may be kept clean and like new.

Trick pictures are not as plentiful as they were a few years ago. This is partly due to the trouble in taking them, and in trying to improve the standard of the industry the motion picture manufacturers have eliminated them. Nevertheless, everybody enjoyed the old-fashioned zig-zag chase and objects running backward.

Action on the film may be reversed by turning the camera bottom up on the tripod, or by using a special printing machine which causes the negative and positive films to move in the opposite directions.

In turning the trick handle or the main crank of the camera slower than the regular rate, fewer pictures are taken per second, and consequently, when the pictures are projected upon the screen at the regular rate the action is very much faster.

Ghosts, dreams, and dissolving views are used quite frequently at the present time. Ghosts are made to appear on the film by exposing the negative twice before developing. Only light figures can be introduced on dark backgrounds in this way. When dark objects are to be introduced on a white background the effect is produced by double printing. Two negatives are required. In printing the stock is run through the printing machine separately with each negative. Everyone is familiar with the dummy type of picture in which just before the accident the camera is stopped and a dummy substituted. By the various tricks which can be enacted with the camera and in developing many beautiful and miraculous effects can be produced in motion pictures which are utterly impossible upon the regular stage.

CARE OF THE FILM.

Considering the nature of film and the use to which it is subjected, it is surprising that film can be obtained in such good condition as we usually receive it. The speed with which it is necessary for the operator to handle the film excuses him to a certain extent from the damage that it receives while in his hands. Still by the use of a little judgment and care films would remain in good condition much longer than they usually do.

The "rain" on the film which is so disagreeable to everyone is caused by particles of dust settling on the soft emulsion of the film, and when the film is rewound and pulled down, as is usually necessary, the dirt is ground in and plows fine furrows through the emulsion producing the rain effect. Dirty sprockets and guide rollers also damage the film to a certain extent. The guide rollers on the magazine trap and those resting upon the sprockets should be kept clean. Dried emulsion accumulates very rapidly on them, especially when running first run film and in passing over the rollers the film receives the full benefit. Almost all of the sprockets are now made with hollow centers so that the film touches the sprockets only at the ends. In this way much of the scratching is eliminated.

In rewinding if a little tension is applied to the reel being rewound, it will not be necessary to pull down on the film to get it all on the reel. But when the operator is turning the crank of the projector with one hand and the rewind with the other, as is too often necessary during rush hours, it is impossible for him to rewind properly and he is generally thankful to get the films rewound at all. Therefore, it seems that the only remedy is to make the reels larger so that 1,000 feet can be wound on a reel even if it is done loosely, or to put less than 1,000 feet on a reel.

The operator should use a little care in applying oil to the machine and not on the film. When running first run film it is not necessary to saturate all the sprockets and springs with oil ruining the film. Take a cloth that has been dampened with oil and rub the springs and sprockets with it.

Before running a film the operator should see that it has three or four feet of leader or blank film at the beginning of the reel before the title and a two-foot tail piece at the end. When a new reel is sent out by the exchange it usually has a header about two feet long.

Every time a film is run through the machine the end is doubled over to fit tightly under the spring of the take-up reel. When the reel is rewound, the end is generally jerked off, or if it is not pulled off at this time it is later when attempting to force a doubled end between the magazine rollers. Thus the leader rapidly disappears. If the exchanges would see that at least three feet of leader is on every reel before they send it out, they would confer a blessing on the operator and the audience as well. The patrons of the show are the ones who really suffer as there are many operators who never attach a leader no matter how short a title, but double the title under the reel clamp, and the audience gets but a fleeting glimpse of the title if the automatic fire shutter raises up in time.

The tail piece at the end of the film serves the same purpose. In many pictures the climax of the entire film takes place in the last few feet of the reel and with part of it gone much of the value of the film is lost. Also the end is usually so scratched up and full of rain that it is extremely difficult to see the picture at all. Manufacturers would do well to put several feet of film bearing their trademark at the end instead of a few feet of old film or nothing at all.

The best film to use for leader is some that has been colored black or made opaque so that no light can get through it. If you have to make your own leader it is better to clean the old emulsion off than to run an old scratched up picture.

To remove the emulsion from old film, soak it in warm water for a few minutes until the emulsion is soft. Cold water will do if you cannot get warm water. Lay the film on a board with the emulsion side up and scrape off the emulsion with a knife.

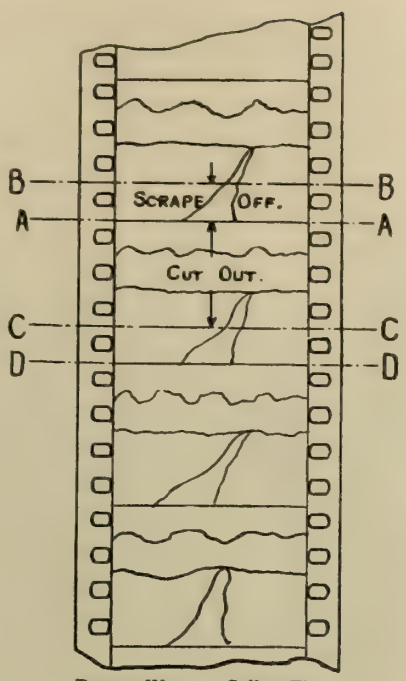
Films should be kept in a cool, damp place in tin or metal boxes with tight fitting covers. All of the large cities require all films not in the machine to be placed in metal boxes. When in the operating room these boxes should be placed on the floor or as low down as possible.

Old and dry film may be moistened and made pliable by giving it a glycerine bath. Make a solution of 30 to 40 parts of water, to one part of glycerine. Draw the film through it quickly and wind on a circular drum, being careful not to let any of the film overlap or not to touch the emulsion until it is dry. The drum should be revolved to dry the film. This must be done very carefully so as not to injure the film.

When running a reel of film as often as twenty times a day it becomes somewhat stiff. To make it more pliable unroll the film in a tank similar to the old take-up tanks. In the bottom of the tank place a can with a mixture of water and glycerine in the above proportions. The top of the can may be covered with a heavy screen or a lid in which a number of holes have been punched. Leave the film in the tank for a few hours and you will be surprised at the results.

Film jumping is caused by a number of things. As mentioned before many films are not properly perforated, causing them to jump up and down on the screen or to sway sideways. Films perforated with the rotary perforator show this jumping more than those perforated with the reciprocating machine. But if every picture jumps up and down on the screen the intermittent movement needs adjusting or probably the teeth on the intermittent sprocket are worn. Of course old brittle film will always jump more or less because the sprocket holes have shrunk.

Mending the film is a very simple operation, but it is usually done so hurriedly that the patch opens up sooner than if it was done right. The operator should have a pair of small scissors to cut the film, a sharp knife to scrape off the emulsion, and good film cement. Most film cement is put up in bottles having a small brush fitted into the cork. In this way the bottle is always kept tightly corked and the brush for applying the cement is always at hand and in condition to use.



Proper Way to Splice Film.

To patch the film so that no frame-up will be necessary when it passes through the machine cut off one picture on dividing line *A-A*, and the picture below at *C-C* one sprocket hole above the dividing line. Next moisten flap *A-A, B-B*, with water and scrape the emulsion off with the knife blade. Be sure to get it all off as the cement will not stick to the old emulsion. Now scrape off back of *C-C, D-D*, to remove the grease or dirt on it. Apply the film cement liberally on flap *A-A, B-B*, where it has been scraped, and lay part *C-C, D-D* on top, being careful to see that the sprocket holes come directly over each other. The best way is to match the holes on one side holding it with the thumb and one finger; then match the other sprocket holes and press the whole joint together and rub firmly with the thumb and finger. All this must be done very quickly as the cement dries rapidly, and when once dry, and the film does not stick it must be scraped off again and tried over. If a larger flap than one sprocket hole is used the film at the patch becomes too stiff and in going over the round sprockets the patch will open up. After completing the patch cement the edges down by running the brush over them, as that is always the first part of the patch to open up.

Pictures in Topeka Churches

A number of the ministers of Topeka, Kan., have decided that moving pictures will form an educative feature in the development of the leading churches during the coming winter. The idea of the use of moving pictures in connection with the teaching of religious truths was introduced in Topeka by Rev. Robert Gordon, of the First Baptist church, when he announced that the moving pictures would play an important part in the church services in November.

Many of the Topeka ministers have now taken up the moving picture idea and they will be shown in a number of the churches during the winter in connection with the regular Sunday night services.

"I do not believe in letting the devil have too many of the good things," was the statement of one of the Topeka ministers in regard to the use of the moving pictures.

Scene from Selig's Feature Film, "The Danites."

South Africa's Picture Shows

Consul Edwin N. Gunsaulus, Johannesburg, says moving-picture shows are a very popular form of entertainment in all the populous centers of South Africa, and there are about 40 such shows in the Johannesburg consular district, 16 being in Johannesburg. Many of the theaters in which these entertainments are given are finely designed and well appointed. In addition to the moving-picture shows now running in his city, two or three new theaters are being erected, one of which will surpass anything of its kind in South Africa.

French and English machines predominate there, although some American machines are used. It is claimed that the mechanism of the French and English makes is not so complicated as the American. These machines have also found favor on account of their being heavier than those of American make. All agree that the American machines show the pictures as well as those of foreign make.

The film releases of most of the American and European firms are received there each week, the latest releases coming from London by post. The weekly importations of the three leading importers average 42,000 feet. These films are first shown in the theaters controlled by these firms and then rented to the smaller theaters in the district.

American films are very popular with the public there, cowboy pictures being particularly in favor with the general public. All of the theaters show at least one or two of such pictures at each performance. American dramatic films are also very popular—much more so than the Continental films, as it is claimed that the American dramas are better acted. A majority of the scenic films come from the Continent.

No moving-picture machines are manufactured in South Africa. There are three bioscope cameras, all of English make, in the consular district. The negative and positive films used for these cameras are imported from the United States. One of these machines is operated by a photographer who turns out a weekly film of 400 or 500 feet, called the "Local Gazette." Another machine used for producing scenic and topical films, turns out about 400 feet weekly.

One local firm has added a cinematograph department to its photographic supply branch. In this department complete stocks of bioscope machines and accessories are carried, as well as supplies of all kinds for bioscope shows. The manager of the cinematograph department of this firm states that the production of local films at present is more in the experimental stage than commercial.

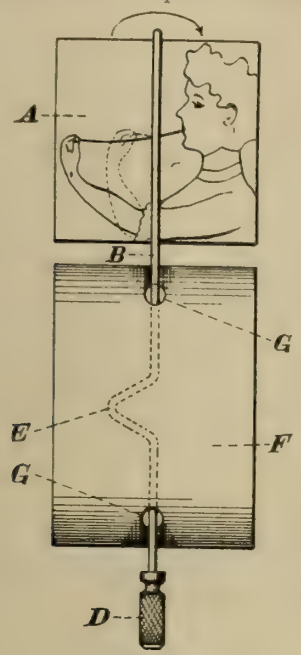
All the principal bioscope theaters employ vaudeville artists. Those in the city of Johannesburg give two shows nightly and matinees on Wednesdays and Saturdays. In the suburbs one long show is given nightly, also the usual matinees. At each performance from 4,000 to 5,000 feet of films are shown. All theaters give two entire changes of films each week. The usual prices of admission are 50 cents and 25 cents.

Recent Patents in Motography

By David S. Hulfish

UNITED STATES Patent No. 1,004,382. Moving Picture Toy. Ernest W. Davis, Chicago, Ill.

The invention comprises a card having pictures of an object in two positions, on the opposite sides of the card, together with a special means for alternately



1,004,382.

presenting to view, at moments of rest, the opposite sides of the card.

A suitable card, labeled *A*, has the two pictures, here shown as a girl pulling a string of chewing gum. One side of the card bears the picture with the hand extended, while the other side of the card bears the picture with the hand less extended, as indicated in the dotted lines of the hand near the center of the card.

The pictured card *A* is secured to a wire *B* having a handle *D* to be twisted between the fingers to rotate the card. The wire *B* passes through the holes *G* and *G* in the card F, and a band *E* in the wire *B* strikes the card *F* as the pictured card turns. The card *F* being held in one hand and the handle *D* being twirled with the fingers of the other hand, the angle *E* in striking the card *F* causes the pictured card to check momentarily in its revolution twice in each turning, thus showing the sides of the card alternately at moments of rest.

The claims are based upon the feature of the card *F* and the angle *E* for the purposes of checking the card *A* as described.

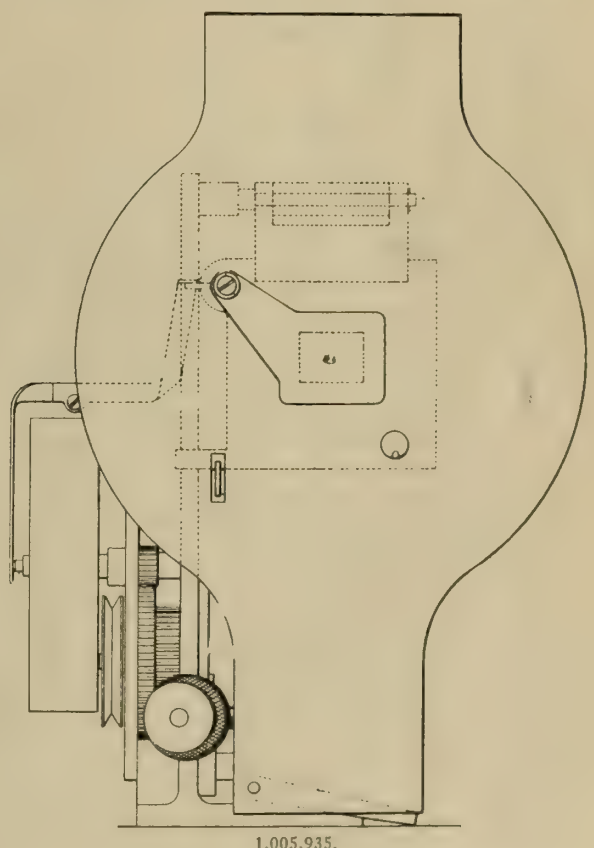
No. 1,005,935. Light Shield for Moving Picture Projecting Machines. James A. Cameron, New York, N. Y.

According to the present invention, the film is protected effectually from the heat of the arc lamp by interposing a large shield between the projector and the lamp house, and by providing a free air space between the fire shield and the projecting machine itself. The shield consists of a large flat plate of metal, or of any non-inflammable material, such as asbestos, which is supported between the lamp house and the projector, and is provided with a hole just large enough to permit to pass the cone of light which falls upon the picture film in the film window.

All superflous light rays are intercepted before they reach the projecting machine, and the beam of light which passes through the opening in the shield may be made to correspond to the film window. The beam of light thus may be reduced to the proper size for the film window, passing through the film window to the film without striking the film gate about the film window and thus without heating the film gate and adjacent parts of the projector.

The heat absorbed by the fire shield is prevented from reaching the projector by the free air space between the shield and the body of the projecting machine.

The fire shield is so arranged that the motion head cannot be operated until the fire shield is in position. A shutter for the opening of the shield shuts the light



1,005,935.

from the film when the picture is not being projected.

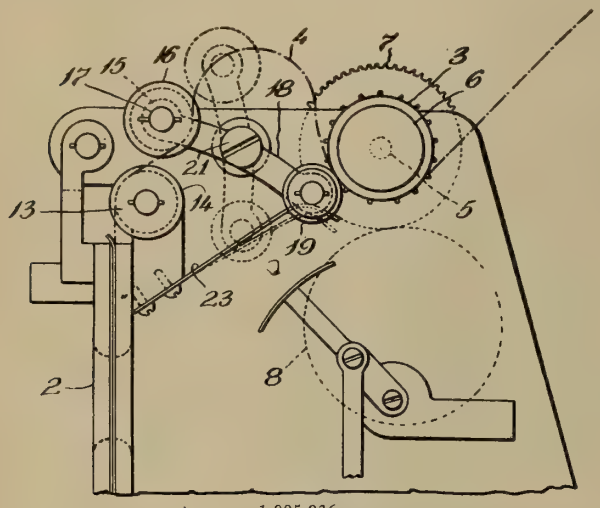
The illustration accompanying shows the face view of the shield. The patent has fourteen claims.

No. 1,005,936. Moving Picture Projecting Machine. James A. Cameron, New York, N. Y.

In projecting machines there are provided usually an upper steady feed sprocket for giving a continuous feeding movement to the film, as it is drawn from the feed magazine, and an intermittent sprocket for shifting the film in front of the film window. These two sprockets are so related as to maintain a degree of slack in the film between the steady sprocket and the film gate. One ob-

ject of the present improved motion head is to provide a simplified mechanism for adjusting the size of the upper feed loop. This Mr. Cameron accomplishes by the use of a film feeding roll for the upper sprocket, which roll has adjustable connections with the driving gears which operate it.

Other objects are to guide and control the looped



1,005,936.

portion of the film, and to facilitate the threading up of the machine before beginning projection.

In the figure, the upper steady feed sprocket is shown labeled *3*, and carried upon its shaft are the additional parts, *7* the drive gear, *6* a knurled head or handle, and also a ratchet and set of pawls, not shown in the drawing because they are upon the opposite side of the machine. These pawls and their ratchet form the connection between the driving wheel *7* and the driven sprocket *3*. The shaft itself is labeled *5* and is shown dotted in the figure. The size of the feed loop may be adjusted by turning the handle *6*, either with the motion head at rest or while running.

There are nine claims.

No. 1,006,292. Apparatus for Projecting Moving Pictures. Eberhard Schneider, New York, N. Y.

This patent shows an auxiliary device for use in novel effects upon the screen while projecting pictures, either moving pictures or fixed slides. The device produces a frame of light around the picture upon the screen, and provides means for changing the color of the light, or for chromatrope effects if desired.

The invention contemplates the use of the single arc lamp for the projecting of the picture upon the screen and for the projection of the colored light borders described.

The illustration accompanying this review of the patent shows a plan view of a projecting table, having a lamp house, a motion head, and the attachments of this invention. Below it are two small views, showing the slot plates for projecting the light borders described.

The lamphouse is shown at *1*, and the motion head complete is shown at *2*. At *3* and *3* in the lamp house are side windows through which the side light of the arc lamp passes. From the arc lamp *4*, the strong front light passes through the condensers and motion head, as usual, while the side light passes through the side windows *3* and *3* and is reflected by the mirrors *5* and *5*, which are adjustable by the clamps *6* and *7*, the side light then passing through the side frames *8* and *8*, containing the slot plates *9* and *9* which carry the slots *10* and *10*. Each side light slot forms half a frame of light, and together they frame the screen with light. Lenses *11* and *11* focus this light upon the screen.

Disks *12* and *12* of colored glass, variably colored, are mounted in brackets *15* and *15* upon shafts *13* and *13*,and are rotated by shaft *16* through belts *18* and *19*. Shaft *16* by gears *17* is turned from any suitable moving part of the motion head.

By changing the disks *12*, various color effects may be obtained, and many possible modifications of disks and slot plates lend possibilities of entertainment to the attachment.

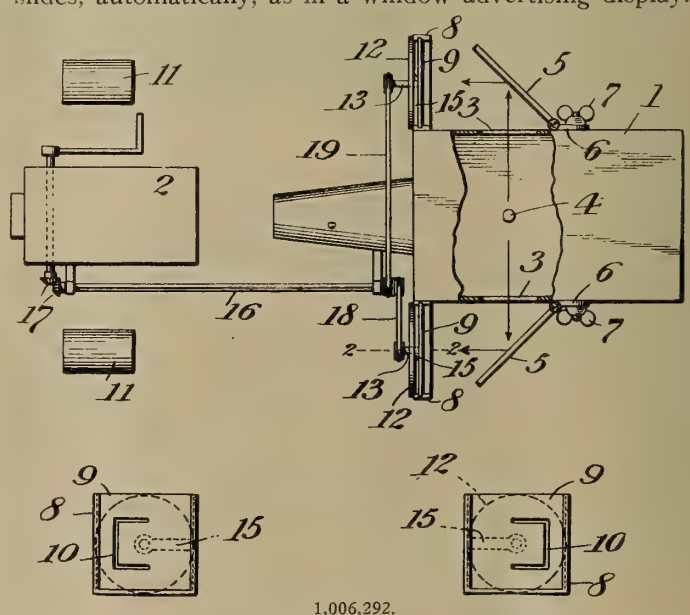
The two claims give Mr. Schneider the exclusive right to make, use and vend the improvement described:

1. An attachment for moving picture projecting apparatus comprising a reflector adapted to be mounted adjacent to the light of the moving picture projecting apparatus and adapted to utilize light from the same source as that employed in projecting the moving picture, a mask or slide presenting an opening adapted for projecting a frame of light around the moving picture, and means adjacent to said slide for changing the character of light passing through the opening therein.

2. An attachment for moving picture apparatus comprising a reflector, a support for a mask or slide, a mask or slide for an opening for the projection of light to form a frame around the moving picture, a screen mounted adjacent to said mask or slide and movable in relation thereto, whereby the character of the light passing through the opening in the mask or slide is varied, and a lens for projecting the light passing through the opening in the mask or slide, whereby a frame of light is formed around the moving picture.

No. 1,006,318. Stereopticon. Einar A. Ungren and Armstrong R. Foster, Pine Bluff, Ark.

The object is the successive projection of lantern slides, automatically, as in a window advertising display.



1,006,292.

The means adopted is an electromagnetic device for moving the plates. In connection with it is a clock for starting the action of the electromagnetic plate moving device, the second hand the clock closing the electric circuit of the plate moving device every minute, or oftener if desired.

No. 1,006,406. Kinetoscope Safety-Shutter. Alvah C. Roebuck, Chicago, Ill., assignor to the Enterprise Optical Manufacturing Company, Chicago, Ill.

This invention relates to that type of safety shutter mechanisms for kinetoscopes intended to prevent the concentration of the light rays upon the film, and thus pre-

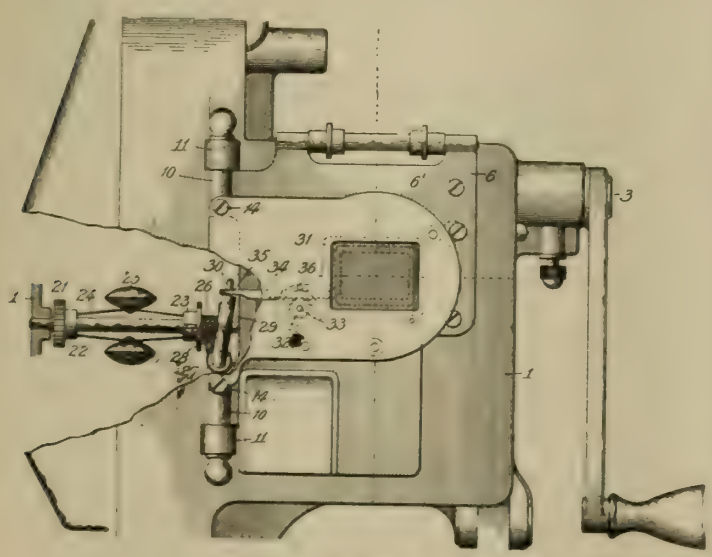
vent the ignition of the same, when at rest in the film window, or in slow motion through the film gate. The object of this invention is to provide a shutter which will be sensitive to the movement of the film mechanism, which will be mounted upon the film gate of the motion head itself, and which therefore will move with the film gate as the gate is opened or closed, so that the safety shutter, without any derangement of its parts or operative connections may be moved out of the way along with the film gate in the operations of threading up the motion head, and will be brought into position as the film gate is closed upon the film preparatory to starting projection of the picture.

In the accompanying drawing, the part labeled *1* is the frame of the motion head, upon which all the apparatus of the projector is mounted. The main shaft or crank shaft is labeled *3*, this shaft driving the film mechanism and driving also the centrifugal governor.

The film gate is labeled *6*, and swings horizontally upon the pair of vertical hinges, of which the fixed parts are labeled *11* and the moving parts are labeled *10*. Secured to the hinge and to the film gate by the screws *14* and *14* is the fire guard plate, carrying the fire shutter *31*, attached to the pinion wheel *32* and pivoted at *33*. The toothed rack *34* rides upon the pinion wheel, and when the rack is pulled to the left the wheel is turned, lifting the fire shutter out of the film window.

The shaft *27* rocks in horizontal bearings. One end *28* of the shaft *27* is engaged by the sliding shoulder *23* of the centrifugal governor driven by the gear *21*, having the fixed collar *22*, the sliding collar *23*, the springs *24* and the weights *25*. The remaining end of the shaft *27*, that is the end *30*, engages the toothed rack *34*.

The operation now is clear. When the motion head is turned the governor weights *25* move outward, drawing the sliding collar *23* to the left; this draws the end *28* of the rocking shaft *27* to the left; the end *30* also



1,006,406.

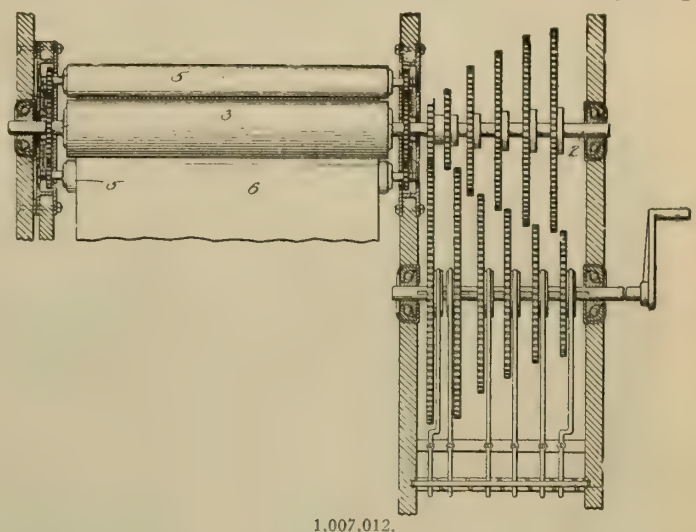
moves to the left, drawing the toothed rack *34* to the left, turning the pinion wheel *32* and lifting the fire shutter from the film window.

The point of engagement of parts *30* and *34* is made to fall in line with the hinge parts *10*, *10*, *11*, *11*, and as the film gate and fire shutter swing upon those hinges the part *34* swings around the part *30*, always retaining its operative connection and its operative condition when the film gate is closed.

The claims are eleven in number, and appear to protect the invention described.

No. 1,007,012. Film Feed Device. Charles C. Spinks, Memphis, Mo., assignor to M. C. Spinks and M. A. Poor, Memphis, Mo.

The invention is for feeding photographic films, either in the camera or in the projecting machine. It may be used in connection with any type of projecting



1,007,012.

machine (or camera) for the purpose of feeding any size of film. Thus it is possible to run any size of film with the one feeding device, and without using sprocket teeth.

The feed roller *3* is a friction roller, the film *6* being held upon the friction feed roller by the clamping rollers *5* and *5*.

As different sizes of pictures upon the different films will require different rates of feed, a number of pairs of gears are included between the crank handle and the feed rollers, that a pair may be selected which will give approximately the speed required for the particular film being projected.

The claims pertain to the number of intermediate gears, and also to the specific means for clamping the clamp rollers upon the friction feed roller, with the film between.

Alabama Wants Advertising Pictures

Alabama in moving-picture may be adopted as an advertising plan by Lee Cowart, state commissioner of immigration, who is arranging for a trip through the central, western and Pacific coast states sometime next summer. Commissioner Cowart first developed a scheme to run exhibit cars through that section of the country, but not being able to get the railroads to make concessions was compelled to look elsewhere for publicity methods.

It is proposed to have moving pictures made of Alabama cities, lands, industries, products and scenery, then show them at points all along the road. The pictures are to be furnished Commissioner Cowart by any person, firm, corporation or organization, or by any county or municipality, without cost to the immigration department.

No details have yet been worked out, but it is probable that the commissioner will soon put the matter before those who may be interested in advertising the state. When the necessary number of pictures has been procured, it is announced, an itinerary will be laid out, and the pictures will be shown free of charge in towns where stops are made.

Scene from Selig's Feature Film, "The Danites."

Benefits of League Membership

The following letter, sent to exhibitors by the Motion Picture Exhibitors' League of America, calls attention to some of the concrete advantages gained by membership in the league:

We wish to bring to your notice a few things we have accomplished for the Chicago exhibitors and see no reason why we should not be in a position to remedy some if not all of the many grievances or matters of import, providing we can be assured of your mutual support and co-operation.

The Exhibitors' League saved at least thirty-three frame theaters from being put out of business, through a new building ordinance proposed by the city council.

Every theater license has been increased excepting those of the moving picture houses.

We have been able to make satisfactory settlements in various instances in cases of damaged films or the destruction of same through fire losses; more reasonable rates for special releases or subjects of more than 1,000 feet, regulation of film programs beneficial to both licensed and unlicensed exhibitors, through a distinct and mutual agreement between exhibitors and exchanges licensed and unlicensed whereby the length of a program shall consist of no more than three reels where the price of admission is five cents; and where the admission charged is more than five cents, the length of the program is left to the discretion of the exhibitor as he sees fit.

In addition to these important results achieved through our organization we maintain a representative grievance committee whose duty is to investigate all said grievances or complaints that a member may bring in good faith or may have against another exhibitor or the exchanges, placing reliance of course and expecting the various exchanges good will and support which we are pleased to be able to state they have shown disposition to give, since our organization has been in existence.

We believe it is unquestionably to your advantage to become a member of our league or assist in forming a local in your vicinity as past experiences have proven that an individual in any business, much less in one like ours, cannot accomplish what an organization can, and by concerted action only can we expect to obtain concessions for our mutual welfare and furthermore safeguard legislation beneficial to our common interests and not prejudicial to us as has been the case heretofore in many instances.

To those whom this may appeal to and in furtherance of a good cause undertaken by as representative a body of men as could be desired, we will gladly furnish a copy of our constitution and by-laws, which may be of help to any exhibitors desiring to form a local, subsequently affiliating with our state organization, which is incorporated into our national body, upon written request to our secretary of Illinois Branch No. 2, Motion Picture Exhibitors' League of America.—Sidney Smith, 435 *North Clark street., Chicago, Ill.*

The organization movement is progressing rapidly, and we trust this excellent appeal will do much to interest those who, for one reason or another, have not yet seen fit to affiliate themselves with such a body.

Michigan Association Active

At a recent meeting of the Moving Picture Exhibitors of Michigan, held at Lansing, it was decided to impose a tax of $5 on each of its members to meet the expense of an appeal to the Supreme Court in the case of the Lansing exhibitors found guilty of keeping their theaters open on Sunday. The association will hold its next annual convention at Muskegon July 9, 10 and 11. A. L. Rule has been appointed general organizer. It is the ambition of the organization to become one of the strongest of its kind in the United States.

Of Interest to the Trade

Correspondence

CHICAGO, January 16, 1912.

EDITOR OF MOTOGRAPHY: We have just picked up a fable which so fits the manufacturing end of the moving picture business that we believe you will be interested to read it.

While we cannot account for its having been overlooked by our old friend Aesop, we have so far been unable to trace the authorship to him.

This fable is like all others, in that it begins with a big lie and ends with a great truth. The lie is the story; the truth is the moral which adorns it. Here it is:

"Once upon a time a painter was engaged in painting the exterior of the Singer building in New York. He was on a scaffold about ten stories up, when a man on the street, at some distance away, cried up to him, 'That is a beautiful building, isn't it?' To which the painter replied: 'Damfino, I am too close in to see it.'"

The moral of this fable, as applied to the film industry, reads don't keep so "close in" to your business that you never see your product after it leaves your studio. Climb down from the scaffold of self-satisfaction and look at your films as others must look at them. Go out into the highways and byways, and see them after they have been in service a few months, or even weeks.

Observe how your great care in making them has been nullified by the lack of care in keeping them.

See the multiplicity of dirty scratches and oil stains, which have accumulated on them, and notice, too, that your trade mark is still there, advertising you more and more unfavorably every time the film is shown.

Knowing nothing about runs, consider what the public must think of such pictures, especially that large part of the public living in the suburbs, or outlying districts, where a film less than sixty days old is seldom if ever seen. After this, if you do not decide that, like the painter, you are "too close in," read up on the habits of the "Billy-loo," a bird which to shun danger is said to stick its head in the sand and whistle through its feathers.

Yours truly,

NATIONAL WATERPROOF FILM COMPANY.

Lubin South and Southwest

The Lubin Manufacturing Company has sent a company to the South and another to the Southwest, where they will spend the next six months working out the various stories which require the particular setting which these sections provide. Principal among the first party, which is under the supervision of Arthur D. Hotaling, are Mae Hotely, Jerold Hevener, Peggy Glynn, Betty Cameron, George Reehm, Robert Burns, Spottiswood Aitken and Walter Stull. The equipment of this section is made up of a Pullman, a day coach and a baggage car. Stops will be made at Jacksonville, Daytona, Miami, St. Augustine, Knight's Key, Florida, thence to Cuba, and the return journey will be via New Orleans and the Mississippi river.

The second section, which will visit the important cities, reservations and garrisons of Arizona, will be under the direction of Wilbert Melville, who will have with him the following leading characters: Burton King, Webster Cullison, W. J. Wells, Romanie Fielding, Harry Berger, Charles Lugert, Edna Payne, Virginia Bennett and Adele Lane.

Birmingham to Have School Pictures

Dr. J. H. Phillips, superintendent of the public schools of Birmingham, Ala., announces that plans are being perfected for the installation of a system of moving pictures throughout the various schools of the city within the near future.

It is the plan of the board of education to install an up-to-date apparatus for the display of instructive motion pictures. Experts will be employed to operate the machines, and a perfect system will be used in presenting the films to be taught by the new method.

The idea has met the approval of the friends of the local schools, and its adoption is looked forward to with a great deal of interest.

While there has not been any definite time set for putting the moving pictures in operation, it is certain that they will be installed just as early as practicable.

When the pictures are placed in the Birmingham schools, it will be the fourth city in the United States to have a similar system. Memphis is now arranging for the display of such views in her public schools, while the method has been successfully used in Brooklyn and Des Moines for some time.

The only drawback to the use of motion pictures in the public schools is that some trouble has been experienced in obtaining desirable films for instructive purposes.

The system will be installed without additional appropriation on the part of the city, or without serious inroads into the funds of the board of education.

Exhibition of Manufacturing Methods

A large automobile show was recently held at Olympia, London, where, notwithstanding the great size of the building, many of the manufacturers were unable to obtain floor space. The American makers especially were disappointed, as only one of them was able to secure space. However, with characteristic American ingenuity, several of the manufacturers proceeded to take advantage of the large crowds that came to the exhibition, filled with a keen desire to learn all they could about automobiles. So while the show was in progress, all the stages in the making of two American cars were shown in motion pictures. The films showed the factories, the different processes of construction, and the great care taken in testing the finished product before offering the cars for sale. The films were explained by a lecturer, and the makers claim that they received fully as much benefit by this unique method of exhibiting their cars as if they had secured space at the show. It is proposed to show these views throughout the British Empire.

The "Implet" is Born

The *Implet* has made its bow to the moving picture people. Thomas Bedding, who from January, 1909, till April, 1911, brightened the pages of the *Moving Picture World*, is the *Implet* editor. Mr. Bedding explains the purpose of the *Implet* by saying that "while necessarily guarding the interests of the Imp Films Company it will not be narrowed in scope, like most house organs." To

quote further from the announcement: "It will address all exhibitors, manufacturers and the general public throughout the world."

The first issue of the *Implet* lives up to the promises made for it. Volume 1, Number 1, is dated January 20, 1912. The price is given as five cents. The first page of the introductory issue is devoted to an appreciation of Carl Laemmle, written by Mr. Bedding. Mr. Bedding's tribute to the "Little Napoleon" of the film business is a sincere reflection of the opinion of every individual who has enjoyed a bit of the Laemmle friendship or association.

Fox's Case Decided

In a suit brought by the Greater New York Film Rental Company against the Motion Picture Patents Company, in which it sought to restrain the latter from revoking its license granted January 20, 1909 until the matter should be brought before the proper tribunal, Justice Bijur of the Supreme Court denied plaintiff's application on the ground that the contract in question was clear and binding in its terms. Plaintiff held that the license was withdrawn without cause and that this action greatly imperiled his business. Following this decision steps were taken to place the matter before the Appellate Division. In its decision the court reviews quite at length the issues involved, but does not consider it necessary to pass upon the many interesting points of law involved, on the ground that the present issue hinges solely on the clause in the license contract which permits the Patents Company, arbitrarily and without cause, to revoke said contract on fourteen days' notice, which clause is held to be binding and to carry with it this legal right.

Another Manufacturer

The Aajax Motion Picture Manufacturing Company is the name of a new concern which has been incorporated by men, who for the most part, are already well known to the trade. It is the purpose to make one negative a week for the National Film Distributing Company, do special dramatic work for other manufacturers and also take industrial pictures. The new firm will be located at 120-22 West 31st street, New York City. The officers are as follows: President, Luther E. Taylor; vice-president, John F. Hughes; secretary, Louis J. Rosett; treasurer, DeWitt C. Wheeler; Farrell MacDonald, who is also a stockholder, will be director of productions. Mr. MacDonald formerly filled this position with the Imp company.

Bernhardt and Rejane in Pictures

There have recently been released by the French-American Film Company films which are bound to attract widespread attention because of the world-wide reputation of the actresses represented therein. We refer to "Camille" in which Madame Bernhardt appears, and "Mme. Sans Gene", selected by Rejane. In each case the play has been somewhat revised to meet the requirements of the new conditions under which they are given. It is stated that Madame Bernhardt's com-

Scene from the American Film, "A Leap Year Comedy."

pensation for the time spent in posing for this subject was $30,000. Each film is sufficient for an evening's entertainment, being about 5,000 feet. Max C. Anderson is the American representative of the French-American Film company. The actresses did their work last fall, but the films were but recently ready for general release in this country.

The tendency of famous artists to favor the motion picture camera is very encouraging.

The Superior Film Exchange, Fargo, N. D., has been organized by Mr. Merrill, who has for many years been connected with the vaudeville and burlesque in Sacramento, Cal. The exchange will use independent films and it is the purpose to cover the district of North Dakota, South Dakota, Montana and Minnesota. As there is said to be a dearth of film exchanges in this section the new concern will doubtless be a success and find a big market for its films.

The Gem Theater, Chicago, Ill. Front Designed by the Decorators' Supply Company, Chicago.

Humidor Film Tin Patent Allowed

The Perfection film tin is a newly invented case for films, in which a brittle film is restored to softness and pliability in a few hours. This seemingly extraordinary result is accomplished by the use of a few drops of a fluid, which is absorbed by a pad in the tin, and the vapor from which acts on the film. These tins are inexpensive enough to be used in place of the ordinary kind, and will save their cost in film in a short time. A waterproofed film kept in one of these tins will remain practically new for an indefinite period, with ordinary use.

The National Waterproof Film Company, Chicago, announces that it has been allowed a patent on the Perfection tin by the United States government.

The oddest calendar that has yet come to hand is from the offices of the Wisconsin Seating Company, New London, Wis. It is made of mahogany veneer on three-ply stock sawed into the shape of the state of Wisconsin and nicely finished. On the wood surface is printed a view of the company's extensive works and a list of its products.

Another film calendar for the new year is put out by the French-American Producing and Manufacturing Company, Chicago. It is made to look like a piece of film.

Mirror Screen Maker Given a Dinner

Frank J. Rembusch, manufacturer of the famous mirror screen and proprietor of the new Alhambra Theater at Shelbyville, Ind., was the guest of honor at a business men's banquet in that city January 18. Ninety-two of Shelbyville's prominent citizens were present and many of them spoke of Mr. Rembusch's enterprise with pride. The meeting closed with a fitting address by Mr. Rembusch.

The Essanay western company, which has been operating in and around San Rafael, has moved to Lakeside, Cal. An abundance of beautiful natural scenery, so necessary for successful picture production, is to be found there, and G. M. Anderson has in preparation a number of excellent photoplays. Miss Vedah Bertram, a new leading lady of the western company, will be featured in coming pictures with Mr. Anderson, whose creation of the role of "Broncho Billy" has become famous throughout the country.

Ohio Convention in March

The Motion Picture Exhibitors' League of the state of Ohio will hold a convention at the National Cash Register hall, March 26 and 27. O. B. Weaver and Clem Kerr, members of the league, have been appointed by M. A. Neff, president of the league, to co-operate with the Board of Trade and the management of the Cash Register Company. This will be the biggest meeting ever held in the state of Ohio by the Motion Picture Exhibitors' League. All bona fide exhibitors are invited to attend whether they are members of the league or not. The first day, March 26, will be given over to pleasure and a trip through the National Cash Register works. The second day will be for the members of the league only. Now is the time to make arrangements to attend this splendid social, business and educational convention.

Changes in the Champion

Mark M. Dintenfass of the Champion Film Company has recently made some important changes which he believes will add to the efficiency of his professional department. Jay Hunt, formerly with Vitagraph, but later with Eclair, will be general supervising director of production. Evelyn Francis will be leading lady and Irving Cummings, at one time leading man for the Powers company, will join the Champion company in this capacity. Miss St. Claire, Mr. Gemp, Scenario Editor Coigne and Directors Davis and Mitchell are the old members of the company who have been retained.

Chicago's Latest Exchange

The Majestic Film Service Company is a late addition to Chicago's list of buying exchanges, having recently been incorporated with a capital stock of $25,000. Although the combination is new the officers are well known in this field. C. J. Hite, of the H. & H. Film Service Company is president; T. A. Hewitt, secretary and treasurrer, and R. C. Seery, formerly manager of the Standard Film Exchange, is manager. The new firm will be located at 216 Fifth avenue, where it will be prepared to supply twenty-four reels per week.

Pathe in Texas in Mexico

The Pathe company has stationed a company at El Paso, Texas, which will work throughout Texas and Mexico utilizing the scenery of this section in developing Indian and Mexican subjects. The work is in charge of Director George Connor and with the party are Redwing, the Indian girl, and Miss Lurline Lyons, leading lady.

General Film Has Fire

The plant of the General Film Company, 926 and 928 Market street, Philadelphia, was recently destroyed by fire. Owing to the extreme cold and other adverse circumstances, the fire department was handicapped and for a time it was feared the center of the business district was doomed. The loss, including the plant and damage to other buildings reached $200,000. Fortunately no lives were lost.

Denver Gets Big House

Plans have been drawn and work will begin in the spring on what will be Denver's largest and finest moving picture theater. It will be located at Curtis and 17th streets, with a frontage of 75 feet on Curtis street, and will have a seating capacity of 2,200. It will be built by S. L. Baxter, pioneer in the picture field in that city, who owns the Isis and the B.

Two beautiful calendars have issued from the offices of the American Film Manufacturing Company. One is from headquarters, in the Ashland block, Chicago, and the other from the London (England) office. The local example carries a group of portraits of the familiar American stock company, while the English production has a lithographed picture of a man and woman (presumably Warren Kerrigan and Pauline Bush) on horseback.

The Solax Company has put out a very handsome calendar for 1912.

Scene from George Kleine's Cines Drama, "A Sister's Stratagem."

Turkey's Picture Theaters

Vice Consul John L. Binda, Saloniki, says American cinematograph films are easily the most popular shown in Saloniki. During the summer an outdoor moving-picture theater was established quite a distance from the most populated sections of the city. However, it was able to do a good business by promising to show several films from a certain American company each week. When the theater had worked up a good patronage it substituted cheaper European films. Immediately business fell off and only by promising to increase the number of American films could it win back its lost patronage. One manager says that the people prefer American films because of their clearness, their intricate plots, and the vivacity and naturalness of the actors, the American heroine being especially popular. Films showing the exploits of American detectives are well liked.

There is an excellent opportunity for an American company to establish a theater there showing only American films. This could be started with an outdoor show that could run five months during the year and earn enough money so that a place for the winter could be built. There is no other form of amusement in the city and the population of 200,000 must depend on three cinematograph theaters for entertainment.

From the *Near East:*

The other day we announced the formation in London of the Levant Kinematograph Company (Ltd.), with a capital of $50,000, to take over the patent rights for Turkey in Asia of the Natural Color Kinematograph Company of London. We now learn from Smyrna that the company has acquired a suitable site on the quay, and the building is expected to be open next month. We understand that the same company has acquired the rights also for Greece and Egypt, and that it is intended to open exhibitions in these countries later. The electric installation is in local hands, and a considerable part of the fittings have been ordered from British makers. The engines—two horizontal electric lighting type, internal combustion, each developing 25 candle horsepower—are from Gardner & Sons (Ltd.), of Patricroft; the ammeters and voltmeters are from Frankfort, Germany; the wires and cables are of British make. Six arc lamps, Korting & Mathiessen system, of 2,500 candlepower each, and 1,250 metallic filament lamps supply the light.

The Only Filipino Amusement

Manila, with a white population of only 6,000, supports nearly fifty moving picture shows, which are becoming very popular with the natives. This is practically the only amusement in the theatrical line in the city and even the elite of the capital make it a practice to have their theater parties.

The theaters for the most part are in first-class condition. The front seats, which are benches, are occupied by the natives, who view with each other in getting as close to the front as possible. The building is divided, the back part having good seats occupied by the better class of Filipinos and Americans. The cost to the natives is five cents and to foreigners is ten cents.

Natives coming from other islands or from some other portion of the archipeligo think these moving pictures the eighth wonder of the world and can hardly realize that the moving figures are not real. They examine the machines closely and are very curious.

Among the Picture Theaters

PERSONAL NOTES.

Harry A. Spoor, London representative of the Essanay Company, sailed Wednesday, January 24th, on his return trip to England. Mr. Spoor carries back with him knowledge of elaborate preparation being made at the Chicago studio of Essanay for some brilliant productions in the near future.

Henry J. Brock, president of the Kinemacolor Company of Canada, Ltd., has been appointed managing director of the Kinemacolor Company of America. Mr. Brock is one of the partners of the Marck Brock Theatrical Enterprises of Buffalo, owning and operating numerous high class moving picture and vaudeville houses in the United States and Canada, and is well known in this field throughout the country.

Stanley Twist, publicity man for the Selig Polyscope Company, who was in the hospital for some time, has recovered sufficiently to resume his duties.

Charles DeForest, the well-known comedian, has been engaged by the Republic Film Company to play in its comedy productions.

Charles Simone of the Nestor Film Company, Bayonne, N. J., is recovering from a severe attack of acute muscular rheumatism, and a lacerated arm, caused by a fall on the ice.

A. K. Greenland, formerly connected with the New York office of the *Billboard*, has assumed a position with the Gaumont company.

H. H. Hutchinson of the American Film Manufacturing Company, A. A. Davidson, of the Selig Polyscope Company, and Watterson R. Rothacker, of the Industrial Moving Picture Company, have been selected to represent moving picture interests on the Ways and Means committee of the Chicago Association of Commerce.

E. H. Brient has resigned his position with the General Film Company at Indianapolis, Ind., to assume the management of the Indianapolis office of the Feature and Educational Film Company, with headquarters at 16 West Market street, that city.

R. Guthrie Kelly, scenario editor for the Nestor Film Company, recently died in California as a result of injuries sustained in an automobile accident near the Los Angeles Country Club house, about seven miles from that city. Mr. Kelly was 24 years old and well known in motion picture circles. The remains were taken to Sioux City, Iowa, his old home, for burial.

C. O. Baumann, president of the New York Motion Picture Company, has gone abroad in the interest of the new feature Bison 101 Ranch films, the first of which is to be released in America on February 23.

A. J. Danziger, of the New York Film Company, has gone to Europe with the intention of visiting all the places where motion pictures are manufactured.

Harry F. Kellogg, manager of the Theaterette Moving Picture Theater at Ft. Scott, Kans., recently died in that city after a brief illness. Mr. Kellogg was the founder of this theater which was the only five cent theater in the place.

ROLL OF THE STATES.

ALABAMA.

The Iris, a popular moving picture theater of Greenville, owned by S. O. Morris, will move into new quarters which will be remodeled and made thoroughly up-to-date.

Realizing the popularity of the motion picture theater and the great opportunity of reaching the public through its medium, the weather bureau at Birmingham conceived the idea of disseminating the weather forecast in this way. Accordingly, it was proposed to T. S. Abernathy, manager of the Odeon theater that he display the daily weather forecast on his screen between the acts. Believing this to be a progressive idea and also a useful public service Mr. Abernathy readily agreed. If the idea is a success it may be tried in other places.

The Crescent, one of the most up-to-date and beautiful motion picture theaters in the South, was recently opened at 208 Dauphin street, Mobile, under the management of I. N. Frankie. A novel feature of the seating arrangement is that the screen is in the front of the house, the seats facing the door. The color scheme is green and white and the house is seated with mahogany opera chairs and no effort has been spared to provide for the comfort and pleasure of its patrons. Only the best of motion pictures will be shown.

The Vaudette, a handsome, up-to-date motion picture house, has been opened at Birmingham under the management of H. A. Spielberger.

ARKANSAS.

W. R. Vance is now the sole owner of the Bijou theater at El Dorado, having acquired the interest of his partner, A. S. Hadden.

CALIFORNIA.

The Consolidated Amusement Company will erect a moving picture theater at Monrovia at a cost of $25,000.

A municipal moving picture theater will be erected at Berkeley.

A moving picture theater will be erected at San Pablo by Fred C. Clift at a cost of $75,000.

At a meeting of the Moving Picture Exhibitors' Association held in San Francisco, a new constitution was adopted and steps taken to extend the organization so as to include exhibitors throughout the state. A resolution was also passed affiliating the association with the National Motion Picture Exhibitors' League. The following officers were elected: President, Charles Rothschild; vice-president, A. R. Oberle; recording secretary, W. A. Corry; financial secretary, N. K. Herzog; treasurer, Max I. Shirpser.

The Globe Amusement company has been incorporated at Los Angeles with a capital stock of $1,000,000. It is the purpose of the organization to erect a number of high class vaudeville and motion picture houses in the most populous suburbs of Los Angeles, all of which will be constructed along the same lines. It is said they will be so arranged that patrons can order refreshments at tables while watching the performance. The enterprise will be under the management of H. W. Nixon, 915 Security building.

The Fox Motion Picture company of Los Angeles has been incorporated with a capital stock of $50,000. The directors are D. S. Markowitz, M. Brick, N. Krystal, L. L. Burns, G. Cooper.

COLORADO.

Plans are being prepared for a moving picture theater to be erected at 105 North Tejon street, Colorado Springs, by Harry C. Goldstein at a cost of $15,000. It will be known as the "Garden" and will be strictly modern in every particular. It will be decorated with palms, ferns and flowers and it is planned to construct a roof garden so that in summer refreshments can be served and pictures shown in the open air. Work will begin about February 1st and it is expected to have the theater completed by April.

The Majestic of Colorado Springs, which has heretofore been devoted to vaudeville will now show pictures exclusively.

C. S. Gambrill will erect a moving picture theater at the corner of Tejon and Nevada avenues, Colorado Springs, which will have a seating capacity of 1,250, and it is said will cost $100,500. No expense will be spared to make the house comfortable and attractive. The interior will be decorated with frescoing and paintings by celebrated artists.

The Photoplay theater of Colorado Springs, formerly conducted by G. W. McClelland, has been purchased by John E. Carpenter of Lawrence, Kansas, for $14,000.

Warden Tynan, of the State Penitentiary at Canon City, has purchased a moving picture outfit for use in the prison and will give weekly exhibitions along educational lines.

Within the next few months there will be two large motion picture theaters erected on Curtis street, Denver, between Seventeenth and Eighteenth streets. One will be erected by S. L. Baxter, owner of the Iris theater, which is located in the same block, and will have a seating capacity of about 2,200. The other will be erected by the Paris Amusement company and will have a seating capacity of about 2,500. Work will begin late in February or early in March and it is expected to have the houses ready to open to the public early in the summer.

CONNECTICUT.

New Haven, Conn.—A moving-picture theater with a seating capacity of 600 is being erected on Congress avenue by Fahey Brothers.

FLORIDA.

The Star is the name of a new moving picture theater opened at the corner of Bay and Hogan streets, Jacksonville, under the management of Thornton Parker, who built and operated the Bonita circuit through the South. As Mr. Parker has had long experience in the moving-picture business and is familiar with all its details there is every reason to believe that the Star will be successful from the beginning.

GEORGIA.

About May 1st there will be opened in Macon one of the most up-to-date roof garden picture theaters in the country. For

this purpose L. C. Small has leased all roof privileges of the Georgia Life building.

IDAHO.

The Grand theater of Pocatello has been purchased by Al Hawkins, who is an experienced motion picture man and should make the house a success.

ILLINOIS.

A moving picture theater was recently opened at Ida Grove by Geo. Pullis.

William Evans has opened a moving picture theater at 521 Hampshire street, Springfield.

E. L. Harris is now sole owner of the Columbia, the largest and best equipped exclusive moving picture theater in Peoria, having purchased the interest of S. A. Oakley in the Alhambra Amusement company, which owns this house.

Ed Rothe, 7815 South Halsted street, Chicago, will spend $4,000 in enlarging his theater.

Leland Edwards has been granted permission to erect a moving picture theater at 412 Main street, Bloomington.

The Majestic moving picture theater at Fairbury has been purchased by Messrs. A. R. Moss and Harry Evans.

A moving picture theater will be erected at 2006-8 Montrose avenue, Chicago, by A. Pink, at a cost of $5,000.

The Princess theater at Galva was recently purchased at receiver's sale by John Best.

The Colonial theater, North Main street, Bloomington, has been purchased by A. C. Shultz of Peoria, and the same will be under the management of William Peterson.

A new theater will be erected at 5419 South Ashland avenue Chicago, by J. Kohlman, at a cost of $6,000.

The Princess theater at Galesburg has been purchased by Don Best, who will continue to operate the same.

Messrs. Daley will erect a hippodrome theater at Carlinsville, which will have a seating capacity of 1,800.

The Dreamland moving picture theater, operated at Lena by D. F. Shirk, has been purchased by Charles Wallick.

The Princess theater at Galva has been leased by Wallace Emery, who will conduct the same.

Messrs. Byrus and Nelson will conduct a motion picture house at Roseville.

The Morton Film Exchange, Chicago, has been taken over by Eugene Cline.

C. P. Lautenslager, 3433 W. North avenue, Chicago, will erect a moving picture theater at a cost of $25,000.

The Colonial moving picture theater of Rockford, owned by John Sammons, has been purchased by Messrs. Anderson and Johnson, two Rockford men, who will operate the same.

The Majestic Film Service of Chicago has been incorporated with a capital stock of $25,000 by C. J. Hite, 6825 Jefferson avenue, and others. It is the purpose of the concern to deal in moving picture apparatus, operate theaters, etc.

A moving picture theater will be erected at 21-25 North Clark street, Chicago, by Harry Moir, at a cost of $618,000.

Stelzer Brothers, of McCook, Neb., have located in Lincoln, where they will engage in the manufacture of violins and rebuilding moving picture machines.

A moving picture theater will be opened at 323 C Avenue, Lawton, by J. C. Murray.

The Dreamland moving picture theater at Farmington has been purchased by Mayor Johnson.

The Ogden is the name of a handsome new motion picture house recently opened at 1114 West Sixty-third street, Chicago. Only high grade pictures will be shown.

William Baker, 1145 Garfield Boulevard, Chicago, has been granted permission to erect a moving picture theater at a cost of $9,000.

Henry O. Noben, proprietor of the Rockford Moving Picture Parlor, recently damaged by fire, announces the same will be rebuilt.

C. H. Zuttermeister, 1415 Fullerton avenue, Chicago, will erect a moving picture theater at a cost of $10,000.

The State Theater company, Chicago, has been incorporated with a capital stock of $1,500. The directors are William F. Zurwelle, William H. Becker and Raynold H. Hendricks.

The Gem theater at Clinton has been purchased by Clarence Tharp.

E. B. Green will open a moving picture theater at Greencastle.

The opera house at Raymond has been leased by Max and Vivian Sajlec, who will conduct it as a moving picture house.

The Devon Moving Picture Theater, 6517 North Clark street, Chicago, was recently damaged by fire to the amount of $500.

The Central Theater company of Chicago has been incorporated with a capital stock of $1,000 and the directors are as follows: Fred D. Selber, A. Paul Holbeb and M. J. Isaacs.

The Alvin is the name of a high grade moving picture theater recently opened at Sixty-third and Drexel avenue, Chicago, by C. B. Reynolds, whose purpose it is to acquire a chain of high grade exclusive picture houses.

The Edgewater is a high grade moving picture theater recently opened at 1130 Bryn Mawr avenue, Chicago, with a seating capacity of 300, under the management of W. H. Apgar.

The Sylvia is a new motion picture house located at 2809 Sheffield avenue, Chicago. S. Wertheimer is the proprietor.

The Princess is the name of the new motion picture house opened at Western and North avenue, Chicago, by B. Petchaft and company. The seating capacity of this house is 300.

Messrs. Katz and Rosenthal will conduct a moving picture theater at 5619 Center avenue, Chicago.

The X-Ray theater at Lincoln has been purchased by J. Kendall of Pleasant Plains.

Danville Auxiliary Branch, No. 17, Moving Picture Machine Operators' Union has been granted a charter. The following officers have been selected: President, Harry Hughes; vice-president, Bert Walters; secretary-treasurer, James Goff; business agent, Ed Dinsmore; seargent-at-arms, Ray McKinney.

INDIANA.

The Wayne Amusement company, of Fort Wayne, has been incorporated with a capital stock of $7,000 by T. C. Young, G. F. Underhill and others.

Misses Bertha Eldridge and Josephine Sims have assumed the management of the Orient Motion Picture House at Delphi. As far as can be ascertained these two ladies are the first in the state to engage in this line of work. Both are members of old and prominent families.

The Dreamland theater has been opened at Princeton by Riley Hull.

The Industrial Motion Picture company of South Bend has been incorporated with a capital stock of $15,000 and will establish a factory in that city for the manufacture of moving picture films for advertising purposes. The incorporators are Carl J. Allardt, manager of the Orpheum theater, president; Samuel D. Moran, treasurer; Edward M. Lucas, secretary and general manager.

The Young Amusement company has been incorporated at Indianapolis with a capital stock of $10,000. The directors are V. U. and G. B. Young and C. J. Hoff.

J. M. Johns, F. H. Nichols and H. Maxwell are planning for the erection of a theater at Rockville which shall cost $10,000.

The Victoria theater at Lafayette has been taken over by Aaron M. Gollos, a well-known theatrical manager of Chicago, who will open the same with novelty photo plays and musical acts. Mr. Gollos is establishing an Indiana circuit of theaters to add to his already large combination of amusement places.

The Star theater at New Albany, formerly owned by Walter Klarer, has been purchased by Simon Schafer.

The Walker Amusement company, Indianapolis, has been incorporated with a capital stock of $1,000. The directors are E. H. Reed, T. Walker and Charles Alcon.

Ingwald Moe, of the United States Steel Corporation, has purchased a site at Gary on which he will erect a moving picture theater, which, it is said, will cost $100,000.

W. G. Henne, 108 Brackford avenue, Evansville, will erect a moving picture theater at a cost of $8,000.

Ground has been leased and plans are being made for the erection of a motion picture and vaudeville theater on Massachusetts avenue, near College avenue, Indianapolis, at a cost of $15,000.

The Star theater, recently opened at Valparaiso by Oscar Williams, has been taken over by E. J. Hire, who will operate the same.

IOWA.

M. L. Weber and son of Independence will open a moving picture theater at Waverly.

R. J. Maloney, who operates the Lyric theater at Morrison, will open a theater at Clinton.

The "Golden," a high grade motion-picture house, has been opened at 805 Walnut street, Des Moines.

The Majestic theater, a motion-picture and vaudeville house of Nevada, has been taken over by S. J. Bowers, who formerly owned it and some time ago sold it to John Mott.

The Lyric theater at Charles City was recently damaged by fire.

A moving-picture theater will be opened at Dexter by James Joyce and A. W. Drake.

Messrs. Myers and Worthing have purchased the Johnson Opera House at New London and will convert the same into a moving-picture theater.

A. F. Victor of Davenport, head of the Victor Animatograph company, has made a number of inventions which will make it possible to secure a moving picture machine for use in home entertainments, an improved form of stereopticon for use in educational, religious and amusement lines, and an improved post card

projector with many different usees, at a reasonable cost. The Victor Animatograph company has been organized with a capital stock of $100,000 for the manufacture of these inventions. The factory is now located at 218 East Third street, Davenport, and the officers are as follows: President, A. F. Victor; vice-president, Wilson McClelland; secretary, W. R. Weir; treasurer, Dick R. Lane; sales manager, S. G. Rose.

Henry Graaf will erect a moving picture theater at Estherville at a cost of $15,000.

The new Pastime theater has been opened at Iowa City by Fred Devers.

Messrs. F. L. Secoy and L. F. Chenoweth of Muscatine will conduct a moving-picture theater at 1101 Main street, Keokuk.

The Lyric theater company has been incorporated at Cedar Rapids with a capital stock of $7,000 by Frank Rose, Barney Davis and Evelyn Rose. The new concern will conduct a moving picture house at 93 Canal street, that city.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

EYE STRAIN

Its Cause and Remedy

"In the February number of the Motion Picture Story Magazine appears an article upon "Eye Strain," by Robert Stuart, M. A., from which we quote:

"'Eye strain' is the strain on the muscles of the eye, and as Douglas C. McMurtrie remarks in his 'Conservation of Vision,' eye strain is the most widely spread of all disorders of the eye." This author adds: "It is likely that the effects of this form of eye trouble are greater and more disastrous than all other forms put together." Scores of specialists in Europe and America who might be quoted to the same effect, have shown that unsuspected eye-strain is hampering the progress of thousands of ambitious men and women."

"To the general public, it is, indeed, astonishing to learn on the highest authority, that not merely headaches and nervousness result from trouble with the eyes, but that eye strain which does not always display itself locally, in a way to be recognized locally, is responsible for sleeplessness, over-drowsiness, irritability, indigestion, a sense of nausea that affects the appetite and directly diminishes the working power of the human machine."

As a writer in the Delineator puts it: "Nowadays, the wise doctor, having an obscure stomach trouble to deal with, in absence of other explanation, looks to the eyes. Eye strain has a most potent and far reaching influence on digestion. I know of one case of chronic dyspepsia, of a year's standing, completely cured by a change of eye-glasses."

No one can make a study of motion picture entertainments and fail to recognize that the majority of films shown are defaced with oil stains and dirty scratches—all of which are self-evident eye strains.

It is as impossible to make films which will not scratch as it is to make scratches on a film which will not fill with dirt and give to the pictures the appearance of having been photographed during a rain storm. In the trade such films are appropriately known as "rainy." As the majority of films are made today, washing the dirt out of the scratches with water ruins the films immediately and cleaning with volatile fluids ruins them after a few operations.

The Edison company recognizing the importance of clean pictures have for some time been issuing (without extra cost) films which can be washed with soap and water. Dealers, however, have generally neglected to wash them and so the Edison films are frequently found carrying as much eye strain as any.

The strong hand of public sentiment is needed and will eventually come to compel that all moving pictures shall not alone be made washable, but shall be periodically washed.

Moving pictures made right and kept clean produce no more eye strain than does looking out of a window, but, when streaked with incongruous black marks, they are, according to oculists, about the worst eye strain that can be imagined.—Davenport (Iowa) Democrat, February 7, 1912."

¶ Can any motion picture dealer read this and not realize the future of his business depends upon cleaner films?

¶ Films which are waterproofed and washed with water every week or ten days are the only ones sure to be clean.

¶ Waterproofing can be applied to new or old films.

WITH WHICH IS INCORPORATED THE NICKELODEON

VOL. VII. CHICAGO, MARCH, 1912. NO. 3.

SHUTTING OUT THE CHILDREN.

MAYOR HARRISON of Chicago, introduced at the city council meeting of February 19 an amendment to Section 119 of the Chicago code for 1911, prohibiting children under sixteen years of age attending public performances, picture theaters and places of amusement unless accompanied by guardian or parents. The amendment was framed by members of the West End Woman's Club. It reads as follows:

Be it ordained by the City Council of the City of Chicago:

Sec. 1. That section 119 of the Chicago code for 1911 be and the same is hereby amended to read as follows:

"(Prohibiting persons under sixteen years in places of amusement unless employed therein or attending performance). It shall be unlawful for any person, firm or corporation licensed under the ordinances of the City of Chicago to conduct any place wherein entertainments of the first, second, third, fourth, fifth, sixth, seventh, or thirteenth class, as defined by the ordinances of the City of Chicago, are offered, operated, presented or exhibited for gain or for admission to which the public is required to pay a fee, or the agent or employee of such persons, firm or corporation, or the person, firm or corporation in charge or control of such place of amusement or his or its employee or agent, to permit any minor, female or male, under the age of sixteen years, unless she or he be employed in or about such place of amusement, or under the age of sixteen years, when she or he be not so employed, to remain therein during any time when such place is not open to the public in connection with a public performance given therein, unless such female or male person is accompanied by one of her or his parents, or by some other adult relative.

"Sec 2. This ordinance shall be in full force and effect from and after its passage, approval and due publication."

It will be observed that there is a joker in the amendment as presented which would render it powerless if passed in that form. It prohibits the presence of children under sixteen when the theater *is not open to the public*. That it is not the intention of the amendment's framers to confine its potency to such narrow uses, however, has been shown by their activities in seeking support for their measure. Mrs. H. S. Newton, 1706 Warren avenue, has interviewed Archbishop Quigley, Rabbi Hirsch, Mayor Harrison and other prominent men. "They all give their unqualified approval to the proposition," Mrs. Newton said. "Children who would leave after the first performance if their parents were with them frequently remain the whole evening and are untitted for school the next day."

Brisk work on the part of the officers of Chicago Local, Motion Picture Exhibitors' League of America, resulted in the tabling of the measure at the council meeting of March 4. Before it comes up for reconsideration it is hoped to present such an array of fact and influential opinion against it that it will be killed without further parley.

The exercise of logic is claimed to be a purely masculine function, although deplorably rare even from that source. Perhaps that is why this Chicago amendment came from a woman's club; for it will not stand the light of reason. In the latter part of 1909 the city of New York was considering legislation similar in its provisions, and MOTOGRAPHY's predecessor, *The Nickelodeon*, published an editorial on the subject which so analyzed the situation that we reprint it at this time:

ADMITTING CHILDREN.

New York is headquarters for a national board of censorship of moving pictures—a board whose personnel is a virtual guarantee of efficiency. Chicago has a police censorship system which keeps a dozen inspectors busy examining films before they are released. Its operation is so efficient that over 300 neighboring municipalities rely absolutely upon its decisions, and refuse to allow pictures to be shown in their local theaters unless they bear the stamp of approval of the Chicago police board. A number of other cities have similar boards of systems of inspection, some of them—San Francisco, for example—enforcing regulations so strict and narrow as to bar all films where one person is seen to strike another. In all the world there is no form of entertainment so compulsorily clean as moving pictures. In the family theater of the best residence district, or in the garishly illumined show house of the Tenderloin, the pictures are the same. They are all censored to absolute inoffensiveness.

There was one reason above all others for the establishment of this far-reaching system of censorship. The children like the picture shows! They do not care for vaudeville, they do not understand drama, perhaps; but the moving picture appeals directly to their love of light, and of motion, and of pictures themselves. The moving picture is largely the children's show. That is why we censor our subjects.

Perhaps it has never occurred to the municipal lawmakers who seek to legislate the children out of one of their greatest enjoyments, how absurdly anomalous their position is. Why have we gone to the trouble and expense of censoring pictures for the sake of those who will not be permitted to see them?

To be sure, children, when excluded by law as individual patrons, are admitted if accompanied by a guardian. But the logic of this move is no clearer than is the exclusion itself. Is it expected the guardian will remove his charge in case an objectionable subject appears upon the screen? If so, we must credit the average guardian with being a more efficient censor than the board of censorship itself. It can hardly be argued that the mere presence of a guardian would redeem a really objectionable picture, if such could be found.

Abandoning this phase of the proposition as an unsolved problem, it is still possible to see that the misinformed might object to children's attendance on the ground that conditions of rowdyism might be met, or undesirable acquaintances made. We insist that the street, the park, even the school, are far more fertile fields for the rowdy and the undesirable than are the picture theaters. Furthermore, we claim that the picture theater is a more wholesome and infinitely more elevating place for children than the park or the street; and a comparison with the ice cream parlor would be an affront to the picture theater man.

It is idle to try to keep children in the house, or to deprive them of entertainment. Their growing intelligence demands amusement that shall satisfy their curiosity, their unconscious artistic sense, and their broadening appreciation of the bigger things of life. They have it in the moving picture show. To refuse them the untrammeled freedom of their chosen entertainment is a crime against our future citizens.

Irreproachable as the picture show was then, it is doubly so now, and in Chicago the local censors are active and strict to the point of severity. Chicago laws require lighted houses at all times, ample exits and safe construction. As to the pictures themselves, we challenge the West End Woman's Club, Mrs. H. S. Newton or Mayor Harrison to produce a single example of immoral, improper or even questionable subject that has

passed the Chicago Censor Board and been exhibited in a Chicago theater.

As stated before, Chicago exhibitors, both in and out of the National League, are working hard to prove the absurdity of the amendment. In this they have the support of the national body itself, as well as of the manufacturers and renters. Communications intended to aid the cause, either by presentation before the authorities or by giving heart to the local exhibitors, have been received in large numbers. A contribution from J. W. MacIntyre, of the Motion Picture Distributing and Sales company, is especially worthy of comment, and we reproduce here an abstract of it through the courtesy of Sidney Smith of the Chicago Local:

Teachers, schoolmasters, tutors, pedagogues of all kinds have from time immemorial been complaining that the greater part of their teaching is unavailing because they cannot get the attention of the young. Now that a means of holding the attention of the young and of educating them has been found in the moving picture it is in danger of being howled down by a lot of people who see nothing that does not suggest to them the seamy side of life because of their own experiences.

The moving picture is one of the greatest blessings of the twentieth century. It has brought amusement to the door of the work-driven sweat-shop worker, the tired out, overworked, underpaid mechanic, the poor house slave of a mother whose family cares keep her drudging from early morn till late, but who can manage to slip around the corner and see the five cent picture show, the only amusement she has, the thousands of cheap laborers in every field who cannot afford the luxury of twenty-five cent or fifty-cent theaters, but can get amusement for themselves and their families at five cents a head. And you would dam this flood of cheap amusement; and why? Because those for whose benefit it is provided are poor and know not how to protest against their amusement being interfered with.

How about the amusements of the wealthy? Are they so pure and wholesome? How about your "Girl from Rectors," your "Blue Mouse," your "Moulon Rouge," and your burlesques? Are they to be compared in the matter of moral tone or purity to the five cent picture show? Why, the moving picture show is a model of propriety compared with these.

Children are certainly safer at a moving picture show than they are on the street. Come now, let us be truthful, more children come to harm on the street than at picture shows. Of course people come to harm anywhere, even at church. But it isn't because of the church or the street or the picture show, but of the people themselves. Crime and criminals are no more bred in picture shows among the families of the poor than they are bred in the families of the wealthy in their own homes.

For years you have been trying to devise a method by which to hold the attention of children so that you could teach them. Now that you have got it, what are you going to do with it? Strangle it? Surely not.

No, do with it what the doctors did with the pills when they found that children wouldn't swallow pills but would swallow candy. They coated the pills with candy.

You find that children won't swallow education in its present unpalatable condition. Coat it as the doctors did the pills by putting it in the form of moving pictures.

The people who attribute crime to the influence of the moving picture show as much power of analysis as the bigots of Salem, Massachusetts, did when they attributed the death of a cow to the influence of some poor harmless old woman and burned her as a witch.

Purify and eliminate the bad in moving pictures but don't refuse to accept the greatest blessing of the twentieth century, the five cent moving picture theater.

With all due regard for the undoubted good purposes of the framers of Chicago's child-exclusion ordinance—for we do not believe they are actuated by malice toward the exhibitors—we cannot view this activity as other than bigoted, pedantic, inutile and not in accordance with modern thought. But it is a pity that those who would regulate an industry cannot be forced to become acquainted with that industry first. It is a strange fact that those who are first to meddle with any existing condition generally know the least about it. If they could be made to pass an examination on the facts before seeking to change them we would have less of this abortive legislation.

PICTURES IN SCHOOL.

THE moving picture machine is slowly but surely forcing itself into the schools. From antagonism to tolerance, from tolerance to interest and, in some quarters, positive enthusiasm, it has won its way, and in a few more years the conquest will be complete. It is another case of logical reasoning overcoming the prejudices of ultra-conservatism and inertia.

That the innovation has the support of more than one faction and, indeed, has interested some of those whose sanction is ordinarily supposed to be difficult, is shown by the following editorial in the *Christian Science Monitor*—one of the best edited newspapers in the country:

Dr. William Henry Maxwell, superintendent of New York City's public schools, was not one of the earliest to fall in with the schoolhouse social and recreation center idea, but the manner in which he has pushed it forward of late, with his present advanced advocacy of it, is calculated to give it fresh impetus in all parts of the country. In such matters the large city, as a rule, is more conservative than the small, or, at least, slower to move. However, while the first city of the country was seemingly holding back in this particular, the second city had taken some long strides forward. Chicago was among the first of the larger communities to view with favor the proposal for a greater use of the public school buildings, but New York fell into line in due time and that city has now forty-five recreation centers established in its schoolhouses. Dr. Maxwell recommends an increase of this number to 100, and he supplements this by urging upon the board of education the advisability and necessity of providing each of these centers with motion picture apparatus.

He takes this course because it is his conviction that the motion pictures can be made educational as well as entertaining. It must be recognized, he says, that there is a strong demand among young people for amusement, and that if the authorities do not help to provide it there are individuals, who, for the financial profit there is in it, will offer entertainments that are a menace to the well being of boys and girls. He believes that if proper steps are taken the schoolhouse recreation centers can be made important instruments for the upbuilding of the moral character of the youth of the city.

Not enough weight, perhaps, has heretofore been given to the motion picture as an educational factor. Dr. Maxwell seems to realize the great value of these pictures in his work. His purpose would be, however, to render them educational without seeming to do so. It is pleasant to hear from an educator of his prominence and responsibility that the public schools should be used by the public for more purposes than classroom work, and that arrangements should be made by which any reputable society of young women or young men might have at stated intervals, and always under supervision, the use of a school room for social purposes. This is practically what we have been saying at every favorable opportunity during the last three years. If the schoolhouses are employed properly as neighborhood social and recreation centers when not regularly engaged in school work, their usefulness to the community and to the nation will be multiplied.

There is another viewpoint, however. The schools themselves are for education; but they have no monopoly on education. The greatest fault of educators who propose to adopt the projecting machine as a standard school equipment, is that they are often moved by a desire to "overcome the bad influences of the cheap theaters." In other words, they wish the schools to compete with the theaters on an ethical basis, and at least indirectly express the hope that the theater patronage will diminish as a result of the school installations. This is not the proper spirit in which to view an art of such great value. Even our greatest educators—men supposedly trained to a logical system of thought—cannot seem to dissociate the entertainment and the pedagogic features of motography,

or to realize that the motion picture is but a photograph endowed with realism, and capable of recording only what actually exists, whether it be a staged play or the formation of crystals in an evaporating solution.

Some time ago the city of St. Paul, Minn., was considering the school-picture question, and during the discussion the following editorial appeared in the St. Paul *Dispatch*. We reprint it as illustrating the thought that perhaps the picture theater may in itself be made the means of disseminating education, even without the aid of the schools:

> There is no reason why the public schools should not use moving pictures, phonographs or even aeroplanes to educate their pupils, provided the results justify the trouble and expense. It would seem to an outsider, however, as though the public schools had a sufficient number of irons in the fire to keep them hammering away diligently for some time to come. Diffusion of energy upon a multitude of things, some of which have been born in faddom, is one of the curses of the public schools. The St. Paul school management fully realizes this thing and is trying hard to get away from it. The tendency is to do too many things and do none well. Whether moving pictures would serve or mar educational courses, will depend upon how they are to be fitted into those courses.
>
> Persons keen upon introducing new notions should not forget that the schools are not the only sources of education. Without newspapers, periodicals, theaters and hundreds of other educational influences, it would be extremely difficult to educate anybody reasonably well. The moving picture shows, it is suggested, sometimes educate their patrons in certain directions more thoroughly than do the schools. Very well, that is a good reason why they should be encouraged in doing the educating, rather than be gobbled up by the schools. Supplemental educational influences are needed. Possibly the moving picture shows need more careful scrutiny than they are receiving. It is doubtful if they should be incorporated in the school courses. Probably their place in the schools would be as adjuncts to neighborhood or social center meetings which may be held in the school buildings.

In short, the educational application of motion pictures depends wholly on the sort of pictures shown, and not on where they are shown. A correctly costumed historical subject, or a study of contemporaneous life in foreign countries, is as fitting an adjunct for school work as is Jones' History of England or Smith's Geography of the World. But those subjects would be equally educational shown in a picture theater. The advantage in equipping the schools is not that they will use better pictures, but that the children who see them may realize that they are educational and apply them to that end.

ENGLAND'S PICTURE THEATERS.

CONSUL GENERAL JOHN L. GRIFFITHS, London, says moving-picture shows are so popular there that there is not a town of any size or importance in the vicinity of London without one or more such shows, and there are a great number in London itself. Many are operated in groups by companies, syndicates, or circuits. Communications addressed to the "Manager, Cinematograph Theater," with the name of any town or city in the United Kingdom, would almost invariably reach the principal show of that character in the place.

The prices of admission vary from 4 to 61 cents. The length of films required for an average performance, lasting from one and one-half to one and three-fourths hours, approximates 4,500 feet. Prices of the films per 1,000 feet range from $2.43 to $24.33, according to the date, the release, and the quality of film. Important and popular events are often shown on the same day as their occurrence. The Grand National Steeplechase race, for example, is held in Liverpool, which is a little over 200 miles from London. The principal race begins at 3 o'clock in the afternoon and is over in about seven or eight minutees. That night the race is shown in a series at some of the London music halls, the pictures having been developed while the train was running from Liverpool to London.

It is now quite the custom for moving pictures to form part of the program at the music halls, fifty-two of which were licensed by the London County Council during the year ending with September, 1910. Outside greater London these theaters are licensed by the local borough councils.

There is a considerable number of firms engaged in manufacturing moving-picture films, the total average production being estimated at about 130,000 feet of film per week. Competition is said to be very keen.

While these picture theaters still enjoy a wide measure of popularity, there is evidence that the public is not so much attracted as formerly. Possibly the existence of so great a number of shows has contributed to this decline, but the chief cause, according to a writer in one of the principal London weeklies, is the fact that proprietors have provided what they like rather than what the public desires. While programs are changed two or three times weekly, there is still too much similarity in the style of picture shown. There is undoubtedly an increasing desire for pictures of scientific interest, depicting, for instance, insect life, bee farming, ostrich farming, and the progress of the different stages in the manufacture of various products.

The Kinemacolor shows, in which the moving pictures are represented in two or three colors, have been very popular in London, and indeed everywhere in the United Kingdom. The coronation ceremonies, the investiture of the Prince of Wales, and other subjects of general interest have been represented in color, and have attracted large and appreciative audiences. It has been found that the reproduction of interesting historical events in which the costumes are a conspicuous feature is received most favorably by the audiences. Scenes from popular authors, such as Dickens and Scott, are accepted with manifest favor and are frequently produced in color.

There is apparently a good opportunity for the manufacturers of American films to obtain additional trade in the United Kingdom. American-made films are being constantly shown in England.

Consul Homer M. Byington, Bristol, quotes the manager of a large moving-picture concern in Bristol that most of the films used are selected from those issued by the manufacturers in England, or agents of manufacturers in foreign countries. A large number of American films are obtained through the various agents in London. One manager points out that the moving-picture shows here seldom get any subjects from the United States other than drama and comedy. He says:

"Certain outstanding events and the scenery of many portions of the United States would be welcomed in this country. Naturally the topical events would have to be of universal interest; such subjects as the great forest fire which occurred about a year ago should take well in England. While pictures of Japan, China, Siam, and various European cities, and scenes from nearly every country in existence are constantly seen, I do not remember ever to have seen a picture of an American city with the exception of Niagara Falls. American manufacturers are to be congratulated on their photography, but I think they stick too closely to well recognized groups of subjects; a greater variety would be wiser in the long run."

Consul Augustus E. Ingram, Bradford, says that in some of the moving-picture theaters in Bradford tea and sweet biscuits or crackers are served free during the

afternoon. Prices of admission range from 4 cents to 36 cents.

Moving-picture men say that fully 60 per cent of the pictures now shown in that country are American, and of the rest probably 25 per cent are French. In the trade journals are several advertisements of American firms. The American pictures that are now most popular are those called "American drama," particularly such as depict ranch or cowboy life. Occasionally such pictures are rather too sensational, and must often give rise to strangely erroneous conceptions of conditions in the United States.

American films are highly spoken of; the only criticism heard is that the color printing of the advertising posters that are used outside the picture theaters is often crude and not equal to work done in this country.

Consul Samuel M. Taylor, Nottingham, says that one moving-picture theater in Nottingham which uses 6,000 feet of film weekly employs a "chooser," whose business is to attend the exhibitions given in London by manufacturers of films. These exhibitions are given in rotation, according to character, as comic, dramatic, educational, etc., and after seeing them the "chooser" draws up a list of films desired and forwards it to the general purchasing agent of the syndicate to which the theater belongs, who undertakes to obtain the films from the manufacturers.

The operator of another show says:

"We run a wonderful lot of American films, a good many French, some Italian, and a few English; but the Americans are at the top of the list in the superiority of their working."

He advises that in applying for orders all particulars as to films should be given, such as the length, subject, whether in color or black and white, etc.—the more particulars given the better the chance of doing business. His own circuit is running a great number of colored pictures at present and they are generally much in favor.

Consul Albert W. Swalm, Southampton, says many inquiries which have reached his consulate in regard to moving pictures will be answered by the following extract from the London *Daily Mail*:

A few years ago the moving picture did not exist. Today it is the basis of a vast industry. The last published returns for the administrative county of London showed that some 287 picture playhouses were licensed in that area, and the probability is that the next return will show an increase to 350. It is estimated that there are 3,000 picture playhouses in the country, and this number is rapidly increasing. Scarcely a town of any size is without its picture playhouse, and in the larger centers of population these places exist by the dozen.

The growth of the cinematograph business began in 1895 or 1896, and was largely developed in America. Even now it is stated that in proportion to population there are five times as many picture shows in America as there are in this country. That money was made in the new industry may be guessed when it is stated that one of the pioneer firms of film makers in this country was for a period making profits of $25,000 per month. Film making does not represent such vast profits today, as other manufacturers soon competed. The price of the film came down from 25 cents a foot, obtained readily in the early days, to 8 cents a foot, which is the price today. Indeed, film makers now say the only people making money out of the pictures are those who show them.

The film may cost anything to make. The expense is determined, of course, by the class of the subject and the cost of getting it photographed. For instance, above the cost of photography and manufacturing charges some firms paid as much as $1,000 for special positions along the coronation route. On the other hand, some popular subjects are easily accessible and cost little above the photographic and manufacturing expenses. Successful photographers for film purposes make good incomes, and men with eyes for good subjects who secure fine pictures are paid anywhere from $1,500 to $5,000 a year.

Curiously enough, England, though not the pioneer of the trade and lagging behind America in the extent of its film-making enterprises, is the clearing house of the world for pictures. All the makers are represented in London, and most foreign and colonial buying is done through English channels.

CONSTANTINOPLE THEATERS.

Consul General G. Bie Ravndal, Constantinople, Turkey, says that within the last two years quite a number of theaters giving exclusively moving picture performances have sprung up in Constantinople as well as in the seaport cities of the empire. There are now about ten such places in Constantinople. The price of entrance varies from 3 piasters (13 cents) in the gallery to 10 piasters (44 cents) in the orchestra. The films are generally changed every three days.

There being such a scarcity of theaters in Turkey, the inability and expense of procuring available and satisfactory plays and actors and the varied linguistic classes of people that have to be catered to give to the moving picture business an era of great prosperity.

The majority of films are imported from France. The next largest number come from Italy. America and England come next in importance and a few films are imported from Germany.

One company imports most of the films and loans them to the various theaters in the empire. A French firm also has a local representative there. The approximate total amount of films imported by the former company for the current year is $60,000 and by the latter $10,000. To this must be added the various films that are imported direct from the makers by the large theaters, the definite amount being impossible to ascertain. Generally speaking, $75,000 would cover the total imports of films in Turkey. Few of the films are sold outright; in some cases when the film becomes shop worn it is sold to local dealers for 10 centimes per meter (1.93 cents per 3.28 feet).

PUBLISHERS FEEL COMPETITION.

Publishers of the lighter form of illustrated literature in England are feeling the effects of the opening of innumerable moving picture theaters throughout the country. The boys and girls are spending their pennies at the theaters instead of for the penny papers. One very large firm which, besides publishing some of the more important of English papers, issues at least a hundred other publications, established first one and then a series of penny illustrated papers for boys, one coming out each day.

The circulation of these papers had reached nearly 400,000, and the proprietors were making a profit of $200,000 a year. As the picture theaters became more general, particularly in the country districts and smaller towns, the circulation commenced to fall, until now it is less than 100,000, and the profits have been about wiped out.

An investigation showed that the boys who formerly bought the papers now spend their pennies at the theaters, where there is a daily change of program.

"The moving pictures have hurt the pool and billiard business," says Thomas Heuston of St. Louis, former pool and three-cushion billiard champion of America. "I have found that the business man who used to play billiards or pool for relaxation now drops into a picture show for half an hour or an hour."

Ohio Convention at Dayton, March 25

March 25, 26 and 27 the Motion Picture Exhibitors' League of Ohio will convene at Dayton. The committee in charge of local arrangements consists of O. B. Weaver, Clem Kerr, George E. Weed, Benjamin J. Wheeler and Edwin Frinke and they are working hard to make the meeting a memorable one. The program of the Dayton meeting, in brief outline, is as follows:

At 8 P. M., March 25, the National Board of Directors of the Motion Picture Exhibitors' League of America will meet at the Phillips House for the purpose of transacting National League business. On March 26, at 10 A. M., all exhibitors will meet at the Auditorium Theater, where automobiles will be in waiting to take all of the visiting ladies sightseeing through Dayton. A short meeting of the state league will be held and committees appointed which will report the following day. At 1:30 P. M., cars and automobiles will be in waiting to convey the visitors to the National Cash Register works, where they will be shown how the cash register is made. At 3:30 all will assemble at the big hall now being decorated for the occasion, where speeches will be delivered by Senator J. B. Foraker, Congressman James M. Cox, Hon. J. J. Lentz, and the mayor of Dayton, response by M. A. Neff, president of the League. Just a few steps from the convention hall one of the finest equipped motion picture theaters in America will entertain the visitors with Kinemacolor pictures, vaudeville, and a musical. The Pathé Frères camera man will be there to take a picture of the convention. This will be one of the feature attractions, as this picture will be shown in every city in the United States, and elsewhere. Those wearing Motion Picture Exhibitors' League

Committee on Convention Arrangements, Dayton, Ohio. Clem Kerr, George E. Weed, O. B. Weaver, Benjamin G. Wheeler, Edwin Frinke.

badges will be admitted to all of the picture shows in Dayton, and free transportation on all of the street cars.

On the second day the members will assemble at the big convention hall at 10 o'clock, and get right down to business. The Chamber of Commerce of Dayton has arranged to give a big banquet to all of the members of the League, no limit being placed on the number, and as everybody knows, the Chamber of Commerce of Dayton never does things by halves, and their co-operation is an assurance of a big time. The Chamber of Commerce is co-operating with the Committeemen named above, and nothing but success can attend the Ohio motion picture exhibitors' convention. Everybody is invited to attend, whether a member of the organization or not.

West Virginia Exhibitors Organize

The motion picture exhibitors of West Virginia met in Parkersburg Wednesday, February 28. Every exhibitor in West Virginia was not only invited but urged

to attend, as matters affecting his business were under discussion. An organization the same as in Ohio, Indiana, Illinois, Pennsylvania, Michigan and other states was perfected. A moving picture of the exhibitors was taken and a big banquet held. The national president and secretary were present to assist in the organization and several of the Ohio exhibitors were there to join hands with the West Virginia exhibitors. The meeting was both social and business. The committee in charge was P. W. Barett, Star theater, and F. L. Harris, Bijou theater, Parkersburg.

The newly elected officers of the West Virginia Motion Picture Exhibitors' League are as follows: President, M. M. Wear, Charleston, W. Va.; first vice-president, F. L. Harris, Parkersburg, W. Va.; second vice-president, L. C. Washburn, Salem, W. Va.; secretary, L. R. Thomas, Moundsville, W. Va.; treasurer, P. W. Barett, Parkersburg, W. Va.; national vice-president, E. W. Waugh, Huntington, W. Va. The meeting was well attended and harmonious throughout. The next meeting will be held in Huntington, West Virginia, on the first Monday in May.

Convention Hall, National Cash Register Works, Dayton, Ohio, Where the Motion Picture Exhibitors' League of Ohio Will Meet March 26.

Indiana Meeting a Busy One

The second meeting of the Indiana Motion Picture Exhibitors' League took place at Indianapolis, Denison Hotel, Tuesday, February 6, 1912. The convention was called to order at 10 o'clock by President Dickson. Roll call showed ninety-two members in good standing, representing about one hundred and forty-five theaters.

The greater part of the morning and afternoon session was taken up with discussions on matters pertaining to the welfare of the League and the moving picture business as a whole. Mr. Dietz of the Indianapolis Board of Censors appeared before the meeting and proved to be a friend of the exhibitors. He told how ministers and representative citizens had condemned the motion picture shows, and when he investigated the real situation the principal objection seemed to be because the price of admission was cheap. Mr. Dietz complimented the Indianapolis theaters on their loyalty and their disposition to obey the laws and as an instance, mentioned that in one day every theater in Indianapolis went to a lighted house on the request of the board of censors. His address was followed by that of the national president, M. A. Neff, who made a most earnest appeal for the exhibitors to unite to uplift the motion picture business, as only in that way is the safety and the prosperity of the individual assured. He also quoted many instances as to how the League had already been a power, although it is practically as yet in its infancy; and what a tremendous force the League will be when, by the use of twenty thousand picture screens talking to millions of people every day, the whole public thought can be focused and influenced. Mr. Neff was of great assistance in keeping the League in the right channel and his advice from the experience that some of the older states in the League have had, gave individual information to the members.

State Factory Inspector Walsh talked to the members about what may be expected in the future along the lines of drastic laws that might injure the exhibitors' cause, and appealed to the members to be in position to frame whatever laws are to be passed and consult with the inspection bureau so that these measures will be wise and just. Mr. Walsh received the thanks of the convention for his very kind talk.

Mr. Robert Lieber of the General Film Company, was very happy in an address which, while it did not follow the text given him, was along a broad line full of interest and encouragement. Mr. Lieber is a big man with a big heart and mind and enjoys a host of friends among the exhibitors.

The Central Film Exchange was represented by Mr. Schraeder, who made a very creditable talk. After this, the meeting developed into a heart-to-heart talk among the exhibitors present in which everybody talked shop and exchanged ideas.

A convention of this kind is of particular value to the exhibitors because of the opportunities to talk business with each other, as it is by getting together and comparing notes that the exhibitor is able to judge what is to the best interests of his own case.

The evening session was a purely business one, in which the convention went into secret executive work, and splendid plans were made for future development. A resolution was adopted that the convention meet in Ft. Wayne in six weeks. It is the purpose of the organization to meet in different districts until the membership is boosted so that every exhibitor in Indiana will be a member or at least be in sympathy with the movement. Another resolution was passed, that every exhibitor use the utmost precaution in safeguarding the life and property of his patrons and keep his theater in such repair as to meet the approval of the public.

Another resolution was passed, that whereas the motion picture exhibitors were to meet on the 28th of February, 1912, at Parkersburg, W. Va., resolved that the convention at Indianapolis send greetings, congratulations on the progressiveness and activity of the West Virginia exhibitors and that it extend its assistance and friendship to them and wish them God speed.

Another resolution was that, where any film exchange furnishing service to any other than legitimate exhibitors, such as the conditions reported at New Castle, Muncie and elsewhere, be informed that such service is unfair, and if not withdrawn the support of the members of the organization be transferred elsewhere.

It was moved that the secretary write to all exhibitors and take up the conflicting conditions and adjust same.

The session closed with a banquet at ten o'clock, which lasted until midnight and was under the direction of Secretary Rembusch, who again acted as toastmaster. The banquet was a very happy affair, full of stories and fun, and the convention adjourned to meet in Ft. Wayne, March 19. A large number of Indiana exhibitors will attend the Ohio state convention to be held at Dayton, Ohio, March 25.

Chicago Charities Grateful for League Help

The United Charities of Chicago, as related in our last issue, received over $3,000 from the Chicago Local, all receipts from members' theater attendance for January 23 being diverted to that channel. The following letter shows the spirit in which the gift was received, and suggests that the theater managers, as well as the poor of Chicago, have benefited by the philanthropic action:

Chicago, February 6, 1912.

Mr. William J. Sweeney, 817 West 63rd St., Chicago, Ill.

Dear Sir:—Checks amounting to $2,985.65 were forwarded to me today by his honor, Mayor Harrison.

As president of the United Charities, I am anxious to send a letter of acknowledgment to each one of those who were good enough to help us in the substantial way in which they did.

Will you be kind enough to give the names and addresses of the different theaters who contributed, so that I may carry out my plan?

On the checks I can only find the "Banner Theater" and the "Hillside Theater."

We appreciate very much the generosity of the motion picture theaters, and I will undertake to use the money contributed to the very best advantage, because we strive at all times, to merit the confidence which the public spirited citizens are kind enough to place in us. Sincerely yours,

Chas. H. Wacker, President United Charities.

The balance of the amount, making a total of over $3,000, was acknowledged directly by neighborhood charitable organizations.

Cincinnati Organizes

On Thursday, February 15, the motion picture exhibitors of Cincinnati met at 606 First National Bank Building and organized a local Motion Picture Exhibitors' League of America. Officers elected were: President, J. J. Huss, of the Royal, Colonial, Sun, Gem and Star theaters; first vice-president, A. J. Carbin, National theater; second vice-president, M. Fishman, Central theater; secretary, A. C. Dingelstedt, Plaza theater; treasurer, Otto Leudeking, Royal theater. The meeting was harmonious and is affiliated with the Motion Picture Exhibitors' League of Ohio and the National League. The members expect to attend the Dayton convention in a body.

Officers and Executive Committee, Chicago Local, Motion Picture Exhibitors' League of America. Top row, Chris Whelan, F. O. Nielson, C. L. Hull, L. Frank, I. Gelder. Bottom row, Sam Katz, C. A. Anderson, George Henry, William J. Sweeney, Sidney Smith.

Kansas City Exhibitors Organize

An organization of thirty of the sixty owners of picture theaters in Kansas City, Mo., was effected February 12 at a luncheon held at the Sexton Hotel. It will be known as the Exhibitors' Association of Kansas City, and is a branch of the national organization, which is

represented in Chicago, Milwaukee and large Eastern cities. Its attitude will be friendly toward the city's efforts for a higher standard of amusements. G. H. Wiley was elected president; J. H. Sheldon, vice-president; Samuel Taylor, secretary; J. Stienens, treasurer; Pearl Alexande, sergeant-at-arms. Motion picture showmen who were not present at the first meeting will be asked to join.

A Notable Film Advertising Campaign

Those who read "How to Develop a Moving Picture Advertising Campaign," by E. L. Barker, in *Printers' Ink* of February 15, could not fail to absorb some new ideas on the subject. Mr. Barker is with the International Harvester Company of America and is the strenuous one behind "The Romance of the Reaper."

Mr. Barker has played all the positions on the show world diamond, from the home talent amateur to the roll top desk at the front of the house, to say nothing of his successful career as editor and manager of one of the leading lyceum publications of the country. Anyone who has read any of his numerous articles on motion picture advertising campaigns cannot forget or help being impressed by his style of putting over his ideas. He has the ideas and can show the results. Not only has Mr. Barker sat in the office directing and managing, but when there was no one else to go, he got out and put over the lecture himself. Any one doubting his success as a lecturer has the privilege of inquiring among the people of Kentucky. His success with "The Romance of the Reaper" goes to prove that the public stands with outstretched arms to welcome the story and pictures placed before it by the firms which have made the most of the opportunity of using the motion picture as a medium to get close to the prospective buyer.

The public will listen with interest to your talk for a time, but sooner or later will come back with, "I am from Missouri; show me!" The successful advertisers of today are realizing more and more the great possibilities of the motion picture as a medium of getting close and showing the public. Mr. Barker not alone puts over "The Romance of the Reaper" but everywhere it is given he receives a dozen or more inquiries from parties who have had the pleasure of hearing and seeing it—"When can I get this for my town? It is great!" This shows what can be done.

Anti-Sunday Bill in New York

Vaudeville and moving picture entertainments on Sunday are forbidden by a bill introduced in the New York legislature by Senator Stilwell, who says that the Sunday moving picture show in his district of the Bronx has become a serious matter and has aroused so much criticism as to make legislation imperative. The bill provides a fine of $500 for a violation, the fines to go to the Juvenile Delinquent Society. The manager or lessee of the place where such exhibitions or vaudeville entertainments are given on Sunday is made amenable to the law, and any corporation furnishing gas or electricity for this purpose is also subject to a fine.

The Playhouse of the Future

By Ford W. Eaton*

EFFORTS OF INVENTORS.

IN THE evolution of many important inventions, much time has been lost because new inventors have adhered to old ideas. Whenever it has been discovered that some new application of physical laws could be made to yield a device or a process which would help the world either in its work or its recreation there have entered into the development of such device or process, as a rule, a peculiar series of guesses as to what would likely be the best method of patching or improving the original whether or not the fundamental ideas are really sound and have in them any possibilities of final perfection. In other words, inventors, like other people, generally assume that a discovery or invention of great importance is necessarily along the right lines and only needs improvement and development, whereas the fact may be that, owing to the adoption of wrong principles, no amount of effort or ingenuity will produce the desired perfect result.

HISTORY AND TRADITIONS.

So we find in the realm of the talking machine and the picture machine that their history is one of development and improvement along certain very narrow lines which lead almost directly from a few original "happy thoughts." Moreover there seems to have been little consideration for any other radically different method, and it is an open question whether this has been due mainly to commercial conservatism or to the fact that really capable engineers and scientists have failed to give these subjects the attention which they deserve.

Whatever may be the reason, we find that the patent record, which is fairly indicative of progress, reveals a wonderful array of incoherent and poorly thought out devices and schemes either to improve the cinematograph or the phonograph, on the one hand, or on the other hand to supplant them by substitutes having wholly impractical features.

The main facts in the history of cinematography, and in regard to the current style of mechanism and film, are so well known that it is needless to discuss them. We will therefore only mention such suggested improvements or substitutes as either have given results that seemed promising, or by reason of the principles involved could likely be developed into something which would fulfill the required conditions.

CONDITIONS OF SUCCESS.

These conditions, as stated in the previous article, are briefly, that we shall be able to produce artificially and automatically "a pre-arranged series of sense impressions which resemble natural impressions so closely as to create a sense of reality in the mind of the observer." This implies a continuous picture which must have no technical defects such as flicker or unsteadiness, and which will of course show all the movements of the original, and be in natural colors and stereoscopic relief. The audience must be made to hear all sounds which are pertinent to the scene, and the sounds must be correct in regard to quality, intensity, sequence and apparent source. In other words, they must be properly distributed as well as harmoniously in accord with the picture.

CINEMATOGRAPHY IN COLOR.

Characteristic examples of attempts to produce ideal results and reconcile theory with arbitrary conditions, are seen in the repeated efforts of inventors to produce naturally colored pictures by means of the narrow band of celluloid which has been the commercial standard almost since the birth of cinematography.

One of the first experimenters in this field was Friese-Greene, an Englishman to whom we owe much credit. We are interested particularly in two of his ideas; first, that of running a cinematograph at triple speed and giving different color values (red, green, blue) to every third picture by revolving in front of the film or lens, a tricolored disk which served to filter out different light rays, the object being to combine the primary colors in proper proportion to reproduce the colors of nature.

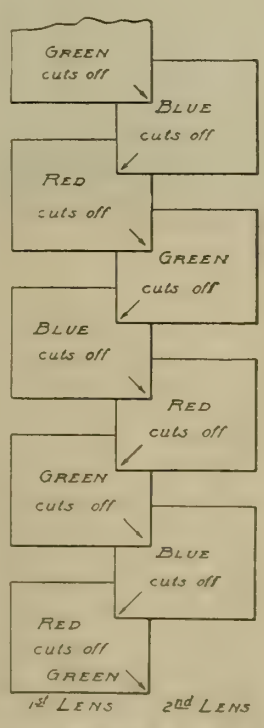

Fig. 1. Diagram of the Friese-Greene Color Screen.

Fig. 4. Film Taken with the Friese Greene Camera.

The difficulties were many, and a few of them insurmountable. For instance, the normal speed of a cinematograph was already so great that the pictures were unsteady and the film would soon wear out, and to triple the speed of the usual type of mechanism was mechanically impracticable.

TWO-COLOR PROCESS.

Mr. Friese-Greene abandoned his patent, and years later other parties undertook to revive the idea by leaving out the blue "filter." A mechanism was thus produced which would project a picture showing a range of colors from red to green, but with many halftones and the shades from blue to violet missing (kinemacolor). Such a mechanism is run at double speed and uses an

*This is the second of a series of articles which began in the February number.

intermittently moving film, hence the flicker, unsteadiness and noise are increased over the ordinary "black and white" cinematograph, and the results as to color are necessarily incomplete.

The rotating bi-colored shutter of the kinemacolor mechanism is its only essential departure from the ordi-

Fig. 2. The Friese-Greene Camera.

nary cinematograph except in the matter of speed. About one-third of the shutter is made of transparent red material while the opposite one-third is green, the two intervening sectors usually being opaque, although sometimes transparent blue material is substituted in hope of adding some of the blue that is lacking in kinemacolor pictures, when red and green filters are used. This explains the fact, often commented upon, that in the brilliant pictures of the Coronation, while all of the red and green uniforms and costumes showed their colors very decidedly, the blue uniforms of some of the mounted guards and the elaborate purple gowns and robes which were everywhere in evidence showed up only as black or dark gray in the pictures. It certainly is to be regretted that there should be inherent deficiencies in a process which has received such splendid backing, and which fairly glitters with brilliant promises.

DOUBLE MECHANISM.

Meantime Mr. Friese-Greene had undertaken another hopeless task and built a double mechanism employing two separate films, each of which had pictures of three alternating color values (Fig. 1) and was moved with an independent intermittent motion. With this apparatus he used an endless band filter for each film, making a total of four films to be adjusted each time the camera or projector was operated. Other difficulties were the practical impossibility of registering the images of the different films, and the unreliability of the film itself, concerning which more mention is made in another article. We present herewith some illustrations which will make the principle clear.

Figs. 2 and 3 are views of the camera, showing the twin lenses and the manner in which one shutter is made to serve them both. There are two sets of reels in addition to the carriers for the endless bands of colored film which are used for filters.

Fig. 4 represents a piece of the film, each third picture of which is supposed to show different color values, but in the reproduction the differences are not very distinct. Fig. 1 illustrates very clearly how the different colors alternate in regular order (green, red, blue), while the pictures are being projected, first from one film and then from the other.

COLORED FILMS.

There have been many other suggestions and serious attempts to produce motion pictures in color, but the only commercial successes have been those in which stencil or photogravure printing operations have been applied directly to each positive film. The best examples seen in America have been the imported films of Pathe and Gaumont, while some of their toned and tinted subjects have been very beautiful indeed, although the range of colors is necessarily limited.

The difficulty with stenciled or otherwise color-printed films is that the coloring materials used must be transparent and confined to the lighter shades or tints and be applied in solid patches, thus making it impossible to reproduce the richness and varied hues of the original, to say nothing of the extreme difficulty of treating the finer details. The expense, also, is prohibitive unless a large number are to be printed.

CONTINUOUS-FILM MECHANISMS.

While these and many other attempts have been made to adapt the so-called intermittent mechanism and standard film to the requirements of color photography, inventors of another type have been working to do away with the difficulties which the present standards impose,

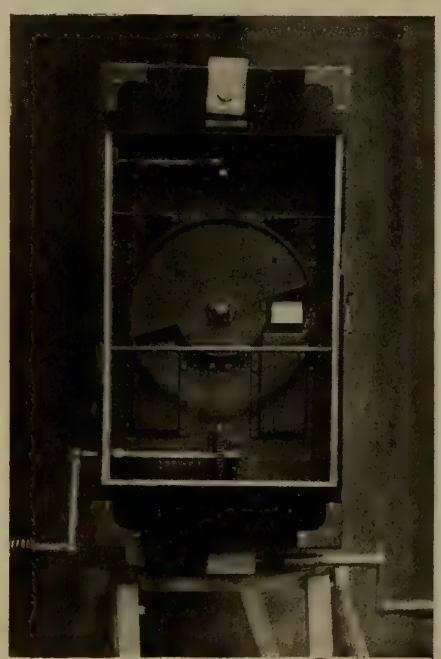

Fig. 3. The Friese-Greene Camera with Front Removed.

and have made many shrewd, though often impractical, attempts to produce a mechanism which would employ a continuously moving film.

One of the first of these was Jenkins, who intended to employ a dozen objective lenses instead of one, and

arrange them in a ring. These lenses act one at a time while the film is moving, and have the advantage that their movement could also be made continuous. The defect in this arrangement was that the travel of the lenses was on an arc of a circle instead of a straight line, and hence the pictures would have their vertical lines slightly blurred even if the lenses and mechanism were perfect. Moreover, it is practically impossible to procure so many lenses perfectly matched, even if there were not the danger of spoiling a set by breakage.

Other inventors have been granted patents for cameras and projectors having more than one lens and a film which moves continuously while various optical and mechanical means have been used to counteract the motion of the film and keep the images stationary during exposure. These have never reached the practical stage on account of technical difficulties and the universal adoption of the single film as the standard.

"ANTI-TRUST" CAMERAS.

In recent years the only continuous-film cameras to attract much notice, have been the Bianchi camera (Fig. 5), which utilizes certain principles of refraction in a way that is new to photography, and the Precision camera which has a reciprocating lens (Fig. 6). These cameras were perfected at the instance of film manufacturers who were not licensed under a certain patent which claims to cover the use of a stationary lens and intermittently moving film. The patent, as originally issued to Mr. T. A. Edison, was broad enough to be a real obstacle, but since its second revision and reissue, the field for real progress is fairly free from the terrors of threatened litigation, provided such progress be actually independent and along logical lines.

There enter into the construction of the Bianchi device some very delicate optical problems, and the inventor deserves much credit for being able to produce very creditable negatives in spite of the declaration by experts that the optical arrangement of his camera necessarily introduces astigmatic errors which more than neutralize the fine corrections of the modern photographic objective. The chief difficulty has been to lengthen the exposures sufficiently for dull days and interior work. The essential feature of this camera is that it neutralizes the motion of the film by revolving a prismatic member between the film and the objective lens.

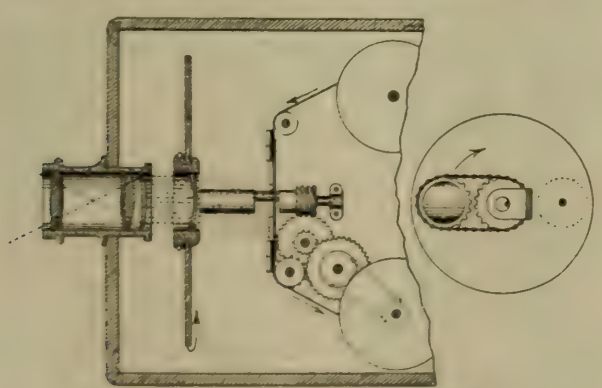

Fig. 5. Diagram of the Bianchi Camera.

The Precision camera has a very simple optical arrangement and the only theoretical objection that has been made to it is that it changes the point of view slightly while a picture is being taken. This possible error is so trifling as to be unnoticeable except when very close and very distant objects are being photographed at once. It will be shown later how this apparent defect may be turned into a decided advantage by producing stereoscopic effects more complete and satisfactory even than those seen in a stereoscope. In fact, the simplicity and rational construction of the Precision camera will be found to be a much truer anticipation of the perfected apparatus to be used in Ortography, than the current type of cinematograph with its Maltese crosses, Geneva movements and "jerking" films.

TALKING PICTURES.

Passing over the technical development of the talking machine we will mention a few of the attempts which

Fig. 6. The Precision Machine.

have been made to make the picture machine and the talking machine work in harmony with each other. One of the first devices to be used in public demonstrations was the Chronophone, which was exhibited at the St. Louis Exposition in 1904, and during several seasons thereafter was quite extensively exploited in the United States as well as in Europe. Several other synchronising devices have been employed to make a picture machine located in a booth in the balcony keep time with a talking machine located behind the picture-screen. Most of these synchronisers have been electrical, and as a rule have depended upon having the talking machine run by a motor which was "regulated" by another motor under control of the picture machine operator.

TWO MACHINES—TWO OPERATORS.

All goes fairly well until the two motors get "out-of-step," and most of the patents taken out have been for some kind of "restoring" device, to re-establish synchronism. Thus the skill and judgment of the operator are continually called into play, and this, together with the fact that a second operator is required to change records, etc., at the talking end of the apparatus makes a very real difficulty.

The Cameraphone which recently enjoyed rather extensive exploitation, was very similar to the Chronophone, and had the advantage of using a loud-speaking graphophone, although there was the same difficulty in regard to synchronizing the two devices, and the artificiality of the sounds.

Another imported device called the Cinephone, exploited recently, was designed to avoid the need of electrical synchronization. The picture projected by this arrangement contained a dial which had a moving hand or pointer, and this pictured pointer was supposed to revolve in unison with a real pointer on the talking machine just

behind the screen. In this case even more alertness, not to say skill, is required of the operator, as there is nothing automatic about the manner in which the two machines are kept together. Another objection is that the audience is conscious of the mechanical nature of the performance, as the dial is an ever present reminder.

To sum up, the chief deficiencies common to all talking pictures which depend upon a phonograph or other talking machine behind the picture screen, operating in intended unison with a picture machine at the other end of the house, are:

1. *Imperfect synchrony.* The picture is not sure to keep time with the sounds.
2. *Lack of distribution.* The audience is always conscious that a stationary horn is talking for moving actors.
3. *Unnatural quality* of the sounds.
4. *Insufficient volume* of sound to fill an ordinary theater.
5. *Necessity of having at least two operators* at widely separated points.

In regard to the pictures themselves, nearly every one is familiar with their shortcomings, although we have grown so accustomed to shaky, flickering monotones that we seldom complain unless the operator adds insult to injury and lets the light creep off into one corner of the picture, or go out entirely. Here are some of the things which must be remedied before the motion picture can become a real factor in the play of the future:

1. *Unsteadiness,* caused by the narrowness of the film, imperfect perforations, and lack of precision in the camera and projecting mechanism.
2. *Flicker,* caused by the interval of darkness which comes between the separate images that make up a picture.
3. *Limited size or dimness of picture,* due to the smallness of the film pictures, and to the cutting off of much of the light.
4. *Lack of color,* due to the limitations imposed by adhering to the present standard of film.
5. *Lack of relief.* Stereoscopic relief is also impossible with present film; but the cameras of the future will record this wonderful effect as well as the colors, and the new films and mechanisms will also wipe out the first three difficulties, so that in the playhouse of the future there need be no disconcerting deficiencies, inharmonies or nuisances, but instead one complete, harmonious, perfect performance.

The next article will refer to some of the steps that have been taken toward realizing this much-to-be-desired condition.

Town Runs a Picture Show

Farmington, Ill., as a municipality has gone into the moving picture show business. Mayor Johnson is the ticket collector, while Policeman Duffy presides at the box office. The venture, although in an experimental stage, is intended to be continued, the city making only a small profit. Educational pictures only are shown.

Scene from the Selig Feature Film, "The Shrinking Rawhide."

On the Outside Looking In

By the Goat Man

WHEN you are on the inside looking out you can go bankrupt and it cuts no ice. What business on earth can offer a better example than The Powers Company, a bankrupt; J. P. Chalmers, a petitioning creditor, carrying the Powers advertisement; Pat himself with outstretched hands as the illustration of the advertisement which carries the brazen caption, "Delighted!" Oh, consistency. But Pat isn't broke. He is far from it. He isn't even bent. He is just ducking. And an item like $50,000 is something to duck if you can get away with it. I'm betting that Pat can and it cost me—oh, I won't tell. It would be coarse work, and I'm on the outside.

* * *

New York is a big center for the marketing of films—a monster clearing house. I use that word monster with full knowledge of its meaning. All General Film stuff clears at 200 Fifth avenue. There are forty-six branches—forty-one in the United States and five in Canada. Licensed films may be shipped from the maker direct to the branches, but the bills are rendered against New York headquarters. The Sales Company insists on the films themselves. The fifty-four exchanges of the United States which deal with the Sales Company, 111 East 14th street, look to that one place for supply. Five exchanges of Canada have no other source outside the junk market. The bills are made against the Sales Company, which is maintained on a footage scalp and the shipments go out from there usually on a C. O. D. basis. It may jar the sensibilities of an ordinary business man to learn that a manufacturing member of this selling organization will ship his entire product from anywhere to New York; wait ninety days for settlement and in the meantime buy his own stuff back for his film exchange, making no objection to the C. O. D. shipment! But then, our point of view is narrow—we're all on the outside!

* * *

Then there is that New York "third movement" thing—the Disturbing Company. I have been reading its advertisements in my contemporaries and I'm impressed. Not favorably, however. No, Lucy, I can't see that it has a look in—not even a peek. I'm well informed that the first angel, a nice, old philanthropist who has fallen for the soft-soap, refuses to go any further. And believe me, when you go $110,000 and make up your mind, you ought to stick. Few of us could go that far. Those of us who flit around the outside, always hoping, getting our wings singed occasionally—a hundred or two here and a hundred or two there—get a little fun as we go along; but a hundred thousand plus—zowie! Nix, nix, nix. Poor old philanthropist! He says that he'll lie low and take his money back out of the profits. Really, I feel sorry. The third movement will now be enacted. It will go out and dig up another angel. That thing has cost me—but, there, there, Sylvia, it was only a few little dabs and hope is eternal. Even an Ullman may recant.

* * *

But they do say that the Disturber has some really excellent films and that an open market might afford the public a chance to see them. But even with Gaumont out in the open the open market looks to me like a closed door. Yet nobody on the outside knows. Joe Hopp, very much on the inside, is strong enough in the faith to declare for it while wholly surrounded with Chicago exhibitors and Dutch lunch.

* * *

Who said Big Bill Sweeney for treasurer of the Motion Picture Exhibitors' League of America? I did.

* * *

I was drilling around in the ice and zero weather of Minneapolis for a few days last month and while taking refuge in a nice, warm office, a friend wanted to know what I was doing. I told him that I wasn't doing much of anything—that I was being done in a perfectly illogical manner in my effort to establish a high-grade motion picture magazine—one that would contribute a share in making a better motion picture entertainment. He came right back with: "Have you been to the Lyric?" I asked him what he knew about the Lyric and he was quick to inform me that he knew all about it—that he loaded his family into his limousine twice a week and never missed a change in the bill. This would be just ordinary if this man wasn't the kind that you always guess wouldn't go to a picture show on a bet. Of course, I would go to the Lyric. I wasn't in Minneapolis for much more than that very pleasure, but the boss of the Lyric wasn't at home that day, and I would surely see him tomorrow. So I went to the Lyric. There wasn't anything from the street to suggest that here was the threshold of the best motion picture theater in the world.

Hip Pocket Essays

THE PROJECTING MACHINE.

The projecting machine was never invented; it was wished on an unsuspecting public. It constitutes the first of a number of similar chances allowing "Saunder's fat friend" to put his hand in your pocket and extract your roll.

It is made of a few brass and iron castings and a number of big words whose meaning is more or less apparent, such as "optical center," "geneva wheel," "link and pin," "spherical aberration," and other meaningless terms obtained from the original Greek or some other guy like that.

By means of a young electric light plant, a flat, brass-buttoned thing called a rheostat, a condenser, a compensare, a transformer, a sheet iron tank called a lantern head and about fifty-seven varieties of intermittent gears, wheels, pinions, sprockets and guards which you turn with a handle, you are enabled to pull the film through a series of fire rollers behind a shutter, over an aperture plate, under a tension spring, and while you are doing all this the shutter gets out of the way often enough to let some light through and if the "throw" is long or short enough with the framing up hickey working correctly the result is a picture on the screen. Clear, isn't it?

Frankly speaking, the projection machine is where the exhibitor spends the money he has left after paying film rentals. Parts are obtainable from any film exchange and business is so good they don't have to advertise.

When using a projecting machine it is necessary to speak low and take off your hat. Otherwise the machine may get angry and chew up some film, gag, spew, buck, jump, tremble, or fall over. A friend once said he lost a finger in one.

There were two immaculate all-brass easels on the sidewalk—a big electric sign above the entrance. The doors opened upon a capacious lobby that suggested straight business. The foyer, aisles and stairs were carpeted and there wasn't a square inch of surface from the dress circle to the gallery that hadn't been rubbed that morning. I will not try to enlist the details that had been attended to make the environment of this house truly blessed. Mr. S. L. Rothapfel, the genius who is responsible for all this, makes his pictures the climax. They are rock-steady. I had heard the term abused many, many times; but here at last I found them. Rothapfel's pictures are motion pictures, but they don't do a hula-hula dance. They are flawless. They are clean. They are lectured. They are projected in a lighted room—a theater seating more than 1,400 people at 10-20-30c. I would never miss a Lyric change of program if I lived in Minneapolis. I would follow the crowd to the Lyric. If I wanted to render the picture business the one biggest, most magnanimous tribute possible, I would hire this man and travel him, so that he might show others how the thing is done. If he used witchery to get his effect there would be no need to sing his praise, but he uses ordinary things. His films are the same films that are available to every exhibitor. His machines are the same you can buy. I was in his operators' booth. It was no surprise to me. I might have been disappointed if I had not found the two operators in their pure white uniforms. The machines were faultless and my lady's cut glass was never more spotless. Mr. Rothapfel is not on speaking terms with dirt in any form. His is a clean show and clean things have nothing in common with dirt. Best of all I saw Cines' Brutus. I haven't seen a film since. I don't know whether I care to see films any more, unless Mr. Rothapfel will show them to me. Cines never saw their Brutus. They made it, of course, but their notion of its possibilities must have had limitations, just as you and I have been led to believe by viewing the helter-skelter of hundreds of thousands of feet of films. I can't tell you what Rothapfel does to put this "spell" on his patrons. As you sit in front of his screen, he grips you fast. You want to stay. You wonder why he doesn't give you all the films in the world. Why should he confine his show to only two changes of program a week? Oh, you exhibitor, with your mania for five to seven reels a day and for a nickel!

* * *

The origin of the motion picture is shrouded in mystery. Some contend that it is only a few years old; others that it grew out of early experiments of the Greeks and Romans. But recent discoveries place its beginning still farther back in the mists and gloom of antiquity. Indeed, it is probable that its history goes back to the stone age; and some archeologists claim that one Xanvryl invented a mechanism for moving a series of carved rocks intermittently past a hole in the wall, obtaining a real motion picture through the little understood principle of persistence of vision. And there is evidence that in Moses' day the industry was quite well developed along its present lines. For a record of this we need only consult the Holy Scriptures.

The picture theater, indeed, was as popular in that day as it is now and ever shall be, world without end, amen. For example, we find:

They rushed with one accord into the theater.—Acts xix:29.

Many will seek to enter in and shall not be able.—Luke xiii:24.

The manager issued instructions to the ticket-taker:

Number ye the people that I may know the number.—II Samuel xxiv:2.

And the ticket-seller said, as now:

How many?—II Samuel xxiv:3.

Here is evidently an ignorant layman's description of a special show pulled off for the king (apparently a mirror screen was used):

And before the throne there was a sea of glass like unto crystal; and in the midst of the throne and round about the throne were four beasts full of eyes before and behind.—Revelation iv:5.

Kinemacolor and the aluminum screen are mentioned:

Apples of gold in pictures of silver.—Proverbs xxv:ii.

The independents of that day were evidently having trouble with the Patents company. Witness this bulletin:

Then ye shall drive them out from before you and destroy all their pictures.—Numbers xxxiii:52.

And the plaint of the independents:

We have no might against this great company.—II Chronicles xx:12.

In one point, at least, we have it on the ancients; for their production of films must have been very slow:

At the end of every seven years thou shalt make a release.—Deuteronomy xv:1.

He made a release to the provinces.—Esther ii:18.

That the operator was watched closely is shown:

Behold, he spreadeth his light upon it.—Job xxxvi:30.

By which way is the light parted?—Job xxxviii:24.

The light shall not be clear, nor dark.—Zachariah xiv:6.

Realization of the advantages of a lighted house is shown by this complaint and the order which follows it:

They grope in the dark without light.—Job xii:25.

At evening time it shall be light.—Zechariah xiv:7.

There seems to have been a great deal of trouble with the exchanges:

To keep the charge and shall do no service.—Numbers xii:26.

And from the age of fifty years they shall cease waiting upon the service thereof.—Numbers viii:25.

A daily rate for every day.—II Kings xxv:30.

And they shall not sell of it, neither exchange.—Ezekiel xlviii:14.

Charge of the house for all the service thereof.—Ezekiel xliv:14.

Put my money to the exchanges.—Matthew xxv:27.

What mean ye by this service?—Exodus xii:26.

Be damned.—Mark xvi:16.

The only reply recorded as from the exchanges was:

Wherefore kick ye?—I Samuel ii:29.

Twenty and three.—Judges x:2.

Beat it.—Numbers xi:8.

Evidently at least one concern used waterproofed films. See the announcement:

Neither shall ye see rain.—II Kings iii:17.

The musical part of the program was fully considered:

Provide me now a man that can play well.—I Samuel xvi:17.

Sing unto him a new song; play skilfully with a loud noise.—Psalms xxxiii:3.

A very lovely song of one that hath a pleasant voice, and can play well on an instrument.—Ezekiel xxxiii:32.

Occasionally there was trouble in the audience, too:

He fell off the seat.—I Samuel iv:18.

Thy seat will be empty.—I Samuel xx:18.

He said, What title is that that I see?—II Kings xxiii:17.

And the usual courtesies were extended to the press:

Thou hast nothing to pay.—Proverbs xxii:27.

Have you heard of that newest coast company, the United States M. P.? Know any of these people? Corley Stone, president; John M. Fisher, vice-president; W. E. Clarke, secretary; J. B. Dudley, treasurer. There is also a Major McGuire, stage director; Carlyle Wynne, attorney; Harry Earl, assistant to the Major and Bill Paley, camera man. They are at it now, according to report, releasing three a week with "eastern independent concerns." And all on $100,000 capital by the sanction of Arizona. If it looks good to you mail can be sent to 706 Security building, Los Angeles. Needn't refer to our advertising pages for further announcement.

George Fitch on Motion Pictures

Our own George Fitch, of national fame—upon whom, in the language of the litterati, has descended the mantle of Mark Twain [no, Sophronia, we do not refer to the kind that sits on a gas burner and makes light of it]—recently pulled a wheeze on motion pictures. We reproduce it here, hastening to state that it is copyrighted, 1912, by George Mathew Adams, and was published for the first time in the Chicago *Record-Herald*, as one of Fitch's "Vest Pocket Essays":

One day Edison caught sight of the camera, which had hitherto had an easy time, but from that moment it was doomed. Edison harnessed it up with a set of gears and a revolving shutter and set it to work photographing speed, history, romance, humor and travel.

As soon as this was done moving pictures became enormously popular. The moving picture theater immediately leaped into being and began to compete with the street car and the cigar store for the nickels of the populace. In consequence, the limited supply of 5-cent pieces became so overworked that a nickel which doesn't register at three tills each day is loafing on its job.

Moving pictures are making us acquainted with the world and familiar with great men of all times. The scenery of Java, Sahara and Siberia are chestnuts to us, though we may never have traveled one hundred miles on a railroad train. For 5 cents we can see King Solomon quarrel with fifty wives, in colors. We have seen so many battleships launched, kings crowned and buried, tigers shot, highwaymen treed, pugilists demolished and mountain peaks scaled, that most of us are extremely blase and the trees on the streets would have to walk off arm in arm to get more than a yawn out of us. This the trees will never actually do, but they are likely to do anything on a moving picture film, which is a great assistance to nature sometimes.

In moving pictures we may also see ferocious Indians chasing the brave hero down a macadam road and barbecuing him against a trolley pole; likewise we may discover the temperamental cowboys capturing a horse-stealing Mexican and lynching him in the wilderness around the corner from a hat factory in New Jersey. This teaches us not to believe all the moving pictures tell us. It is, in fact, one of the most accomplished of liars. It is posible in a moving picture factory to make a magnificent and awe-inspiring volcano out of a pile of sand, a roman candle and a barrel of soapsuds.

More people are watching moving pictures today than are watching chorus girls, which is a sign that the world is better. The picture melodrama is not a brain strengthener, but it is an improvement over the old "ten, twent', thirt'," variety, because the audience cannot hear the remarks of the characters. Moving pictures have been taken of practically everything in the world, including the pyramids and Washington's monument, but no one has taken a moving picture of a baggageman accommodating a crowd of hurried passengers. A standing or even sitting picture can handle this subject perfectly.

Keartons Get More Nature Films

The announcement that Cherry Kearton, the celebrated English photographer of bird life, is in India, seeking to procure material for moving pictures of the life and habits of the tigers in the Bengal jungle, recalls the work of this artist and his brother and collaborator, Richard Kearton, in reproducing wild life in moving pictures.

It is said that Charles Wesley, the hymn maker, was wont to say that the devil should not be allowed to monopolize all of the good tunes, and the Kearton brothers reasoned that the moving picture should not be solely devoted to the depiction of melodrama, posed and staged for the purpose. To this end they sought to show the natural movements of birds, animals, and even serpents and insects, in their natural environment.

The first moving pictures of this character were shown at the White House during the last year of the administration of President Roosevelt, by Richard Kearton, and created a genuine sensation. The guests saw the movements of the hawk hovering in the air and swooping for its prey, and the family life of the nightingales, chaffinches, wrens, sparrows and blackbirds.

The methods of the Kearton in procuring their pictures at their Yorkshire home are of great interest. One of their "properties" is an imitation ox, built to resemble closely the genuine animal. Secreted within the interior is a box which is occupied by the naturalists with their moving picture camera. From this point of vantage the study of the birds is carried on and their natural motions reproduced.

One of the brothers is a natural imitator of birds, and is thus enabled to lure the wild birds into the vicinity of the bogus sample of the lowly kine. But they are lured, not to their hurt, but that they may add to the store of scientific knowledge and furnish entertainment to thousands of charmed beholders.

Views of a Police Superintendent

In Prague they inaugurated a system of police detection that has reverberated throughout the old world and has become an international question. They utilize the motion picture machine and all the exhibitions in Bohemia will now portray the likenesses of criminals when "wanted" by the police. It has been commented upon at Berlin, Paris and Scotland Yard; also discussed freely by several of our most prominent United States detectives with international alliances.

Thomas A. McQuaide, superintendent of police of Pittsburgh, Pa., has set aside sufficient time to give this world-wide and momentous question the serious consideration it deserves.

"It goes without saying," he said, "that the greatest publicity given the perpetrator of any wrong, the more easily and quickly he will be apprehended by the authorities. The majority of alleged wrong doers have an erroneous idea of the police department; of course there are exceptions to this rule. If a man is guiltless he has no greater friend on earth than this department, and every power that is behind it. We simply stand between the law and the people, and believe me sincerely when I say I am always happy to see any man charged with a crime pass out that door with the shadow removed and collectively we will never hesitate to do all in our power to guard his future from attacks.

"I cannot quite agree with the able United States authorities who have passed upon your question as it applies to the United States, its laws and methods. Do you realize the terrible responsibility of the police department and the city of Pittsburgh were we to step into any motion picture theater and say to its manager: A great crime has been committed and we are reasonably sure this is a likeness of the man wanted, 'flash that on your screen?' Who is courageous, be it the city of Pittsburgh or this department who would not hesitate in fear

of a possible mistake. Instances of the kind have occurred, not to speak of the support which would be given the 'little theater' manager by the powerful motion picture companies with their millions of capital invested and catering, as you say, to 20,000 theaters in the United States with a daily attendance of 8,000,000. The laws of the country give us no protection where a procedure of the kind would be concerned, and no matter if we covered ourselves with glory, 999 times, let us once err and all our good attempts and past successes are lost sight of.

"Another wrong impression has gained considerable ground, and that is the likenesses we take of a criminal or suspected one are not for country-wide publication, but belong to this department confidentially and exclusively. Now tell me how in this country it is possible to carry out this system as promulgated in the old world. I cannot see it now, and it won't be soon, I don't think.

"So tell your motion picture managers they need not quake in their boots for fear one of my officers will suddenly present a picture and say 'screen' that, mindful of the heavy damage suits in the event of a possible error, and which would probably wipe away that 'little' manager's investment over night, and personally I would hesitate to assume the responsibility unless backed up by the positive laws."

Another General Film Service Dispute

Judge Lynch February 17 granted an injunction to the Montana Amusement Company, which operates moving-picture show houses in Butte and many other Montana cities, restraining the General Film Company from discontinuing the supply of motion picture films for its Imperial theater in Butte. The proceeding instituted by the Amusement company, through its attorney, William Meyer, marks the beginning of a fight against the exchange on the part of the Amusement company, for it is said that other sections may follow.

Stripped of legal verbiage, the complaint upon which the request for a restraining order was based makes the following allegations:

That the Montana Amusement Company, which owns and operates the Imperial, entered into a contract with the General Film Company for rental of nine reels of moving picture films each week at an agreed price; that the film company furnished the film and received payment as agreed up to February 17, when the Amusement company was notified that the terms of the agreement would be abrogated and that the service would be discontinued; that the General Film Company, by virtue of an agreement with the Motion Picture Patents Company, controls distribution of all films manufactured by them in Montana; that if the defendant is allowed to discontinue this service the damage will be impossible to ascertain, as the complainant has built up a profitable business at an expenditure of more than $15,000.

Fox Files Bond for Appeal

The Greater New York Film Rental Company, which serves the Fox chain of moving picture theaters in New York, filed a bond February 21 in the Supreme Court for the continuance of a temporary injunction against the Motion Picture Patents Company and the General Film Company. The injunction requires the Motion Picture Patents Company and the General Film Company to refrain from interfering with the supply of films to the Fox theaters.

The Greater New York Film Rental Company has appealed to the Appellate Division of the Supreme Court from an order of Justice Bijur denying a permanent injunction against the revocation of the Greater New York Company's contract under which it received licensed motion picture films and was permitted to use patented exhibition machines. Justice Bijur signed an order continuing the temporary injunction provided a bond was filed, pending the decision on the appeal.

Novelties in Moving Pictures

New uses for the cinematograph are being discovered. The Italian war department requested the relatives, sweethearts and friends of the members of the Eleventh regiment to present themselves on New Year's day at that regiment's barracks in Naples. There they moved past the moving picture machines and waved their hands or threw kisses to the camera as they came opposite it. The films were then sent to Tripoli and the men, during their leisure evenings, are cheered by the sight of their wives, parents, children and sweethearts reproduced on the screen before them.

Still another new field of photography was opened with the recent remarkable hydro-aeroplane flight of Frank Coffyn in the vicinity of New York City. He carried as a passenger a photographer fully prepared for the work and fine plates of the scenes over which the machine passed were secured. The newspapers have reproduced enough of them to indicate something of the wonderful possibilites of this sort of photography. This immediately suggests to the person who has ever in mind the uses of the flying machine in war the possibilities of securing an intimate record of the position and resources of the enemy. But it has a more general promise than that. The "birdseye" view is the new view of the earth we live on. It must have its charm for those who do not go up in airships. How soon it will be that we shall have the moving picture camera mounted on the aeroplane, and landscape by the reel, reproduced for the delectation of the multitude at ten cents a unit. These are only hints of what may be as the airship's reach and success increase.

Audience Calm During Fire

With fire eating its way through the rear floor of a five-cent theater at 178 North State street, Chicago, 150 persons sat calmly through the performance. They could hear the firemen shouting for extinguishers and could smell the smoke creeping through the auditorium, but until the picture was finished they kept their seats. Then they filed out as unperturbedly as though nothing had happened.

The theater belongs to V. C. Seaver. About 5 o'clock Mrs. Henrietta Norrison, ticket seller, noticed the floor growing warm. She notified Mr. Seaver. He called the fire department, then stepped to the front of the center aisle and addressed the audience.

"Ladies and gentlemen," he said, "there is a small fire below the cashier's booth. The fire department is on the way and there is absolutely no danger. Those who are afraid can leave. I ask them to leave in an orderly manner. The remainder of the audience may watch the rest of the show."

About thirty men and women arose and made a leisurely exit. The rest remained.

The Child's Leisure Hour

By Rev. Herbert A. Jump*

SOME time ago I chanced to have conversation with a group of fifty Persians who are living in my town. Desirious of ascertaining how American life had impressed them, I put this question, What was your most amazing experience upon your arrival in the United States? One man answered, "the subway." Another replied, "a black woman." A third confessed that it was the moving picture. And I saw by the nodding of heads among members of the group that they were saying "amen" to the last answer. Fur-their inquiries brought out the fact that practically every one of these foreigners was in the habit of going to moving picture shows. One man declared, "I like them because they make me forget that I am tired." Another said, "I like them because I learn so much from them without knowing the English language." Evidently the motion picture is entering into the experience of the immigrant.

A few weeks ago I visited the public library and happened to have a chat with some children in the Children's Room. "How many of you visit the moving picture shows?" I asked, and every hand went up. "What kind of pictures do you like best?" was my second inquiry. "I like the sad pictures," answered one pale-faced little girl. "I like the kind where they get married," answered a jolly miss. "I like pictures of the American soldiers marching down the street with the stars and stripes going on before," came from a dark-skinned lad who later on confessed that his name was "Guiseppi Calderoni." The librarian of the Children's Room added her testimony, which was to the effect that a Hebrew boy had recently inquired for a story called "The Bride of Lammermoor," and when asked where he had ever heard of that story, he replied, "in a moving picture show," and before he was through patronizing the library he had read every novel of Sir Walter Scott's. Evidently the motion picture occupies a large place in the experience of the school child.

Winifred Greenwood, with Selig.

In short, a new form of entertainment for the people has grown up which appeals to all races, all ages, all stages of culture. The motion picture today is one of the most democratic things in modern American life, belonging in a class with the voting booth and the electric car.

*From Religious Education.

Statistics as to the popularity of the moving picture are such as to surprise the uninformed. One out of every twenty-three persons in the United States sees moving pictures each day. In a city like New York probably one out of ten is a patron of this institution. The motion picture theaters of the United States, if arranged side by side, would extend for forty

Sidney Ayres, with Selig.

miles. The money invested in these enterprises and paid in at their box offices each year would make a belt of dollar bills long enough to encircle the globe at the equator. If the school children of the country who patronize motion pictures each day were to march by in single file it would take them nineteen days to pass the observer, assuming that the observer stayed at his post for eight hours a day. To supply this amusement demand, the dealers are putting out a new film every sixty minutes; photo-plays are manufactured, like candy—"fresh every hour." Five times as many persons patronize the motion pictures as are to be found in the old-line theater. And all this swift growth has taken place almost without being noticed by any persons except the keen social observer.

The chief significance of the motion picture is the fact that it makes drama cheap. No form of art appeals so deeply to the experience of the common man as the drama; no form of art is ordinarily so inaccessible to the common man. The entertainment which he loves most is the entertainment which until recently he has found it hardest to secure. The poor people who love music have been able to enjoy it in the park concert; those who love pictures and statuary have had the public museum opening its doors for their pleasure; tastes for poetry and fiction and other forms of literature have been satisfied by the free library. The man who loved to see a good play, however, the form of art which reproduces life most perfectly, has found it impossible to satisfy his hunger unless he has had the price of a seat at considerable investment of money. It is as though the only place to buy bread should be at the Waldorf-Astoria. But with the perfecting of the motion picture this condition of things is being changed. Our age is the age of "canned drama." The great American democracy is responding to this new opportunity with characteristic enthusiasm. If the full purport of this new

movement were understood, we should realize that over the entrance to every motion picture house should be inscribed some such titles as "The Nickel College," or "The Dime Civilizer," or "The Moving Picture University."

It is impossible to deny that the motion picture is exercising a profound influence upon men's ways of thinking and living. The significant question is whether, on the whole, this influence is for good or for bad. My own personal opinion could be expressed in the statement that the motion picture is the cleanest form of popular entertainment being given indoors today. In this statement I am alluding, of course, only to the motion picture—not to the vaudeville numbers which are frequently interspersed with the motion picture. For this fact the public owes a large debt of gratitude to the People's Institute of New York and to its capable founder, Professor Charles Sprague Smith, under whose auspices the Board of Censorship was organized. When an amusement business like the motion picture business yielded itself voluntarily to the supervision of a censorship representing moral ideals, it was a new thing under the sun; and without the hearty help of high-minded promoters of this new invention the present comparatively safe condition of affairs could never have been brought about. With prophetic vision Professor Sprague Smith enlisted the co-operation of the leading manufacturers of motion pictures in 1909 while the trade was still young. As a result, this form of commercial amusement has been "well brought up." Practically all of the motion pictures in the country today are being passed upon by the Board of Censorship, and that board is applying as high standards of critical taste as in its opinion the trade will tolerate. If, however, the public makes its approval evident, the board can apply still stricter standards and the trade will not dare to over-ride its verdicts. Meanwhile, in the direction of the elimination of improper vaudeville, the improved sanitation of the motion picture establishment, proper police supervision, and in other directions, much work for reform remains to be done apart from the activity of the censorship.

The social influence of the moving picture can be traced throughout the length and breadth of modern society, but in at least three aspects its significance looms conspicuously. In the first place, it is adding immensely to the general intelligence of the common people. The diligent patron of the motion picture house is having the opportunities of reading and travel and wealth put at his disposal for the sum of five cents. With the aid of the motion picture camera he becomes acquainted with every land under the sun, with the details of all the leading industries by which men earn their daily bread, with the picturesque scenery of our own and other countries, with the stories of the great masterpieces of literature and drama, and with many of the latest discoveries of science. The so-called "educational film" has not yet won the popularity which it merits, but it none the less has brought to pass the enlightenment of the common mind in many directions where hitherto there was nothing but gross ignorance. Many a man, for example, knows more about the Bible today than he ever knew before, and he has learned it, not from a newly formed habit of church attendance, but from his patronage of the motion picture show where Scripture films are not infrequent.

The second point at which the social influence of the motion picture can be traced in detail is in its effect upon the home surroundings. The problem of the tenement is the problem of how to preserve the spirit and beauty of home life. Many a woman fails as a homemaker from ignorance of what a home ought to be. Would it be at all surprising if the pictures of domestic happiness and comfort which appear in every program of motion picture films should create in the long run higher ideals of home esthetics? Bring to mind those pictures of the interiors of homes which you have seen recently at the motion picture theater. There were lace curtains hanging at the windows, flowers decorating the table, pictures upon the walls, ornaments upon the mantlepiece, rugs upon the floor, and all the furniture arranged with seemliness and order. Many of these improvements of the home along the lines of beauty and refinement are possible only with a comfortable income; but, on the other hand, the ambition which seeks to beautify the home, even though the home be but a three-room tenement, can work transformations with the meagerest materials. I was talking recently with the manager of a successful motion picture house in New England who said, "Every day I open my picture house I am exercising an influence upon hundreds of homes in this city. The workingman comes here and looks at pictures which show homes much more beautiful than his own; he watches men and women meeting according to the forms of polite society, the man tipping his hat upon the street, or removing it when he enters the house, or stepping aside that the ladies may pass before him; he becomes an observer of the world of good manners; and then tomorrow as he goes to his toil, where his hands and his feet are occupied but his mind is free to roam, he unconsciously lives over again those scenes which he watched in my playhouse. He thinks of points at which he can improve his own conduct, of ways in which he can modestly beautify his own home, and before the weeks have passed there is a touch of color or an increase of cleanliness in his tenement due to the unconscious instruction which he received at the motion picture show." The manager who thus conceives of his calling is perhaps not very commonly to be found, but clearly there is a measure of truth in what he said.

The third and last aspect of its influence is its influence upon moral standards of the community. Here we touch upon ticklish matters, where prejudice frequently talks more loudly than knowledge. But here also we are dealing with the most significant aspects of this new form of entertainment. People who know little about motion pictures are in the habit of declaring that they reproduce only low standards of morality. These persons seem to imply that low standards of morality must always accompany a low price of admission. Because the admission is cheap, the ideals of the amusement enterprise are supposed to be cheap. But such persons unfortunately are falling into grevious error. We need to free ourselves from the superstition that virtue always wears a frock coat and a silk hat, and that vice is generally dressed in overalls and a flannel shirt. As a matter of fact, the testimony of a theatrical manager with whom I recently conversed comes very close to the truth: "The poor people want clean shows; it is the rich people who like the smut." The motion picture film, therefore, has maintained its popularity, even though a

standard of censorship has been applied to it which is woefully lacking in the drama patronized by the well-to-do. And because this moral censorship has held sway, decent moral standards are being taught by the motion picture much more than by the regular drama. There are pictures of wrong-doing, to be sure, thrown on the screen; we observe a horse thief or a highwayman plying his trade; we see acts of violence or the condition of drunkenness; but the real moral import of the film must be judged by its whole story. When you have seen the story through to the last chapter, you will find on the whole that the moral inference from the motion picture film is wholesome. After a somewhat gruesome film had been shown a couple of years ago, in which a wife's infidelity to her husband was visited with summary and severe punishment, two of the girls who had been in the audience were overheard to comment upon the film as they left the theater. These were the words of one: "Say, Mollie, if ever I get married, I'm going to be straight with my man. It don't pay to be crooked." Do not these words set forth the message of the motion pictures which you have seen—"It don't pay to be crooked." It is a motto which I should like to teach some merchants and business men and politicians, as well as to have it taught to prospective wives and future husbands. The Board of Censorship is not altogether satisfied with its work, but on the whole its efforts to give a wholesome moral tone to the motion picture output of the country commends itself by the results.

Indeed the question comes to mind, Why may not the motion picture be used deliberately for moral education? Why not arrange a course in moral instruction by the use of film stories parallel to those courses in moral instruction which have been prepared with the aid of stories from classical literature? Why may not preachers preach from motion picture parables of contemporary life even as Jesus preached from parables of contemporary life two thousand years ago? Why could not a company of philanthropists in each city establish "motion picture civic centers" where the films should be definitely selected with a view to their educative uplift upon the masses of our population? Why should there not be children's motion picture shows supervised as carefully and adapted to the nature of the child as successfully as are the children's departments of our public libraries? The more one dreams his way into the vastness of the opportunity, the more he is convinced that the possibilities of the motion picture for social uplift have scarcely begun to be utilized.

Dakota Church Uses Pictures

A practical scheme to bring all classes of people to church has been tried in Miller, S. Dak., and is a success. The Christian denomination there has been without a pastor for some months and only the prayer meetings, etc., were kept going, which drew small audiences. The other denominations have able and well liked preachers and their audiences were only fair to good. Finally a layman in the Christian church conceived the idea of buying a moving picture machine and giving illustrated bible lectures, mostly pictures relating to bible scenes, the holy lands, etc. Advertisements were put in the papers worded "Beautiful pictures portraying the grandest scenery of the world, the modern wonders, the marvels of the universe, next Sunday evening." Such snappy advertisements naturally attracted many who were not church goers, as well as those who made profession. The result is that the church is being filled with all classes to see the pictures and hear the lectures, with the prospect of continued attendance as new pictures are advertised for each Sunday. There is no charge, except the regular collection that is taken any time.

Birmingham School Pictures Successful

The initial performance in the introduction of the free moving picture as a part of the educational work at the Birmingham, Ala., high school February 8 was an enthusiastic success. The high school auditorium was crowded to the doors and everyone was delighted with the experiment.

Dr. J. H. Phillips, superintendent of schools, was very enthusiastic over the outcome. "It exceeded even our most sanguine expectations," he said. "The crowd was immense, the pictures worked smoothly and they were not only highly entertaining but very instructive.

"We are the first in the south to make this innovation and I feel that it is going to prove a great aid in the educational work in the city."

The pictures given included scenes from "The Merchant of Venice" and Dickens' "Christmas Carol", a play by the high school students, "The Cricket on the Hearth," and the entertainment was closed by a moving picture entitled "The Fly Pest—a Lesson in Sanitation."

"This last film," said Dr. Phillips, "is sure to do a world of good and its strong appeal for more effective sanitation will be heeded. People from all sections of the greater city had the lesson impressed upon them so forcibly that they can never forget.

"I am more than glad that we made the moving picture experiment."

Films Will Tell of Teeth

For the purpose of instructing the school children of Toledo how to take proper care of their teeth, and of preventing facial deformities, tooth ache, and other attendant ills, a series of motion pictures will be thrown upon the screens of the moving picture theaters in that city during the month of April.

Dr. L. L. Zarbaugh, who is the originator of the idea and movement, returned recently from Columbus, where the education oral hygiene committee of the Ohio State Dental Society in special session decided to promote the movement and make it state wide.

Twenty school children from the Toledo schools will be carefully examined, the conditions of their teeth photographed, their descriptions recorded and the total discoveries rendered into moving picture form and presented to the public.

Kindergarden Pictures

Motion pictures prepared for the promotion of kindergarten work are being shown at the Olympic Theater, Oklahoma City.

The pictures are being displayed under the auspices of the Kindergarten council, of which Mrs. Orin Ashton is president and Miss Edna Lindsay, secretary.

The numbers are "Cinderella" and "On the Threshold of Life," the others showing the results of kindergarten work in the slums of New York City.

Business in a Town of 54,000

Fifty-three thousand nickels a week are paid into the coffers of the moving picture theaters of Altoona, Pa., by the public. This estimate is based on figures given to an Altoona *Tribune* reporter by a moving picture theatrical manager, who is in a position to know the weekly receipts of several theaters. Two million seven hundred and fifty-six thousand nickels a year are paid into the theaters. This is the first year that such an enormous business is being done in Altoona, for, while the moving picture business has been long established there it has never before boomed so much as at present. In other words far over two and one-half million people pass the doors of the theaters every year. Many of these people are duplicates, as some go every night; but the figures show that an enormous percentage of the city's population patronize the shows.

The East Side theaters alone entertain over 17,000 patrons a week. The west side far exceeds that figure. The shows in the business district entertain 36,000 patrons a week. These figures are conservative. It is possible that more patrons visit the theaters. The figures, of course, represent the number of paid admissions, and if the duplications are considered, it would probably be found that 20,000 people a week visited the shows instead of 55,000, as the figures would seem to show.

The moving picture theater owner who gave the *Tribune* the figures on which the computations in this article are based was asked if the business showed many vagaries. He said:

"It is up one day and down the next. Saturday is always big. We never run less than $25 a day, while on Saturdays we range from $90 up. It is interesting to watch the box offices. The day may be as pretty a one as ever you'd meet in poetry, and still the people won't come in. It might be warm, cold, rainy, sunny, or anything else, but the public will not patronize you unless it takes the notion. Days that you would imagine would be your best sometimes are the worst."

Altoona now has seven theaters given over to moving pictures, while the pictures are shown regularly in the Orpheum in connection with the vaudeville performance, and are frequently seen at the Mishler. Another moving picture house is to be built on Ninth street between Eighth and Ninth avenues and will be open to the public in the spring. On the west side are the Pastime, the Grand, the Majestic and the Bijou theaters; on the east side the Family, the Ideal and the Crystal. The National will be the name of the new one to be erected on Ninth street. Curious enough, there are not two Altoona moving picture houses on the same block. There have been at times, and as many have gone up the spout as have prospered.

Within the last couple of years a tendency to make the theaters elaborate, especially on the interior, has been shown.

Scene from the Selig Feature Subject, "The Ace of Spades."

Indian-Head Dramas and Comedies

Thrillers For March

AN ASTONISHING number of excellent photoplays are listed for production throughout the month of March by the Essanay Company. And every one of them is an individual gem of its kind, too. Nine great comedies, four thrilling eastern dramas and five western dramas, these last featuring that king of photoplay artists, G. M. Anderson.

In "The Bandit's Child," booked for release March 16, Mr. Anderson gives one of the finest western dramas produced in many moons, and plays the role of Fleming, the bandit, with gripping characterization.

Tom Fleming and his pal, Morgan, are planning to hold up the stage. Fleming sends Morgan into town to spy on the departure of the stage and, while waiting at his shack, receives a letter from his wife back East, whom he has not seen in three years. Opening it he reads:

My Dear Husband:

Today is baby's birthday. Think, Tom, it has been three years since you went away, but baby seems to remember you and continually calls for her daddy, and every night she prays with me that you will always remain a true, honest father and husband. Anxiously waiting to see you, I am—Your Loving Wife.

For a moment Fleming stares at the letter. "And while they pray for me, I'm planning to rob!" The force of it all strikes him like a blow in the face and he gazes off toward the distant hills as he chokes down a lump in his throat. The beat of hoofs come up the trail, and presently Morgan throws himself from his reeking bronco and pants out that the stage is coming. With a sudden resolve, Fleming shows him the letter and says he is going to quit outlawing and make himself worthy of his wife and baby. For a moment the two men fathom each other's souls, then Morgan grips Fleming's hand, mounts and disappears in a dust-cloud.

Firm in his resolve, Fleming now sends in his gun and a note to the county sheriff, saying he will take the county's offer of freedom for surrender. Then he sets out to look for honest work. He is hired by a blacksmith and is getting along splendidly, when a ranchman recognizes him as the former bandit and discharge follows. A cattleman next gives him work, and Fleming feels certain he will make good, but the cowboys find out his former vocation and threaten to leave in a body unless he is discharged. Fleming goes, and realizes it is useless to attempt to find honest work. Filled with bitterness, and forgetting his good resolutions, he secures his rifle, finds a hiding-place beside the trail and awaits the coming stage. Meanwhile, Fate takes a hand in the game and the stage breaks down a short distance from where Fleming is concealed. A little baby girl wanders off amidst the confusion and finally comes upon a strange man sitting beside the trail with a rifle. A twig snaps and Fleming whirls with a snarl and leveled gun—to find the little one regarding him with wondering eyes! Taking her in his arms, Fleming suddenly sees a locket about her little neck, snaps it open and sees—his wife's picture! "Dat's my mamma," lisps the child, and in another moment she is clasped in Fleming's hungry arms. "My little girl," he chokes, "why, how on earth came you—" he breaks off suddenly as a step is heard behind, rises and sees his wife who has come in search of the little one. For a moment she stares at the rough man clasping her baby, then with a scream of joy she throws herself into his arms. With wife and baby in his fond embrace, Fleming suddenly turns toward the trail. Slowly the stage rattles by and disappears in a fog of dust. With a prayer of joy at his miraculous deliverance from further crime, he hugs his loved ones to him. Fleming, the bandit, has, indeed, become the true, honest father and husband for all time.

A Scene from "The Ranch Girl's Mistake."

"The Ranch Girl's Mistake" is another splendid Western dramatic offering from Mr. Anderson, and is one of the world-famous Broncho Billy series he has created. The story goes that Broncho loves pretty Nan Morgan and introduces her to the boys of Lariat one day as "the future Mrs. Broncho." However, Nan now meets a dressy stranger from the East, who talks to her on several occasions and finally gets her to agree to elope with him and give up Broncho. Nan goes, leaving a note for Broncho telling what she has done and for him to forget her. Heart-sick, Broncho gets his belongings and goes to the railroad station, where he meets a young woman who has just arrived on the train from the East. She inquires of Broncho about her husband, and it is not until she shows him a photo that Broncho recognizes him as the scoundrel who has robbed him of Nan. Telling the little woman he will bring her husband to her, Broncho saddles his horse and, after a thrilling ride, overtakes the villain and Nan and forces them to return to the station. There he unites husband and wife, without the little woman suspecting a thing of what has happened, and Nan

A Scene from "The Bandit's Child."

realizing what Broncho has saved her from, sobs out her repentance on his shoulder. Mr. Anderson plays Broncho and Miss Vedah Bertram portrays Nan, and it is a cracking good picture in every way.

A thrilling, tragic tale of the North woods is "At the End of the Trail," wonderfully portrayed by the eastern stock company. Pierre Bonvard, a French-Canadian adventurer, leaves his helper, Tukish, a half-breed, to die in the snow when he gives out. Tukish is rescued by Waldron, a trapper, who gives him a home in his cabin. Bonvard, who is wanted by the northwest mounted police for murder, comes to Waldron's cabin during Tukish's absence, stabs the old trapper and escapes with a hoard of gold. Tukish discovers the tragedy, and a thrilling chase ensues, in which two men use dog-sleighs over the frozen snow and ice. Tukish at last overtakes Bonvard, and a desperate struggle with knives follows. Later, Brett, of the mounted police, arrives at the scene and finds Tukish gasping out his life over the dead body of Bonvard, whom he has slain. Tukish gives Brett the gold with instructions to return it to Waldron, then dies of his terrible wounds. Francis X. Bushman's portrayal of Tukish, and his marvelous make-up as the Indian, is a remarkable piece of work.

Two full dog teams of genuine "malemuts" or "mush" dogs of Alaska are used. The dog sleighs are brought into active service in skimming over the ice and snow. The film was produced under ideal winter conditions, and the dogs thoroughly enter into the spirit of the story for they are perfectly at home in their "parts."

To relieve the evident dearth of comedy photoplays now on the market, the company has come to the rescue with nine comedies which are all booked for the month of March. Seven of them are from the Chicago studio, and two are screaming "Alkali" Ike subjects from the hand of G. M. Anderson. Who, among film-fans, has not laughed himself sick at the droll adventures of Augustus Carney who portrays "Alkali?" And "Alkali" will further amuse you in two more cracking Snakeville comedies in April.

Erlanger Says "Charge $1.50"

Film dramas at advanced prices is the latest theatrical venture to be presented. Klaw and Erlanger have leased their theater in Longacre Square, New York, for a moving picture exhibition, the seats selling for $1.50, the cost of viewing many theatrical stars at close range. Chicago may be given a chance to pay the same price later.

A. L. Erlanger of the firm was recently in Chicago. He declared that the picture shows had become a permanent factor in the amusement world.

"My personal opinion is that the moving picture business is at present in its infancy," said Mr. Erlanger. "No one can predict what may be developed in that line within the next few years. Many expert men are at work in the endeavor to perfect new improvements, and the result of their labors is constantly evident.

"The moving picture show is destined to become in the very near future a greater factor than it is at present. Theaters have suffered somewhat from the rivalry of the picture shows, but we find that there is still a public which will patronize good plays. I do not think that the legitimate American drama is in any danger of extinction, even if the pictures become much better than they are at present."

Current Educational Releases

The Durbar Films, made by Gaumont, Pathe, and others, for which such elaborate preparations were made, have now been presented to the public. These films represent one of the greatest and most historic ceremonies ever known and cannot fail to interest all. It is this class of films that pays, not only in dollars and cents, but attracts a different class of patrons; those who heretofore have hardly considered the moving picture theater worthy of their patronage; those wishing to be instructed as well as amused and entertained.

The pictures shown were taken on the occasion of the crowning of King George V as Emperor of India, December 12, which, as would naturally be expected, was attended with all the splendor and pomp of which oriental countries are capable. The ceremony took place upon a raised platform beneath a magnificent, triumphal arch. The king and queen ascended the marble steps leading to this platform, upon which were placed the throne chairs, accompanied by their train bearers and Hindoos carrying richly decorated sunshades. An impressive scene is one where the Indian princes pledge their allegiance to their new ruler. A scene which introduces a note of sadness into the gay festivities is the review of the battle-scarred veterans of many Indian wars, mute witnesses of the many hardships endured. When we consider the immense amount of work connected with a subject of this kind and also of the great distance, it seems almost incredible that in less than a month from the time the first picture was taken the Gaumont company made its first delivery of films in New York City.

Pottery Making in Thoune, Switzerland.—Eclipse. We are shown how this pottery, known all over the world for its originality, is shaped by the potter's wheel, hand decorated and varnished and is then ready for the market.

Flowers for the 400.—Kalem. A very attractive film, as the picture was taken from a farm devoted to floriculture and shows acres of blooming plants.

The Peanut Industry.—Lubin. A scene in Virginia showing the cultivation of the peanut and its preparation for the market.

The Sulphur Industry in Sicily.—C. G. P. C. An illustration of the primitive method of mining, refining and shipping sulphur.

Manners and Customs in Malaysia.—C. G. P. C. A fine travelogue which takes you through this quaint town, introducing you to this interesting and novel people as they are engaged in their daily work, amusements and recreation.

Making Hay.—Lubin. A very pretty and interesting presentation of country scenes at haying time.

Life in Our Ponds.—C. G. P. C. This very interesting film shows the life and habits of the finny tribes which inhabit our fresh water ponds.

United States Life-Saving Corps, New York City.—Edison. A very interesting and spectacular representation of the work done by the life-saving corps at Coney Island and other points in and around New York. It also shows how young girls are taught to swim and are prepared for rescue work.

How Plants Are Born, Live and Die.—C. G. P. C. A very interesting and instructive subject showing the different stages of the growth of the plant from the germination of the seed until the plant has fulfilled its mission and goes back to the earth whence it came.

Farming in Tunis.—C. G. P. C. This film shows the methods by which the soil is tilled in that far off country which are very primitive and might be much improved with profit.

Roentgen's X-Rays.—C. G. P. C.

First Aid to the Injured.—Selig.

Zoological Gardens in Rome.—Cines.

Natural History Series No. 1.—Reliance.

Life of Daniel Boone, No. 1.—Republic.

Life of Daniel Boone, No. 2.—Republic.

Rosanna's Dream.—Natural History Series No. 2.—Reliance.

Weaving Carpet.—Lux. The scene is Aubusson, central France, a town noted for the quality of its carpets, and the entire process of manufacture from the painting of the design to the finished product, is shown.

Natural History Series No. 3.—Reliance.

Building the Greatest Dam in the World.—Imp. A series of pictures graphically portraying the wonderful feat of engineering as exemplified in the construction of a massive dam across the Mississippi river at Keokuk, Iowa. The huge machines, such as concrete mixers, stone crushers that produce 500 carloads a day, excavators, traveling cranes and concrete dumpers are shown, also the giant power house, which is a third of a mile in length.

Making Paper from Wood.—Lux. This film is very instructive as it shows the different processes by which the wood is transformed first into a paste, then into a pulp and finally into the finished product, packed ready for shipment.

The Turkish Police.—This film shows the Turkish soldiers taking the oath of allegiance to the Sultan and also shows them in the performance of some of their duties.

A Day on a Buffalo Ranch.—Imp. The roundup of a large buffalo herd on a North Dakota ranch, which is very interesting.

Cardinal Farley.—Champion. A film showing the greeting extended Cardinal Farley upon his return to his home in New York City.

Cotton Industry.—Imp. The opening scene is a southern plantation with hundreds of negroes gathering the cotton and putting it into bags which are loaded into wagons and taken to the gin. After going through the ginning process it is taken to the market where it is purchased by merchants and shipped to the manufacturers.

Culture of Sugar Cane.—Eclair. This interesting film consists of a series of pictures showing the various processes in the making of sugar from cane, including the gathering, stripping and cleaning of the cane and the method of extracting the saccharine fluid, as performed by the natives of the region where it grows.

Education of the Blind.—Eclair. The methods by which the blind are taught various subjects are shown in this film, including a series of tableaux by which they are instructed in the various trades.

Love and Lemons.—American. This film shows a lemon grove and the method of spraying and caring for the trees. It is owned by a young woman who captivates the heart of her foreman, and the end is, consequently, quite dramatic.

New York's $15,000,000 Fire.—Nestor. A view of the Equitable building from Broadway and Wall street, also from the Trinity building and the United States Realty building while it is yet burning.

Arabian Pottery.—Eclair.—This interesting subject shows the method of making Arabian pottery, showing how it is shaped, dried and decorated.

The Tea Industry in the United States.—Imp. This film is taken from the tea plant at Summerville, South Carolina, and shows the method of culture and preparation for the market.

The Taos Indians at Home, New Mexico.—Selig. A picture of the North Pueblo Indians taken in their own country, showing their customs and manner of life, also some of their industries including their famous pottery. A good representation of the remnant of this interesting tribe.

New York City Street Cleaning.—Edison. Showing the different methods of cleaning the streets in a large city, including the ordinary sweeper and the latest type of flushing machine.

Pottery Making in America.—Lubin. All the different steps in pottery making are shown, the molding, stamping and decoration, until it is packed for transportation.

Children Who Labor.—Edison. This subject carries a story which should appeal to every thinking man, woman and child. It shows the evil effects of child labor and makes an earnest appeal for the little bread winners who pass through childhood knowing little of its joys.

Asbestos Quarry.—C. G. P. C. A very interesting and instructive film showing how asbestos is blasted out of the rocks in a quarry, transported to the works and made into marketable form.

How Motion Pictures Are Made and Shown.—Edison. A film that will be of universal interest as it shows the complete operation from building the scenery to projecting the completed pictures.

Motion Pictures in Schools

The introduction of motion pictures in the public schools has proved so satisfactory that in New York, where the experiment was tried with complete success, there have been vigorous protests on account of the temporary elimination of this feature of educational work because of the danger of fire. Teachers and parents are testifying to the value of this new agency in imparting instruction in a vivid and effective manner. Historic events have been reviewed in pictures, and the impressions made upon the minds of the children are believed to be more lasting than the impressions they get from text books. Scenery, buildings and views of foreign countries impart a taste for travel, and give the young people a better idea than they get by reading, of famous objects and places.

In California the kinetoscope and the phonograph have been firmly established as agencies of public education. In other states experiments are being made. Everywhere the verdict is the same. This leads to the conclusion that motion pictures will figure prominently in educational work in the future.

Moving picture shows, accompanied by lectures, are being tried in the public schools of Fitchburg, Mass., to teach moral conduct. The pictures show fights between boys, the quarrels of girls and the way in which games should be played fairly. Explanatory remarks are made by the teacher or by some one who accompanies the moving picture outfit from room to room, and are intended to impress upon the pupils the right and wrong of every-day conduct.

This seems an excellent innovation and one that may help to solve the problem of how morals may be efficiently taught in the schools. The pictures furnish entertainment and concentrate attention while they teach. It has been predicted by Thomas A. Edison that geography will be learned by children in the future from moving pictures, and a more delightful way of learning it can hardly be imagined. Probably many other studies can thus be made interesting and highly instructive. The moving picture outfit seems destined to become part of the equipment of every progressively managed school.

Ask Film Pictures of Party Conventions

Moving pictures and phonographic records will carry a graphic picture of both the Republic and Democratic national conventions to future generations if plans of the Modern Historic Records Association are carried into execution. That organization has made requests to each convention committee for the privilege of making pictures and records for future use.

Moving Picture in Municipal Campain

Councilman John MacVickar of Des Moines, Ia., advocate of the commission form of government, has announced he will deliver speeches illustrated by a moving picture machine and showing municipal improvements during his term, as a part of his campaign for re-election in April.

Facts About Edison Reissue No. 13,329

By David S. Hulfish

UNITED STATES Patent, Reissue No. 13,329. Kinetoscope Camera. Thomas A. Edison, Llewellyn Park, N. J., assignor to Motion Picture Patents Company, Jersey City, N. J., a corporation of New Jersey. Original patent No. 589,168, dated August 31, 1897. Reissued as Reissue No. 12,037, dated September 30, 1902. Again reissued as Reissue No. 13,329, upon application filed May 24, 1911.

The original patent, No. 589,168, was issued upon an application filed by Mr. Edison on August 21, 1891, and the reissue No. 13,329 expires on December 5, 1928; a total term of something more than thirty-seven years of patent protection upon this single invention.

The history of this series of patents is interesting. The first patent of the series, No. 589,168, was issued with six claims, four of which were directed toward the camera for making the motion picture negative, and the remaining two of which were directed toward the film picture itself.

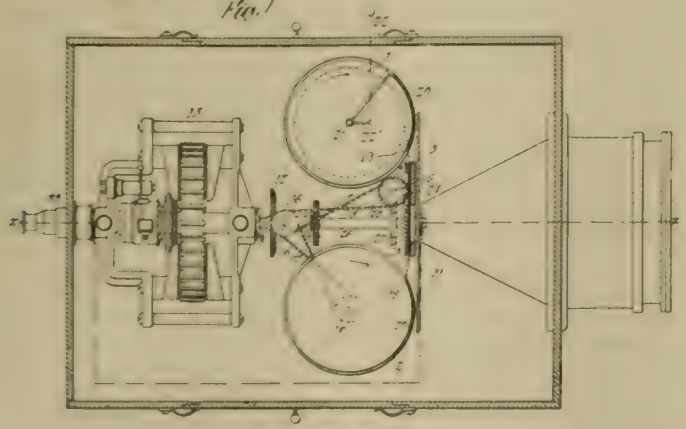
On June 10, 1902, Mr. Edison filed an application for the reissue of the original patent, dividing the application into two parts, and as a result two patents were issued in the place of the one surrendered. These two were Reissue Patent No. 12,038, dated September 30, 1902, for a film picture, and Reissue Patent No. 12,037, dated September 30, 1902, for a motion picture camera.

Since from this date there are two patents to consider, it will be found less confusing to take them up separately.

THE FILM PICTURE PATENT.

Originally filed in 1891, originally issued in 1897, then reissued in 1902 as Reissue No. 12,038, application was made again for another reissue of this patent, the last application being filed on December 17, 1903, and a reissue being granted as Reissue Patent No. 12,192, dated January 12, 1904.

Fig. 1



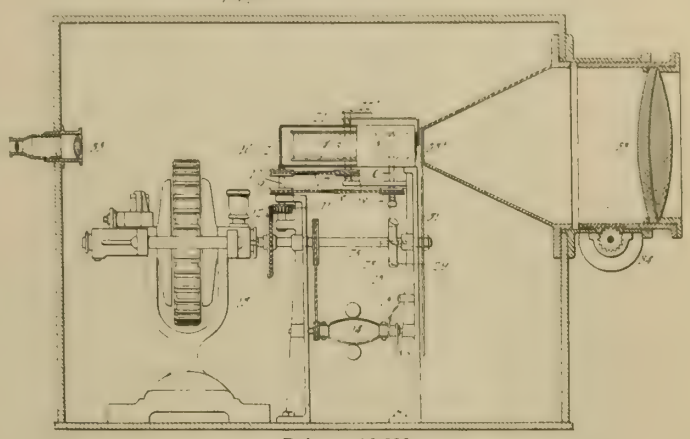
Reissue 13,329.

The history of this film-picture branch of the original Edison patent was reviewed by Austin Sherrill in *The Nickelodeon* of August, 1909, and an analysis of its two claims is there given. Since that date, further history has been made.

The second claim of this patent has been sustained as to validity by the Supreme Court of the District of Columbia, in a decree entered in that court on December 23, 1911, in the case of the Motion Picture Patents Company vs. Chicago Film Exchange. A copy of the decree may be found upon advertising page 7 of Motography for February, 1912. The two claims of the patent read as follows:

1. An unbroken transparent or translucent tape-like photographic film having thereon uniform sharply-defined equidistant photographs of successive positions of an object in motion as observed from a single point of view at rapidly-recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described.

Fig. 2



Reissue 13,329.

2. An unbroken transparent or translucent tape-like photographic film provided with perforated edges and having thereon uniform sharply-defined equidistant photographs of successive positions of an object in motion as observed from a single point of view at rapidly-recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described.

Theoretically, the effect of this decision is to strengthen the position of the Motion Picture Patents Company and to give it greater power in its efforts to dominate the motion picture industry in the United States. Just what use will be made of that power, and in just what way this decision and the power it gives will affect the industry of the country can be learned only by waiting and watching.

The text and drawings of the Reissue Patent No. 12,192 are substantially the same as those of Reissue Patent No. 13,329, given below, only the claims being different, as quoted above.

THE CAMERA PATENT.

Originally filed in 1891; originally issued in 1897 as No. 589,168; first reissued in 1902 as Reissue No. 12,037; again reissued December 5, 1911, as Reissue No. 13,329.

This patent also was reviewed in the article by Mr. Sherrill in the August, 1909, *Nickelodeon*, up to that date. Its further history is comprised in its recent reissuance, and in the changes in the claims in its last reissuance as compared with the claims of the former issues. A comparison of these three sets of claims will serve to show the gains or losses by the recent reissuance:

THE CLAIMS OF THE ORIGINAL PATENT, NO. 589,168.

1. An apparatus for effecting by photography a representation, suitable for reproduction, of a scene including a moving object or objects, comprising a means for intermittently pre-

jecting at such rapid rate as to result in persistence of vision images of successive positions of the object or objects in motion, as observed from a fixed and single point of view, a sensitized tape-like film, and a means for so moving the film as to cause the successive images to be received thereon separately and in single-line sequence.

2. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a single camera, and means for passing a sensitized tape-film at a high rate of speed across the lens of the camera and for exposing successive portions of the film in rapid succession, substantially as set forth.

3. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a single camera, and means for passing a sensitized tape-film across the lens of the camera at a high rate of speed and with an intermittent motion, and for exposing successive portions of the film during the periods of rest, substantially as set forth.

4. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a single camera, and means for passing a sensitized tape-film across the lens at a high rate of speed and with an intermittent motion, and for exposing successive portions of the film during the periods of rest, the periods of rest being greater than the periods of motion, substantially as set forth.

5. An unbroken transparent or translucent tape-like photographic film having thereon equidistant photographs of successive positions of an object in motion, all taken from the same point of view, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, substantially as described.

6. An unbroken transparent or translucent tape-like photographic film provided with perforated edges and having thereon equidistant photographs of successive positions of an object in motion, all taken from the same point of view, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, substantially as described.

THE CLAIMS OF THE FIRST REISSUE PATENT, 12,037.

1. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of and longitudinally movable with respect to the lens, and having an intermediate section crossing the lens; feeding devices engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a shutter exposing successive portions of the film during the periods of rest, substantially as set forth.

2. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; a continuously-rotating driving shaft; feeding devices operated by said shaft engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a continuously-rotating shutter operated by said shaft for exposing successive portions of the film during the periods of rest, substantially as set forth.

3. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; a continuously-rotating driving shaft; feeding devices operated by said shaft engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; a shutter exposing successive portions of the film during the periods of rest; and a reel revolved by said shaft with variable speed for winding the film thereon after exposure, substantially as set forth.

4. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a single camera, and means for passing a sensitized tape-film across the lens at a high rate of speed and with an intermittent motion, and for exposing successive portions of the film during the periods of rest, the periods of rest being greater than the periods of motion, substantially as set forth.

THE CLAIMS OF THE SECOND REISSUE PATENT, 13,329.

1. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; feeding devices engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a shutter exposing successive portions of the film during the periods of rest, substantially as set forth.

2. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; a continuously-rotating driving-shaft; feeding devices operated by said shaft engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a continuously-rotating shutter operated by said shaft for exposing successive portions of the film during the periods of rest, substantially as set forth.

3. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; a continuously-rotating driving-shaft; feeding devices operated by said shaft engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; a shutter exposing successive portions of the film during the periods of rest; and a reel revolved by said shaft with variable speed for winding the film thereon after exposure, substantially as set forth.

4. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; feeding devices engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a shutter exposing successive portions of the film during the periods of rest, substantially as set forth.

5. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized perforated tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; feeding devices provided with teeth engaging the perforations of such intermediate section of the film and moving it across the lens of the camera at a high rate of speed and with an intermittent motion; and a shutter exposing successive portions of the film during the periods of rest, substantially as set forth.

Comparing the claims of the first reissue with the claims of the original patent, it is noted that the original patent had claims covering a camera in which the film might move continuously, whereas the first reissue had only claims in which it was specified that the film should move intermittently and that the exposure of the image should be made while the film was motionless.

Comparing the claims of the second reissue with the claims of the first reissue, it is noted that the first three claims are identical, while the fourth and fifth claims of the second reissue are narrower in scope, and cover nothing which would not be covered by the claims of the first reissue. The gain in the recent reissue therefore seems to be a gain of nine years, the expiration of the patent being extended by that amount by reason of the reissuance.

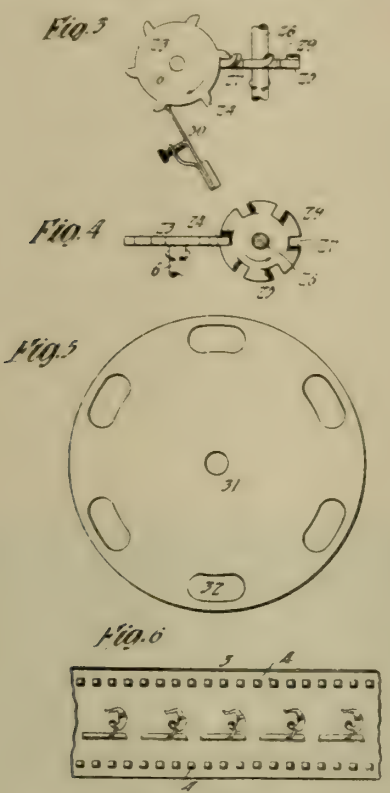
The complete drawings and descriptive text of the Reissue No. 13,329 are as follows, the claims having been given above:

The purpose I have in view is to produce pictures representing objects in motion throughout an extended period of time which may be utilized to exhibit the scene including such moving objects in a perfect and natural manner by means of a suitable exhibiting apparatus, such as that described in an application filed simultaneously herewith, (Patent No. 493,426, dated March 14, 1893.) I have found that it is possible to accomplish this end by means of photography.

In carrying out my invention I employ an apparatus for effecting by photography a representation suitable for reproduction of a scene including a moving object or objects comprising a means, such as a single camera, for intermittently projecting at such rapid rate as to result in persistence of vision images of successive positions of the object or objects in motion as observed from a fixed and single point of view, a sensitized tape-like film, and a means for so moving the film as to cause the successive images to be received thereon separately and in single-line sequence. The movements of the tape-film are intermittent, and it is preferable that the periods of rest of the film should be longer than the periods of movement.

By taking the photographs at a rate sufficiently high as to result in persistence of vision the developed photographs will, when brought successively into view by an exhibiting apparatus, reproduce the movements faithfully and naturally.

I have been able to take with a single camera and a tape-film as many as forty-six photographs per second, each having a size measured lengthwise of the tape of one inch, and I have also been able to hold the tape at rest for nine-tenths of the time; but I do not wish to limit the scope of my invention to this



Reissue 13,329.

high rate of speed nor to this great disproportion between the periods of rest and the periods of motion, since with some subjects a speed as low as thirty pictures per second or even lower is sufficient, and while it is desirable to make the periods of rest as much longer than the periods of motion as possible any excess of the periods of rest over the periods of motion is advantageous.

In the accompany drawings, forming a part hereof, Fig. 1 is a plan view, with the top of the casing removed, of a form of apparatus which I have found highly useful for the taking of the photographs. Fig. 2 is a vertical longtitudinal section on line *x x* in Fig. 1. Figs. 3 and 4 are enlarged views of the stop mechanism of the photographing apparatus. Fig. 5 is a plan view of the shutter for the photographing apparatus, and Fig. 6 is a perspective view of a section of the tape-film with the positive photographs thereon.

Referring to the drawings, *3* indicates the transparent or translucent tape-film, which before the apparatus is put in operation is all coiled on a reel in the sheet-metal box or case *1*, the free end being connected to an empty reel in the case *2*. The film *3* is preferably of sufficient width to admit the taking of pictures one inch in diameter between the rows of holes *4*, Fig. 2, arranged at regular intervals along the two edges of the film, and into which holes the teeth of the wheels *5*, Figs. 1 and 2, enter for the purpose of positively advancing the film. When the film is narrow, it is not essential to use two rows of perforations and two feed-wheels, one feed-wheel being sufficient. Said wheels are mounted on a shaft *6*, which carries a loose pulley *7*—that is, a pulley frictionally connected to its shaft and forming a yielding mechanical connection. This pulley is driven by a cord or belt *8* from a pulley *9* on the shaft *10*, which shaft is driven by means of the beveled gears *11*, *12*. The wheel *12* is preferably driven by an electric motor *13*, which when the apparatus is in use is regulated to run at the desired uniform speed, being controlled by the centrifugal governor *14* and the circuit-controller *15* in a well-known manner. On the shaft *10* is another pulley *16*, which is connected by a cross-belt *17* to a pulley *18*, also frictionally connected to its shaft, and which carries the reel to which the tape is connected in casing *2*. The film passes from the casing *1* through a slit formed by the edge *19* and the sliding door *20*, which is normally thrown forward by the spring *21*, Fig. 2, with sufficient force to clamp the film and hold it from movement. When the door *20* is retracted by pulling on the rod or string *22*, which is connected to the arm *22'*, the film is liberated and allowed to advance. Film-case *2* is provided with a similar door, but the device for moving the door is not illustrated. This arrangement of the sliding door not only holds the film, but it tightly closes the casing, thus excluding light and protecting the sensitive film. The casings or boxes *1*, *2* are removable, so that they, with the inclosed film, may be taken bodily from the apparatus. The shaft *6*, heretofore referred to, is provided with a detent or stop-wheel *23*, the form of which is most clearly shown in Figs. 3 and 4. The wheel *23* is provided with a number of projecting teeth *24*, six being shown, which teeth are adapted to strike successively against the face of the co-operating detent or stop-wheel *25* on the shaft *26*, which is the armature-shaft of the motor or a shaft which is constantly driven by the motor. The wheel *25* has a corresponding number of notches *27* at regular intervals around its periphery. These notches are of such size and shape that the teeth *24* can pass through them, and when the wheels *23* and *25* are rotated in the direction indicated by the arrows each tooth in succession will strike the face of wheel *25*, thereby bringing the film absolutely to rest at the same moment that an opening in the shutter exposes the film and will then pass through a notch, allowing the tape-film to be moved forward another step while it is covered by the shutter. To avoid the danger of the wheel *25* moving so quickly that a tooth cannot enter the proper notch, a laterally-projecting tooth *29* is provided adjacent to each notch. When a tooth *29* strikes a tooth *24*, the latter tooth will be guided by the tooth *29* into the adjacent notch *27*.

30 is a detent spring or pawl to prevent backward movement of the wheel *23*.

I prefer to so proportion the parts above described that the wheel *23* is at rest for nine-tenths of the time in order to give to the sensitized film as long an exposure as practicable and is moving forward one-tenth of the time, and said forward movement is made to take place thirty or more times per second, preferably at least as high as forty-six times per second, although the rapidity of movement or number of times per second may be regulated as desired to give satisfactory results. The longer interval of rest of the film insures a good impression of the object projected thereon and results in a picture having clean and sharp lines, since the film has sufficient time to become steady and overcome the vibration caused by the sudden and rapid motions of the feed mechanism. On the shaft *26* or on any suitable shaft driven by the motor is a revolving disk *31*, serving as a shutter for alternately exposing and covering the sensitive film. This disk, which is continuously revolving, is provided with six or any other suitable number of apertures *32* at regular intervals around it near the edge, they being so arranged that one of the apertures passes directly between the camera-lens *33* and the film each time the film is brought to rest, the light-rays passing through the opening *33'* and the falling on the film half-way between the reels on which the film is wound.

34 is a device for adjusting the camera-lens toward or from the film, and *35* is a device by means of which the operator can focus the camera on the object to be photographed.

Although the operation has been partially indicated in the description of the apparatus it will now be set forth more in detail.

The apparatus is first charged with a sensitive tape-film several hundred or even thousands of feet long and the motor is set in operation. Since the spring *21* causes the door *20* to clamp the film, as already described, the loose pulleys, *7*, *18* slip without pulling said film along, but when a moving object—for example, a man gesticulating—is placed in the field of the camera and the handle *22* is pulled the film is released and the pulleys operate to pull the same along. At the same time the reel in case *2* is rotated to wind up the film, thus transferring it from the reel in case *1* to the reel in case *2*. This movement is intermittent, the film advancing by very rapid steps, which are definitely and

positively controlled by means of the peculiar detent or escapement described, and a photograph is taken after each step.

While I do not care to limit myself to any particular number of steps per second, there should be at least enough so that the eye of an observer cannot distinguish, or at least cannot clearly and positively distinguish, at a glance a difference in the position occupied by the object in the successive pictures, as illustrated in Fig. 7. A less speed in taking the pictures will cause a trembling or jerky appearance in the reproduced picture. When the movement of the object being photographed has ceased or the desired number of photographs has been obtained, the apparatus is stopped. The film is suitably treated for developing and fixing the pictures, when positive prints therefrom, Fig. 6, can be used in an exhibiting apparatus.

Face Polar Bears to Get Films

With stories of daring adventures on ice floes in an attempt to get moving pictures of Arctic animals in their native haunts, of charges by enraged polar bears, aroused by the strange sight of white men and cameras, and desperate efforts of walrus to sink their kyaks, Captain F. E. Kleinschmidt has returned from the Northland. He has a most elaborate series of photographs and motion pictures of Arctic regions.

Captain Kleinschmidt, who is a native of Tacoma, Wash., was assisted by his partner, Louis L. Lane, and by Eskimos, who stood guard with rifles ready to shoot if the plight of the leaders of the expedition became too dangerous.

On one island, Wrangell, visited by Captain Kleinschmidt for the first time since the revenue cutter Rodgers stopped there thirty years ago, twenty-four polar bears were snapped in all conceivable groups. They were roped ashore, in the water and on ice floes, and pictures were taken of each operation.

Captain Kleinschmidt approached within fifteen feet of one big bear, which watched the moving picture machine curiously. He tossed a piece of walrus meat to the bear while Mr. Lane turned the crank of the machine. The bear grabbed the meat savagely, began eating it and then, suddenly looking up at the two white men, charged madly. Captain Kleinschmidt and Mr. Lane grabbed their instruments and established new iceland records for a dash of many hundred yards.

On another occasion the party was seeking pictures in kyaks. The machine was set up on board two, lashed side by side, when a big walrus dived under them and punched his tusks clear through the frail craft. Then he gave a mighty wrench, but the tusks slipped and the natives set to work desperately paddling the sinking vessel to an ice floe.

Game specimens obtained will be sent to the Carnegie Museum at Pittsburg and the Museum of Natural History at New York.

China's Picture Shows

Consul General Amos P. Wilder, Shanghai, says American pictures would be popular in that place if the right selections, suitable to the local taste, could be made. This can only be done by establishing a local agency which could judiciously select the films that would be popular and which could also oversee the business in other ports. There are but two important shows in Shanghai.

Consul Lester Maynard, Harbin, says all the four moving-picture machines in Harbin are of French manufacture. The proprietors of the theaters obtain their supplies through Moscow and Paris agents. One owner also handles films and sells about 10,000 meters each of positive and negative films per year. There are two machines there for taking moving pictures, one of English and the other of French make.

Scene from the Essanay Comedy, "Getting a Hired Girl."

Problems of the Operating Room

By William T. Braun

DUTIES OF THE OPERATOR.

THE success of the theater depends directly upon the operator. The manager may be courteous to his patrons, use great care in making up his program, the piano player may work up the pictures well; but if the projection is not first class the house will not draw the crowds that it should. This is even more true where competition is keen, but every point of the art should be studied and improved upon as much as possible, even if the house is the only one in town; then if competition should creep in, other things being equal, the house that can give its patrons a steady, flickerless, clear, well lighted picture will continue to draw the crowds. The various duties of the operator differ in each theater, but he alone is responsible for bringing the projection up to the highest point possible with the apparatus in his charge.

On entering a new position the operator should make it his business to investigate every part of his equipment at once and not wait until something goes wrong and then attempt to repair it with an audience waiting. Every position has peculiarities of its own which must be absorbed as soon as possible by the new operator in order to give satisfaction.

If the house is new the operator will most likely install the machine and various parts of the equipment himself or have it done under his supervision. The operator who is one in every sense of the word will exercise a little ingenuity in arranging the parts of his equipment so that everything will be handy, thus saving himself as much time and labor as possible in the execution of his duties.

If the make of projection machine is not absolutely familiar to the operator he should make it his business to find out everything he can at once. If he is in a large city it will be possible to visit the show-rooms or factory where the machine is built, as the manufacturers are always ready to give operators any information they need, so that the machine will give good service and the exhibitor feel satisfied. If he is in a small town, by writing to the manufacturer he will receive catalogs and instruction books which will explain the various adjustments and purpose of each part of the machine. Every small device upon the machine was placed there for a certain purpose by the manufacturer and in order to get the best results the operator should be familiar with the workings of it.

In placing the machine in the operating room raise the machine high enough from the floor so that the operator may turn the crank when standing, as it relieves the monotony in a long grind if the operator can stand up for a while. Also place the machine far enough away from the peephole so that the operator may sit opposite the head while turning the crank. In this way he will not receive all of the heat from the lamphouse and his eyes will not be injured by looking at the bright spot on the gate.

The rheostat or transformer should be placed under the machine so that the operator may raise the amperage when running a heavy film. The operator most likely will have to run the wires from the operating room switch to the lamp and transformer. Run the wires as direct as possible, avoiding making complications in wiring to save a few feet of wire or a switch or two. Some operators have a mania for wiring up their equipment in as complicated a manner as possible, either to save a bit or to mislead any intruder or future occupant of the operating room. This never pays, as complications always cause trouble, and in the end are replaced by simple systems. For the lead wires never use anything smaller than No. 6 B. & S. gauge, asbestos covered, stranded wire. It is not advisable to splice the lead wires as there is always danger of the joint becoming loose. When it is absolutely necessary to splice these wires they should first be scraped until they shine, then wound tightly together and soldered, then wound with tape. All connections with the switches, lamp and rheostat should be made with connection lugs. Be sure to have the wires clean and bright before fastening the lugs. Lugs of the clamp variety should be used in preference to the solder lug, as a tighter and more lasting connection is assured. Always bear in mind that a loose or dirty connection, no matter where it is, generates heat, increases the resistance of the line and in time will destroy the connection entirely.

The bench for the rewind should be placed near the machine so that if necessary the operator can rewind while running the machine.

When the projection machine is new it needs more care than later on, in regard to cleaning, etc. The gears and various parts have to be run awhile so that they work more easily. The machine when new should be cleaned frequently with benzine to remove the fine iron or steel particles which wear off with the first month's running, otherwise when they become mixed with the oil a grit is formed which rapidly wears out the swiftly moving parts.

In opening a new place it is very necessary to have the machine and lamp in perfect order and for the operator to have the machine absolutely under his control, so that no breakdowns or delays will occur. Then the audience will get a good impression from the beginning and first impressions always last.

In taking a position in a house that is running, the operator is expected to step in and run everything in perfect order at once. He should at once go over the entire equipment, examine every part to see that it is in perfect working order and thus familiarize himself with every part of the apparatus.

First, the machine should be cleaned. Remove the lenses, magazines, crank, outside shutter if one is used; then clean the working parts with benzine. Whenever posible remove the gears and all parts readily accessible, and brush them off with benzine. The various parts should be carefully wiped off and examined closely for signs of wear.

Beginning at the top of the machine we have the upper film magazine. The fire trap or guide rollers of this magazine should be kept thoroughly clean. As these rollers are solid, in order to keep them in contact with the film, the emulsion from the film accumulates very rapidly on the surface and must be cleaned off, otherwise they will scrape the soft surface of the film with long scratches. A small, stiff nail brush is the best instrument for cleaning the rollers.

The same thing can be said regarding the guide rollers on all of the sprockets. On almost all machines these rollers are now made with a hollow center so that

only the edges of the film come in contact with them. The three sprockets can also be cleaned with the brush. Unless the dried emulsion is removed from between the sprocket teeth the sprocket holes will not come in contact with the teeth and the film will continually jump from the sprocket. The teeth of the sprocket should also be examined for signs of wear. The film in time cuts a groove in the under side of the teeth, especially those of the intermittent sprocket. These grooves wear out the sprocket holes of the film and cause the picture to be very unsteady on the screen. The sprocket must be examined at close range in order to see these small grooves.

The intermittent movement should be next examined. The star wheel is the part of the intermittent movement which receives the most wear. When the slots become worn the action of the pinwheel is not regular, causing the intermittent sprocket to jerk, and results in an unsteady picture. The pinwheel must be examined in its relation to the star wheel. The intermittent sprocket should be perfectly rigid when the star wheel is at rest in the four different positions. The slightest movement of the sprocket when the star wheel is at rest is magnified about 200 times on the screen, causing a very unsteady picture. On all machines with the star wheel movement the intermittent shaft revolves in eccentric bushings. By turning these bushings the star can be brought closer to or further away from the pinwheel. The sides of the star should fit snugly against the rim of the pinwheel when at rest and the eccentric bushings should be turned until it does so. Both of the bushings must be turned exactly the same amount, otherwise one side of the shaft will be higher than the other. This will cause the band on the pinwheel to wear to an edge instead of wearing evenly throughout its entire height.

The entire intermittent movement is the vital part of the whole machine and the more care that the operator takes with it the better the results on the screen will be. On some machines the star and pinwheel are enclosed and run in oil. This keeps out the dust and dirt and running in oil preserves the parts. But this does not mean that because it is enclosed it should never be examined. The covering should be removed about once a week, the old oil taken out and new oil put in. The chamber should not be filled with oil, otherwise the oil will work back through the bearings and out of the oil holes, causing considerable trouble. Put in just enough oil so that the bottom of the star will touch the oil when revolving.

The guide roller on the intermittent sprocket generally receives more wear than any of the other rollers. The edges of these rollers sometimes wear down to a sharp edge and in running new film over them that part of the film containing the sprocket holes is sliced off.

The film gate generally serves as carrier for the automatic shutter, tension springs and sometimes the guide rollers. The tension springs have a double duty to perform. They hold the film absolutely still while being projected and they also flatten the film against the aperture plate. When the film is pulled down the length of one picture by the intermittent sprocket the film has a tendency to keep on moving after the sprocket has stopped. In order to keep the film stationary the tension springs exert a pressure, causing the film to stop. If this pressure is not great enough the picture on the screen will not be steady; if the pressure is too great the action of the machine will be hard and any patches passing through the gate will be likely to open up. On some machines the springs can be adjusted by screws on the back of the gate; on others it is necessary to adjust the screws on which the gate is secured.

While being projected the film must lie absolutely flat against the aperture plate, otherwise the picture will not be sharp and distinct all over the screen. No matter how fine a lens you have the film must lie all in one plane in order to be in a sharp focus on the screen. When the springs become worn they should be replaced at once by new ones and the difference in the picture can be noted at once.

The aperature plate must also be flat in order to produce a good picture. On some machines, especially those having short tension springs, the aperture plate becomes cupped, or a depression is worn in the plate opposite the aperture. The film in passing over the gate is pressed into this depression by the spring, consequently throwing the picture out of focus. As soon as a plate becomes worn in this manner it should be replaced by a new one. The tension springs and plate all work together in producing a good picture and both must be in perfect condition.

The take-up attachment, which has about replaced the old film tank, must be kept in perfect adjustment, otherwise it will cause no end of trouble. On almost every machine the take-up works different, but there are certain points in common with all machines which, if attended to, will avert many troubles. Most take-ups are attached or driven from the rest of the mechanism by a round leather belt. This belt should not be too tight, otherwise the tension on the film will be too great and it will be ripped; if too loose the friction between the pulleys and the belt will not be sufficient and when the reel becomes full it will not revolve but remain stationary. The belt should be kept free from oil or it will slip. A belt with couplings attached should be ready to slip on at a moment's notice in case the old belt parts. Some machines are equipped with an extra idler or weight so that the belt may be made tighter without opening the couplings and cutting out some of the belt.

If the key on the lower reel shaft becomes worn down it will not remain in the seat of the reel hub but slide around in the reel when the reel is almost full. Also only reels that run absolutely true and with a perfect key-seat should be used on the take-up. Select three such reels and mark or paint them so that they will not be taken from the operating room. By always using these reels in the take-up much annoyance can be avoided. If a spring cotter or reel cotter is used to hold the reel on the shaft the spring of it must be sufficient to hold the reel on the key of the shaft. Always remember that a little time spent in studying the defects of the take-up will be amply repaid by making it unnecessary to stop in the middle of a reel to tighten the belt, change reels, etc.

The other parts of the machine, such as gears, shafts and bearings, should be carefully cleaned and examined.

The machine can now be assembled again and oiled up ready to run. A drop of oil in each oil hole is enough to use every day for the ordinary run. If more is used it will only mix with dust and form a gum, clogging up the oil holes and wearing out the various parts. The machine should be kept covered when not in use, to keep out the dust and dirt and to protect it from dampness.

The machine should be gone over carefully at least once a week to see that everything is in first class condition and a sharp lookout kept for all signs of wear. Do not wait until the parts are entirely worn out or until a breakdown occurs before notifying the manager that some new part is needed. Notify him in advance, explaining to him the importance of it and then if you are not supplied the fault will not lie at your door. Always remember that you are not only being paid for turning the crank

but for taking care of the machine and the projection as well, and a careful operator will seldom be caught with an avoidable breakdown.

After having satisfied himself that the machine head is in first class shape the operator can turn his attention to the lamp and lamp house. The lamp should be removed from the lamp house and taken apart. A small stiff brush should be used to clean the various parts of the lamp. The carbon arms or clamps should be well cleaned, especially that part which comes in contact with the carbons. The inside of these arms should be filed smooth with a round mill file. Small ridges are formed on the inside of these arms, which should be removed, otherwise good contact will not be made with the carbons. The arms receive about the most wear of any part of the lamp. They become very hot from the intense heat of the carbons and when the thumbscrews are turned very tight they are liable to snap off, causing no end of trouble. An extra set, complete with thumbscrews, should be kept on hand, and those in the lamp should be examined at least once a week to see if there are any fine cracks or breaks in the metal which are liable to break open when heated.

The racks or screws upon which the arms work should be kept thoroughly clean and free from rust. The intense heat of the lamp causes all screws and rods to rust very quickly and this must be removed, otherwise it will be unable to keep the lamp in perfect adjustment and get the best results.

After all of the parts are thoroughly cleaned they may be assembled and vaseline to which a small amount of graphite has been added should be applied to all racks and screws. Do not use the regular sperm oil that you use on the machine head for the lamp. The connections of the leads to the lamp should be examined every day. Being so near to the heat of the arc the ends of the wires become charred and are burned off. The best connections with standard wire are obtained by use of the copper clamp terminals previously mentioned. By the use of these the entire wire is brought into contact with the carbon arm, and not only a small part, as is the case when the wire is wrapped around the binding post. A tight connection is always best and it is assured by use of the solderless terminals.

The lamp house itself should be cleaned out at least once a week. The screen covering over the vent holes should be brushed off and kept clean, otherwise the heat from the lamp cannot escape as it should and the interior of the lamp house will become overheated and cracked condensers will result. The mica bushings which insulate the carbon holders from the rest of the lamp should be examined to see that they are serving their intended purpose, otherwise some day the operator may receive an unpleasant shock.

Be sure to have the carbon arms in exact line before replacing the lamp in the lamp house. A pair of carbons should be put in the carbon arms and set so that they will be in an exact line.

The slide rods on which the lamp house slides from one lens to the other should be kept free from dirt and wiped off with a cloth dampened in oil. The lamp house will then slide over easily, not making it necessary to shake the whole machine to move over the lamp house.

The operator should now see that the whole machine, lamp house and all, is on a solid base. The projection outfit is generally attached to a table of some sort. It is usually necessary to brace the legs of the table with wire in order to make the machine rigid. If the machine board is near a wall the machine can be made absolutely rigid by attaching straps of iron to the machine board and fastening them to the wall.

After the operator has satisfied himself that the machine and lamp are in perfect condition, he should trace up the wires to the cut-out box. The operator should make himself thoroughly familiar with the entire switchboard, because in case of trouble he is the first one to be called on to find out the cause. For this reason a full supply of fuse plugs for the incandescent circuits and various fuses of the amperage required should be kept on hand so that they may be put in as soon as a fuse blows.

Only cartridge fuses should be used in the operating room and all live parts of the switch should be enclosed.

The operator who takes the time to fully acquaint himself with every part of the equipment and who knows just the right thing to do in case of trouble is the man who will hold his job and give satisfaction to the manager and can always rest assured that he can get a good position.

London Schools to Use Pictures

The cinematograph is to be introduced into the schools of London, and a high official of the education department expresses himself greatly in favor of this up-to-date innovation. He believes that the cinematograph will shortly be recognized officially, and grants will be arranged both in day and continuation schools.

One of the difficulties in the way of its introduction is the already overloaded curriculum. The board of education will have first to clear away all the growths which have crept into the system, which has allowed head teachers, and his majesty's instructors, to crowd subjects into the work, until the overburdened child is incapable of taking more, or even properly digesting what is now put before it.

Georgraphy in the future wil be one of the most fascinating subjects to a child, when New York, Peking and Lassa are not merely names, but are places seen, with people actually moving up and down in their streets. This first step of the new education department will, doubtless, be hailed with delight by thousands of teachers and students. Mr. Selby-Bigge, the new permanent secretary, can inaugurate his tenure of office in no better way.

Kansas Schools and Theaters Co-operate

The moving picture show, frequently charged with teaching the young idea to shoot in the wrong direction, is to be made an ally of the school room in instructing the pupils of Columbus, Kansas, schools in geography. The board of education has contracted with a nickel theater to present one afternoon each week moving picture films selected by Superintendent Shenk, which will depict life among the people of whom the children are studying in geography. Superintendent Shenk thinks this will add interest to the geography work and also have a tendency to improve the general tone of the picture shows.

Government Investigating Picture Business

The Department of Justice is said to be investigating the moving picture business to ascertain if there is a "trust." The inquiry, like many recent Sherman law cases, involves primarily the uses of patents. The matter has not yet progressed to the point where it can be definitely determined that there is or is not violation of the anti-trust statute.

Illustrated Sermons

While a motion picture machine buzzed and threw photographs on a screen over the pulpit in Grace Presbyterian Church, Montclair, N. J., the Rev. George J. Becker, the young pastor of the church, drew moral lessons from the pictures, which told the story of the Prodigal Son, Pharaoh and the Israelites, and Paul and the Centurion.

The church was crowded for the first motion picture sermon, a series of which will be given on alternate Sunday nights. In the audience were many children. The picture apparatus was in a fireproof booth and exits were plainly designated with red lights.

The innovation attracted many visitors, and one of the officers said that if the attendance increased it would be necessary for the congregation to erect the new church which has been under consideration.

The minister is a great believer in the adaptability of the motion picture to church uses. He said that it was a pity that the modern church had relinquished the old miracle and morality plays.

"We have allowed these valuable instruments and aids to slip through our fingers and become secularized," he said. "Why not recover their use to the church through the moving pictures? Why not appeal to the eye as well as to the ear and the emotions in our worship? I suppose there are those in Montclair who are opposed to the innovation because of the dangers that have attached to them through unscrupulous managers of moving picture theaters. There will be no call for vaudeville in a church entertainment, and no one will question the propriety of pictures that may be presented here."

Saloon Business Injured by Pictures

Following an inspection of the Tacoma, Wash., motion picture houses, Mrs. John Q. Mason, of the newly organized municipal civil service board, declared she found nothing demoralizing in the shows, but had ascertained they were hurting the saloon business. Saloon men, she said, are complaining that their business is falling off because of the moving picture houses. The latter, it seems, are taking men from the saloons. Hence, she holds the five-cent theaters should be considered as having an elevating influence.

Mrs. Mason reports that the entertainment furnished by the motion picture houses she inspected, while in many instances trashy, was free from all obnoxious features.

The city council of La Salle, Ill., has recently taken a step which brought considerable joy to the owners of three moving picture shows. An ordinance was unanimously adopted to limit the number of picture theaters in the city to three until the town has attained a population of 15,000. This means that the owners of the present places virtually have a corner on the business.

The exhibitor who formerly advertised the Three Musketeers in two parts has given way to the man who advertises the Two Orphans in three parts.

Of Interest to the Trade

How a Property Fire is Made

Barry O'Neil, managing director of one of the Lubin stock companies, receives a scenario of a photoplay. It is a melodramatic story which, to the experienced director, is perfectly easy, except that he must make a fire scene, with all the circumstance and excitement of the real thing. He approaches the principals of the firm and tells them that there is no fire reported in town and he must have a fire that afternoon as the production is late.

"Well," replies Mr. Lubin, "make one."

O'Neil explains that it will cost much money.

"No matter what it costs. Make the fire."

The stage manager goes out on a hurried quest and not far from the plant he finds an empty house in a row of pretty cottages. The landlord is sent for and a deal for the rehearsal is quickly made with a guarantee that the house shall not be burned down and all damages shall be paid for. A telephone is sent to the nearest fire station and engine and crew of firemen are secured and quickly on the spot, followed by the usual crowd, which pretty soon numbers four or five hundred. Here is the necessary mob. O'Neil brings his players to the scene, and standing in the middle of the road directs the scene. A few preliminary instructions and all hands go to work. Smoke is seen issuing from the top story window. The engine dashes around the corner and the firemen get down to business. A half dozen axes smash in the door and lower windows and the firemen enter. Ladders are placed at the upper windows, which are quickly demolished. A child is brought out of the door, then three or four men and women are dragged through the upper windows by the firemen and brought down the ladders to safety. The mob cheers the rescuers. A property man of the plant is one of the workers at the scene; a little dog Trixie is always at his heels, and as the man dashes into the burning building the dog fearlessly follows. Presently the dog is seen to jump from one of the windows and receives a round of applause. There is still one woman in the burning house. The smoke is now dense and the flames belch from the windows. The rescued ones urge the firemen to save the heroine of the playlet. One daring man rushes up the ladder to the top floor, he climbs into the window, the crowd shriek and cover their eyes at the fearful sight; presently the fireman appears at the window, one arm clasps May Buckley around the waist, and stepping out upon the ladder he drags the senseless form out and carries her head first to the ground. The mob embrace the rescued woman and the brave fireman. Miss Buckley quickly slips out of the picture and trots off back to the studio. The flames and smoke clear away; the house, except for the broken windows, looks none the worse for the rehearsal.

How are the smoke and flames made? You must ask the chemist.

A business firm in the Near East writes one of the commercial agents of the Department of Commerce and Labor that moving pictures are very popular at present in certain sections of the Near East. This firm would like to get in touch with persons willing to establish theaters in that section, or with manufacturers of moving picture films who would be willing to rent their films to already established theaters. Address Bureau of Manufactures, Washington, D. C., file No. 8181.

Film on the Loan Shark

The movement started by the Chicago *Tribune* toward correcting the "loan shark" evil will undoubtedly be greatly aided in its effectiveness by the Essanay company, which constructed a story based on several personal experiences published in the *Tribune's* columns. The film depicts the inhuman methods employed by these much-dreaded usurers and will appear under the title of "The Loan Shark" on March 15. Over one million people will see this picture throughout the country and its good results should be widespread in helping to stamp out the common evil.

Scene from Essanay's "The Loan Shark."

Satisfied with "Sunlight" Screen

The Sunlight Metallic Cloth Curtain company, 1106-343 South Dearborn street, Chicago, states that Loew's Amusement Enterprises of greater New York have just completed arrangements to install "Sunlight" curtains in the following theaters: Royal theater, Brooklyn, N. Y.; Circle theater, Sixtieth and Broadway, New York; New Greeley Square theater, Sixth avenue and Thirtieth street, New York; Herald Square theater, Thirty-fifth and Broadway, New York, and Delancey theater, Delancey and Suffolk streets, New York.

The Loew company ordered a sample curtain last fall and after the most exhaustive and rigid tests of this curtain in one of its houses, and a careful record of the costs of operating with the new type of curtain, the company was able to demonstrate satisfactorily that the curtain was actually reducing expenses and producing a better result with a more pleased patronage, because of the clear picture result obtained. The tests proved so satisfactory that the company is ordering these additional installations for the balance of its theaters, and it speaks well for the product that as large an amusement company as this should make such a complete installation.

The screens that are being installed are all equipped with a patent frame and tightening device which eliminates wrinkles. It is claimed by the Sunlight company that this is the only device of its kind on the market which will give an absolutely smooth picture surface. Because of the fact that some of these theaters are using vaudeville, while others are not, some of the screens are fixed, while others are equipped with a patent frame and are used as drop curtains by being elevated into a fly loft when vaudeville is being shown.

Los Angeles Correspondence

Out Santa Monica way the farmers are using the stock companies of the film makers in a rough way. The producer is lured on to the property by the enchanting scenery and gets along beautifully with his work until Mr. Landlord and his neighbors come swinging upon the scene bearing shot guns. The order is given to cease operations until a settlement is effected. This is usually reached by the maker paying $100. Representatives of the Kalem company have appealed to the mayor of Santa Monica who promises to do what he can. But what can the poor mayor do? The Kalems say they will pull out of the town and go to Honolulu if Santa Monica doesn't fix it with the farmers.

The N. Y. Motion Picture company has leased the old Southern Pacific depot property at Santa Monica and will remodel the buildings and beautify the grounds for a permanent establishment.

Charles L. Fuller, of the Vitagraph company, has left town. Fuller is one of the most popular gentlemen who ever visited here. Nobody knows why he came or what he came for and now that he has gone, we wonder where he went and why? It is evident that his expense check was mailed somewhere else and he left here to meet that.

T. J. Marion, general manager of the Kalem company, who was here for some time, has returned to New York.

Fernando Odon Galvez has joined the Selig forces at Edendale.

Miss Betty Hart is animal queen in the first of the Selig animal pictures since the zoo struck Edendale. It is a distinctly new role for the versatile and charming little lady.

J. L. McGee has deserted his famous bungalow and moved to his own new house. His friends say he has been moving so long that he will be an old tenant before he settles.

If you see or hear from F. P. Shaw, we want him back. Shaw has fleeced nearly a hundred would-be motion picture actors and actresses who would like to meet him again. For $10 in advance Shaw would turn out a real star competent to earn $5 a day. He would turn the trick in three weeks. This town is full of folks who would want nothing better than that and picking for the m. p. school was good. Shaw skipped with his collection of souvenirs.

George Weston, stage director of the Bison company, was seriously if not fatally injured February 20, by the premature explosion of a blast of dynamite. A battle scene was being played and the explosion was to destroy the barracks as a finale to the action. Mr. Weston was absorbed in the business of the piece when the explosion hurled him down an embankment where he was found in an unconscious state.

Moving picture entertainments in churches have become so popular at Montclair, New Jersey, to guard the public safety, the town council has passed a new ordinance governing permits and licenses to shows and entertainments, providing for proper inspection before permits are granted.

Most Popular Picture Player

Fully 15,000,000 people attend the moving picture theaters every day. There are 13,000 theaters in this country, in which motion pictures are displayed, exclusive of halls, churches and clubs, where they are displayed occasionally. Over $100,000,000 is invested in the motion picture industry in this country. There are about 3,500,000 motion picture enthusiasts in this country known as "fans," who are just as interested in the personalities of the photoplayers as the patrons of the regular drama are of the legitimate actors.

The *Motion Picture Story Magazine* is conducting a popularity contest among its readers for the most popular picture player. The contest is so arranged that a letter, or card or verse containing the name of a favorite player will count as one vote for that player. Over 102,000 votes have been cast and the March issue of that magazine contains the result of the contest up to the date of going to press, as follows:

Maurice Costello (*Vitagraph*)	11,543
E. Dolores Cassinelli (*Essanay*)	10,478
Alice Joyce (*Kalem*)	8,671
Florence Lawrence (*Lubin*)	8,619
G. M. Anderson (*Essanay*)	8,429
Mae Hotely (*Lubin*)	7,124
Arthur Johnson (*Lubin*)	4,918
Florence Turner (*Vitagraph*)	4,492
Mary Fuller (*Edison*)	3,419
Mary Pickford (*Biograph*)	3,088
Mildred Bracken (*Méliès*)	3,000
Carlyle Blackwell (*Kalem*)	2,978
Ormi Hawley (*Lubin*)	2,464
F. X. Bushman (*Essanay*)	2,392
Helen Gardner (*Vitagraph*)	2,184
Warren J. Kerrigan (*American*)	1,863
Gene Gauntler (*Kalem*)	1,395
Crane Wilbur (*Pathé Frères*)	1,097
John Bunny (*Vitagraph*)	1,088
Lillian Walker (*Vitagraph*)	1,085
Leo Delaney (*Vitagraph*)	1,084
Gladys Field (?)	1,044
Marion Leonard (*Rex*)	1,026
Gwendolen Pates (*Pathé Frères*)	952
Edith Storey (*Vitagraph*)	921
Earle Williams (*Vitagraph*)	875
Kenneth Casey (*Vitagraph*)	865
Jack J. Clark (*Kalem*)	847
Elsie McLeod (*Edison*)	761
Harry Meyers (*Lubin*)	727
Kathryn Williams (*Selig*)	708
King Baggot (*Imp*)	643
Paul Panzer (*Pathé Frères*)	640
Robert Gaillord (*Vitagraph*)	639
James Cruze (*Thanhouser*)	626
Adele de Garde (*Vitagraph*)	623
Gertrude Robinson (*Reliance*)	618
Pearl White (*Pathé Frères*)	613
T. J. Corrigan (*Selig*)	593
Anne Schaeffer (*Vitagraph*)	592
Jack Standing (?)	591
Max Linder (*Pathé Frères*)	591
Mabel Normand (*Biograph*)	583
Marc McDermott (*Edison*)	580
Hobart Bosworth (*Selig*)	572
William Clifford (*Méliès*)	570
Owen Moore (*Thanhouser*)	569
Julia Swayne Gordon (*Vitagraph*)	568
Mabel Trunnelle (*Majestic*)	562
Guy Hedlund (*Biograph*)	560

Trouble for Lubin People in El Paso

One of the Lubin Film Company's traveling organizations now located at El Paso offended the majesty of the law and consequently were arrested and duly fined. Wilbert Melville, the director, seeking for subjects of local atmosphere, conceived the idea of making a reel of pictures illustrating the incidents of the Mexican revolu-

tion. He obtained a permit from the chief of police of El Paso to use the highways of the little town and a number of peace-abiding citizens to make the show. In addition to the members of the troupe some 300 or 400 extras were engaged and dressed up to represent federal soldiers and revolutionists. Doubtless there was not a full understanding between the chief and the mayor, however. The latter looked upon the demonstration as real and dangerous to his neighbors across the Rio Grande. The police, under instructions, charged the body and scooped in as many men and women as they could handle. The show folks were duly arranged and despite full explanation and the chief of police permit, were fined $10 each and messages were sent across to Juarez assuring the authorities that no apprehension was necessary. Melville, the director of the troupe, got away in his automobile but had to send a good sized bag of money to get his associates released.

New St. Louis Theater

With the opening of the Hippodrome St. Louis will rival all the cities in the country in motion picture magnificence. St. Louis will then have one of the largest and most up-to-date theaters in the United States.

Every effort has been set forth to make the house one that will satisfy the exacting tastes of the amusement loving public. Under the direct supervision of Frank Talbot, manager and promoter, the plans have been laid with extreme care for safety and comfort. Concrete walls, stage and floor make fire almost impossible, while forty exits will be provided for cases of emergency. Perfect sanitation is made possible by means of a saucer-shaped concrete floor with a sluice in the center, making it possible to flush the entire building daily with water.

Zigomar

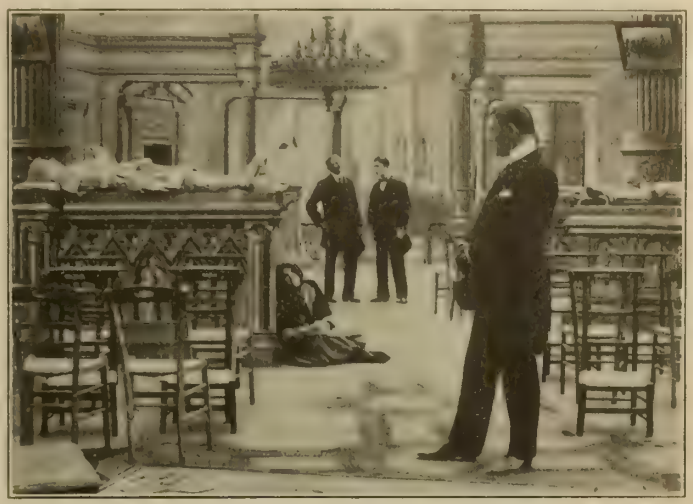
"Zigomar" is the title of a sensational feature film being marketed by state rights by the Feature and Educational Film company, Cleveland, Ohio. It is a detective

Zigomar Rides On Two Motors

story of the most vivid type, in which the craft and energy of the master criminal are matched only by those of the detective, Broquet. It is a three-reel subject of fifty scenes, and there is not a dull foot in it. The climax is especially startling.

Tobacco in Motion Pictures

One of the big motion picture syndicates is arranging to secure a series of films illustrative of the tobacco industry in Kentucky. The object is to show the process of growing, harvesting and marketing the



Broquet Disguised as a Statue, in "Zigomar."

"weed" in its progress from the plant bed to the hogshead.

It will require some time to do this as it is a current saying among tobacco growers that it takes "thirteen months in every year" to raise and sell a tobacco crop. Nevertheless the tobacco industry is a good subject for moving picture exploitation and Kentucky would get some valuable advertising out of such an enterprise. There are some features of it, perhaps, that would not be desirable for publicity purposes. It is no uncommon sight in some of the tobacco districts to see women and small children working in the fields. Whether such work be a matter of choice or necessity it is probably best that it should not be extensively advertised. Work in a tobacco field has some advantages over working in a factory or a sweatshop; but half the world does not know how the other half lives anyway, and some of the uplift organizations which have not the time to investigate conditions in their own bailiwick might be after sending missionaries to Kentucky if they chanced to drop in at the picture show and see a more or less faithful representative of "Betsy and the baby" participating in the slaughter of the tobacco worm or pinching the noxious sucker from its parent stem.

Illinois Landmarks to Act as Back Drops

Some time ago D. C. McClellan, manager of Idylhour Theater, Peoria, Ill., wrote to the Selig company, Chicago, suggesting the taking of a historical film dealing with early life in Illinois. Mr. McClellan put forward the idea to incorporate in a moving picture scenes on the Illinois river, the early visit to this section of the Jesuit priests, and other explorers, and featuring LaSalle, who built Fort Creve Coeur, a few miles north of Peoria. The beautiful scenery at Starved Rock was also to be included, woven into an Indian drama dealing with the legends connected with Lover's Leap and other scenic spots about the rock, which is soon to become included in a state park. Mr. McClellan received a letter from the Selig people in which they stated they had been

considering for some time the manufacture of a film dealing with the early life along the river, featuring Starved Rock, and the details are now being worked out. The picture will be taken this spring, as soon as the foliage has advanced far enough to make a good picture. This film will be awaited with interest by residents of the Illinois valley, and it should prove a drawing card in that state especially.

Moved to Repentance by Moving Pictures

A remarkable case of unjust imprisonment has been brought to light at Cedar Rapids, Iowa, through the medium of the moving picture theater, where one of the films made sufficient impression upon the mind of John G. Gates, a Rock Island brakeman, to cause him to make an affidavit in which he confesses to the crime of perjury. The affidavit also practically clears Charles Jack, an employe in a local hardware store, of a charge for which he served twenty-one months in the penitentiary at Fort Madison and six months in the Tama county jail at Toledo.

Jack and Gates both formerly lived at Traer, Ia., where Gates was employed as baggageman. In August, 1908, he and Jack had some trouble over a woman who had been Jack's sweetheart for some time, and during the altercation Jack flourished a revolver. Gates had a warrant issued for his arrest on a charge of malicious threats to extort money, Gates claiming that Jack had met him on a dark street, pointed a revolver at his head and ordered him to give him $10 and a ticket to the end of the Rock Island railroad.

Jack was arrested, indicted by the grand jury, and after being in jail six months the case came up for trial. Gates testified that Jack had attempted to hold him up, and as the prisoner could not prove otherwise, although he strongly protested his innocence, he was found guilty and sentenced to two years at Fort Madison. His term expired last October, and he immediately came to Cedar Rapids and secured employment.

A few days ago Gates, who is now married, visited a moving picture show, where one of the films depicted a story of false imprisonment and of prison life. The picture affected him greatly and that day he went to Jack and offered to make an affidavit to the effect that his testimony at the trial was untrue. The affidavit was made before a local notary and vindicates Jack of every charge except that of flourishing a revolver.

The Republic producing companies which for some weeks have been located in the Adirondack Mountains, Saranac Lake, N. Y., will separate into two parts, one division going to New York City for the winter and the other going to some point in the South where the climate will be warm enough to permit the production of pictures out-of-doors. Many of the pictures taken around Saranac Lake were taken when the temperature hovered around the 20-below-zero mark and it is the purpose to vary the scenery by going to a warmer section.

Scene from Selig's "The Slip."

A High Class Program

Perhaps nothing places a motion picture theater so securely in the high grade class in the minds of its patrons as an artistic program, not simply a program which is flashed on the screen or displayed in the lobby, but one which is handed to the patron as he takes his seat and which he can take home with him.

One of the most artitistic programs issued by a picture theater is the one put out by the Tenth Street Theater of Kansas City. It consists of twenty-four pages and a two or three colored cover, the cover design being changed with each issue. Very few legitimate theaters get out larger programs, none of them issue finer. Such a program would be a very expensive proposition were it not for the advertising it carries. Fully half of the Tenth Street Theater program consists of high grade advertising which, we imagine, is sufficient to pay for the book and show a very creditable profit besides.

The booklet is issued weekly and gives the programs for the entire week, together with synopses of the films and regular house announcements.

The Tenth Street Theater shows first run films only and charges ten cents admission. Although it is only a year old it is one of the most popular houses in the Southwest. Its managers believe that their success in the picture theater business is largely due to their constant endeavor to impress upon the public the fact that the Tenth Street Theater is high grade, and that its performance is worth the price. Undoubtedly their program has done much to convey this idea.

Mexican Frightened by Cameraman

An American cameraman recently ventured into Mexico to take some pictures of Mexican scenery, together with a parade of a Mexican regiment. Mistaking him for an insurrecto about to start another revolution by turning a machine gun on them, several hundred Mexican soldiers, comprising the garrison at Tia Juana, broke ranks while on dress parade and ran in every direction for shelter.

Officers joined the privates in getting behind buildings and trenches, and the regimental bugler had hardly sounded the call to arms to repel the attack of the supposed invaders when the moving picture man, now thoroughly frightened himself, tucked his machine under one arm and started to run for the boundary line.

He had gained the outskirts of the town when a Mexican officer ventured to snatch a look from his hidng place, and seeing the ground clear, ordered a charge with fixed bayonets. It took considerable prodding, however, to get the privates back into the ranks and into military formation.

The frightened operator was overhauled by mounted men, dragged back into town and taken before the commanding officer. The enraged soldiers wanted to make a target out of him then and there, but the officers prevailed upon them to let the regular military law take its course.

The moving picture machine was carefully taken apart and searched for explosives. The cameraman pleaded with the officers to let him go. He explained to the Mexicans that he was not a filibuster nor soldier of fortune; that he was only working for a living. He went through a pantomime with the aid of a sheet on the wall to show the soldiers how pictures are taken for the nickelodeons in the United States.

Then a great light burst upon the intelligence of the commander-in-chief. He rapidly interpreted his discovery to his fellow officers and his privates. The moving picture man stood distrustfully by, not quite sure that he had yet made himself plain.

The soldiers were so overjoyed at the fact that they were to have been sent down into posterity by the moving picture route that Humphreys was ordered to take their picture without fear of interruption.

A brief examination of his machine, however, convinced the moving picture man that he could never accomplish the feat, but he feared to arouse the ire of the Mexicans, so he went through the motions of taking a real picture while the soldiers marched back and forth within his range, drilled, fixed their bayonets, charged upon imaginary foes, pitched their tents and went through every detail of war life in Mexico.

His arms were aching from turning the crank of his broken machine, and he would have ordinarily used up several miles of film, when the regiment came to attention and the commander stepped to the front and proudly doffed his cap.

That was the end. The picture man was loaded down with cigarettes and cigars and presented with a silk scarf by one of the officers. He refused an invitation to dine and hurried with an escort of honor to the boundary line, the men insisting on carrying his machine for him.

Motiograph Demonstrator Disappears

E. A. Schultz, formerly a demonstrator in the employ of the Enterprise Optical Manufacturing company, Chicago, is no longer with that company. The company wishes to call attention to the fact that it is not responsible for any kind of debts or obligations incurred by Mr. Schultz, and is offering a reward of $10 for information leading to the recovery of a 1912 model Motiograph projecting machine and outfit, trunks, etc., used by Mr. Schultz in demonstration work. The last the company heard of Mr. Schultz he was on the way to Nelson, B. C., Canada, but every effort to reach him has failed.

Recently a number of moving picture theaters in Russia have been displaying a few films depicting American life, most of them being Indian and western pictures. An American consul writes that these films are so entirely different from the usual subjects displayed and seem to be so much appreciated that a good business could be worked up in American films. He suggests that descriptive matter with prices and discounts be sent to a number of firms whose names are furnished. Correspondence with these firms should be preferably in Russian, but German would be better than English. Address Bureau of Manufactures, Washington, D. C., file No. 8193.

The Levi Slide company, New York City, recently sustained a heavy loss by fire, the entire stock with the exception of the negatives being destroyed. The studio apparatus was a complete loss. The entire loss, however, was covered by insurance and except for the delay in business, which was only short, no appreciable loss will be experienced.

The Majestic Film Service company has opened a large and commodious room where all the Independent releases will be exhibited on Mondays, Wednesdays and Fridays at ten o'clock.

Another Newspaper Contest

Another newspaper, the Pittsburgh, Pa., *Leader*—is making strenuous efforts to interest the picture fans among its readers. With the idea of ascertaining the critical views of motion picture patrons and their thoughts concerning the film subjects they witness, the *Leader* has inaugurated a contest among the patrons of all motion picture theaters advertised in its pages—and there are seventeen of them represented there.

Its readers are invited to submit a critical view of any subject shown at these theaters during the week, and to the writer of the best criticism, adhering strictly to the rules set forth below, will be given an order for two admissions good every day for 30 days at the theater where the picture was shown and criticised from. The successful 14 criticisms are published the following Sunday, with the names and addresses of the winners of the 14 prizes.

RULES OF CONTEST.

First—Name of theater and date of attendance.

Second—Title of film.

Third—Criticism not to be over 150 words.

Fourth—Film to be judged solely from the standpoint of: (a) Dramatic expression and "enunciation;" (b) Gesticulation; (c) Minuteness of detail; (d) Photographic and color effects; (e) General ensemble.

New Zealand's Picture Shows

Consul William A. Prickitt, Auckland, says one or two American makes of cinematograph machines have been tried in New Zealand, but they did not seem to give satisfaction. A number of the old Edison machines are still in use in various parts of the country, but they are gradually being replaced by French makes. However, comparatively little is known of modern machines and one person interviewed said:

"We are looking for good machines. We depend entirely on the imported article, and in New Zealand there is a market which requires to be studied. For instance, most American machines apparently do not suit us because they are manufactured with a view to projecting small pictures. They are made of too light a standard and are not steady enough for our large pictures. We use 80 amperes. In America the highest used is, I believe, 35 amperes. We have not the same legal restrictions here, and so always show a 28-foot picture as against the small 12-foot picture understood to be common in America. Thus when the size of the film is magnified so much it is essential that absolute steadiness should be maintained. These are points which American makers would need to study before attempting to work the New Zealand market."

It is estimated that over 50,000 feet of film per week come into New Zealand and are hired out through central agencies. Of this total quite 50 per cent is manufactured in America, and on every program presented in a New Zealand picture theater fully half the items comprise American subjects from American films.

All American films come through London and are admitted duty free. American dramas, cowboy stories, and comedies are exceedingly popular, and the photography is regarded as excellent. The average program is reckoned to run about 7,000 feet. Some proprietors suggest that films dealing with current American news might be sent out advantageously. The cinematograph business in New Zealand is practically all in the hands of three firms.

This Film Moved Some

I have heard of films breaking records before now, says "Stroller" in the *Kinematograph*—in fact, if sales managers are to be credited, about every other subject they release achieves this distinction—but it has been left to Mr. A. E. Mainwaring of the Western Import Company, to handle a film capable of extending its destructive powers to such a very real thing as a window. To be exact, it was Mr. Grainger of Tyler's who was handling the film, "The Trapper's Consent," at the time, and the story goes that during the course of an innocent conversation the subject—a "moving" picture in more than one sense—leapt from the box and "projected" itself through a glass partition into the Tyler shop possibly with the idea of finding out how it compared with the Eclair and Itala samples there. Salesmen speak of a good subject "moving" satisfactorily and if the possession of this quality is any criterion of merit, Mr. Mainwaring would appear to possess in "The Trapper's Consent" a headliner of the very first water.

Advertising Western Theaters

There are many ways to get publicity for a motion picture show. One of the best ways is that used by William Cutts, manager of the Montana Amusement Company, who has in the Butte *Miner* of December 17, a long article covering the history, development, and uses of motion pictures. This may furnish an idea for other enterprising managers.

Two Scenes from the American Film Company's "Winter Sports at Coronado Beach."

Among the Picture Theaters

PERSONAL NOTES.

Lawrence S. McCloskey has been appointed associate editor and scenario writer for the Lubin company. Mr. McCloskey was formerly engaged in newspaper work.

We are glad to be able to report that W. N. Selig, president of the Selig Polyscope company, has so far recovered from the operation made necessary by the wound received some time ago at the Los Angeles branch, as to be able to leave the hospital, and trust it will only be a short time until he will be completely restored to his former good health.

William V. Mong, formerly producer for the Selig Polyscope company, is now in charge of the scenario department of that company's Chicago office.

David Horsley of the Nestor company has returned to the Nestor studios at Hollywood, Cal., after a business trip to the East, stopping to take pictures of interesting places along the way.

On February 12, C. G. Thompson, manager of the Cleveland branch of the Victor Film Service, tendered a banquet to the Moving Picture Operators of Local No. 160, I. A. T. S. E., Cleveland, which was attended by about one hundred members of the union.

Watterson R. Rothacker of the Industrial Film Manufacturing company, Chicago, recently delivered a lecture before a number of advertising men at Denver, Colo., on the merits of moving pictures as an advertising medium.

Upon his return from the Western Studio at La Mesa, Cal., S. S. Hutchinson, president of the American Film Manufacturing company, Chicago, paid a visit to New York City.

Giles R. Warren, who has acted as scenario writer for different companies has been employed in that capacity by the Powers company.

George Larkin, known as the "dare devil of motion pictures" and formerly with the Pathe Freres Stock company, has joined the Eclair stock company.

During the production of a war picture by Pathé Frères at Creedmore, L. I., recently, Henry Hoffman, a member of the stock company, was seriously burned about the face by an exploding bomb. At the time he was in charge of the bombs which were being thrown upon the field to make the scene appear more realistic. A number of these bombs were piled together when a lighted cigarette was accidentally dropped among them causing them to explode. His face was almost blown off and it is feared he will be blind for life. Several other bystanders met with slight injury, but none seriously.

A demonstration of educational films will be given at Hull House, before a number of prominent Chicago teachers and principals, by Tom Quill. Jane Addams, well known in Chicago, will also be present.

E. E. Fulton, well known in Chicago film circles, and whose repair house has a wide reputation among exhibitors, has taken on additional space and now has a display room which is surpassed by none in the city.

ROLL OF THE STATES.

ALABAMA.

The Alabama Amusement company has been incorporated at Birmingham with a capital stock of $6,000 for the purpose of conducting a moving picture theater. A. D. Moore is president and E. D. Ensley, secretary.

The Grand, an up-to-date motion picture theater, has been opened at Bessemer.

The Victoria is the name of a new motion picture house opened in the building formerly occupied by the New Lyric theater, on Twentieth street, near Third avenue, Birmingham, by Julius Patterson and A. D. Moore.

ARKANSAS.

A new motion picture theater is being erected at Jonesboro by A. J. Kerfoot which will cost $10,000 and the same will be under the management of John Collins, at present in charge of the Empire theater.

The Bijou, a moving picture theater at El Dorado, has been purchased by E. Jewell of Grant, Iowa, who will operate the same.

CALIFORNIA.

The United States Motion Picture company of Los Angeles, has been incorporated by C. E. Kaufman, E. T. Charles, H. H. Earl and others, with a capital stock of $100,000.

A moving picture theater will be erected at San Diego by Messrs. Pinkerton and Edwards at a cost of $20,000.

Charles Godard, who conducts the Acme Motion Picture theater in Sacramento, has leased the premises at 617 K street, that city, for eleven years and will open another picture house there. The new house will be devoted exclusively to pictures and the admission will be 10 cents. He will also continue to operate the Acme as a five cent house.

The New York Film Manufacturing company will establish a plant at Lookout and Palm avenues, La Mesa, for the manufacture of motion pictures. That section of the country is proving a favored locality for the manufacture of moving picture films. Climatic conditions are such as to permit of the companies operating in the field practically every day in the year, while the clear atmosphere and prevailing sunny weather is particularly favorable for this kind of work. The American Film company is operating in that section and the Essanay at Lakeside.

The Liberty theater at San Bernardino has been thoroughly overhauled and reopened under new management which will give the public first-class service.

A moving picture theater will be erected on Telegraph avenue, between 25th and 26th streets, Oakland, by E. Van Loan, at a cost of $4,900.

Dreamland is the name of a new moving picture theater erected at Riverbank by J. Wilson Wright.

COLORADO.

The Crystal Theater at Denver has been purchased by the Crystal Theater company which will conduct it as a vaudeville and motion picture house.

CONNECTICUT.

The New Foy Theater, formerly the Auditorium, has been opened in the Y. M. C. A. building, Temple street, New Haven, and will be conducted as high-grade motion picture house. The pictures shown will be censored by a committee of the Y. M. C. A. and will be along entertaining and instructive lines.

Work will begin at once upon a vaudeville and motion picture theater to be erected at Lancaster avenue and Forty-first street, Philadelphia, by Mrs. Jennie Effinger, which will have a seating capacity of 2,000, and will cost about $80,000.

The Auditorium at Jeannatte has been opened as a moving picture and vaudeville theater by the Consolidated Moving Picture company of Pittsburgh, under the management of Walter H. Buhl. The house has a capacity of 1,000.

A moving picture theater will be erected in Bloomsburg by L. T. Sharples of that place and William Fegley of Sunbury, at a cost of $10,000, work to begin at once.

The American Motion Picture company has opened an office at 205 Smith block, Sioux Falls, under the management of Claude C. Baker.

The National is the name of a new moving-picture theater to be opened at 813 Ninth street, Altoona, by Thomas Weir, who also operates another house on Sixth and Fourth streets. The front will be brilliantly illuminated and the interior will be well equipped and beautifully decorated.

The Auditorium at Jeanette, which has a seating capacity of 1,000, has been leased by the Consolidated Moving Picture company of Pittsburgh, who will conduct the same under the management of Walter H. Buehl.

The new school board at Washington has announced its intention of installing a moving-picture machine in the public school to be used in the study of history, geography, chemistry and botany.

A moving-picture theater has been opened at Fourth and Campbell streets, Williamsport, with a seating capacity of 300.

The Olympic, a new motion-picture theater, has been opened at Connellsville by Peter Mikalarias and N. Berbatis.

Plans have been prepared for a new moving-picture theater to be erected at Main and Prospect streets, Nanticoke, by Messrs. Reilly & Schroeder, at a cost of $8,000.

A moving picture theater will be erected on North First street, between Grand and Hamilton avenues, Duquesne, by the Merlin Amusement company.

A moving picture theater will be erected at Bellevue by Messrs. R. D. and William Jenkinson which will have a seating capacity of 500.

The Globe moving picture theater, Fifty-ninth and Market streets, Philadelphia, has been conveyed to Edward Harshaw, subject to a mortgage of $30,000.

The Alhambra theater, at Wilkesbarre, is now under the management of H. W. Pursel, who will make every effort to give the public the best obtainable in the picture world.

The Victoria, one of the finest and most up-to-date moving picture houses in the state was recently opened at Sunbury by the General Amusement company of Shamokin and Sunbury of which L. J. Chamberlain of Shamokin is president.

The Merlin Amusement company of Wilkinsburg will erect a moving picture theater at McKeesport.

A moving picture theater has been opened at Birdsboro, the only one in the place.

A permit has been granted for the erection of a moving picture theater at 1643 Moss street, Reading, by James Graul at a cost of $3,000.

E. J. Buttermore, manager of the Geyer's Opera House, Scottdale, Pa., informs us that we were in error in stating the Consolidated Moving Picture Company had purchased this house and that the same is still under his lease and management.

The Alhambra theater, a big vaudeville and moving picture theater, recently opened at 1615 Twelfth street, Philadelphia, has been purchased by a syndicate headed by William W. Miller, lessee of the William Penn, Girard Avenue and Forepaugh theaters. The house has a seating capacity of 2,000 and the price is said to have been $125,000.

John H. Gillitt has been granted permission to erect a moving picture theater at 215 Lorenz avenue, Pittsburg.

Plans have been prepared for a handsome moving picture theater to be erected at Nantichoke by Charles Schwartz. It will be located at the corner of Main and Prospect streets.

A moving picture theater is being erected at 2846 North Twenty-second street, Philadelphia, by A. Bonnen, which will cost $14,000.

The Liebtry moving picture theater of East Liberty, will be remodeled and improved and the name changed to the "Auditorium."

The Hippodrome is the name of a new motion picture theater recently opened at West Fourth street and Mifflin place, Williamsport.

SOUTH CAROLINA.

Messrs. E. B. and A. L. Rawls will establish a studio in Columbia for the manufacture of moving pictures. It is the intention of the promoters to devote their attention for the present to commercial pictures, views of South Carolina cities and industries, reaching ultimately to dramatic pictures.

The Montgomery Amusement company which operates moving picture theaters in Jacksonville, Atlanta, Savannah and Valdosta, will erect another house in Columbia, the same to be ready for occupancy about May 1.

A. Louis Wood and J. K. Wood will open a moving-picture theater at Gaffney.

A commission has been issued to the See Charleston First company with a capital stock of $1,000. The company will conduct a moving picture business.

The Humphries moving picture theater of Gaffney has been taken over by P. M. Morgan.

SOUTH DAKOTA.

A motion picture theater will be opened at Yankton by the Yankton Theater company.

The Opera House at Marion will shortly be opened to the public as a moving picture theater.

A motion picture theater will be erected at Wessington by R. P. Boughton.

A moving-picture theater will be opened at Yankton by the Yankton Theater company.

The Star is the name of a new moving-picture theater to be conducted at Sisseton by F. D. Chausse.

The Grand is the name of a new moving-picture theater at Sisseton which will be under the management of Messrs. Burt & Strand.

The opera house at Marion will be opened to the public as a motion-picture house.

TENNESSEE.

The Princess, said to be the most perfect and exquisite moving-picture theater in the South, is just about ready to open its doors to the amusement loving people of Nashville. No expense has been spared to provide for the comfort and safety of its patrons.

The Bonita Motion Picture company will open two moving-picture houses at Nashville, one at 214 Fifth avenue and the other at 608 Church street.

A new moving picture theater is being erected at 165 South Main street, Memphis, by the Trimble Cigar and Billiard company, which will be ready to open to the public about the first of February and will be one of the finest picture houses in the South. The lobby will be of marble, with imposing stairways leading to the balcony, which will have a seating capacity of 225. The main floor will seat 500, while a mezzanine floor will give added seating capacity. Upholstered seats, a new patented ventilating system and other improvements promise to make the theater one of the most attractive in that section.

There is being erected at the corner of Fifth avenue and Church streets, Nashville, the Princess, which will be one of the handsomest moving picture theaters in the South when completed and will have a seating capacity of more than a thousand. According to the management of the new theater, the theater will be used for exhibiting moving pictures of historical, religious, scenic, geographical, scientific and other subjects. Nothing but the highest class of pictures will be shown and ladies and children will be especially catered to. It is hoped to have the house ready to open by January 1.

The Ideal theater at Stevens Point has been purchased by N. H. Hackett of Wausau, an experienced moving picture man, who will redecorate and otherwise improve the house.

Messrs. Hanson & Taylor, proprietors of the Grand opera house and the Bijou theater at Rhinelander, have purchased the Majestic moving picture theater in that place.

Charles Ataehle, proprietor of the Cosmo and Cozy theaters at Merrill, will erect another house.

The Pricess theater of Marinette is now under the management of C. C. Knapp and R. G. Tetro.

The Princess theater of Marinette was recently closed while important improvements were being made on the interior. Henry Vandanberg is manager of the house.

The Crowley Amusement Co. has secured a permit for a moving picture theater on National avenue, between Thirtieth and Thirty-first street, Milwaukee.

TEXAS.

The moving-picture proprietors of Beaumont and Port Arthur have decided to form the Jefferson County Motion Picture Exhibitors' association for the protection and uplift of the motion picture business in Beaumont and Port Arthur.

The Empress is the name of a handsome new moving-picture house recently opened in Dallas. The house has a seating capacity of 400 and cost $15,000.

The Dixie theater at Huntsville has been taken over by Sam Parish.

The Dixie Film company will open a moving-picture theater in the new $75,000 theater being erected at Main street and Prairie avenue, Houston.

Wicks & Company, who already operate the Star and Vaudette, moving-picture theaters of Houston, will open a third theater in that city.

The Riggins Investment & Promoting company has been organized at Waco with a capital stock of $50,000 to establish a film exchange business to operate in Texas, Oklahoma, Arkansas and Louisiana. The officers are as follows: President, J. W. Riggins; vice-president, L. B. Riggins; secretary, Robbia A. Riggins; treasurer, Eddie Mai Riggins.

UTAH.

The Princess is the name of a new $10,000 motion picture house opened by the Rex Theater company at Provo, under the management of John B. Ashton.

D. H. Christenson, superintendent of Salt Lake City schools, has installed a moving picture machine for the use of the schools.

VIRGINIA.

A company has been organized by Phillip A. Fuller for the purpose of erecting a moving-picture theater at Phoebus, at a cost of $15,000.

A. M. Johnson will erect a moving-picture theater at Phoebus to replace the one recently destroyed by fire.

"Dreamland" is the name of a new motion picture house recently opened at Radford by James F. Martin and W. R. Roberts, Jr.

The Virginia moving picture theater at Harrisburg has been taken over by the Virginia Amusement company and the same has been improved and enlarged.

VERMONT.

The Dreamland theater at Bellows Falls will be enlarged, increasing its capacity from 350 to 725.

The World, a handsome and attractive new moving-picture theater, has been opened at Vergennes.

The "New World" is the name of a new motion picture house opened at Vergennes.

The Board of Education at Rutland will install moving picture machines in the schools of that city.

WEST VIRGINIA.

The New Colonial, a handsome, up-to-date moving-picture theater, has been opened at Market and Sixteenth streets, Wheeling, by Charles A. Feinler. The house will be devoted to moving pictures exclusively and every device looking toward perfection in operating has been provided. The seating capacity is 1,000.

The Salem Amusement company, Salem, has been incorporated with a capital stock of $10,000 to conduct theaters. The incorporators are L. C. Washburn, Frank Carney and C. W. Prince.

WISCONSIN.

The Western Vaudeville association will erect a moving-picture theater at La Crosse.

Plans have been drawn for a new moving-picture theater to be erected at Fond du Lac by the Fond du Lac Orpheum company.

The Colby company will erect a new moving-picture theater at Cumberland.

A moving-picture theater will be erected at Hopkins and Twenty-third streets, Milwaukee, by Messrs. P. Phillippi and J. Eberhardy, at a cost of $7,500.

The Bijou theater at Fond du Lac has eliminated vaudeville from its program and will henceforth be an exclusive motion picture house; this in compliance with a request from its patrons.

Messrs. Sherwood and McWilliams of La Crosse, have purchased the Victoria theater at Lafayette, Indiana, and will add it to their chain of moving picture houses. Previously it has been a vaudeville house.

The Green Bay Theater company, Green Bay, has been incorporated with a capital stock of $40,000 by J. R. Minahan, V. I. Minahan and M. K. Kobussen.

"Dreamland" is the name of a high-grade motion picture house recently opened at La Crosse, 1201 Caledonia street.

The Bijou theater at Rhinelander has been leased by P. J. Hanson, who will thoroughly remodel and refurnish the same, making it one of the handsomest moving picture houses in that section of the state. Mr. Hanson has had wide experience in this field and will doubtless make a success of his new undertaking.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

EXPLOITING

MOTION PICTURES

SCENE FROM AMERICAN'S "INDIAN JEALOUSY."

MOTOGRAPHY'S EXHIBITORS DIRECTORY

THE necessity for **Motography's Hand Book and Film Record** having been conceded by all film interests, we are now undertaking a vastly more important work in **Motography's Exhibitors Directory,** a specimen page being shown herewith.

Ever since the establishment of **Motography** it has been part of our business to supply correct lists of motion picture theatres. The frequent changes among exhibitors has made the keeping of these lists expensive and trying, but the trade has long recognized the value of our efforts. When you are wanting exhibitor's lists, ask us.

Motography's Exhibitors Directory will aim to give permanency to the film business. Every theatre will be listed substantially as shown on the sample page.

Be sure your house is represented. Blanks will be furnished upon request, making it convenient for you to supply us the information.

Motography's Exhibitors Directory will also contain the list of film manufacturers, the exchanges and the exhibitors' league.

Motography's Exhibitors Directory

CALIFORNIA.

●**ANTIOCH** (1,076) **Casino Theater,** remodeled 40x100, investment $9,000. Two shows, (v) 1½ hrs. Changes daily. Screen 12x16, throw 80 ft. Piano. Seats 553 @ 10c. Stamm & Beede, mgrs. Employs 5. 101.

▲**COLUSA** (1,582) **Criterion Theater,** 133 Fifth St., remodeled 35x60, investment $1,500. Two shows, 1 hr. Changes six times a week. Screen 11x14, throw 45 ft. Piano. Seats 200 @ 10c. Bennett A Prior, owner. Employs 4. 31.

▲**HOLLISTER** (2,308) **Opal Theater,** remodeled 23x66. Two shows, 1½ hr. Changes three times a week. Screen 10½x14½, throw 60 ft. Electric piano. Seats 275 @ 10c. Elmer Tompkins, owner. Employs 3. 31.

▲**LOS ANGELES** (319,198) **Art Theater,** 508 S. Broadway, remodeled 18x110. investment $2,500. Eleven shows, ¾ hr. Changes twice a week. Screen 9¾x11½, throw 65 ft. Electric piano. Seats 168 @ 5c. Harry W. Hahn, mgr. Employs 6. 91.

▲**LOS ANGELES** (319,198) **Broadway Theater,** 833 S. Broadway, permanent 60x155, investment $50,000. Three shows, 1¾ hrs. Changes twice a week. Screen 18x20, throw 105 ft. Orchestra. Seats 850 @ 10-15-20c. Seymour Tally, mgr. Employs 17. 31.

▲**LOS ANGELES** (319,198) **Nickelin Theater,** S. Spring St., remodeled 25x123, investment $9,000. Twelve shows, 1 hr. Changes twice a week. Screen 10x13½, throw 71 ft. Piano. Seats 350 @ 5c. W. T. Horne, mgr. Employs 10. 41.

▲**LOS GATOS** (2,232) **Photoplay Theater,** Main St., remodeled 40x65, investment $1,400. Two shows, 1 hr. Changes four times a week. Screen 10x14, throw 55 ft. Electric piano. Seats 225@5-10c. G. K. O'Leary, owner. Employs 2. 31.

●**MERCED** (3,102) **Merced Theater,** remodeled 22x80, investment $1,000. Four shows, (v) 1 hr. Changes six times a week. Screen 14x20, throw 60 ft. Piano. Seats 350 @ 5c. Sol. Shockley, mgr. Employs 4. 31.

▲**MODESTO** (4,034) **Dreamland Theater,** 915 I St., remodeled 24x100, investment $3,500. Three shows, 1¼ hrs. Changes six times a week. Screen 12x14, throw 80 ft. Piano. R. B. Stevenson, mgr. Employs 6. 41.

▲**MONTEREY** (4,923) **Monterey Theater,** permanent 60x150. Three shows, 1½ hrs. Changes four times a week. Screen 18x20, throw 130 ft. Piano. Seats 800 @ 10-20c. Clancy & Cornell, mgrs. Employs 8. 31.

▲**SAN BERNARDINO** (12,779) **Unique Theater,** 343 Third St., permanent 80x120, investment $5,000. One show, (v) 2 hrs. Changes twice a week. Screen 18x24, throw 90 ft. Orchestra. Seats 1,000 @ 10-20-25c. J. W. Leonard, owner. Employs 12. 31.

●**SAN FRANCISCO** (416,912) **Silver Palace Theater,** 729 Market St., permanent 30x165. Ten shows, 1 hr. Changes six times a week. Seats 399 @ 5c. Silver Palace Theater Co. (Inc.), owners. Employs 10. 31.

●**SAN FRANCISCO** (416,912) **Davis Theater,** 2507 Mission St., permanent, 25x110. Five shows, 1 hr. Changes three times a week. Piano. Seats 400 @ 5c. Davis Bros., owners. Employs 9. 31.

▲**SAN JOSE** (28,946) **Empire Theater,** N. Second St., permanent 50x100, investment $4,200. Eight shows, 1 hr. Changes six times a week. Screen 16x19, throw 86 ft. Piano and trap. Seats 800 @ 5c. G. G. Tonascia, mgr. Employs 6. 51.

▲**SAN LUIS OBISPO** (5,157) **San Luis Theater,** permanent 27x100. Two shows, 1¼ hrs. Changes three times a week. Screen 18x18, throw 90 ft. Orchestra. Seats 450 @ 10c. J. Holler, mgr. 31.

▲**TULARE** (2,758) **Majestic Theater,** remodeled 50x120, investment $3,000. Two shows, (v) 1 hr. Changes four times a week. Screen 9½x13, throw 60 ft. Piano. Seats 500 @ 10c. S. J. Greenwood, mgr. Employs 5. 41.

▲**WATSONVILLE** (4,446) **Opera House,** permanent 64x70. Two shows, 1 hr. Changes three times a week. Screen 12x16, throw 55 ft. Orchestra. Seats 600 @ 10c. Jas. G. Piratsky, mgr. Employs 12. 41.

VOL. VII. CHICAGO, APRIL, 1912. NO. 4.

THE DAYTON MEETING.

GENERALLY speaking, enthusiasm wins its cause. Some, by dint of fortunate circumstance, succeed without it; some, misguided, fail even with it; but the rule still holds good. For this, if for no other reason, we must predict continuous growth and uninterrupted success for the Motion Picture Exhibitors' League of America and all its affiliated state and local branches. But there is more substantial ground for the prediction than enthusiasm. The league is founded right, it is needed, and, best of all, it is *going* right. The convention at Dayton was bigger, better and more harmonious than the previous one at Cleveland—and it is not difficult to remember how enthusiastic that was.

One feature of the convention, or perhaps we should say of the city in which it was held, was the avidity with which the local newspaper men fell for the stories of the press agents. Anything went, from Bert Adler's honeymoon to the three million dollar bunch of ten; but it was all good natured and did no harm, with one exception. That exception was the persistent statement that the meeting was decidedly independent, in the sense of being anti-license. From some source the press gathered the impression that the convention delegates were supporting the independent manufacturers and censuring the licensed.

This is absolutely untrue. During all the official proceedings of the convention no mention whatever was made of factional differences or preferences. The whole meeting was as absolutely impartial as avoidance of political topics could make it. The attendance of exhibitors was very fairly divided between licensed and independent; yet the question never arose as to the status of any. It becomes interesting to trace the source of the press stories.

We have already mentioned that the newspapers welcomed all copy handed them by the picture men. It is only necessary to add that the independent film manufacturers were present in force. And they were present in person, most of them. On the other hand, few of the licensed makers were even represented. What a glorious opportunity for independent press-agenting! Can we blame them for taking advantage of it?

That leads us to the question: Why were the licensed forces absent? Even a proxy attendance would have helped, and the licensed representatives would have found plenty to occupy them and make their going worth while. We cannot believe the licensed makers have adopted a policy of ignoring the league, for they are wise enough to see that it cannot be ignored. The only plausible theory is that the licensed machinery is more ponderous than the newer independent, and takes longer to get in motion.

All men, not excepting motion picture exhibitors, like to have those with whom they do business show interest in what they are doing. The league members have been extremely courteous in this matter of licensed representation, and have gone out of their way to make excuses for the absent interests. But they must be more than commonly charitable if neglect does not influence their affections.

The national convention in Chicago next August will be attended by thousands of league members and other exhibitors. It should also be attended, in person if possible, by every maker of and dealer in goods of any kind whatsoever used in connection with the operation of a motion picture theater. At all events every film manufacturer should regard it as his sacred duty, not only to the welfare of the industry but to his own harmonious conduct of his business, to be there. The exhibitor is the direct consumer of the manufacturer's wares, and the exhibitor is growing stronger every week.

President Neff's advocacy of a congressionally appointed national censor body, that body to appoint state censors, is interesting and the plan seems good. Universal and official censorship appears to be the only path to escape from the persecution of press and reformers—though it may be mentioned that the league, and its conventions, are doing much to introduce the press to the personal side of the industry and establish a more friendly spirit. But it is only reasonable that the exhibitors should have some voice in the appointment of censors, if not in the censorship itself.

The individual grievances of members, which threatened in the earlier days of the league to swamp the committees and officers, are now safely under control. The plan—due, we believe, to the far-sighted Mr. Sweeney—of requesting members to reduce their grievances to writing, has eliminated the more exaggerated and hypochondriacal claims and put the real troubles in shape for rectification. And without a doubt the correction of false conditions is the vital function of the league—not because other matters are not equally important, but because it is that feature which is most likely to attract new members and hold present ones.

A FILM EXCHANGE SUGGESTION.

BUT a few short years ago—the fat years of the phonograph business—the big three, Edison, Victor and Columbia, were fighting each other hard on patent litigation, but still operated under shop licenses, special grants and other reciprocal arrangements.

In the marketing of their product they were actively competitive, but the sales campaigns were widely different. The Edison and Victor people operated very similarly; they aroused interest by advertising, public demonstration and shrewd salesmen, created exclusive agencies of local merchants who *invested their own*

money and were interested in pushing the sale of the product with a benefit not only to themselves but to the manufacturers. It took three years to make a good phonograph agency and with the local man's capital invested he couldn't withdraw unless he sold his store outright.

The Columbia people operated differently. When a good line had been opened up by the local merchant the Columbia people said, "Sell to us, and work on a salary" (figuring that the forty per cent middleman's profit would run the local store). If the storekeeper wouldn't sell they opened an opposition store. Today the Columbia Company has 80 or more branch stores in the United States whose personnel is on salary and whose profits are all received by the home company.

The Edison people have over 18,000 agencies, with no salaries or rents to pay; and who do you believe makes the most sales, the 80 branch stores or the 18,000 agencies?

Is it not strange that the organizers of the General Film Company did not consider the phonograph business when completing their arrangements?

At present there are about fifty film exchanges in round numbers; before the elimination of the individual exchanges there were over a hundred, which, by now would have been two hundred. With each of the fifty or more present exchanges trying to save money by buying as few prints as possible, is it probable that they will take as many prints as one hundred exchanges would? The one hundred exchanges would all be after business hard in order to realize on their personal investment, and you cannot secure new business with old films. Naturally, then, more prints would be sold under the individual exchange system.

If the fifty present exchanges took the full program (which they are not all doing) they would require 1,800 prints a week or $180,000 worth of film.

If the 100 individual exchanges took 75 per cent of the present program they would require 2,700 prints a week at $270,000, or an added output over present conditions of $90,000 a week, or $4,680,000 more business than is possible at the present time.

But, you say, the manufacturers get the profits from the present General Film Company.

What is to prevent them from individually owning their own exchanges? They'd get that profit and an added output besides. And—whisper—all the manufacturers are not at present interested in the General Film Company.

It was customary in our cub days to give a boy a title instead of an increase in wages. Is it possible to do that with the shrewd business men who have built up this enormous film industry?

Would it not be possible to reorganize the General Film Company, limit territory to each particular exchange, establish enough exchanges to cover the territory, insist on them taking and disposing of at least eighty per cent of the present program? It is done in the beef industry, where the bulk shipment varies from day to day. It can be done in the film business with more profit to all.

ANOTHER ATTACK ON PICTURE SHOWS.

IN THE annual report issued by John D. Lindsay, president of the New York Society for the Prevention of Cruelty to Children, moving picture shows are held responsible for a general increase of crime affecting school children. The report alleges that while in 1910 twenty-eight cases were prosecuted as the result of crimes traced to motion picture shows, there were forty-seven criminal prosecutions of the same nature in the last twelve months.

The society's investigators, according to Supt. Thomas D. Walsh, whose report is added to Mr. Lindsay's, obtained 6,409 convictions out of 7,806 prosecutions involving the custory of children. He says:

> The inclination to commit petty depredations and crime while free from school or home supervision is so great that many children take advantage of it. Indeed, this half-time system offers opportunities for school children to participate in a form of amusement which has produced more female victims than any known to the society since the notorious dance halls were abolished years ago.
>
> Then little girls were sold into shame. Now boys and girls are thrown together in darkened rooms where moving picture shows are given under conditions that permit of the freest contact with depraved adults. It is estimated that there are over 900,000 children of the school age within the society's jurisdiction. Of these 80,000 are said to be part-time scholars.

It seems absurd that we must go on fighting these charges, over and over again, regardless of the ancient law of "ex judicata"—that one may not be tried twice for the same offence. Acquittal of the charge, and conversion of the complainant, seems but a signal for new Quixotes to arise and fight the windmills they imagine they see whirling about our heads. Does a clergyman but express approval of a picture, and a hundred other churchmen are instantly up in arms, ready to prove a condition they have never seen and know nothing of.

But we must not malign the clergy; for they are fast becoming our best friends. Not a week passes but another church makes pictures a part of its services, or a minister of the gospel praises the good work of the films. The most virulent and malicious attacks, by long odds, come from these societies for the prevention of this or that, these women's clubs, these bands of self-appointed reformers. And there is a subtle sophistry about their claims that makes them hard to combat, because they are always armed to the teeth with statistics and alleged specific examples.

Practically every city that pretends to guard its citizens has a law compelling lighted theaters. Without exception that law is observed and enforced, and it is the rule that one can read a newspaper in a modern picture theater while the show is on.

How about your parks and your streets? Are they so well lighted that vice dare not venture forth? Why attack always the new, and therefore conspicuous, condition? Look to the actual dangers that can be cured so easily, and let the honest, clean exhibitor alone.

THE PATENT CASE DECISION.

THE United States Supreme court, by a vote of 4 to 3, has rendered a decision which is astonishingly favorable to the manufacturers of patented articles and rather unfavorable to the consumers of them.

Chief Justice White was one of the three justices in the minority. He indicates his belief that this patent decision is another example of that process of judicial construction whereby courts enlarge their own powers and diminish the powers of the co-ordinate branches of government.

The chief justice speaks as follows for himself and Justices Hughes and Lamar: "The ruling now made is * * * virtually legislating, the result being not only to multiply monopolies at the will of an interested party, but also to destroy the jurisdiction of state courts over subjects which from the beginning have been within their authority."

Unless Justices White, Hughes and Lamar have been confused by the legal verbiage of their brethren on the bench, the result of this patent decision will be that close monopolies will be established and upheld by law, with a still tighter grip upon the consumer. Says Chief Justice White:

The result of this decision might easily be that the patentee selling a patented engine had the right by contract to bring under the patent laws all contracts for coal or electrical energy used to afford power to work the machine.

The buyer of a patented sewing machine might be required by the patentee to buy all the thread, needles, or oil used with the machine from the patentee.

The patentee of a cooking utensil might require that all food cooked in it be purchased from him.

The patentee of a window frame might require that all the material in a house in which the frame was to be used must be procured from him.

Several bills to curb the monopolizing power of patentees over unpatented articles used in operating patented machines have since appeared in congress. Old bills were revived and new ones drafted in response to the appeal of Chief Justice White of the Supreme court for congress to change the law which a majority of the court ruled gave patentees practically unrestricted privileges regarding the manner in which their patents may be used.

E. B. Moore, commissioner of patents, has prepared a bill to amend the law so that patentees may not impose onerous conditions upon purchasers of their patented articles. Senator Gore may reintroduce a bill he presented to congress last year regulating "license restrictions" in the sale of patents.

Officials of the department of justice have digested the decision of the Supreme court with a full realization that it will restrict the administration of the Sherman anti-trust law. The belief was expressed, however, that it would have no important bearing upon cases now in the courts except that against the Keystone Watch Case Company, although it was admitted that the strengthened position of the patentee undoubtedly would be introduced by the defendants in the suits against the United Shoe Machinery Company, the National Cash Register Company, and the alleged coaster brake combination.

Attorney-General Wickersham has indicated that there was strong likelihood that a hearing would be asked of the Supreme court in the case decided four to three by a divided bench. The government, not being a party to the suit, can act only through the defeated parties.

There is little likelihood that the decision, even if it is not nullified by congress, will have much effect on the motion picture industry. The Motion Picture Patents Company has always operated along the lines suggested by the decision, which only proves that it was legally entitled to do so, and that its attorneys knew their business when they outlined its policy at the beginning of 1909. With the decision in force, there can be no further question as to the legality of the $2 per week license fee, nor of the restrictions on unlicensed films.

GERMANY'S PICTURE SHOWS.

CONSUL GENERAL ALEXANDER M. THACKARA, Berlin, says it is estimated that there are about 1,500 moving picture shows in Germany, some 360 being in Berlin: The number is subject to marked fluctuation. A variation throughout the empire of as much as 50 a week is not unusual. The general trend, however, is toward an increase.

This is true not only of the number of shows in operation, but also of the seating capacity. It is estimated that the average seating capacity of the cinematograph theaters in Berlin is at present 360, having risen from 280 within a short time. There are few large theaters devoted exclusively to moving pictures. One new moving-picture theater now under construction will have a seating capacity of 1,200. The managers of moving-picture shows lease the films from middlemen, called "buyers." There are 60 or more of these buyers throughout the empire—fourteen in Berlin; seven in Leipzig; three each in Munich, Cologne, and Hamburg; two each in Frankfurt, Dresden, and Stuttgart; and one or two each in Chemnitz, Nuremberg, Dusseldorf, Hanover, Crefeld, Strassberg, Brunswick, Carlsruhe, Bochum, and other less important cities.

The buyers purchase the films outright from the manufacturers or from their agents. Films are sold by the meter (3.28 feet), the standard price for this unit being one mark (23.8 cents). This is equivalent in American standards to 7¼ cents a foot. As the cost of producing the films averages 5¾ cents a foot, the usual profit is 1½ cents, which is low as compared with other countries, the average manufacturer's selling price in Great Britain being reported as 8 cents and in the United States as 10 to 12 cents. One firm dealing in what are known as special releases, that is, extra-long films, is able to command 1.25 marks per meter. Their films are seldom less than 850 feet in length, and once each week the company turns out a film of 3,000 feet. There are two German film manufacturers which make a specialty of extra-long films, producing none under 3,000 feet in length. These longer films as a rule have love stories for their subjects.

Competition among the middlemen is as severe as that among the manufacturers. As a result, show-house managers do not come to Berlin and other centers to procure their films, but are waited upon by agents who tour the provinces. Competition has now reached such a point that a movement has been started for the organization of a company, to be capitalized at 2,000,000 marks ($238,000), to exercise an effective control over the entire trade in cinematograph films, with Berlin as its center. The idea is encountering strong opposition, and its realization is uncertain.

One result of the competition, coupled with an almost uniform price for films, is that the middlemen are quick to take up films which embody any point of superiority, and the market is very responsive to merit. This is an advantage to foreign film manufacturers seeking to enter this market, which in a measure compensates them for the disadvantage arising from the keen competition among manufacturers now in the field.

In addition to the severity of competition, account must also be taken of the censorship which the police authorities exercise. The police direct special attention to the elimination of all pictures depicting scenes of disorder or acts of violence such as might incite to riot or accustom the people to breach of the peace. Special attention is also directed to the elimination of all pictures the action of which depicts disrespect for authority or holds up to ridicule or contumely, officers of the law or other servants of the government. It will readily be seen that this excludes from the German market many American films, such as some of those which show stories of frontier life and attendant disorder or such as make a policeman or other person in authority the butt of a comedy skit. All films depicting pugilistic contests are absolutely barred. Objection is also made to pictures

involving religion on the ground that they may incite sectarian feeling.

American films enjoy a wide reputation and popularity in Germany. In Berlin more than a dozen American film companies are represented, and all are reported to be doing a fair business. With one exception they are represented by Germans. Three other American firms have combined their representation in one agent.

A moving-picture operator in Berlin is paid 30 to 40 marks ($7.14 to $9.52) a week. Operators in the smaller cities receive 20 to 30 marks ($4.76 to $7.14).

Consul General Frank D. Hill, Frankfort on the Main, says moving-picture shows are in operation in all cities of any importance in that district and in Germany. According to an estimate recently published in a local paper, there are 2,500 such shows in Germany, of which 300 are located in Berlin. There are some 15 moving-picture shows at Frankfort on the Main. The more important establishments renew their programs twice a week.

Films are manufactured by a number of German houses, of which the most important are in Berlin. The average production of leading German concerns is estimated at 3,280 to 3,937 feet per week. There is, however, an excellent market for foreign films in Germany, three-fifths of those exhibited here, according to reliable estimates, being imported.

Dealers advise the office that German manufacturers have greatly improved their product during the last few months, paying much more attention to quality of material used, subjects, and talent employed. Some of the leading Berlin stars now act for films.

The film business, particularly in foreign films, is conducted as follows: The manufacturer has a general agent in Berlin, one man often representing several firms. This agent travels through Germany, making the entire circuit every two weeks with his new pictures. There are about 45 customers to be seen in the different centers. In each city of any importance there are one or more houses which buy the films outright from manufacturers; the price paid for good films being 1 mark (23.8 cents) per meter (3.28 feet). These firms then let the films to the moving-picture shows, which keep them sometimes a few days, sometimes weeks, according to popularity and intervals at which programs are changed. The so-called "verleihanstalten"—firms which buy films from manufacturers and rent to shows—are often important concerns, well fitted up, with rooms for showing pictures, etc.

French films are very popular there, and English films also find a good market. The English subjects are good, but complaint is made that on account of the dampness of the English climate the films do not last. American films are also in demand, the office being advised that some ten American manufacturers are represented at Berlin. The subjects most in demand are those dealing with Indian life, cowboys, wild west scenes, etc. Pictures must be of such a character as not to come into conflict with the censorship exercised by the police.

One of the great difficulties experienced by American firms is in having copies made abroad. After the American agent has secured his orders he must get copies, as it is impracticable to wait until the films desired can be obtained from the United States. One of the first steps to be taken by the American house is to make a contract with some reliable European manufacturer for copies. The contract must be made with great care, particularly as regards delivery, as it is often in the interest of the European firm to delay delivery. The following case has been reported to the office as illustrative of the difficulties of the American importer: The Berlin agent of an American manufacturer had secured orders for 30 copies of a new film. Copies were made in Paris according to previous contract with a French film manufacturer, and were delivered just too late to enable the agent to fulfill his contracts with the German customers, with the result that acceptance was refused in every instance.

An American house desiring to sell films in Germany should secure a reliable general agent in Berlin, which is the principal market for films, and pictures are submitted to police censorship there. At least three pictures a week should be turned out in order to make the business pay, the agent's expenses, particularly for traveling, being heavy.

Moving-picture machines are manufactured in Germany, and French machines are also used there. A good machine can be purchased for 950 marks (about $225).

The Moving-Picture Craze

James W. McGee in Chicago Examiner.

The moving-picture craze has spread
Like measles through the land,
And every town and village has
Its own peculiar brand.
The cities like the rural scenes,
With pumpkins, corn and hay;
The country wants the city scenes,
The Bowery and Broadway.

The vivid views of "Western life"
The small boy greets with glee
Are only meant for Eastern states
And Eastern eyes to see.
The Southern views of "darkey life"
The pictures claim to show
Would get a cool reception
Where the cotton blossoms grow.

The great, immortal Washington
Can nowadays be seen
To cross a local Delaware
With ice cakes painted green.
Napoleon, too, is pictured
On the field of Waterloo;
The field looks quite familiar
With its peaceful Lake View hue.

The fiery steed Napoleon rides
Would not be known today
As one that drew a State street car
For years along the way.
But moving-picture scenes are set
In most peculiar ways
To fit the public's latest fad—
The moving picture craze.

Health Campaign in Pictures

A campaign for the instruction of the people of Richmond, Cal., in good sanitation and the principles of health through the exhibition of moving picture films in the local moving picture theaters is being actively waged. Such an action would be in line with the recommendations of the state health officers, in session in Santa Barbara, in connection with the League of California Municipalities conference, and with the actions of several other cities throughout the state who have followed out such a plan. Some opposition is being experienced by the advocates of the scheme on the part of the moving picture theater proprietors, who fear a loss of business by the action, but others declare themselves willing to do all in their power to aid in the public instruction in that fashion.

The Motion Picture Exhibitors' League of America

General Headquarters
703 Euclid Ave., Cleveland, Ohio

OFFICERS OF NATIONAL ASSOCIATION.

President, M. A. Neff, Lock Box 15, Cincinnati, O.; Vice-Presidents, S. E. Morris, Cleveland, O.; William Ullman, Detroit, Mich.; H. S. Dickerson, Winchester, Ind.; H. C. Farley, Montgomery, Ala.; H. G. Lux, Jr., Utica, N. Y.; William J. Sweeney, Chicago, Ill.; E. W. Waugh, Huntington, W. Va.; Fred J. Harrington, Pittsburgh, Pa.; Secretary, C. M. Christenson, Cleveland, O.; Treasurer, J. J. Rieder, Jackson Mich.

MOTION PICTURE EXHIBITORS' LEAGUE OF OHIO.—Headquarters, 1003 Mercantile Library Bldg., Cincinnati, Ohio. President, M. A. Neff, Cincinnati; First Vice-President, W. A. Pittis, Conneaut; Second Vice-President, J. H. Broomhall, Hamilton; Treasurer, O. B. Weaver, Dayton; Secretary, J. J. Huss.

CLEVELAND LOCAL NO. 1—Headquarters, Commercial Bank Building, Cleveland O. President, S. E. Morris; First Vice-President, F. E. Simmons; Second Vice-President, C. F. Schroeder; Secretary, L. H. Wilk; Treasurer, W. C. Kaspar; Financial Secretary, F. M. Kenny.

CHICAGO LOCAL NO. 2—Headquarters, Fraternity Halls, 19 W. Adams street, Chicago, Ill. President, George Henry; Vice-President, C. A. Anderson; Secretary, Sidney Smith; Treasurer, Wm. J. Sweney; Financial Secretary, Simon Katz; Executive Committee, Robert R. Levy; Chairman, Fred W. Schaefer; Secretary, F. Natkin, L. H. Frank, C. H. Hull, Abe Balaban, C. C. Whelan.

INDIANA LOCAL—Headquarters, Indianapolis, Ind. President, H. S. Dickson, Winchester; Vice Presidents, H. F. Prentice, Terre Haute; Earl Rife, Logansport; Jos. Bommersheim, Ft. Wayne; Hershel Cannon, Muncie; W. R. Deaton, Warsaw. Secretary, F. J. Rembusch, Shelbyville. Treasurer, Jos. H. Gavin, Indianapolis. Chairmen of Committees: Arbitration, W. C. Yutsey, Lebanon; Grievances, Dr. J. M. Rhodes, Indianapolis; Legislation, H. W. Summer, Anderson; Insurance, Jno. A. Victor, Indianapolis.

CINCINNATI LOCAL—Headquarters, 606 First National Bank Building, Cincinnati, Ohio. President, J. J. Huss; First Vice President, A. J. Carbin; Second Vice President, M. Fishman; Secretary, A. C. Dingelstedt; Treasurer, Otto Leudeking.

MISSOURI LOCAL—Headquarters, Kansas City, Mo. President, G. H. Wiley; Vice-President, J. H. Sheldon; Secretary, Samuel Taylor; Treasurer, J. Steinens.

WINNIPEG LOCAL—Headquarters, Winnipeg, Canada. President, W. O. Edmonds; Vice-President, J. A. Schuberg; Secretary, F. Van Alstein.

MICHIGAN LOCAL—Headquarters, 302 Kirby avenue, E., Detroit, Mich. President, Peter J. Jeup, 399 Hibbard avenue, Detroit; First Vice-President H. F. Fowser, Lansing; Second Vice-President, J. J. Rieder, Jackson; Secretary, W. Lester Levy, 302 Kirgy avenue, E. Detroit; Treasurer, Carl Ray, Muskegon.

DETROIT LOCAL—Headquarters, 399 Hibbard avenue, Detroit, Mich. President, Peter J. Jeup. Vice-President, Patrick H. Reauhine; Secretary, W. Lester Levy; Treasurer, Fred W. Rumler.

WEST VIRGINIA LOCAL—Headquarters, Moundsville, W. Va. President, M. M. Wear, Charleston; First Vice-President, F. L. Harris, Parkersburg; Second Vice-President, A. L. Cottrill, Point Pleasant; Secretary, L. R. Thomas, Moundsville; Treasurer, P. W. Barett, Parkersburg.

Big Convention at Dayton

By Allen L. Haase.

DAYTON, OHIO, established a reputation for hospitality March 26 and 27 that other cities will find hard to improve on when their turns come to entertain the motion picture men. The occasion was the sixth annual convention of the Motion Picture Exhibitors' League of Ohio. The meeting place was all Dayton; but headquarters was established in the Algonquin Hotel, while Welfare Hall at the National Cash Register works was used for the assemblies.

The National League officers were on hand Monday the 25th, going into executive session which lasted far into the night. The convention proper did not begin until Tuesday morning. The officers and other early arrivals went to the Union depot to meet the delegation from Cincinnati at 10:30. Before they arrived, however, a train from the East brought in the representatives of the Motion Picture Distributing and Sales Company and the independent manufacturers. Among them were Carl Laemmle, Mark Dintenfass, J. E. Brulatour, Harry Raver, Herbert Miles, Charles Simone, Thomas Evans and Bertram Adler. Pathe and Gaumont pictures were taken of the arrival, but the bystanders rushed in and marred the beauty of the scene. Then with Mayer's band of Cincinnati, a procession was formed, which marched through the streets to the Auditorium theater, where President M. A. Neff called the convention to order.

Mr. Neff explained that more motion pictures would be taken when the members and guests assembled in front of the court house. He commented on the great hospitality of the cash register people, who offered not only the use of their hall but a dinner for five hundred as well. The substance of his address follows:

I cannot help but say one or two words in regard to our first meeting. Looking over this vast audience, I remember what our treasurer said to me one time in Columbus when it looked dark and gloomy for the Motion Picture Exhibitors' League: "Mr. Neff," he said, "I have had in my mind that the time might come that we, as motion picture exhibitors, can get together and work for the good and the common cause of all of us, and that we might sometime join in a meeting where we would have a banquet." He has already seen that come to pass at Cleveland. He is here today and he can see the work that has been done and the progress made.

Now, gentlemen, we are making progress. The Motion Picture Exhibitors' League isn't understood in a general way by the public. We have people who, it seems, do not understand or do not care to understand our motives. We are organized for the purpose of uplifting the business and eliminating those things that have crept into the business in an earlier day. The people now engaged in the motion picture business are business men. It isn't like it was eight years ago. Thousands, millions of dollars have been invested, and we are trying to uplift the business. We are trying to bring it prominently before the people that they can see what we now see. Of course many people in America claim to be educators—many educators will claim that they know how this is done and that, and they haven't even dreamed of the possibilities of cinematography. It is way beyond them, and yet they will come to it after awhile.

When you represent a business that is educating the world, when you represent a business that makes it possible for a man studying surgery to graduate in a year where heretofore it took him probably four or five years, you can readily understand what cinematography means. We are educating the people to sanitary conditions. We are bringing them historical pictures. We are not only educating them but we are amusing them. Cinematography cannot lie. It tells you the truth every time. If the picture is a fake-up, it tells you. If it is real, you know it. The practical eye looking at pictures will tell you quickly whether it is taken in a room like this or whether it is natural scenery.

I do not care to discuss this subject at length now, but I want to say this, that the Motion Picture Exhibitors' League is organized for good, and we want the support of every ladies' organization and every other organization throughout the country to co-operate with us in order that we may uplift the business and place it on so high a plane that they cannot throw and hit cinematography with any of their ridicule or abuse. We are in this business as business men, and as an evidence that we mean business all you have to do is to look around you today.

The president then announced that ex-Senator J. B. Foraker, counsel for the National League, could not be present to speak because of a sore throat. He then appointed committees on various subjects: Three

exhibitors from Bellaire, Columbus and Toledo, on colors of the Ohio League; three from Dayton, Cleveland and Cincinnati, on legislation, and six exhibitors on a general membership committee to interview every exhibitor not already a member. In appointing this committee Mr. Neff pointed out that every exhibitor outside of the organization indirectly added strength to the possible enemies of the League. Everybody was asked to register.

It was announced that the leagues of Missouri and District of Columbia had been affiliated with the national body—making eleven states since last August. Then the president introduced Mr. Harrington and Mr. Kreff of Pennsylvania, Mr. Sweeney of Chicago, whom he mentioned as the treasurer who gave three thousand dollars to charity in a day, and Mr. Morris of Cleveland. A group photograph was taken of the convention and the meeting adjourned for luncheon, to meet at 1:30 at Welfare Hall.

At the afternoon session President Neff called the vice-presidents of the various state leagues to the platform. He then read the following telegrams from Senator Foraker and Congressman Cox:

M. A. Neff, President Motion Picture Exhibitors' League, Dayton, Ohio: I regret more than I shall undertake to express my inability to be in Dayton today. I have been unavoidably detained here. I sincerely wish you a successful and an enjoyable convention. Senator J. B. Foraker, Cincinnati.

M. A. Neff, President Motion Picture Exhibitors' League: I find at the last moment that it is impossible for me to be there. The Child Labor Bureau bill, one of the most important pieces of legislation in recent years, is apt to come out of the committee on the floor of the house at any time and it would be plain neglect of my duty if I were to leave here. It is a great disappointment not to be in Dayton and add my part in extending the welcome of our city. The importance of motion pictures has just come to be realized. I have observed their enterprise here within the last few months, and the part you are playing in giving to that community governmental and patriotic scenes is bound to be recognized by the public generally, because it cannot but inspire a great love of country and in our institutions. It is wholesome and you are entitled to every encouragement and co-operation. The tendency towards those human activities which create better standards of life is universally commended. James M. Cox.

Mayor Edward Phillips of Dayton then delivered his address of welcome. He said:

Mr. Chairman and Delegates to the Convention: I am most assuredly gratified to be called upon and privileged to extend to you the welcome of our city. Your association is recognized today as one of the leading educational institutions of our country and the interest manifested by all classes of our people demonstrates the fact that your efforts for their entertainment are being appreciated by them.

Not very many of us have had opportunity for travel, not only in our own country but abroad. One can go to almost any of the motion picture theaters today and see, possibly, ancient Egyptian scenes, scenes in the jungles of Africa, actual occurrences in the land of the midnight sun; or, coming to our own United States, life in New York, Chicago, or any of the larger cities; the beauties of Yellowstone Park, and life on the Mississippi. Aside from scenes of travel or those connected with historical events, one may see comedy, tragedy or some pleasing episode of daily happenings almost anywhere. The people are also interested from a standpoint of recreation and the relief from toils and struggles of everyday life.

Again I desire to say that you have come to stay.

Therefore, on behalf of the citizens of Dayton and in my position as chief executive, I bid you a sincere and hearty welcome. May your deliberations and council be harmonious and profitable, and when you return to your own homes and firesides I trust that you will look back with much pleasure to your visit to Dayton, the best city in the best state in the best country on the globe.

Mr. Neff made a suitable reply to the Mayor's address of welcome, thanking the citizens of Dayton and the officers of the N. C. R. Company.

President Neff's response follows:

Brother Exhibitors, Ladies and Gentlemen: In behalf of the Motion Picture Exhibitors' League of America, Ohio State League No. 1, I wish to thank his honor, Mayor Philips, for the kind expression of friendship and good will. In behalf of the exhibitors and their friends in attendance at this convention, I accept the keys that he has so generously presented to us, and assure him, while this key will unlock the doors of Dayton to us and bid us welcome, we are not unmindful of the generous hospitality and personal greetings that we have all received since coming to your fair city.

I want to thank each and every citizen of Dayton for their kind consideration and splendid reception. As I view your magnificent buildings, your well-paved streets, your beautiful parks and your natural surroundings that nature hath bequeathed to you, assisted by the scientific hand of genius, and the progress, the rapid growth and hundreds of factories, I congratulate you upon your commercial activity and splendid prosperity.

We wish to thank the good citizens of Dayton who have so generously contributed in assisting Local No. 5 in bringing our convention to your city and making it such a grand success. We wish also to advise you that your entertainment of the Motion Picture Exhibitors' League of America in your city is like bread cast upon the water. The pictures that have been taken of Dayton will be shown throughout the world.

It is not necessary to tell you what that means. Cinematography, with the rapid growth of its popularity, is educating and amusing the world—especially the great industrial class. Cinematography today is practically in its infancy. The great field of education and advancement that will be made in the next two or three years through and by the motion picture is beyond the mind of man to comprehend or foretell.

An educator that can reduce the student's years of study from five to one year and more efficiently equip him for his profession must be acknowledged as marvelous. That is what the motion picture is doing. An educator that can direct the hand of surgery and at the same time assist medical science is most wonderful. An educator that eliminates all that is false and brings to the world only those things which are true shall be recognized as not only the advance agent of education but the greatest benefit known to modern civilization.

Through cinematography the world is daily growing smaller. It is bringing all nations of the earth, in a sense, together. It brings the beast of the jungle to your very door. It shows you the ways and environments of city as well as rural life.

If cinematography is protected and not used by scheming politicians and others for unfair purposes and self-aggrandizement, the good that will be accomplished will advance us hundreds of years, make us more proficient, and, above all, educate us to a higher standard of forbearance and friendship.

Our organization is organized for the purpose of uplifting every branch and every part of the motion picture business, to weed out the undesirable, to bring about conditions that will appeal to every fair-minded man and woman and educate and daily disseminate intelligence to the great industrial class throughout the world.

Mr. Neff then introduced to the exhibitors the general manager of the Cash Register works, Mr. E. A. Deeds. Mr. Deeds said:

I appreciate very much the hearty response you have given after an introduction of this sort; I appreciate it and will take it for those men that have helped entertain you people and will do so in the next days. We are interested in your work. We are interested for two reasons: one is because you are an organization. If there is one thing more than anything else that we have tried to advocate it has been organization. We have spent more time, probably, in our business along that one line than on any other one line—that of bringing our organization closer together and bringing it up to the highest state of perfection that we possibly can, and what little success we as a company have attained has been on account of our organization. And I want to congraulate you people on having gotten together in an organization. I want to congratulate your president, Mr. Neff, on having been able to get together such a body as this. I believe that I am in position to appreciate more than some of you the amount of work that it has taken on his part to bring about this assemblage, an organization of people whose interests at first seemed diversified, but who after all are all interested in one common thing. And I want to congratulate you on the work that you are doing in trying to get together and help push ahead your business, and that is what you are here for—to talk things over.

We are glad to have you here and extend to you a most cordial welcome, so that you can come here with your deliberations.

This is a new hall. It has only been used for the conventions of our own people so far, and your convention is the first, except the cash register convention, that has ever met in it; and I feel that it couldn't be better dedicated today than to the motion picture people.

The second reason why we are interested in this thing is that we have always believed in education by pictures. Years ago, before the motion picture was developed, we had, in order better to instruct our people, to get the old-fashioned stereopticon lantern slide, and in our school work, teaching our own people here, we found it a most invaluable thing. In other words, we couldn't run our business today if it wasn't for the stereopticon and the lantern slides. It has become a vital part of our organization. The motion picture goes still farther along this same line, and this hall was designed primarily as a place where we can properly exhibit our motion pictures and other pictures before our conventions and the different schools and agents and factory people, so that we can build up our organization.

We are interested in the picture business. We want to see what the latest things are so that we can have them and keep our people up to date. It is an educational process, and you people have the grandest opportunity in the world along that line. It won't be five years until the whole public is going to realize that the motion picture exhibitors are the most powerful educational factor we have in this country.

You have the opportunity of getting hold of the people and bringing together and concentrating the advanced ideas from all over the world. There isn't anything so broadening as travel, and to the people who cannot travel you are able to bring the thing and lay it down in front of them, just as it actually is, and we want to congraulate you upon your work. At first you had to start out to entertain the people. And we are glad to see that educational films are being run, and in most of our motion picture shows here in our own city, every week and more frequently at times, there are certain educational films run along that channel. You have a grand opportunity and I know you are going to use it.

We wish you the most successful convention you can possibly have and I want to extend to you the hospitality of this factory. It is yours for a day or two. You can have any piece of it or run it any old way you please. We turn it over to you and you can make any suggestions you want to, and if there is anything over there that you think will help you in your business just take it home with you.

Following Mr. Deeds' address a number of Kinemacolor views of Dayton and the N. C. R. plant were shown. Then the convention listened to a talk by Mr. Hope Jones on the subject of "Music." Mr. Jones is an expert on organ building and is employed in that capacity by the Rudolph Wurlitzer Company of Cincinnati. He said:

I have a few words to say to you on the subject of music. We have been hearing how the motion pictures are to be uplifted. We all welcome that. We all believe it. But there is one other thing that ought to be elevated, and I just think it may profit you if I say half a dozen words upon the subject; and that is the music connected with the moving pictures.

There is no use trying to get finer pictures unless we have finer houses, and that is coming; and we also ought to get finer music, and it will pay you to do it.

The Rudolph Wurlitzer Company has taken this matter up especially and has employed me. I am an organ builder, but farther than that, I am an enthusiast. I don't care about the money end of it, but as an artist in the organ building I thoroughly enjoy myself. For forty years I have been building organs for the great cathedrals of England, and now I am in this country, and I have turned my attention to the improvement of the organ for secular purposes. The business is immense. Today one theater manager has ordered ten great big instruments, fifteen thousand dollars apiece, for his theaters, and so it goes. They are being taken up all over the country. And this is what I want to speak to you about. I put in for this company a large instrument with orchestral additions, placed in the Baptist Temple at Broad street, Philadelphia. In sixteen evening performances, by playing music for the people, we made a charge of half a dollar, and some seats a quarter; we crammed that great church, which holds three thousand five hundred people; we crammed North Broad street and Berk street and we actually had to telephone for the police reserves to dismiss the people. We have nothing else but this instrument, and one player to pay, and the instrument which cost around fifteen to seventeen thousand dollars was paid for in a very short time. Those people have been listening to that instrument now for over a hundred performances and still crowds come.

There is a great future, I believe, in combining those two things—an instrument that will attract the people, that will hold them, that will be heard blocks away, that will give them all the orchestral additions in addition to the fine organ tune; and those things, I think, will be a great assistance when these two are combined. I mustn't detain you longer, but I look forward to the pleasure of hearing the music going up as well as the pictures, because they ought to rise together.

The evening of the first day was spent in social recreation and amusement at Welfare Hall, where, starting at 7:30 films of the leading independents were shown on the screen. The name of the particular machine in use being announced and the whole being a good test of their respective projection ability. Two films were run side by side on the big double screen, affording a perfect comparison.

Miss Martha Russell, formerly with the Essanay Film Manufacturing Company, had projected an old Essanay print in which she had a leading part, after which she gave a short talk on "How Moving Pictures Are Made," letting loose a few trade secrets which better informed the exhibitors of some of the manufacturers' troubles in making films. The entertainment was over by 11:30 and it was a tired but happy bunch of exhibitors that poured out of the big hall. It was then that they learned of the accident to J. P. Chalmers, publisher of the *Moving Picture World,* details of which are given on another page.

Wednesday, the second and last day of the convention, dawned drizzly and drear every place but in the hearts of the enthusiastic exhibitors present, and nine o'clock found them on the way out to Welfare Hall again, where it was announced that Mr. Chalmers had passed away early that morning, and a subdued audience paid a silent tribute to their former friend and fellow worker.

The exhibits were inspected by those interested and President Neff asked the members of the Ohio state and local leagues to sign a charter in an adjoining room, after which a closed meeting was announced at which various resolutions were adopted. One of these was a resolution to investigate the law and arrange for Sunday opening of theaters. Several other resolutions were discussed; some tabled, some passed, and an adjournment was taken for lunch.

Wednesday morning's session of the convention was held behind closed doors. Sunday closing and other matters of importance were discussed. Each member of the convention was reported to have volunteered to do all in his power to procure such legislation as will open the doors of the motion picture theaters in all municipalities in the country on the Sabbath day. When this pledge was given, Welfare hall, where the convention is in progress, rang with applause.

Mayor Tynes, of Portsmouth, who owns and operates one of the leading places of public amusement in that city, said he could see no real reason why the authorities should close theaters on the Sabbath day, especially those in which harmless and entertaining pictures of real life are displayed.

"As a board of censors has been established that does real censoring by making it impossible for members of this league to exhibit anything that can be regarded as objectionable," said Mayor Tynes, "I cannot see what possible harm could come to our young people by giving exhibitions on Sundays. They would be kept off the streets and would receive wholesome and beneficial amusement that would really make better citizens of them."

Charles Johnson, of Washington Court House, J. M. Kaufman, of Gallipolis, J. A. Maddox, president of Columbus local, and many other delegates supported the stand taken by Mr. Tynes. The legislative committee that was appointed by President Neff Tuesday morning made a partial report. It was determined to watch closely all proposed legislation that threatened to be inimical to the legitimate interests of the motion picture men. O. B. Weaver, of Dayton, who is chairman of the committee, said he found little disposition on the part of Ohio solons to harrass them in their business. On the contrary, he declared there was a decided disposition to encourage the enterprise.

"They have found that the business is clean and conducted in the interests of public morals," said Mr. Weaver, "and for these reasons they are friendly to us. No public censorship could be exercised that is more rigid than the board whose rulings we voluntarily and cheerfully submit to."

The executive committee of the National League received applications for a state charter for New York from both Buffalo and Binghamport. Action regarding a charter was postponed. General organization was discussed. The committee granted charters to Kentucky, Missouri and the District of Columbia.

In the evening motion picture films of many concerns were displayed at the Hall of Industrial Education to the pleasure of a large assemblage. Vaudeville numbers were also given.

Wednesday afternoon a motion picture of the members only was taken.

At the session Wednesday afternoon of the Ohio Motion Picture Exhibitors' League, Toledo was chosen as the city in which the next convention will be held, July 16 and 17 being decided on as the date. The delegation of Toledo boosters had a walk-away in landing the convention, all opposition being easily swept aside.

The closing session was given largely to discussions and the adoption of resolutions, most of the work being of a strictly business nature.

At five o'clock the weary members returned to the hotel to prepare for the banquet which was scheduled for 7 p. m. at the N. C. R. building.

It was after eight when the crowd had assembled in the officers' club rooms on the tenth floor of the N. C. R. administration building, where Mayers' band tried to keep the people from getting impatient. The speaker arriving, disposition was made of 350 guests at a huge circular table, flanked on all sides and in the center with batteries of chafing dishes over burning gas jets.

The menu is reproduced. It was excellently served by white-clad, rubber-shoed employees of the N. C. R.

COFFEE TEA POSTUM
MILK MALTED MILK BUTTERMILK

After the eatables had been disposed of, Clem Kerr announced that Judge Sol Flatou would act as toastmaster, who then introduced F. F. Montgomery, who spoke of his ideals of the motion picture game. He thanked the local for their hearty reception when he opened the "Majestic" at Dayton, and stated that Montgomery was not trying to run anyone out of business.

C. M. Christenson, secretary of the National League, was next with his thanks for the honor extended him, which he could not fill on account of his unpreparedness.

The *Billboard* was then called on, but its representative was not present, so the toastmaster called on President Neff, who complimented the ladies for their beauty, the city of Dayton for its enterprise and the N. C. R. for its hospitality.

Hon. John J. Lentz, of Columbus, was next introduced. Mr. Lentz stated that he had left a legal case in Columbus that afternoon at Mr. Neff's solicitation, and although tired and not quite fit he would try to say a few words of what he thought of the moving picture industry.

Mr. Lentz' speech, delivered impromptu, was a masterpiece such as only the most popular stump speaker in Ohio could give. It interestingly ran on and on, so that although his auditors were frequently brought to their toes with his stirring oratory and more frequently halted the speaker with their thunderous applause, it could not be printed in Motography verbatim—in fact there was no stenographer to take the speech.

The subject of his talk was "Education," and he pointed out how the exhibitors are greater than doctors, lawyers, ministers or school men, because they are making it possible for a child of ten to get the same knowledge now obtained only after years of study and application in a very short while.

He pointed out with deft allusions the prejudices that have cursed the human brain, citing the burning of women at Salem for witch craft, the mutilation of Quakeresses in Virginia for preaching their religion, giving as the new battle cry of the M. P. men Thomas Jefferson's speech that he "had sworn on the altar of God eternal hostility to every form of tyranny over the human mind."

With oratorical exactitude he led his hearers back to themselves, showed how they were helping to liberate the human mind from the tyranny of ignorance, how they were broadening the intellect of young boyhood and young womanhood and old boyhood and old womanhood, cleverly introducing a southern story of two Georgia crackers who had decided to emigrate, who hitched their oxen to a prairie schooner and starting early in the morning, trudged the road westward until dark. After feeding the oxen and themselves they lay down to sleep. Before reaching snoreland she, reaching over to him, said, "John, how fur hev we come t'day?" "Wall," says John, "they say a ox team kin travel 18 miles in a day." "Gee! John, is the world as big on the other side of Georgia as it is on this side?" "Yas, indeed, an' bigger, too," says John. Mr. Lentz said there was no reason for questions of this sort today and moving pictures were the cause of this better knowledge of the world and all its phases.

Those who wish will have a chance to hear Mr. Lentz at Chicago in August. He promises to come and be ready. It is worth a lot to hear him speak alone.

Following Mr. Lentz, Mr. Fairburn, of the Dayton *News*, said a few words, and then William J. Sweeney, of Chicago, was introduced amid the wildest burst of applause. Mr. Sweeney spoke of Chicago's promise and stated that his eyes had been opened by Dayton, so Chicago would have to go some to beat her. He thanked the various committees, the city and the N. C. R. and sat down.

He was followed by Fred Harrington, of Pittsburgh, president of the Pittsburgh Local, who delivered a great

little political speech on the referendum, initiative and recall, winding up with an appeal to liberate the other half of the slaves by giving women equal suffrage.

Miss Hazel DeVinne gave a piano solo and the entire audience rose to sing "Auld Lang Syne," after which the leave takings began in earnest.

CONVENTION NOTES.

If there is any one name that will go thundering down the ages of the historical records of the Dayton Local No. 5, it will be that of Clem Kerr, president of the Local. With only two members of the league in Dayton and one of them delinquent, he took upon himself the task of organizing the exhibitors of Dayton preparatory to the holding of the convention. The story of the persuasive diplomacy, worry and tribulation, no matter how aptly related, cannot be appreciated unless the reader has had similar experience. Mr. Kerr succeeded in getting the 30 exhibitors of Dayton to join the local, applied for and obtained affiliation with the National organization, secured the promise of assistance in the shape of a banquet and entertainment from the Dayton Chamber of Commerce, and at the last minute was advised that the proceedings were off. With the convention date set for ten days ahead Mr. Kerr personally interviewed merchants, hotel men, banks, factories, and arranged for $800 of subscription. With this sum he went to Mr. Hale, of the welfare department of the N. C. R. works, explained the situation and pleaded for the sake of Dayton as well as for the sake of the Dayton Local that the N. C. R. would serve a dinner for 500 guests for this sum. Mr. Hale, a shrewd, broad gauged man, mused a moment and replied, "We will serve your people a dinner; we will grant you the use of Welfare hall for your meetings, but we cannot take your money." Not only Dayton and the Ohio League but the National League as well owe a great deal to the fairness and wholeheartedness of this man and this corporation.

Adler, of Thanhouser, is the great little press agent. He bulled the local papers that Mrs. Miles was his wife and that she was formerly Adam Kessel Jr.'s daughter, his recent marriage to her fixing him for life as general manager of the Bison Company.

Harry Raver was a symphony in Brown.

Herb Miles was looking his best and was the center of a throng discussing the Mutual all the time.

McQuade was the second busiest man at Dayton, the first being M. A. Neff.

Bradlet in a uniform was mistaken for a guide to the N. C. R. lots of times.

Why not let Mr. Lentz prepare a speech for the Chicago convention? Ohioans, please note.

Harry Raver is against gambling in any form at any time, but more especially when his flush isn't good for the pot.

No. 512 was a popular room nights.

Who broke the glass door in Kenny's room?

Mrs. Schmitz was at once the most popular as well as the jolliest exhibitor present. She adopted Sweeney and Mandelbaum as her boys at once.

R. R. Nehls was reading Japanese to any one who'd listen, and Dick is some Jap reader, believe us.

Morris, of Cleveland, is the foxy guy, sending candy home to the cashier—or was it the wife?

Schrader is the lord high master of hurdle jumpers. Says he's training for Chicago next August.

"Tell it to Sweeney" is getting to be a regular league slogan. Big Bill sure is the popular man. One of the local papers spoke of him as the largest single exhibitor on the premises, and complimented him on the size of his feet. Bill weighs 230, and his heart and mind are just as big.

J. E. Brulatour was heralded by the local press as the world's greatest film celebrity—which would be true if there were not so many others deserving of mention.

Death of J. P. Chalmers

James Petrie Chalmers, publisher and editor of the *Moving Picture World*, died March 21 at 6:15 a. m. of injuries received the evening of March 26. During the convention of the Motion Picture Exhibitors' League of Ohio at Dayton he fell down an elevator shaft in the convention hall, and, according to statements of several who were near, crashed nearly eighteen feet to the cement floor. The convention meeting was in progress and no one knew who the injured man was. A former moving picture man, now employed by the National Cash Register Company, found the body, horribly crushed. The company's physician was hastily summoned and, after an examination, ordered the injured man sent to Miami Valley hospital.

Frank Winch. D. W. McKinney, Bertram Adler and Harry Raver heard of the accident and hurried to the hospital in a taxi. Mr. Winch saw the injured man and declared that he was unrecognizable. Mr. Chalmers lived at 123 East Twenty-third street, New York City. It was his practice to go to his father's farm in Connecticut every Saturday, where he would stay until Monday morning. He was a man of exemplary habits and a manner that won for him a large number of devoted friends. In his particular branch of journalism he had few equals. He was fifty years old and unmarried.

Resolutions of condolence have been passed by the various Motion Picture Exhibitors' Leagues, of which the following are examples:

Whereas, Almighty God, in His divine and infinite wisdom, has called suddenly from our midst our esteemed friend, James Petrie Chalmers;

And Whereas, Illinois Branch No. 2 is desirous of offering condolence to those who were bound to the deceased by the nearest and dearest ties, on the great loss they have sustained;

Whereas, James Petrie Chalmers was a splendid type of man in every sense, a devoted and affectionate son and brother, who took an earnest interest in the affairs of this branch and the league;

Therefore, be it Resolved, That we, the members of the Motion Picture Exhibitors' League of America, Illinois Branch No. 2, in meeting assembled, extend to the family and friends of our deceased friend our sincere and heartfelt sympathy in their great bereavement, recognizing in this dispensation the hand of an all-wise Providence, who doeth all things well;

And Resolve, That it is our prayer that He who holds the destinies of men and nations in His keeping will afford them that consolation that He alone can give;

And Resolve, That these resolutions be forwarded to the family of our deceased friend, and a copy be spread on the records of this branch.—W. J. Sweeney, Sidney Smith, Julius A. Alcock, Committee on Resolutions.

Resolved, That we, the Motion Picture Exhibitors' League of America, Ohio State Branch, in convention assembled this 28th day of March, 1912, do hereby extend our sympathy and deep regret to the family and friends of James P. Chalmers, editor of the *Moving Picture World,* of New York City, who, through an accident, met an untimely death while attending our state convention at the auditorium of the National Cash Register Company, at Dayton, Ohio, on March 27th, 1912.

Resolved Further, That we greatly deplore the fact that this should have occurred as the result of our urgent invitation to Mr. Chalmers to be present at our convention, thereby causing great sorrow to not only his family and friends but to all members of this League as well.

Resolved Further, That we recognized in Mr. Chalmers a strong friend and advocate of our cause, one who always gave a listening ear to our pleadings for the betterment of the moving picture industry, and who, through his journal, voiced our sentiments to the people.

Resolved Further, That we extend a vote of thanks to the National Cash Register Company, of Dayton, Ohio, for the great care and attention bestowed upon Mr. Chalmers from the time of his accident until his death.

Resolved Further, That a copy of this resolution be sent to the family of Mr. Chalmers, to the journal of which he was the able editor, to the trade journals, to the National Cash Register Company, and that a copy be spread upon the minutes of this League.—Respectfully submitted, The Motion Picture Exhibitors' League of America, by C. M. Christenson, Secretary.

Mr. Chalmers is survived by his aged parents, a sister and a brother. His death is a severe blow, not only to the men of the trade, but also to those who, through business affiliation, came to know him in a closer relation.

Milwaukee Week's Attendance

Each week about 200,000 people attend moving picture shows in Milwaukee, according to a deputy building inspector, who has been investigating the subject.

Having been to fourteen moving picture shows in one night, he feels that he can be considered an authority on the subject. For his record making he selected the northwest side, where moving picture houses are not far apart. There are now forty-two moving picture theaters in Milwaukee with an average seating capacity of about 550.

Chicago Defeats Age Limit Law

Three hundred Chicago theater owners, employees and friends appeared before the judiciary committee of the city council March 18 and waged a successful fight against the proposed ordinance forbidding children under 16 to attend places of amusement unaccompanied by parents or guardians.

The committee vote, which was unanimous to place the proposed ordinance on file, was taken only after the members had listened to a lively two-hour debate on the question from a dozen different speakers. There were several warm altercations.

Mrs. H. S. Newton of the West End Woman's club, the sponsor of the measure; Mrs. Andrew P. Coon, representing the Illinois Federation of Women's Clubs; the Rev. E. K. Johnson, the Rev. Frank G. Smith, and Mrs. Frances Shaw were the speakers for the ordinance. They declared that such an ordinance was necessary for the protection of the children.

The moving picture men's battery of orators urged every conceivable argument against the passage of the measure. They declared that 60 per cent of the little theaters would be bankrupt in thirty days if the ordinance was passed, that outside realty values would be decreased, that the poor of the city would be deprived of their chief place of amusement and education, that 3,000 employes would be thrown out of work, and finally that the closing of the picture shows would mean an increase of delinquency among children because they would be thrown upon the street.

The Alhambra Theater at Shelbyville

By Charles F. Morris

DOWN in Shelbyville, Indiana, where the Mirror screen is made, there is a new picture theater. It was opened for the first time Monday, January 21. Its name is "Alhambra," and Frank J. Rembusch, president of the Motion Picture Screen Company, is its owner. Besides being the demonstrating theater for the Mirror-screen, it is a most beautiful and artistic house, and is equipped with pipe organ, upholstered chairs, and a number of other distinctive features.

After the purchase of the lot the first thought of Mr. Rembusch was to build a one-story theater building, and with that in view the architect presented the plans and specifications. These plans did not suit Mr. Rembusch, and after two months' work the present plans were accepted, as they outlined the ideas of the owner, to which the architect added his best work.

Rembusch's Alhambra Theater at Shelbyville, Ind.

The foundations are deep and heavy and two or three more stories could be added at any time.

The exterior is of Oriental brick, produced by the Martinsville, Ind., Brick Company, and was especially selected by the owner. An Indianapolis gentleman in looking at the building recently stated it should be called the "Persian Rug" on account of its appearance, especially when the sunshine strikes it and brings out all the various colors.

In reply to a question as to what design of architecture the building followed, Mr. Rembusch humorously stated that it first certainly must be American, being a mixture of various designs. Also the rough brick and suggestion of heavy piers in both interior and exterior, rather leans a little to the mission or bungalow style, which is original with America.

The office rooms are the finest in the city. Every room is steam heated and is perfectly lighted day and night. The Metropolitan Life Insurance Company has secured the front rooms and the rear rooms are all rented. There are three or four fine suites of rooms in the building which Mr. Rembusch rents.

Frank J. Rembusch.

The doors of the theater opened the first day at 1:30 p. m. and the first performance took place as matinee, commencing at 2:00 o'clock.

The price for the first day was ten cents. There is a matinee every afternoon during the year (that is, every day except Sunday) at five cents, from two to five o'clock in the afternoon.

The interior decoration of the theater follows somewhat the usual custom in theaters. Shades in the mural paintings are tan and green and the outline allegoric. The center figure, main panels, contains the Grecian comedy and tragedy ugly faces. This decorative work was contracted by Mr. Ramsing, a young Danish artist.

The building will seat about six hundred. It is thoroughly fire-proof in every way. The electric wiring is put in under the latest underwriters' rules and it is the best wired building in Shelbyville.

All the exits of the building are provided with patented door hinges and locks—"Von Duponts" patents. These special fixtures are so arranged that there is a bar extending across each door, and a slight pressure of anyone, even a child, against this bar will unlock it from the inside. They are the same locks that are used on the Murat theater at Indianapolis and the Alhambra will be one of the few theaters in the state with this arrangement.

The chairs are full mahogany, leather upholstered, and of specially beautiful design and very comfortable. They are the finest chairs made by the Wisconsin Seating Company, Port Washington, Wis.

The stage is large enough for

regular moving picture exhibitions, concerts, vaudeville and light stock companies. To quote Mr. Rembusch, "With all the talk of the high cost of living today, there is one great oasis, perhaps the one thing that keeps the human animal more contented than if conditions were not so. This is the day of cheap amusements, and you know amusement is just as necessary as bread and meat. Nothing but the very best pictures and highest class vaudeville will be shown, and nothing questionable will be allowed."

The floor is inclined or pitched so that every seat in the theater is excellent. Perfect ventilation is secured by natural and artificial means. The mezzanine floor is provided with a special parlor for ladies, and with every comfort possible. It is designed for theater parties and for those who desire reserved seats.

Some of the finest theaters in the East, in London and Paris, have the name Alhambra and this had some influence in its selection for this, Shelbyville's most beautiful and artistic play house.

The editor of the Shelbyville *News* asked Mr. Rembusch, "What's the tower for?" "What's the tower for?" Mr. Rembusch repeated. "Why, my dear sir, that is the means of identification. When anyone wants to know, Where is the Rembusch building? Where is the Alhambra theater? Tell them it is the building with the tower on it."

Club Women Interested in Pictures

The child welfare movement is one that is attracting the interest and attention not only of mothers and teachers, but of philanthropists, club women and the world at large. The women's clubs have done much good and practical work along these lines and to them belongs the credit of initiating many important reforms.

The Kosmos club, the largest women's club in Chattanooga, Tenn., is interested in the matter of films used by moving picture shows and realizing that the moving picture shows can be made a great educational force they are writing to the manufacturers of these films requesting that wherever their films are shown there will be something specially for children, and certain days be set aside as children's day.

Kosmos club is asking the federated clubs of the country and the National Congress of Mothers to join in this demands. The following letter has been sent out by Mrs. M. N. Whitaker, chairman of the Child Welfare department of Kosmos club:

"The mothers of the country are demanding of every educational agency that it not only educate mentally, but that it give a pure and sane outlook on life. The picture show is one of the strongest strongest influences on child life. It makes a strong impression, for it raches the mind through its strongest sense, the eye, and is becoming the most generally patronized amusement. Because it is so popular and so powerful we are demanding a concession of the manufacturers of the films.

Scene from American's "The Range Detective," a Drama of the West.

On the Outside Looking In

By the Goat Man

NO less a legal luminary than Mr. Samuel Untermyer of New York is quoted as having said that "The entire United States is in the grip of the moving picture trust. So vicious is this trust that no competition is able to stand against it." This statement was defiantly hurled at the United States Senate Committee on Interstate Commerce. It is alleged to have been part of Mr. Untermeyer's testimony. I set this down here and am sorry I can't print the snicker that goes with it. It shows that really great minds are apt to go off half-cocked. Mr. Untermeyer ought to disillusion himself. He ought to put some money into a brand new film producing plant. He might pick up the Disturber where the angel dropped it. He would find out quickly that the motion picture trust has no grip on the United States. I wont attempt to go over the whole combination again. I've done that. I've attempted to show that the Patents Company has good legal legs upon which to stand and that the Sales Company is the shrewdest imitator of the Patents Company that ever happened and that there was no need for, nor a show for the Disturber or third emulator of the two combinations as they exist. Exhibitors of films are responsible for this condition. There is fierce competition in making and renting and showing of films. The profits in the business are gigantic and the losses are fierce. The "grip" Mr. Untermeyer refers to seems not to concern anybody except the outsider and Untermeyer has not been retained. I think the "grip" is necessary. I am sorry that there is so much selfishness among the insiders, but that is another story. I consider seriously only those things that come from within the two big-charmed circles, and nothing ever comes from those places. It is game for outsiders to shun, even Untermeyer and his kind.

* * *

In Chicago, as recently as Saturday, March 30, there was an independent pow-wow of exchange men and film makers. Our own Chicago Joe Hopp called the meeting and nearly everybody came a running. Since I had first pleasure in meeting the bunch—and it is always a pleasure—I note this great difference—everybody looked like real money. And a poor cuss always enjoys seeing how money is apt to effect those who get it in chunks and in a hurry. I have also been keen to observe that the independents are always there. I was shocked when I heard that Ingvald Oes missed the train. Oes always lends height to the meets—about six and a half feet of it. The chairs are all too short legged for his long legs. At any rate Oes wasn't at the Sherman house and I missed him. Charley Bauman and Dave Horsley came all the way from Los Angeles. Mr. Horsley had with him his wife and son, and Simone was there from New York. The Nestor folks weren't overlooking anything. Picturesque Pat Powers slipped the assignment to Tommy Evans and his wife. Herb Miles was on the ground with his trunk full of latest New York clothes and haberdashery, his sticks and Mrs. Miles—that rollicking little Missus who is always there with a capital T. Brulatour has cut out meat and coffee and most of the bill of fare, but he was florid and fat and younger than ever before. Ad. Kessel, Jr., had on seventy-eight more carats of diamonds and had shed his vest as an expedient for easy going. He wanted his meals served in the lobby as a convenience to the pages who were running around like mad with telegrams addressed to him. The Cochrans were there, both Bob and Tom, and Carl Laemmle and Rothacker and Tom Quill—gee, this close proximity of names might suggest something—but what matters it; everybody has known right along. Then there was Ed Thanhouser and Blache and Magee and—oh, yes, my good friend Kennedy—not J. J. (I can't be mistaken) I mean Aubrey. Now, Aubrey positively wouldn't tell why he came and that was purely a New York acquisition. He must have got it with his English topcoat. Well, why were they there? Nobody has told—not even Untermeyer, and that's a pity. If I'm missing any one it isn't intentional, for I don't owe 'em a cent. I don't even have to be good, but some time we'll all know each other better—this bunch of good fellows and the Goat—and we'll all feel better. What's the matter with me, anyhow! I was driving right through and forgetting Joe Engle and Harry Raver. What a narrow escape! But they got up awfully late—it was a hard game the night before and they had both quit winner, so they could afford to hit the pil-

Hip Pocket Essays

THE MANUFACTURER.

This is the high financier of the industry—the only man who can take a picture of yourself with your own permission and charge you money for looking at it.

Making moving pictures is not an industry, it's a cinch.

To be a manufacturer you must have a camera and a few spools of negative. Then you stand on the corner of a street—any street—any corner—and take a picture of the people hurrying past, including the wagons, autos, policemen and the pony followers, of course. Develop this negative—make a hundred prints of it and sell them to the film exchange for $110 each. The exchange rents one to the exhibitor, who charges you 10 cents to look at yourself.

A very popular and similarly high priced film is that of the animals in the zoo. Even the keepers go to see that film at 10 cents per see.

Then there is the dramatic film. This is made up of 100 feet of drama and 900 feet of titles. These are very popular.

Comedy films are made by nearly all the manufacturers. It was formerly the fashion to run the films backward to evoke the laughs, but even the public kicked at making one film do for two, so regular and irregular comedy is now being ground out by the manufacturer. Standard comedy requires one fat woman, or man dressed as a woman, one hero and some mob at 50 cents per head. The hero lays his hat on a chair. The fat woman sits on it. Shrieks of laughter by the audience. Climax—just a moment, please, the operator is fixing the machine.

Special films are made by nearly all manufacturers. One sends several train loads of wild animals to Aurora, Senegambia or some such place, takes elaborate scenes in gorgeous settings, spends ten or twelve thousand dollars advertising it, and his arbiters don't buy a single reel extra. Another pictures the Cubs and Giants for $7.32 net and sells forty more reels. No, children, you can't all be manufacturers, so be quiet.

low. Think about just having breakfast when it was time for dinner. Of course, I couldn't omit mentioning Sam Hutchinson and Freuler and Nehls and Doud who could run in and out while attending shop. · All they had to do was dodge a Clark street car.

* * *

I have said that Joe Hopp brought them here. He had brought the exchange men from all over, too. I wont attempt to name them. Some of these exchange men constituted individual grievance committees who were dead sore with their local Motion Picture Exhibitors' League members, but I won't trouble you with the details. I'm sure that the exchange men and the exhibitors, whether league members or not, will continue to get along. They always have and there is no good reason to think they will quit. One is necessary to the other, under present conditions, but present conditions are good only for today and the edge is in favor of the exhibitor, or I'm a poor prophet. The exchange men had first inning at the Sherman. Scene—Crystal room; action—closed doors. Their deliberations were followed by inviting the manufacturers in, when bang went the doors again. This much has leaked. Mr. Hopp heads a committee representing exchange men and Mr. Brulatour heads a committee of independent manufacturers who will meet at Atlantic City in a couple of weeks and fix it all up in ship-shape. They always do this. It doesn't take a wise man to prognosticate in the film game. It's a cinch to prophesy.

* * *

Kurt Waldemar Linn is organizing a company to make films in Los Angeles. Now what do you know about that?

* * *

I didn't go to Dayton, but I got it straight from Big Bill Sweeney, who goes where there is prospect of a crowd, and he has reported. I guess maybe these exhibitors are getting together, yes? Incidentally keep on telling it to Sweeney. You will be safe, alright. I'm going to tell you some things about him myself along about July, when I get completely thawed out and limbered up.

* * *

I saw Edison's baby projector, a little while ago. This is what it will do, besides giving you motion pictures in your home. It will be the stepping stone, the entering wedge for films into the public and Sunday schools of this and other countries. Here is a complete outfit with all experiment brushed aside—a fifth the size and a fifth the price of standard equipment. Nothing pleases me more than to know that the film service will be handled by Edison. Strangely enough the films themselves are on the basis of a fifth the price of standard stuff. I don't know how the thing settled down to five as the dividing unit, but there will be no junk films; no rental squabbles; no royalties; no melon-cutting; and, important part, the films will be clean and rainless — waterproofed and washed.

* * *

"Chalmers is dead" came the first message from Dayton from one of my good scouts. There weren't any details and I leaned back in my chair with my hands back of my head, my fingers clutched together, my feet on my desk and my eyes closed. I wont try to tell you my thoughts—all of them—but I saw the quiet, mild-mannered living man who built the *World* and who had a strangle hold on the film game. He stood out clear in my memory. Any man does who can put it all over you and not half try. Chalmers died with very few enemies and scores of friends. He had the faculty of getting out from under. It is a helpful gift. The papers told of a check that was found in his clothing when his body was turned over to the coroner. It was for $700. That is where the newspaper stories ended. I was curious. Newspaper men are not prone to carry around $700 checks—not even the affluent ones. Careful inquiry brought me the information that this check had a full growth of whiskers—it was old and had those mysterious and significant letters "N. S. F." stamped across its face. I am telling this to emphasize the character of James Petrie Chalmers. Anybody else would fight for $700. Anybody else would scorn phoney money. Chalmers carried it around as a pocket-piece; as a souvenir of the good old days. There are ways and ways to get away with the business of the film crowd. Chalmers knew how. He got away with it. No name has made a greater impression on me than this man's name. My sincere sympathy to his aged parents and his brother John and sister Eliza, who survive him.

* * *

There has been gradually developing a new, mysterious phase of film releasing—mysterious only to the outsider and completely surpassing his understanding. I can't illustrate it better than by example. It was during last fall that I accepted an invitation to see the Selig forces in the making of "Christopher Columbus." Without singing the praise of that film, I find Europe going crazy over it. Williams owns its

Miss Josephine Scotti, Cines Stock Company (George Kleine).

exclusive rights in Australia, and other foreign countries have had the privilege of exhibiting the masterpiece to its populace. We sit back in this country, playing second-fiddle to the rest of the world. As Americans, we like to lead and when the biggest film

Emilio Ghione, Cines Stock Company (George Kleine).

ever produced in America can ramble all around the world before we see it, there is something new in the commercial aspect of film marketing. Plain curiosity prompts me to ask why such a remarkable condition. When the American trade journals will be singing the praise of Selig's "Christopher Columbus," the editors will be prying open the casket of tradition. At the present rate the three reels will be as old as Chris himself before we get a crack at it. Here's congrats to my good friend Montagu, who gets his'n in London, fully matured while the griddle is hot!

* * *

Will somebody also explain why Tom Cochran concluded to go outside while the going was good inside? Tom made a stab at it in his two-page spread, but that wasn't really intended for the honest-injun reason.

* * *

And quite the smoothest piece of work was the admission of Gaumont to the Sales Company. I will never forget the really good Gaumont's. It is hard to forget the good things in life and Gaumont has had me on my toes more than once. Then there's the Sales Company Weekly—some addition to programs of the independents, believe me. And if you can't or wont believe me ask Frank Winch—he gets there with both of his tootsies—gets there all the while.

Are you getting ready for the Motion Picture Exhibitors' League convention in Chicago next August? I mean you, Mr. Exhibitor. Begin to think of it now. Begin to sequester and save. You'll be coming, that's sure. Chicago is already making plans and Chicago will give you the time of your life when you get here. Big doings are promised, but the thing for you to be doing is to get ready early; start early; stay late. There is one convention you can't afford to miss. See this paper and small bills for further details.

A Promising Film Advertising Campaign

By E. B. Lockwood.

The International Harvester Company of America is about to present a dramalogue, "The Dawn of Plenty," which will be illustrated with moving pictures and stereopticon views. After talking to Edwin L. Barker of the advertising department, one cannot fail to see the great possibilities of such a campaign. Those who have read "The Story of Bread" by him are the more interested when they learn that his idea is to take the same subject and show it from another angle, using moving pictures and stereopticon views to illustrate it.

The services of Henry E. Joy have recently been secured to lecture on the subject. He is known as a very talented lecturer and working with Mr. Barker there is no doubt that "The Dawn of Plenty" will be a great success. This dramalogue depicts the long hard struggle of mankind to secure bread enough to eat. From the time when famine and war ravaged over the face of the earth, up step by step through the ages to the present day of plenty, when even the poorest can have this same bread which at one time was a luxury enjoyed only by the wealthy; a subject so old and yet so new that one becomes deeply interested and impressed not only with the human side of the story but its great possibilities in the form of a dramalogue. Mr. Barker intends to keep "The Romance of the Reaper" up to its present standard and also place "The Dawn of Plenty" before the public in such a way that it will be greatly appreciated.

We all admit that the International Harvester Company has a great story to tell, but so have many other firms. Shredded Wheat Company and many others have launched successful campaigns of this nature in the past, but the International Harvester Company has set a pace that will be hard to beat.

Picture Copyright Bill in House

Stipulated penalties for moving picture operators, singers, newspapers and others who unconsciously or unknowingly violate copyright laws are provided in a bill which Representative Edward W. Townsend, of New Jersey, creator of "Chimmie Fadden,'" introduced in the House, March 26. The bill was referred to the committee on patents.

Under the Townsend bill it will cost a newspaper not more than $200 and not less than $50 to reproduce a copyrighted photograph without permission. A moving picture exhibitor who unknowingly presents any part of an undramatized work may pay from $50 to $1,000. A maker of motion pictures who distributes such films may be compelled to pay from $250 to $5,000 for his error. Reproductions of dramatic or musical productions in violation of copyright are penalized at $100 for the first performance and $50 for each succeeding performance. Delivery of lectures, sermons, speeches, etc., violating the law, will cost $50 for each offense.

Scene from Selig's "The Redemption of Greek Joe," a Story of Life in the Alleghany Coal Mines.

Making Motion Pictures by Pencil

"Epochs in art while you wait," might almost be the title under which Windsor McCay, cartoonist, could talk to an audience.

"The coming artist will make his reputation not by pictures in still life, but by drawings that are animated," says Mr. McCay.

"People will not be satisfied with 'The Angelus' merely. The persons in the picture will have to show some action."

Mr. McCay is led to this belief by changes that he himself has brought about in the method of depicting life in drawings. He has created the animated cartoon and the animated serious picture as well, in each of which the thousands of drawings necessary are made by hand with only a slight change in each drawing.

Mr. McCay is showing a moving picture of the mosquito. Concerning this series of drawings produced by himself and colored, he said:

"There are 600 feet of film in that picture, with 4,000 different drawings. It requires 16 drawings for each second of time in the moving picture. In the Nemo film, which was sold to a moving picture company, there were 8,000 different drawings. The mosquito picture was cut to some extent, because it made the act a bit too long. I have also sold this picture to the same company that bought the Nemo film, with the provision that it be not shown in the United States.

"An immense amount of work is, of course, necessary in producing a moving picture in which the thousand little scenes are drawn by hand. They are first prepared on large cardboard just as if they were to be reproduced in a newspaper, with only a slight difference in each picture. They are photographed by a moving picture machine one at a time, the operator using a stop arrangement on the apparatus so he can take one picture, pull out the drawing, turn the machine to the next film, put in another drawing, etc. All this requires a lot of work and a lot of time. I was from May until January getting the mosquito picture in shape for exhibition.

"What interests me the most, however, is the possibilities of serious and educational work with this method of producing moving pictures. I have already had a conference with the American Historical Society looking to the presentation of pictures showing the great monsters that used to inhabit the earth. There are skeletons of them on exhibition and I expect to draw pictures of these animals as they appeared in real life thousands of years ago and show them as they trampled their way through the dense jungles, ate a stump or pulled down a tree or hand a battle with others of their kind. There is almost no end to what an artist might do with such an idea. That is why I say the coming artist will have to do something besides present a picture of one scene and no action."

Because four of the five picture shows in Oskaloosa, Iowa, jointly have leased the fifth and closed it up, County Attorney Patterson is making an investigation looking toward prosecution. He holds that they have organized a trust in restraint of trade and are liable under the Iowa statutes to a fine of from $50 to $1,000, or from thirty days to one year in jail.

A Film Treatise on Instructing the Blind

Selig's "Wolcott Coombs"

Motography for February contained an article entitled, "A Blind Boy's Interest in Pictures," which attracted a great deal of interest on account of its very unusual nature. The boy, Wolcott Coombs, himself has now been made the subject of a remarkable film—or rather two films. One of these is a half-reel for regular release, dated April 5. The other is a much longer treatment, about 1,500 feet or so, for lecture and scientific purposes, and is a special release.

The first, or popular subject, shows Wolcott Coombs, the seventeen year old blind and deaf boy—who in three years, under the instruction of Harry L. Virden, has accomplished more than many sighted boys do in twice that length of time—and a partial list of his accomplishments, such as expert hammock weaving, caning chairs, reading and writing in the various systems for the blind, using the typewriter, etc. In this country there is no school for the deaf-blind, and very few of those thus afflicted have the proper equipment with which to study. Three years ago Harry L. Virden, then principal of the Oklahoma school for the blind, became interested in young Coombs, who was attending the institution. Without hope of remuneration, Mr. Virden resolved then and there to devote his entire time to perfecting this boy's education and practical training. The film shows the result of his efforts, which are being watched with more than usual interest by educators and physiologists throughout the country. Young Coombs is as ambitious as he is interesting, and is now preparing to enter college where he will be taught history, economics, etc., under the direction and tutorage of his friend and teacher, Harry L. Virden. Later on Coombs hopes to establish a shop where he may direct other sightless boys in the practical arts. But the greatest and most praiseworthy of all his ambitions is the hope that some day he may be instrumental in establishing a school for the deaf-blind in this country where others in his condition may secure the educational advantages that he has enjoyed.

The longer special film is simply an elaboration of the shorter regular one—or rather, we may say that the shorter subject is an abstract of the longer.

Briefly, it may be stated that the methods of teach-

Wolcott Coombs at the Typewriter. Prof. Virden Inspecting His Work.

ing the deaf-blind combine the methods used in teaching the deaf with those used in teaching the blind. The pictures show first the methods of conversing with the deaf by the familiar manual alphabet and the "sign language," which is really a sort of manual shorthand. These systems, being essentially visual, are not suitable for the deaf-blind, and other methods are resorted to. The simplest is printing letters in the palm of the hand with the end of the finger; and naturally the evolution of this system develops an abbreviated or condensed form analogous to the sign language of the deaf. The process of reading the types for the blind is shown. There are four systems of blind types: the Moon, Line, New York Point and Braille. The Moon and Line systems follow closely the regular alphabet, and are used mostly by those who become blind late in life and are not inclined to learn the peculiar code used by the New York Point and Braille systems. The latter are used in schools for the blind. There seems to be little choice between them, and it would be a desirable thing if their exponents would co-operate in establishing a standard system, so that all the literature for the blind—none too voluminous at best—would be available to all those afflicted. Both systems,

Wolcott Coombs, Kathlyn Williams and Prof. Virden in Selig's Animal House.

as is perhaps well known, consist of series of raised dots. Wolcott Coombs has learned to use all of the systems fluently.

An interesting scene in the film shows Prof. Virden instructing Coombs in the use of his vocal cords. This is done by examples. Coombs places his fingers upon the lips of his instructor, while the latter spells upon his hand the word he is pronouncing. The principles of articulation are thus imparted, and while the process is necessarily slow, remarkable progress has been made.

The boy's use of the typewriter, both regular and Braille models (the latter printing the raised dot Braille type) is shown, as well as a sample of his work—which, by the way, would put to shame many a sighted stenographer. He is also shown writing script, which he has been taught to do very well indeed.

The industrial occupations described for the short film are shown also in the longer one, with sundry elaborations and details. In this connection it is interesting to know that Prof. Virden has fitted up a little shop for the boy, who not only attends to the manufacturing end of the business, but conducts the correspondence and keeps the accounts.

Much of the instruction is by means of models so constructed that Coombs may learn their form to the smallest detail by the sense of touch. History, architecture, the drama, geography, etc., are imparted readily in this manner, and Prof. Virden has become adept at making little models of all sorts of things for the boy's benefit.

The process of reading to the boy is also shown. It consists merely of rapid translation by the manual sign language of the matter being read. It is astonishing how thoroughly posted Coombs has become on current as well as historical events.

The short film will be intensely interesting to the thinking class of people, for it opens a new vista of possibilities in the care of those afflicted with blindness or deafness or, worst of all, both. The more complete special film is really an exhaustive treatise on the same profound subject, with Prof. Virden as the author and Selig as the publisher. And it stands as a monument to their broad humanitarianism; for neither has a thought of financial gain in exploiting the subject. Furthermore, the fact that Coombs was *not* an extraordinary subject is sufficient comment not only on the peculiar fitness of Prof. Virden for this work, but on the practicability of teaching others as Coombs has been taught—when we awake to our duty toward our afflicted.

Philadelphia Age Limit Law

Children less than thirteen years of age, unattended by adults, will be barred from Philadelphia's moving picture theaters after 9:30 o'clock at night and during school hours, according to an ordinance which has been prepared by Common Councilman Robert D. Dripps.

It had been his intention to have the age limit placed at sixteen years, but this met with the objection of J. Louis Breitinger, counsel for the Exhibitors' League of Pennsylvania. After conferences on the subject, thirteen years was agreed upon as the minimum age. Violation of the law may be punished by a fine of $5.

The proposed ordinance, which was drafted by Mr. Breitinger and sent to Mr. Dripps follows:

Section 1. No owner or owners or leasee or leasees or the president of any corporation owning or leasing any building or grounds or any manager or director or doorkeeper thereof or anyone having control of any building or buildings or the premises connected therewith or of any tent or tents or enclosure or any other method of construction used as a theater, roller skating rink, public dance hall, museum or for the purpose of giving acrobatic performances, tragedies, comedies, or farces or for the purpose of exhibiting stereoptical views, either fixed for moving pictures or the exhibiton of trained animals, theatrical performances or any other equestrian circus or menagerie or museum or wild west show and any exhibition of personal skill or the performance of some act of any character whatever for the amusement of the public, shall permit any minor child under the age of thirteen to enter or remain in such place or places unless said minor is accompanied by and in charge of an adult of full age not furnished or provided by such owner or leasee, president, manager, directoor or doorkeeper or the person in charge thereof after 9:30 o'clock p. m. or during the hours of school session of such minor child.

Section 2. Any person wilfully violating the provisions of this ordinance shall be subject to a fine of not less than $5 for the first offense and for each succeeding offense not less than $5 nor more than $25 for each offense, to be collected by process of summary proceedings before any magistrate, justice of the peace as like offenses are now collected.

Decatur, Ill., and Dallas, Tex., are among the cities which expect to use motion pictures in their regular school work before long.

Current Educational Releases

Fishing in Florida.—Lubin. A graphic illustration of the capture and slaughter of the huge Jue fish of our southern waters both as a sport and as an industry. The fish weighs about 600 pounds in some cases and fights hard for its life and liberty, but is quickly dispatched and prepared for the market.

Starfish, Sea Urchins and Scallops.—C. G. P. C. The first of an unusual series of scientific studies of these inhabitants of the deep showing how they live, move, eat and quarrel in their home.

New York Poultry, Pigeon and Pet Stock Association, Madison Square Garden.—Edison. A film which shows the prize winners only, magnificent fowls the monetary value of which extends into the thousands. They are all so arranged as to show off to the very best advantage and Uncle Hank from Virginia comes to visit the show with his nieces, to whom he takes great pleasure in explaining the different breeds. There are also guinea pigs, Persian, Siamese, Manx and short-haired cats.

Making Heroes.—Rex. This film shows the regular monthly drill which the Denver police are required to make in a sham battle with the flames which has so developed the department as to give it the reputation of being the most efficient in the world.

Blowing Up the John Day Rapids.—Rex. A film showing the scientific method employed by the United States government when it blew up the John Day Rapids recently, also showing each process by which the feat was performed.

The Electric Spark.—C. G. P. C. A very instructive educational picture which will interest every boy and girl. It shows many interesting experiments with this mysterious force.

Up From the Primitive.—Reliance. A natural history subject showing the growth of the lower forms of mud and water creatures, including toads, frogs and closely related forms.

How Alligators Are Raised.—Reliance. A natural history subject of educational value and at the same time entertaining and amusing.

Wolcott Coombs—The Phenomenal Deaf and Blind Boy.—Selig. Although deprived of both sight and hearing, under the careful training of Professor Harry Virden, Coombs has been taught to do various things and the picture shows him engaged in these different activities, such as weaving rugs, making hammocks, typewriting, reading and writing, communicating with others in the various systems used by the blind, as well as other scenes.

Cardinal Wolsey.—Vitagraph. A series of scenes illustrating English history as portrayed by Shakespeare in "Henry VIII," not only intensely interesting, but instructive as well. The chief characters represented are Cardinal Wolsey, King Henry, Catherine of Arragon and Anne Boleyn.

Transformation of Scrap Iron.—Eclipse. A film showing how scrap iron is collected and the various processes through which it is converted into pig iron.

Lizards.—Reliance. An exceptionally interesting film showing the origin and characteristics of poisonous and non-poisonous lizards.

Karlberg (Sweden) War School Exercises.—A very interesting film showing certain exercises as practiced in the army schools and barracks of Sweden.

The City of Tripoli.—Cines. A panoramic view of Tripoli showing the most important sections of the city, its prominent buildings and ancient monuments.

Scenes of Richmond, Va.—A view of this historic city and most interesting surroundings, especially those connected in any way with the Civil War, such as fortifications.

Miss Marie Tissier, Eclipse Films (George Kleine).

The Loan Shark.—Essanay. A story which should be of value in awakening such a feeling on this subject which is now attracting public attention as to render the conditions which are portrayed impossible.

President Taft and His Cabinet.—Vitagraph. Showing President Taft and his cabinet in session in the White House, including scenes of historical interest in the Capital City.

The World Famous Danube.—Powers. A series of views along this noted river showing its villages and towers.

Small Trades in Havana.—Pathe. This film gives us some idea of life in Havana by the portrayal of a typical street scene in which the florist, milkman, butcher and all the rest of the tradesmen are faithfully represented.

Scene from Selig's "Darkfeather's Strategy," a Drama Depicting the Primitive Diplomacy of an Indian Maiden.

Our Baby.—Imp. A very interesting comedy which is also intended to be educational, as it gives an illustration of how babies should be cared for.

Across The Isthmus of Panama in 1912.—Selig. By this film the observer takes a trip across the canal zone where he sees in process of construction the most gigantic undertaking of the century. Not only is the huge machinery used in the construction of these immense walls and locks portrayed, but it is shown in action, as the work progresses under the direction of the most skilled engineers. A view is given of Pedro Miguel Locks, Miraflares Locks and Gatun Locks in process of construction, which gives an excellent idea of this part of the great canal, also a view of the Culebra cut region.

Zoological Gardens in Rome.—Cines.

Alcohol.—Eclair. A very interesting drama intended to be educational in its scope.

Through the efforts of the immigration department moving pictures of South Dakota scenes are to be taken for the purpose of giving the state publicity.

Chicago Press Club in Picture Story Contest

Elsewhere we have mentioned the fact that the Selig Polyscope Company, through Stanly H. Twist, has offered a series of cash prizes for the best articles on "The Motion Picture" written by Chicago Press Club members. The offer was made February 26, the contest closing March 20. This time was so short, however, that it was deemed advisable to advance the closing date ten days. The prizes are $100, $50, $25, and five of $5 each, the articles to be from one to three thousand words and the five judges to be selected by the club and the company.

The interested members of the club made a pilgrimage to the Selig plant and learned a number of things. Many articles have been submitted as a consequence, and at least one of the prize winners will be published in a subsequent issue of Motography.

Duke Skates for Camera

Leaving a sick-bed, the Duke of Connaught, governor general of Canada, went skating with the Duchess and Princess Patricia at the Royal skating rink at Ottawa, Can., in order to allow moving picture operators to take motion pictures of "royalty on the ice." The ducal family was accompanied by the entire royal household. The Privy council was photographed while in session for a series of motion pictures. Conservative members objected when the proposition was put up to them, but the duke eagerly welcomed it, and the objections were swept away.

Free moving picture shows are to be established in at least 100 of the larger public school buildings of New York, if an urgent appropriation demanded by Superintendent Maxwell is approved by the board of education.

Photoplays From Essanay's

More Good Indian-Heads

EIGHT corking original comedies, four exciting dramas, and five great western dramas featuring that wonderful photoplay artist, G. M. Anderson, comprise the tasty menu of photoplay treats to be served discriminating exhibitors by the Essanay Company for the month of April. Space prevents descriptions of all these splendid films, but mention can be made of several of the best.

In "Napatia, the Greek Singer," booked for release April 30, Essanay has made use of a simple, strong and appealing plot that dramatizes beautifully. Billy Arnold, a stalwart young fireman, is returning to the engine-house one morning when he sees a beautiful Greek girl, a street singer, being abused and beaten by her villainous father. Billy instantly interferes, warns the fellow to stop his brutality, is rewarded by a grateful look from Napatia's beautiful eyes, then watches her led away by her glowering parent.

Scene from the Essanay Drama, "The Rivals."

In the engine-house Billy has thoughts only of Napatia, and realizes he has fallen in love. He tries to read, but the pages are all a blur and he finally throws the book aside and gives himself up to visions of the beautiful girl.

Next day, in going to the engine-house, Billy passes Napatia's home, a two-story frame dwelling, and is delighted to see her standing in the doorway. He politely raises his cap and stops for a moment's chat—that is suddenly stopped by the appearance of the brutal father who orders Napatia inside and glares wickedly after Billy as he starts on to resume duty. That afternoon Billy is sitting in the bright sunshine before the engine-house, laughing and joking with his companions when Napatia and her father appear. Realizing Billy is watching, Napatia pours out her soul in a pretty love-song, that is warmly applauded by the firemen and a bounteous collection of money is gathered in the old Greek's hat. Billy watches Napatia out of sight and is the butt of much joking on the part of his companions, who see he is smitten with the love-germ. Next day Billy again meets Napatia at her door and persuades her to walk with him. Coming upon a fire-alarm box, Billy shows her how it works, then tells her if she is ever in danger from the brutality of her father, to turn in an alarm and it will bring him to her rescue. At this moment Napatia's father comes up, shrieks out his rage at finding them together and attempts to strike Napatia, but is knocked down by Billy, who warns him again to be careful how he treats the beautiful girl. With a venomous look of hate the old Greek leads her home, where he tells his wife of the affair and the two imprison Napatia in an adjoining room and lock the door. Frantically Napatia tries to escape, but realizes there is not a chance. Suddenly she thinks of what Billy told her. She cannot get to the alarm box, but if she makes a fire Billy will come. To think is to act! Gathering a pile of paper, Napatia finds a match, lights the bundle and holds it near the open window where the smoke and flame can be seen. A pedestrian sees the glare, turns in an alarm and Billy is rudely awakened from his thoughts of Napatia by the sound of the gong. Shinning down the pole he takes his place on the truck and, a few moments later, bursts into the kitchen with his companions and is confronted by the old Greeks, who are frightened out of their wits. Smashing in the door of the adjoining room, Billy is amazed when Napatia flings herself into his arms and confesses how she made a fake fire to summon him to her rescue. Billy kisses her tenderly just as the old Greeks rush in and try to tear the girl from him. Billy holds them off, and is declaring his firm intention of making Napatia his wife when the chief strides in. The situation is explained and Chief Ryan, realizing the extent of the young people's love, congratulates Billy and Napatia, orders them off to the nearest parson, then gives directions to his men to turn the hose on the old Greeks if they make a move to interfere. So the old villains are forced to scowl and rage as Billy and Napatia leave and the firemen stand ready with the hose if they make a move.

This is a thoroughly clever drama, and a thrilling run by the fire department adds greatly to its plot. F. X. Bushman plays Billy, and Dolores Cassinelli Napatia.

A fit successor to that funny western comedy, "Alkali Ike's Auto," is "Alkali Ike's Boarding House," booked for release April 23. Bridget, the cook on the Hard-Up ranch, fails to make the soup fit to eat, and Alkali is selected to tell her about it. He does, and is ejected from the kitchen amidst a storm of pots, pans and half-cooked vegetables. Bridget now proceeds to smash every piece of crockery on the place, souses the boys with a kettle of water, chases them to the hay-loft, then leaves in high dudgeon. Straws are now drawn to decide who will do the cooking, and Alkali is the poor unfortunate. A new supply of crockery is procured and Alkali starts to cook dinner. To add to his culinary troubles, the boys pop in every two minutes to hurry him with the eats, until he at last ejects each one with a bath of the nearest thing within reach. Next morning Alkali vainly endeavors to awaken the boys, wildly rings the bell, soaks them with their own boots and at last empties a pail of water over them before they awaken. Tired of being the goat, Alkali now turns the tables, gets all their guns away from them, then proceeds to make them do the dish-washing, scrubbing and clothes-cleaning, which he punctuates with occasional shots from his trusty Colt. This is, of a necessity, only a skeleton outline of the humor of the film, but it is decidedly the funniest Essanay production of months. Augustus Carney is a scream in his famous role of "Alkali."

"The Rivals," booked for release April 19, is a beautiful heart-interest drama running the gamut of love, jealousy and hatred. A baby girl is adopted into the family of Captain Allen, a retired seaman. Sixteen years later, Mary, now a beautiful girl, loves Frank Munson. Mary invites Eva Dickson, a school chum, to visit her and Eva falls in love with Frank and jealously tries to win him from Mary. A fancy dress ball is to be held and Eva, while rumaging in the attic for a costume, discovers an old letter telling of Mary's adoption. This she uses to try and win Frank over, but the young man scorns her and asks Mary to become his wife. Eva realizes her perfidy, begs Mary's forgiveness and steals from the house a sadder and wiser girl. Eva Prout, well known for her excellent work in many Essanay subjects, plays Eva Dickson, and Beverly Bayne is prettily cast as Mary.

"All in the Family," one of the eight comedies for the month, is a typical Essanay "hit" in plot-construction and production. It is well played and splendidly cast. "The Clue," one of the cleverest dramatic novelties ever released, is based upon a Chinese laundry ticket which proves a bonanza to a poor girl and her sick mother in a most startling manner. G. M. Anderson has never been seen to better advantage than in "Broncho Billy and the Girl," released April 9, and in "The Indian and the Child," released April 27.

Announcement is made by the Essanay Company that another great Broncho Billy drama and a rip-roaring "Alkali" Ike comedy are already booked for May release, and that May will be noted for a large number of fine productions, both dramatic and comedy, from the western company, located at Lakeside, California, and the two eastern stock companies at the Chicago studio.

Billy Tells the Chief About Napatia—From the Essanay Drama, "Napatia, the Greek Singer."

Yellowstone Park on the Screen

By Watterson R. Rothacker

General Manager Industrial Moving Picture Company, Chicago.

DID you ever participate in a conversation on the subject of travel that it didn't end up with the exclamation, "If people only realized that in our own country we have mountains more picturesque than those in Switzerland, lakes more beautiful than those of the Emerald Isle, rivers far more interesting than the Rhine, forests that make the Black Forest look like a postage stamp, and magnificent prairies and plains that cover areas as big as many European principalities."? And yet the same people who have listened, when appropriating their travel allowance buy a trans-Atlantic passage and file their American trips along with their other "tomorrow" anticipations.

One thing is certain, and that is, the American in Europe will there hear enough about his own country to instigate a desire at least to visit the places at his very back-door that Europeans cross the water to see and so enthusiastically acclaim.

The whole trouble with the American traveling public is a combination of ignorance as to just what America has for the tourist and a lamentable ambition to be able to talk about "Yurrup" as one who has been there and sport a mess of gaudy hotel labels on luggage that hands a laugh to the average Pullman porter.

Until moving pictures were invented the uninformed learned about America's great and numerous show places through the medium of friends who had "been there," inanimate photographs, and printed word description. The man inclined to travel was guided or misguided by these insufficient suggestions and was practically dependent upon the veracity and individual opinion of his friendly informant, the honesty of the photographer and the limitations of "still" photography, and the ability and intention of the word painter who in many instances misrepresented for reasons best known to his employer.

Nowadays one can, in a comfortable picture house, see truthful, reliable, life-like and realistic vistas of life in the African wilds, industries in China, Egypt, Germany, South America, sports and pastimes of American Indians or South Sea Islanders, cities in France, India, Australia or wherenot, and he can see them as they actually are, animated and timed, true replicas of the subject itself.

Perhaps it is because film perfection was not attained first in America that there are now on the market more moving pictures typical of European scenery than there are filmed bits of picturesque America—or, perhaps, it is because European names were considered a greater box-office magnet. Anyway, the fact remains that there are now on the market moving pictures showing the wonders of our own Yellowstone National Park, the beauties of Colorado, the grandeur of the Canadian Rockies, the splendor of our Northwestern territories, and other gems of our wonderlands, which when disclosed motographically cause the most phlegmatic "yes-but-in-Europe" bug to acknowledge that his own country offers him the best travel "buy" available.

The "See America first" slogan is being exploited by our enterprising American railway companies. The American railways are finding in moving pictures an advertising medium that convinces. By means of moving pictures tourists and homeseekers are being honestly attracted in a manner that guards against misrepresentation and the attendant disappointments, and enables the prospective traveler or homeseeker to choose his route or future home advisedly.

Old Faithful Geyser Crater.

At the last big land show held at Chicago, moving pictures were the real crowd gatherers. They not only arrested attention but they held their audiences. Moving pictures illustrate sufficiently subjects which mere words fail to describe, and they frankly expose subjects too highly colored by the exaggerating land salesman or sucker-seeking promoter.

The Northern Pacific Railway Company is doing much to exploit the scenic and industrial Northwest, and in this campaign of exploitation moving pictures is an important factor. Last summer moving picture crews in the service of the Northern Pacific Railway made animated film records of the wonders of Yellowstone Na-

In the Upper Geyser Basin.

Tourists and Bears.

tional Park. Starting at Gardiner, the official entrance to the park, the film thus secured unfolds in color and motion a wonderful series of mountain and canyon scenes, boiling hot springs, spouting geysers, vistas of swirling rapids, thundering waterfalls and the cool depths of the Yellowstone Lake with its fringe of towering peaks. Bears, deer, elk and buffalo are plentiful in Yellowstone Park, and were enticed so close to the camera that when these films are thrown on a screen the animals look as though one step ahead would put them alongside the drummer.

These moving pictures of Yellowstone park are a revelation to those who have derived their opinion on this great government preserve from printed matter.. See these pictures and you cannot resist their appeal. They make you promise yourself that you certainly will make the Yellowstone trip if it is the last thing you do. While performing a service of public value, the Northern Pacific Railway Company by exhibiting this series of pictures, also encourages travel over its line, for the Northern Pacific railway is the only line that enters the Yellowstone National park at the official entrance.

In addition to filming the Yellowstone Park the Northern Pacific railway delegated camera crews to take moving pictures of the scenic feast to be had on a trip from Livingston, Montana, up and over Butte Mountain to the city of Butte, Montana. Then the cattle and sheep industries were pictured, as were the big government reclamation projects near Glendive, and the agricultural activities of the fertile Gallatin valley. In fact, by moving pictures the Northern Pacific Railway Company is proving to tourists and homeseekers that the Northwestern territories tributary to their lines have numberless places worthy of an investment that will bring profitable dividends either in travel, enjoyment or industrial prosperity.

Other great railway systems have placed their official O. K. on the advertising value of moving pictures. Their use of this comprehensive means of depiction is doing more to encourage the "See America First" idea than anything else. It is the moving picture force that is really translating "My Country 'Tis of Thee."

Moving picture entertainment and military drill are being introduced to vary the dull routine of the convicts in the Indiana State Prison at Michigan City.

Portland Photoplays of High Standard

That the standards of moving pictures shown in Portland, Ore., are of high degree was the assertion made by a prominent Eastern moving picture film manufacturer who made a tour of the Coast recently. The statement was made to one of the members of the boards of censors, and is a tribute to the energy of a dozen women who for the last 18 months have personally reviewed every film that has come before the Portland public, in the interests of the youth of the city and public morals. In this they have received the co-operation of the prominent producers.

A year ago in November a committee of representative women was named at a meeting of the Associated Charities. The committee comprised Mrs. E. B. Colwell, of the Associated Charities, chairman; Mrs. A. C. Newill, representing the Portland Woman's Club; Mrs. Julius Lippitt of the Council of Jewish Women, and Miss Prichard of the People's Institute. This committee was increased to 12, eight viewers being appointed to officially review each reel received by the local film exchanges and pass judgment on it. The work was done in co-operation with, though independent of the National censorship committee and with the full indorsement of the managers of the several moving picture theaters themselves, who are quite frank to admit that the work of the local board has raised the standard of the films shown in this city and created a demand for the best the market affords.

After eighteen months of weekly reviewing, Mrs. E. B. Colwell, chairman, when asked what was the trend of the public taste in this line of entertainment, said that it was pronouncedly for the dramatic film.

"A good, srong dramatic story told by moving pictures is what the patrons want," said she, "dramatic films of a high class proving the biggest successes. While I would like to see more educational films shown, these, too, have their educational value. Another feature that we hope to have introduced into Portland will be a weekly matinee for children with films that will be of particular interest to them, depicting the fairy tales, folklore of different countries and alternated with films of purely educational value. There is a great field for this, and the managers are already beginning to talk of the establishment of such days. While matinees of this sort have been advertised in the past, upon investigation they have often proved to offer entertainment of no particular interest or value to the child."

The censor board is preparing to issue its third report, covering the period of the last six months.

Film Records Wedding Scenes

To perpetuate the scenes of their wedding and to provide a keepsake for their family or descendants moving pictures were taken following the marriage of Miss Mary Graham C. Farquharson, daughter of Mr. and Mrs. Frank Farquharson, of No. 317 Riverside Drive, to Mr. Daniel Warner Marvin, son of Mr. and Mrs. Harry Norton Marvin of No. 340 Riverside Drive, New York.

Immediately after the brief reception which followed the service the bridal party, accompanied by the clergyman, formed an automobile caravan to the Edison studios, in East Fourteenth street, where a duplicate of the drawing room's temporary altar was formed of scenery and floral decorations, and the ceremony was dramatically repeated before the camera while a phonograph furnished the wedding music. The guests, most of whom were members of the family and close friends, also posed, and more than a hundred feet of films were used.

The Playhouse of the Future

By Ford W. Eaton

APPARATUS USED IN ORTOGRAFIC RESEARCH.

AFTER careful analysis of all previous attempts to solve one or more of these problems, and systematic elimination of all of the attempted solutions which were not founded on sound physical principles, it was seen that so little remained that it would be necessary to adopt entirely new principles and methods if creditable results were to be produced. This has necessitated extensive research into several departments of physics not usually associated with development work of this kind, as most of the work done heretofore had been mechanical, and at no time had sufficient attention been paid to optical, chemical, and other laws, which govern some of the most important features of the work.

In the first place it was discovered that the usual method of taking so called "moving pictures" was not capable of being developed into anything like a perfect process, for it is impossible to use the ordinary narrow strip of perforated film without producing an unsteady picture. It was also found to be impossible to project one picture after another with an interval of darkness between and not have some objectionable flicker.

COMPLETE PICTURES.

In regard to projecting pictures in their natural colors and stereoscopic relief, it was found that previous inventors and experimenters had made but little real progress. New chemical processes had to be used in the preparation of the sensitive film so that it would take all of the colors in their proper proportions, and with unusual rapidity.

In previous experiments in color cinematography, so-called "filters" have been used to filter out certain colors from the different negatives. This involved complication, which could not be tolerated in a perfect and simple system. Hence it was decided to dispense with filters and attack the problem in a different way.

We will now describe a form of apparatus which seems to promise a simple and complete solution of the foregoing problems. The commercial process is not yet available and the mechanism and film shown are such as were used in experimental research. Some of the principles involved are not entirely new, but the work of applying them to the problem in hand has been undertaken without consideration of present standards, either of mechanism or film, and the results to date seem to justify the prediction that all of the requirements as to steadiness, color, and stereoscopic relief will be satisfactorily met and in a comparatively simple way.

FILM AND FILTER COMBINED.

The film shown in Fig. 1 has upon it 3 parallel series of images, each series having a different color value corresponding to the primary color sensations (scarlet, green and blue-violet). These color values are produced without the use of separate filters, since the celluloid itself is of three different colors, and, the film being turned with the emulsion away from the lens, the light rays are obliged to pass through the colored celluloid, which therefore absorbs all except its own color. The positives are then made in the usual way and, when projected, have their picture-side turned toward the screen, which is just the opposite of ordinary practice.

In Fig. 1 it will be noted that in the middle row of pictures the sky is very dark for the reason that the negatives were taken through a scarlet filter, and there is less of this color in the sky than of green or blue-violet, as seen by looking at the other two rows of pictures. Note also that one of the girls has on a crimson cloak which is partly transparent in both the scarlet and blue-violet pictures, but very dense in the green, etc.

Fig. 1. A Street Scene on Tri-Color Film.

In Fig. 2, the Japanese parasol has a transparent edge in the scarlet or middle row of pictures, while the same part of the pictures in the other rows shows more density. The girl has on a red dress which is almost pure scarlet, with a little blue-violet but no green in its coloring. The white collar shows equally clear in each row of pictures, and the black braid trimming is equally dense in all three.

FLICKERLESS PROJECTION.

As shown in Fig. 3, there are three lenses in this type of Ortopticon, but these lenses do not act at the same time, but rather alternately, so that when the pictures are projected there is no interval of darkness on the screen, hence the flicker may be done away with entirely. It should be explained that the Ortopticon or projection device shown in Fig. 3

is an early model that was used for laboratory experiments, while the commercial mechanism will be much more compact and of more simple construction, and almost entirely enclosed.

Similarly limited is the film here shown, for the exact style of film and arrangement of pictures will be quite different in the commercial apparatus. This final film product can only be made with special factory equipment and processes, hence there has been none available up to the present time even for the purpose of experiment.

The remarks and illustrations herewith must therefore be taken only as indicating the progress made in testing out the principles and methods which were adopted as theoretically correct. A later article will deal with the commercial product and the final results obtained.

Fig. 2. A Tri-Color Film Portrait.

COLOR PRINCIPLES — PRINTING AND SECONDARY.

Let us here correct an impression that red, yellow and blue are primary colors. This idea arises from the fact that the mixing of pigments (or paints) of certain shades of yellow and blue will produce a green effect, while red and blue produce violet, etc. This simply proves that these colors are secondary (that is, are composed of more than one primary color), for if we mix two pigments of primary color the result is black. The reason is very simple. A pigment on a white surface absorbs or *subtracts* from white light all its own color or colors. For instance, scarlet substracts all shades of green and blue-violet. Hence if green were added it would subtract the scarlet also, and leave no color, or black. (Fig. 4.)

On the other hand, the true secondary colors are crimson, yellow and cyan-blue. Yellow is composed of scarlet and green, so if a white surface is coated with yellow pigment which absorbs blue-violet but still reflects scarlet and green, it appears yellow.

Now suppose we cover or mix it with a blue pigment which reflects green and blue-violet, but absorbs scarlet. We shall have nothing left but green, for the yellow pigment absorbs blue-violet, and blue absorbs the scarlet, so the only color left is green, which was a part of both the yellow and the blue. (Fig. 6.)

ADDITIVE AND SUBTRACTIVE.

In projecting colored light upon a screen the conditions are different, for here, instead of having an illuminated white surface to start with, we have a dark screen, and begin by *adding* colors instead of *subtracting* them as when we covered a bright white surface with pigments.

Suppose, then, that we first project a circle of scarlet light upon the screen, and then project in the same spot a green circle. We have *added* green to scarlet and the effect is bright yellow or cream color. Now, if we project a third circle of blue-violet, the result is pure white, as all of the three constituents of white light have been added together.

Now let us darken one of the colors, say the blue-violet, and the spot becomes yellowish, showing an excessive proportion of red and green. Now darken the green, and the spot becomes reddish, and finally scarlet as the green is shut off entirely.

All colors are merely mixtures of these primary colors in different proportions, so it is readily seen how the myriad shades and tints of Orto pictures are produced by simply mixing three primary colors just as nature mixed them in the original scene. (See Fig. 5.)

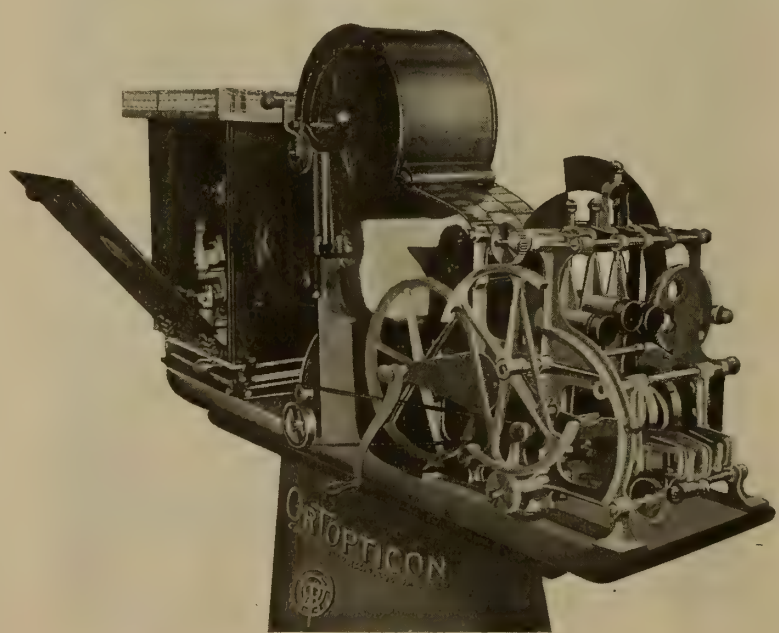

Fig. 3. Laboratory Model Tri-Color Projector.

STEREOSCOPIC PRINCIPLES.

One of the most tantalizing problems that has puzzled inventors in this field has been to produce pictures in stereoscopic relief. Occasionally and accidentally such effects have been noted on the screen with certain classes of subjects, but no practical way of producing the desired result has ever been introduced.

It is an interesting study and we present two diagrams showing how, by the use of an analyzer, the effect may

be seen; first, by the old red and green lantern slide method, and second, by using the Ortoscope to view the three-color Ortografic pictures.

Fig. 7 illustrates the principle of stereoscopic vision as applied to the projection and selective viewing of two superimposed pictures, both taken without filters, the

shadows and other dark parts of one being printed red, and of the other green.

Now, when these are projected and approximately superimposed there will be seen but a jumbled mixture of red and green, but when viewed with green and red glasses the shadows appear black and the high-lights white, with an effect of stereoscopic relief, but no colors.

THE ORTOSCOPE.

When viewing three superimposed images with two eyes (each image being in a primary color), the viewing glasses are stained with secondary colors (each composed of two primaries), as shown in Fig. 8.

Such a picture is in natural colors when viewed with the naked eye. It is also in relief, but the stereoscopic effect is much increased when the analyzer is used. This is best in the form of a fan, which is handier than spectacles and may have the program, or libretto, or advertisements printed upon it, as well as instructive matter and illustrations. They are inexpensive and make acceptable souvenirs.

By reversing the fan, pseudoscopic effects are seen, and by looking with one eye, many strange combinations, and sunset and moonlight effects may add variety to a scene.

This viewing device need not be used with the new Orto pictures except for these special effects, as the new films and mechanisms are arranged to produce a picture that to the naked eye has every desired quality, including every existing color and stereoscopic effects which are even greater than when viewing a natural scene.

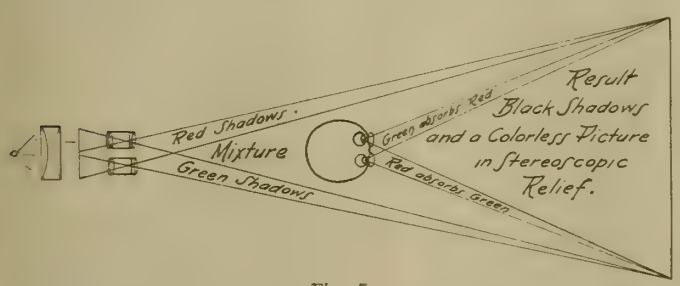

Fig. 7.

This is one of the most wonderful things in Ortografy, and may be explained briefly by saying that whereas the observer has only two eyes to look with, the Ortografic camera has in effect six eyes, for each of the three eyes or lenses takes two pictures, and therefore we see upon the screen the blending of six images each taken from a different viewpoint.

It is just as if a person should have an extra eye at the top of his nose, and three more eyes in his forehead, so that he could see not only from both sides of an object, as it were, but above and below it as well.

NOVEL MECHANISM.

Another departure, or rather a radical difference between this new mechanism and all others in common use, is that the film moves continuously and uniformly, while the lenses reciprocate just fast enough to keep the images in register. It is thus possible to do away with perforations and sprockets entirely, and to move the film by friction rollers, although continuously moving sprockets may also be used.

The commercial machines are being made so that ordinary standard films can also be run if desired, but of course the Ortofilms cannot be run through an ordinary moving picture mechanism. This is a decided advantage as the proposed high standard of Ortografy and the Ortoplay could not be maintained unless there were strict supervision and restrictions as to the operators who handle the films.

Since the lenses reciprocate alternately, it must follow that only one picture at a time need be darkened (while the lens is returning for the next picture in its series), so that two pictures are always showing while the third is changing. Thus there is no flicker, but instead a beautiful dissolving effect, even when the machine is run at a slow rate of speed, and at normal speed of projection the blending is so smooth and gradual as to be unnoticeable.

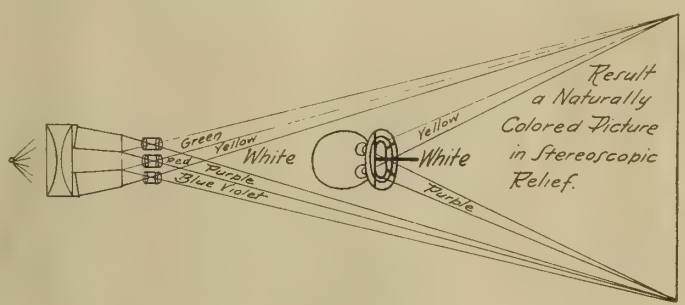

Fig. 8.

Ortofilm is less costly than ordinary film. It is wider but shorter, and is more easily handled. The initial cost is somewhat more, but since it moves through the projecting mechanism slowly and continuously its life is lengthened so that it will out-wear ten or twelve ordinary films.

The operator has no complications to struggle with. There are no "filters" either "revolving", "registering", or "adjustable". He simply starts the light and turns the crank, after framing the picture once for all. The colors are in the film itself, which, on account of its slow and steady movement, need never be mutilated, which is the cause of most pictures getting "out of frame."

In the following article the "acoustics of Ortografy" will be explained, and the exceedingly simple method by which sounds of perfect quality and normal intensity are made to come from the very mouths of speakers and singers, with such harmony and precise synchrony that the observer forgets that the only tangible thing before him is a blank white wall.

Mrs. Charles S. Fairchild of 37 Fifth avenue, New York, entertained the members of the Thursday Evening Club at the Colony Club recently with Kinemacolor pictures of the Indian Durbar.

Motor Operation of Picture Machines

Moving picture machines driven by electric motors are expressly forbidden under the wiring code, the purpose of this restriction being to necessitate the entire attention of the operator being given to his machine. Several bad fires have been caused by motor-driven machines, owing to belts coming off and stopping the film in front of the intense rays of the lamp. Other fires have been traced to smoking by the operator, which would not have been likely to happen had he been required to crank the machine. The Western Association of Electrical Inspectors discussed this subject at Milwaukee on January 25, James Bennett of Montreal, Canada, declaring that an exception should be made to the rule in the case of the new motor-driven Kinemacolor machine. This machine is much larger and heavier than the usual projector outfit, and actually requires a motor to drive its heavy parts, which move at a speed twice the ordinary rate. The services of two men are also demanded to operate the machine, and the current taken by the arc ranges from 80 to 125 amperes. The Kinemacolor apparatus is thus different from any of the ordinary picture machines, and in its design all possible precautions have been taken against fire communicating to the film, including the provision of an auxiliary automatic shutter outside the condenser. Mr. Bennett urged that this machine should have official approval for motor drive. F. L. Daniels, Indianapolis, told of a new safety device, which, he believes, will make motor-driven operation safe. A switch controlling the lamp circuit is so arranged that the breakage or stopping of the motor belt will instantly extinguish the arc. Leon Taylor, Dallas, Tex., insisted that an even greater danger lies in the hand-feed type of arc than in motor drive. He cited a case in Dallas where an operator "froze" the carbone of one lamp and then attempted to operate a second. The excessive current thus taken overheated and burned out the conduit wiring, ignited several thousand feet of film and caused $2,000 loss. H. E. Bloomer, Milwaukee, reported that of the sixty-one moving picture machines in his city eight are motor-driven and have given practically no trouble. Seventeen fires have occurred, all among the hand-operated machines and usually due to ignition of the film while outside the machine. W. S. Boyd, Chicago, said that without experience one can hardly realize the tremendous explosive energy of the standard 1000 feet of film, and he doubted the advisability of leaving to the inspector's judgment the approval of such machines. A special committee was appointed to examine the apparatus mentioned by Mr. Bennett and to report on its safety with motor drive.

The following notice appears in front of a picture show in a district of London:

"Young children must have parents."

Scene from American's "Her Mountain Home," a Dramatic Story of the Rush for Gold.

Problems of the Operating Room

By William T. Braun

PROJECTION.

LAST month those things which make for a steady picture were discussed; this month a few hints on how to obtain an even, well lighted and sharp picture will be given. There are several things upon which a perfectly projected picture depend. The arc must burn in the right manner, the condenser lenses must be of the correct sizes, the projection lenses corrected from faults of all kinds, the screen of the right material, and lastly all of these parts must be lined up correctly and kept in perfect condition.

THE ARC LIGHT.

The quality of the arc light depends to some extent upon the kinds of carbons used. For direct current a soft core carbon is used on the positive and a solid one on the negative, although solid carbons are sometimes used in both the top and bottom carbon holders. Soft core carbons are used in both upper and lower carbon holders for alternating current. As the core burns more readily than the rest of the carbon, the arc is held in position by the core, thus keeping it from wandering around the edge of the carbon. The best size for the ordinary amperage is five-eights inch, although a one-half inch solid carbon can be used with good results on the negative or lower carbon holder when using direct current.

Some carbons are much harder than others and require a heavier amperage to get good results. When using fifty or sixty amperes at the arc, it is better to use a hard carbon, as some carbons which give a fine light at thirty or forty amperes, burn to a needle point when subjected to such a high amperage. The light becomes difficult to control, and the carbons burning to a tapering point easily slide past each other instead of the points touching when they are fed together.

In the first place the carbons must be set correctly or the arc or crater will not be in the right position. The carbons should be set in a straight line for both alternating and direct current. Better results can be obtained from this setting than if the carbons are set at an angle to each other as was formerly the practice for alternating current work. They must also be in line sideways and if the carbon arms become bent or sprung washers can be placed at the connection of the arms to the lamp body so that the carbons will line up perfectly. For direct current the lower carbon should be set slightly in advance of the upper one, so that the crater will form on the front face of the upper carbon. As most of the light when using D. C. comes from this crater it is very necessary that it should face the condenser.

For alternating current work it is better to set the points of the carbons directly above one another.

A crater is not formed on either carbon when using A. C., but the best light is obtained when the points of the carbons burn to a v shape, the wide part or opening of the v toward the condenser. Carbons should be fed often and a little at a time, in order to keep a perfect light. If you let them burn until they flame and then jam them tight together the light becomes dim and anyone in the house can tell when you feed the carbons. Also if the carbons are brought too close together, they will very often sputter and burn to a ragged end. The best remedy for this is to burn a long arc for a while and the arc will then be able to readjust itself.

In order to get a good light the operator should be able in some way to watch the carbons burn. There are several ways in which he may do this without injurying his eyes. On all lamphouses recently manufactured a peep-hole about one inch in diameter is placed in the door opposite the arc. This hole should be covered with two glasses, one blue and one red. Either of these glasses used alone will injure the operator's eyes, but the two in combination make the arc-watching operation safe.

Another good scheme used by many operators is to make a hole about one-eighth inch in diameter in the side of the lamp house opposite the arc. A reversed image in large size of the arc will be thrown upon the wall or a card placed near the lamp house. By placing any convex lens about two inches from the hole, the image of the carbons can be made sharp in detail. The operator can in this way watch the carbons burn without looking into the lamp house.

If you have an outside revolving shutter in front of the projection lens, a reversed image of the arc is thrown on the blades of the shutter. By watching this the operator can tell when to adjust the arc.

It will do no harm to remind the operator once more to keep all connections inside the lamp house tight and clean. The lead terminals should be examined every day to see that they have not fused. A good light cannot be obtained from connections which are charred and half burned out. The inside of the carbon arms should also be kept clean and bright. They should be filed until the metal shines at least once a week. The rest of the parts of the lamp should also be kept free from dirt and carbon ash. In changing the position of the carbons remember that it takes from five to ten minutes for a crater to form; therefore do not change the setting of the carbons every few minutes and expect a first-class light.

When the operator has the arc under control, so that it will give a steady white light all of the time, he has made a big step toward perfect projection.

CONDENSER LENSES.

After the operator has the arc under control he should turn his attention to the condenser lenses. The condensers are much more important than most operators imagine, the quality and size have much to do toward obtaining a perfect light.

In regard to quality it does not pay to buy a cheap lens. The cheap lenses are not accurately ground, they do not give a pure white light, they frequently have blemishes and imperfections in them, and not being of an even density are much more liable to break when expanding than a more expensive lens.

The purpose of the condensers is to collect the rays of light which fall on the rear lens, and bend or converge them so that they will meet in a point in the center of the projection lens tube. An accurately ground lens will bend these rays more perfectly than a poorer one and therefore less light will be lost. The cheap lenses generally have a greenish tinge, and it is impossible to get a pure white light from them; also

small imperfections in them will send rays of light where they are not wanted. A glass of even density will expand and contract evenly, thereby greatly lessening the danger of breaking.

If the operator will look to the various causes of breakage, he will not have to buy lenses so often and he can therefore afford to buy better quality lenses. The first cause of breakage is the mount. The mount should be large enough so that the lenses will have room to expend, say one-sixteenth of an inch larger than the lenses. For this reason square mounts are better than round ones. The mount should also be ventilated. In replacing the lenses after cleaning them be sure that the vent holes in the inner and outer casing come opposite each other, otherwise the heated air cannot escape from the mount. If an asbestos ring or pieces of asbestos are placed around the lenses where they come in contact with the mount, the glass will not touch the hot mount and the edges of the lenses will not crack. Or, place an asbestos ring about one-eighth inch wide between the rear lens and the lamphouse. This will also help to protect the lens.

The screens over the vent holes in the lamp house should be kept clean, then the heated air will escape and not cause the interior of the lamp house to become overheated. Do not open the lamp house door immediately after extinguishing the arc, letting in a draft of cold air, but wait a few moments, giving the lens a little time to cool.

One of the greatest causes of condenser breakage is the unequal heating of the lenses caused by having the arc too close to the lenses. If the right size condenser lenses are used the arc may be placed at a safe distance from the lens and still get the correct size spot at the film gate. The sizes of condenser lenses to be used with various sizes of projection lenses given below have been used, and were found to give satisfaction if the arc light is placed at the proper distance from the lens. For a six-inch focus projection lenses use two six and one-half inch focus condensers; for eight to ten-inch projection lenses use six and one-half and seven and one-half focus condensers, for twelve-inch focus projection lenses use six and one-half and eight-inch condensers, for fifteen-inch projection lenses use six and one-half and eight and one-half condensers. For lenses shorter than six-inch focus projection use two six and one-half inch focus condensers, as this is the shortest focus that can be made with a four and one-half inch diameter condenser.

To find the focus of a condenser lens hold it between a source of light and a paper. Move the paper until the rays through the lens come to a point on the paper. The distance from the lens to the paper is the focal length of the lens. The combined equivalent focus of a pair of condenser lenses is equal to about one-fourth the sum of the focal lengths of the two condensers. That is, the combined focal length of two six and one-half-inch focus condensers would be three and one-quarter inches. This means that if the light is placed three and one-quarter inches from the lenses the rays of light as they emerge would be parallel. Therefore in order to converge or bend the rays of light after they pass through the condensers so that they will pass through the aperture, it is necessary to place the light at a greater distance than three and one-quarter inches from the condenser lenses. By adjusting the lamp from the condensers, the beam of light can be made to converge at different distances from the condenser. This makes it possible to use the same condensers for different size projection lenses by merely moving the arc back and forth; but in order to get the best results, that is to utilize most of the light rays and to protect the condensers from excessive heat, it is better to use different focal lengths of condensers thereby giving a longer or shorter combined equivalent focus, depending on the case in question.

When you have decided which size condensers meet your needs get an extra set and have them in condition to slip in should one of those break which you have in the mount. When the machine leaves the manufacturer, if he knows what size projection lens is to be used, he can supply the proper condenser lenses; but when one breaks any lens which happens to be on hand is usually put in, with the result that either a ghost appears on the screen, or the lamp is moved too close to the glass, and new condensers begin to be a regular item of expense.

The condenser lenses should be cleaned every day. About once a week clean them with alcohol, but every day the exposed faces should be wiped off with a soft cloth to remove dust and dirt.

PROJECTION LENSES.

In regard to quality the same thing may be said concerning the projection lenses as mentioned above for the condensers, probably even more so, because the rays of light receive their final correction by the projection lens. In the tube we find four lenses; the two in front facing the screen are cemented together. This front pair takes care of the chromatic aberration, that is the corrections of the rays regarding color; while the two rear lenses, usually separated by the brass ring, take care of spherical aberration, or the distortion of the image.

It is very important that the lenses be replaced in their proper order in the tube after cleaning them, and that each lens has the proper surface facing the screen. In replacing the lenses see that the cemented pair has its curved surface toward the screen. Sometimes both surfaces of this pair are curved, in that case the lens with the double convex curve is placed toward the screen. Between the two rear lenses or those facing the machine the brass ring should be placed. Care must be taken to see that the ring fits tightly against the glasses, as the thickness of the ring limits the amount of separation between the lenses, and the degree of excellence of the whole combination depends upon the exact amount of this separation. A good rule to remember in replacing the lenses is that the most pronounced curves should face the screen.

Better definition and less distortion can be obtained by using a lens of longer focal length, than by using a short barreled lens. But sometimes it is necessary to use a lens of short focal length, and in this case the exhibitor should procure one of as good quality as he can get.

Many faults are blamed upon the lens that are in reality the fault of the light, tension springs or aperture plate. If these are in perfect order and your picture is not in perfect focus upon the screen, your trouble will very likely be with the projection lens.

The best way to see the differences in projection lenses is to try a cheap and then a more expensive one, and note the difference in the picture on the screen.

Whenever such a test is made, the exhibitor will seldom stop at a difference of ten dollars in the price of a lens.

After cleaning the lenses a good sharp focus may be obtained by the use of ruled mica. Take a piece slightly larger than the aperture and rule it into squares with the sharp point of a knife. Place the mica in the gate between the springs and the aperture plate, and turn the focusing screw until the lines are sharply outlined all over the screen. In this way it will not be necessary to attempt to focus while running a reel. If after cleaning the lens you find that you cannot get a sharp outline of the aperture on the screen, but that the image is doubled, you have very likely mixed the lenses when replacing them in the tube. The writer has had trouble as follows: One corner of the screen could never be put in perfect focus and the outlines of the objects in this corner were always fringed with color. On taking the lenses apart it was found that the balsam or cement between the two front lenses had become dried and the lenses slightly separated. The lenses were taken apart and re-cemented and the trouble overcome. It is best when having any trouble of this sort to try another lens if one can be procured. In this way you can tell at once if the lenses are at fault.

SCREENS.

The picture on the screen is the final result; it is from the picture that the audience judges your projection. Therefore the screen should be the best, and expense should not be spared in making it so. There is a great difference of opinion between exhibitors as well as screen manufacturers as to which is the best screen, but all have their points of merit. No doubt the permanent screen is better than the rolling screen and should be used wherever possible. When vaudeville is presented from the same stage, it is necessary to project the picture on a rolling curtain or screen. If this screen is made of ordinary heavy cloth, much of the light is lost by passing through the screen. There are several preparations on the market which when applied to the screen make it opaque thus saving much of the light.

When a plain white plastered wall is used for a screen, it should be kept perfectly clean and occasionally covered with a coat of white-wash to freshen it.

By using some of the various patented screens now on the market, the pictures are given a slight stereoscopic effect. Still others produce a softer picture which does not tire the eye. Very much depends upon the personal tastes of the exhibitor. Some prefer a white, sharp and bright picture, while others prefer a softer one in which the various objects blend into each other.

OPTICAL CENTER.

The importance of the optical center is known to many operators; but some cannot understand why it is sometimes impossible to obtain a screen evenly lighted, or a picture in perfect focus all over the screen, even when the light and various lenses are in first-class shape.

The optical center is an imaginary straight line, one end of which is at the center of the picture on the screen, and the other end at the center of the arc. It should pass through the center of the condenser, the center of the aperture, the center of the two rear lenses of the projection tube, and the center of the front lens. The screen should be at right angles to this line, also the aperture plate, and the projection lenses. Of course the arc can be moved up or down in order to place it in exact center. It is difficult to get the aperture in the center on those machines where the aperture is moved up or down by the framing device. In working with these machines it is necessary to place the frame-up lever in its central position when testing the optical center.

The optical center is nearly always correct on new machines, although the operator sometimes has trouble in getting the lamp house and its parts in correct position, and always has more or less trouble in lining up the stereopticon lens. Also, if a machine has been repaired a number of times the parts get out of line.

To test the optical center remove the condensers from their mount and also the lenses in the projection tube. Cut pieces of thin cardboard to fit into the condenser mount and the projection tube. With a compass mark the centers on the cards, while they are in the mount and pierce a hole about one-eighth inch diameter in the center of the card. Fit a piece of thick cardboard in the aperture and pierce a hole in the center of it. The holes in the cards of the condenser aperture and projection tube should all be in the same straight line. Now fit a card in the slide carrier and one in the stereopticon tube and test the centers in the same way.

First Meeting of Montgomery Company

The Montgomery Amusement Company, organized by F. T. Montgomery for the purpose of establishing and operating motion picture theaters, recently held its first annual meeting at Jacksonville, Fla. There was a good attendance of stockholders and a general feeing of satisfaction over the results of the first year's work was manifested by those present. Reports for the year showed the company to be in a very prosperous condition and to have paid the stockholders a good per cent on their investment. The company operates theaters at Jacksonville, Atlanta, Ga., Savannah, Ga., Columbia, S. C., Valdosta, Ga., and Dayton, Ohio, all of which have shown handsome profits, except Dayton, which was just opened. These houses are all splendidly equipped and present only the very highest type of entertainment, consequently are well patronized by the very best element. The following directors were elected for the coming year: Frank T. Montgomery, Jacksonville; H. C. Dorsey, Savannah; John T. Alsop, Jr., Jacksonville; Howard E. Harkisheimer, Jacksonville; C. H. Barnes, Jacksonville; C. E. Buchanan, Atlanta; George E. Warner, Atlanta. Mr. Montgomery is president of the company and Mr. Alsop, treasurer. A vote of thanks was tendered the directors for the efficient manner in which they had handled the business during the past year.

College President's Tribute to Films

President E. G. Lancaster of Olivet College was a delegate to the Madison (Wis.) national conference on civic and social center development. The conference agreed, among other things, that the moving picture is one of the greatest educational instruments ever invented. Dr. Lancaster says: "As a practical means of education the moving picture is the greatest invention which has ever been dreamed of, and I predict that within ten years practically every school in the country will be provided with such facilities."

Visits Mother by Film

Unable to spare the time for the 3,000-mile trip to a ranch near Fresno, Cal., where her mother is spending the winter, Miss Maude Lillian Berri has arranged to "visit" her mother with the aid of a moving picture machine. Miss Berri's mother recently telegraphed that she had had a dream in which she saw her daughter ill, with doctors and nurses surrounding her bed. As it is impossible for her to go to California Miss Berri made arrangements with a local film making company to make a reel for which she posed in Washington park, Chicago. Driving her automobile, skating and romping with her collie, "San Fran," Miss Berri had a 1,000-foot reel made and expressed it to Fresno, where a private exhibition was given for her mother.

Speaker Clark in Films

Speaker Champ Clark was the principal figure in a series of moving pictures made from the floor of the house March 11 before the house assembled. The speaker entered the chamber and went through the ceremonies incident to calling the house to order. This is the first time that a speaker has figured in moving pictures in the house.

The managers of the Speaker's campaign for the presidential nomination believe the people will be brought into closer touch with the speaker in this way. Arrangements also have been completed for reproducing a number of speeches by the speaker by means of talking machines, and these will be heard by the public. It is pointed out that the duties of the speaker prevent him from making an extensive campaign through the country. The officials of the house and the stenographers were included.

The little daughters of former Senator Dubois of Idaho, Margaret and Elizabeth, and Hugh Borland, son of Representative Borland of Missouri, were snapped by the moving picture man as they mounted the rostrum and sat in the speaker's chair. The pictures were made to show that everything was in readiness for taking the pictures of the speaker.

Urges City of Dayton to Buy Camera

The municipal ownership and operation of a motion picture camera and films to serve the police department and to be used in advertising the city is a proposition Clem Kerr has laid before Chief Allaback and the Chamber of Commerce of Dayton, Ohio.

Mr. Kerr suggests that the present photograph system of the Bertillion room of police headquarters be changed and that a motion picture camera be purchased at a cost of about $1,100. Films will cost from two to five cents a foot. Mr. Kerr declares that the film camera will better serve police needs in photographing criminals in that postures and physical characteristics can be secured. The negatives and films can be sent, he says, to the police departments of other cities.

The other use of the outfit, Mr. Kerr contends, can be to take pictures of conventions, views of the city, factories, public places and other places of interest, use them in films and have them displayed in other cities, thereby advertising Dayton to an appreciable extent. He suggests that the Chamber of Commerce aid in the promotion of the plan.

Scene from Selig's "Driftwood," a Dramatic Tale of Mistaken Identity in the Slums of the Bread Line and the Rich Man's Mansion.

Of Interest to the Trade

Early "Diamond-S" History

Last July we published an article describing in detail the "Wonders of the 'Diamond-S' Plant." In it something was mentioned of the early history of Selig's gigantic industry. We have been able to secure photographs of the quarters where those small beginnings developed into world-wide activities, and present them here.

The original Selig office was on Peck court—an obscure, short side street in Chicago—No. 43, as the picture shows. The date of this beginning was 1896. The small room was not only the factory and salesroom of the Selig Multoscope Company, but the home of William N. Selig. We can do no better than repeat the previous description of the development from that point.

For a time Mr. Selig manufactured slides, and his efforts must have been attended with success, for shortly we find the business occupying two floors of the little Peck court building, and the firm name changed to Selig Polyscope Company. The subtle shade of difference between "multo" and "poly" indicates the extent of this modest but substantial development. Later Mr. Selig began to manufacture films, principally "fire scenes" and other subjects caught in the open—no dramas. That was in the days of the open market, when, having made a film, you simply went out and sold it to whosoever would buy. Then, in 1898, there came to Mr. Selig one Tom Nash, an erstwhile electrician, but who joined the Selig forces as a moving picture operator. Tom Nash was one of the biggest "finds" of Mr. Selig's career, and has followed the Selig destinies ever since, now serving as general superintendent of the big Chicago plant.

In the seven years between 1900 and 1907 the Selig Polyscope Company advanced with leaps and bounds. It was in the latter year that the Chicago plant was opened. A little later the Pacific coast branch was established, first simply as a traveling company, but now with permanent quarters that rival the home plant itself. The Edendale plant employs about 100 people; the Chicago plant something over 200. The substantiality and efficient equipment of these two plants prove that the Selig Polyscope Company is building for the future, proclaiming louder than any words a firm faith in the permanence of the business.

Music for Cines Subject

S. L. Rothapfel, proprietor of the Lyric theater, Minneapolis, has taken the trouble to score the music for the Cines subject "Josephine," released May 11. His interpretation is as follows:

At the opening of picture play "Sunshine and Shadow" waltz with spirit until Josephine's husband and children are arrested; then break into—

"Marsellaise." Play *pianissimo* until mob breaks into room, then *crescendo*. Continue until mob leaves room; gradually diminish as Josephine has vision of her husband's death. *Crescendo* again at the subtitle "After the death of Robespierre, Josephine and her two children are liberated." Play with spirit until subtitle "Josephine is introduced to Bonaparte, then a common artillery officer."

Resume "Sunshine and Shadow" waltz, continue until subtitle "The members of the French National Assembly are evicted by Bonaparte's grenadiers," then run into

"Marsellaise." Play until subtitle "The religious marriage of Napoleon and Josephine on the eve of the coronation day," then play—

"Pomp and circumstance" march. Elgar, very slow *tempo*, first movement. By repeating this movement it will just about bring you to the ceremony. Swing into second movement, play with very slow *tempo* until subtitle "Napoleon announces to the State Council his decision to divorce Josephine."

Resume "Sunshine and Shadow waltz *pianissimo* until Napoleon hands Josephine letter.

As she reads mute all strings and play with great feeling, "Simple Aveu;" this is to be continued throughout the balance of the picture and can be used with *crescendo* where Napoleon shows the new born baby to the populace, but must diminish again as Josephine reads the letter which advises her that a new heir is born.

This arrangement is made after a practical demonstration

Early Days in Selig History—First One Floor, Then Two, Then the Whole Building at 43 Peck Court.

and will be found very efficient and simple, only four numbers being used in the entire picture; can be played effectively with piano, organ or orchestra of any number of pieces. The best effect will be obtained by a pipe organ, piano, two violins, cello, flute, clarinet, trombone, cornet and tympani. If lecturer is used mute all instruments.

The Edison Home Projector

The long promised home projecting machine for motion pictures is here. It emanates from the workshop of Thomas A. Edison, and is now being demonstrated around the country. The machine weighs but twenty pounds when packed and ready to be carried in the hand like a case of surgical instruments, stands 10½ inches in height, is 17 inches in length and 6 inches wide. It may be placed on a parlor table or anywhere else convenient in the house.

Although the machine is built throughout to conform to Edison laboratory standards and specifications, it is so simple of operation that a child after a short course of instruction will be in a position to operate it as well as any expert. Wherever electric lighting is used an ordinary connection with the fixture will supply sufficient of "the juice" to permit of the operating of the baby arc light which Mr. Edison has perfected especially for the miniature kinetoscope. This projects a strong white light and brings the pictures out clearly on the screen. Whenever it is impossible to make use of electricity a special acetylene generator and lens has been devised.

These points in the machine are interesting, but it is the film that provides the real source of wonder to those interested in motion pictures. Eighty feet of this film contain as many pictures as 1,000 feet of the film used in the theaters, and will give as long a performance —about sixteen minutes. A six-foot picture may be thrown upon the screen and the pictures are sharp, clear and steady. This seeming mystery is made clear when it is explained that there are 210 pictures on each foot of film. Although but seven-eighths of an inch in width, three rows of pictures are included in this space with the sprocket holes separating the first and third series.

When the first row of pictures has been shown a white flash warns the operator. The latter by turning a convenient lever switches over the second row and in like manner changes to the third row, the machine meanwhile going on uninterruptedly. Realizing the danger that might surround the use of inflammable films in the home, non-inflammable film is used.

American Secures Remarkable Lens

The new studio of the American Film Manufacturing Company is rapidly nearing completion. It promises one of the really fine studios of the country where productions of any magnitude may be staged. It is the last part of the American's new factory, located at North Edgewater, Chicago, to be completed. In every case, the latest and most improved devices were used. Contrary to custom the studios have been made in triangular shape, the camera man to occupy the niche where both side walls meet. Roof and sides are covered with a special glass whose diffused rays are expected to add considerably to the photographic results.

Scene from Selig's "The Devil, the Servant and the Man," Reproduced from a Former Selig Success.

Scene from American's "The Distant Relative," a Story of Plot and Intrigue on a Western Ranch.

Probably the most interesting feature of the new studio is a new lens, never before used in any sort of photographic work, which has developed the astonishing speed of F 1.9, in optical terms, which is several times faster than the most optimistic ever dreamed of. Among those manufacturers anxious to secure the best results the lens now in use is considered the fastest in the world. This operates at a speed of F 3.5. Hence, it will be seen that the American's new lens will be a distinct novelty. In experimental work the new lens was used with gratifying results at 5:30 p. m. in the evening of a February day. The pictures were sharp, brilliant and in every way most satisfactory. No special lighting devices will be required in the American's new studio if this new lens lives up to its present record.

Metol Developer Prices Adjusted

Announcement has been made by the importers of "Metol" to the effect that the price of this standard commodity has been reduced materially, says the *Photographic News*. For practically two years the makers of Metol, which is a German product, have maintained their prices. Now, however, the greatly increased demand for Metol on the part of the motion picture interests has compelled the manufacturers to seek means by which Metol, which is related to the expensive coal tar products, can be produced at a price which would warrant a reduction in the selling list. Recently this has been accomplished and as a result of continuous experiment and the discovery of a much quicker process in distillation, the present decrease in prices comes.

Two German companies control the production of Metol, these companies being among the largest manufacturers of photographic chemicals in the world. Their attitude toward the photographer has always been progressive and this latest move is an indication of the German system which at all times tends toward an equitable relation between manufacturer and consumer.

American's Giant Advertising Campaign

The American Film Manufacturing Company announces that it has been successful in securing publication of its film stories in something over 70 papers each week. These publications are spread from one end of the country to the other and include daily newspapers of every size and description. The *Chicago Tribune* shows the largest circulation, topping the list with 287,000 readers scattered over Chicago and the Middle West. Something more than 32 states are being used and the total number of people reached is in excess of 7,000,000.

This is enterprise of the right kind. Not only does it aid the exhibitor in adding to his attendance, but the effect is felt all along the line, elevating the entire status of motion pictures and placing them on a par with all rec-

ognized amusements. That seventy editors of great American dailies should see fit to feature American stories in page and half page space is surely ample evidence that the newspapers are awakening to some latent possibilities. The American is to be congratulated on its enterprise in thus inserting the opening wedge.

S. S. Hutchinson, president of the American Company, is sponsor for the statement that during the past six months, the company has been in excess of $100,000 in advancing the character of "Flying-A" productions.

The Trade at Dayton

At the Dayton convention March 26 and 27 film manufacturers were represented by the following: J. E. Brulatour, president of the Motion Picture Distributing and Sales Company, and president of the Eclair Company; Harry R. Raver, manager Eclair Company; Mark Dintenfass, of the Champion Company; A. Kessel, of the Bison Company; Herbert Miles, of the Republic; Carl Laemmle, of the Imp; Tom Evans, of the Powers Moving Picture Company; C. Simone, of the Nestor Company, and R. R. Nehls, of the American. Mr. Blair, representing the Eastman Co., Rochester, N. Y., was present.

Among those present representing manufacturing supply houses and other products connected with the film business were the following: J. M. McLaughlin, J. W. Kenfield, W. A. Bishop, A. N. Carstens and J. D. Carr of the A. H. Andrews Company, Chicago; E. E. Fulton, 154 W. Lake street, Chicago; John Cooper, of the Sterling Economizer Company, Warren, Ohio; Lindsey A. Woodward and L. E. Neukom, of the Enterprise Optical Manufacturing Company, Chicago; Scott S. Wilson, of the National Carbon Company, Cleveland; F. W. Swett, of the Nicholas Power Company, New York and Robert Hope Jones, Rudolph Wurlitzer Company, Cincinnati, O.

American Produces Mystic Subject

On May 9 the American Film Manufacturing Company will release one of the oddest subjects it has ever issued. The title of this picture is "The Myth of Jamasha Pass." It contains some remarkably beautiful photography. The tale itself is mystical and the general trend of the story is explained by the first sub-title which reads: "In the gloomy depths of the Sierras, superstitious old men were wont to tell of the mystical maid who lived in the Pass of Jamasha. This mystical maid, so the story goes, oft appear'd at sundown, seeking the souls of men."

The story is allegorical, the sub-titles poetical and calculated to throw an air of the mystic around the subject.

Miss Von Trump, that clever ingenue, who has been making good in American pictures for the past four months, plays the leading role which is difficult of interpretation and calling for a high-grade of histronic talent. She appears in tattered garments on the mountain top, smiling and waving her arms in an awe-inspiring fashion, disappears into solid rock and reappears in bewildering fashion. It is expected that "The Myth of Jamasha Pass" will make a sensation. It is decidedly new and handled in an entirely novel way.

Scene from Selig's "The End of the Romance," a Drama Suggested by L. Max Ehrler's Painting.

Scene from Essanay's Western Drama, "The Indian and the Child."

Selig Picture Suggested by Selig's Picture

"The End of the Romance," the Selig release of April 16, has had some romance of its own. Some time ago W. N. Selig, president of the Selig Polyscope Company, returned from one of his trips abroad, bearing with him an original painting in oil by the noted German artist, L. Max Ehrler. Mr. Selig, who is something of an art connoisseur, prized this particular work so highly that he gave instructions to have it hung in his beautifully decorated private office at the Chicago plant. Here it at once attracted attention and admiration from all who viewed it. The painting, wonderfully lifelike, shows a young lady in the act of burning, over a candle, the photograph of her lover.

The painting had been hung scarcely a week before the scenario editor found himself literally swamped with scenarios founded upon the romance suggested in the painting. Practically everyone in the immense plant had received the same inspiration. From among this mass of material one was finally selected and placed in production.

The matter was not mentioned to Mr. Selig, and when he sat in the vault the other day and witnessed for the first time a living portrayal of his beloved art subject, his surprise was genuine.

For a disinfectant for moving picture theaters, mix 30 parts of formalin (10 per cent) with 65 parts of alcohol (95 per cent) and 5 parts of some synthetic perfume (such as mignonette). Of this solution, 10 grams are added to 1 pint of water and used as a spray.—*Drogenhadler.*

Far North in Motion Pictures

Capt. F. E. Kleinschmidt, a young German sportsman, has arrived in New York after some months spent in photographing wild animals in Eastern Siberia and Alaska. He brings with him 10,000 feet of moving picture films which he and his companion, L. L. Lane of San Francisco, made during the trip. Capt. Kleinschmidt, discussing his experiences, said:

"We have obtained pictures of almost everything related to Alaska and the Eastern Siberian country, the natives, their customs, and all the wild life of the country. Our expedition journeyed as far north as 72 degrees north latiture, probably the furthest north ever reached in that longitude. We were several miles above Wrangell Island, where there is only the record of one ship before us. That was in 1881, when the revenue cutter Rodgers went there in search of De Long, the arctic explorer, who lost his life in the north. We found the monuments left by the party from the Rodgers."

Capt. Kleinschmidt has brought back some striking photographs of bears, walruses, mountain sheep and northern birds taken at a close range. Moving pictures were taken, showing raging polar bears, charging the camera. The life the hunters lived and their manner of attacking game are shown in great detail.

A recently issued catalog of the Motion Picture Screen Company, Shelbyville, Ind., gives an interesting and convincing description of the Mirrorscreen. It also describes the company's new transparent screen for rear projection.

Censorship in Montreal

A movement to establish a capable volunteer board of censors, whose duty it will be to look over all the moving picture films which are allowed to be used in the city of Montreal, Canada, is being planned by the moving picture committee of the Children's Aid Society and the scheme is now under sonsideration by the Board of Control.

Chief of Police Campeau, a rigid disciplinarian, supervises the posters which the moving picture theaters are allowed to post outside their doors, but no one supervises the pictures themselves.

Several ladies who have made a special study of the moving picture theater in its relation to children, declare that the great majority of the pictures shown are otherwise than harmful, although at the same time they emphasize the danger of leaving the way clear without any sort of supervision whatever, for the showing of films in the city.

Ontario has a provincial Board of Censors who see and pass upon every picture which is shown in that province and many of the films shown are stamped with the seal of the Ontario Board's approval.

Board of Censors for Roanoke Theaters

The managers of the theaters in Roanoke, Va., have taken the censorship situation in their own hands and through their efforts a committee of fifteen censors will be appointed for vaudeville and motion picture shows in the city.

The managers of the theaters met members of the Chamber of Commerce and decided on this action. The plan as outlined by Manager Schwartz, of the Jefferson, was for the appointment of three censors for each play house. The manager of the theater will be one of the members of the board and with him will be associated a member of the Chamber of Commerce and probably a member of the Woman's Civic Betterment Club.

In all there will be five shows for the eyes of the censors and the board of censorship really will consist of fifteen members though three will be appointed to each play house.

California Hustlers

The Columbia Amusement Company, Santa Rosa, Cal., is as live a concern as can be found in the exhibiting field. It operates the Columbia theater and the Theaterette, both of which houses are ideal places to see motion pictures. Each week a four-page "Weekly Show News" is issued, giving the complete weekly program of the two theaters as well as a bright page of news items and a running comment on the films. All the patrons of the two theaters, and those who should be, receive this interesting little paper every Friday through the mail, and we have no doubt that the "Weekly Show News" does much to assure full houses for the Columbia people.

Flashlight for Theater Usher

Upon entering a moving picture theater where the lights of necessity are turned out or low while pictures are thrown upon the screen, it is often difficult to see well enough to find a vacant seat, says *Popular Electricity*. Just here the pocket flashlight is proving very serviceable. The usher may lead the way and locate a seat with little annoyance either to those coming in or to the spectators if equipped with an ordinary flashlight.

Joliet Exhibitors Bar School Children

Pupils of Joliet, Ill., schools under 14 years will be barred from all Joliet theaters, including moving picture shows, during school hours. No child under 14 will be admitted until after 4 o'clock hereafter. This was the agreement reached at a conference of theater owners with Attorney Harvey E. Wood. Any child who slips past the theater doorkeepers, claiming he or she is over 14, but who looks younger, will be arrested in the theater by a truant officer.

Selig to Release a Former Success

Ever since the Selig Polyscope Company released its production of "The Devil, the Servant, and the Man," back in 1910, it has received request upon request to reproduce the story. Recently Mr. Beal, who directed the first production, rejoined the Selig staff of producers and the first thing he did after entering upon his duties was to produce "The Devil, the Servant and the Man." The new production promises to be vastly superior to the former.

Hoosiers in Moving Pictures

Moving picture records of members of the Indiana Society will be made at their annual outing at Culver, Ind., June 1. Wilbur D. Nesbit, president of the society, met the entertainment committee at the Great Northern Hotel yesterday and announced that he had arranged with a moving picture concern to photograph every part of the program in which well-known Chicago members participate.

No Sunday Vaudeville in Niagara Falls

There will be no more vaudeville in the theaters of Niagara Falls on Sunday. This order was issued by Chief of Police Thomas H. Lyons, and is a direct result of a petition filed with the common council by the ministers of the city. Moving picture shows will be permitted, however, but these exhibitions must, for the most part at least be of a religious character.

The Greater Des Moines Committee has under consideration a plan to have 1,000 feet of film made showing Des Moines' streets and buildings, to be used at the exposition of the International Municipal Congress at Chicago next fall. One firm already has submitted a price of $500. The city council probably will be asked to bear a portion of the expense.

Denver wants to profit by the big exposition in San Francisco and has already started publicity plans to this end. Films of the business and residence streets of the city have been prepared and distributed to moving picture shows in the east and south. All of them bear the legend, "Stop in Denver on the way to San Francisco in 1915."

A balloon seen in the eastern part of Kansas City, Mo., recently was the plan of a motion picture theater owner to obtain a crowd near his theater. The gas bag ascended at 6:30 o'clock from Spruce street between Fifteenth and Sixteenth streets and floated about half a mile to Twelfth and Cypress streets at an altitude of twenty-five hundred feet.

Representative Barchfield March 13 introduced in the house a bill exempting from penalty in cases of innocent producers of moving pictures which may be held to be infringements on the copyright of a book or play.

Among the Picture Theaters

PERSONAL NOTES.

The secret is out. Stan Twist is cultivating whiskers because he was born in St. Peter. He has a right to emulate the saints—he got his start in a town built on saintly, sanctified ground. But St. Peter was only Stan's starting place. He didn't stay there. For that reason you hear very little of the town. The village board should have kept him to boost the burg. It was a mistake that they didn't. But Stan had to follow his parents—he had no voice in his own affairs and the family went to St. Paul. More reason for Stan's whiskers! He lived in St. Paul till his father engaged to help build Jim Hill's railroad through to the coast. Stan's father was a civil engineer and had charge of division construction. This work for Hill led the father first to Montana and afterwards to Washington, where he died when Stan was five. The sorrowing mother journeyed back to Madison, Wisconsin, with her son and daughter. In Madison, Stan got his grammar and high school fairly well and would have cleared the University of Wisconsin if he hadn't needed the money more than he needed the goat skin. At the university he became the self-elected chairman of ceremonies and business manager of every stunt a student can invent, from the frat dance to the minstrel show. Everything that had the jingle of coin caught Stan's ear. He promoted things and was there with the come-on smile—at the box office. When there wasn't anything doing five weeks from any night, he filled it in right there. . . . Well, that's only preliminary. It shows something of the beginning of hustling Stanly Harris Twist, at present the courteous, vigorous, here-now and yonder-the-next-minute manager of publicity for the "House of Selig"—which is some house. But while Twist was at school he went in strong for athletics and amateur theatricals and art. He studied art, not so much to follow it as to understand artists. It helped some, but he doesn't understand an artist even yet! At Madison, he found the "college rag" much to his liking. It gave him his first taste of writing and boosting—mostly coming events to which he was looking to profit him. He had some Chicago papers on the string at so much per column—more revenue. Then he came to Chicago and hustled for Marshall Field & Company—wholesale and retail; sticking for more than a year. He then went to the National Biscuit Company in advertising and selling, but advertising made the long bid for his time and he quit and went to Milwaukee to represent the Bureau of Engraving, Minneapolis. He also found time to be press agent for Davidson's Theater, where one night something happened to an actor and the manager pushed Twist out on the stage to take the part. That was something else again. Twist was in a dilemma whether to act or do the advertising agency stunt. He chose the latter and selected Madison as the place, where he nearly worked himself to death. The doctors told him to go out to California where he might die and they wouldn't hear of it. He went, but he didn't nearly die. He hooked on to the advertising department of the Los Angeles *Herald*, where he "stayed put" for four months. He then established another Twist advertising agency, built it up quickly and sold it profitably. Then he joined the California Belasco Stock Company and stuck it out for a season on the coast. This was followed by dramatic headline sketches on the Orpheum circuit for two years, but he was careful to land in Los Angeles in time to meet Selig's first company at Edendale. He wormed his way into that, because hadn't he studied art, and wasn't he himself an artist and hadn't he been the film fan at the end of every show? He was a confirmed bug on motion pictures. He wanted to see himself as others saw him. He got in the pictures. Then he got into the executive office, curious to learn the commercial end. It was little more than a year ago when Mr. Selig brought Stanly Twist to Chicago to manage the publicity end of his business. Take the Cinderella campaign for an example if you want confirmation that Twist can rise to opportunities! Stanly Harris Twist will have his next birthday September 22. Send him twenty-seven flowers in your boquet—one for each year. He is a member of the Chicago Press Club. That's where his photograph was pillaged. He has all the members working for him, because he has hung up $200 of Selig's money as a prize for the best article on the subject "Motion Pictures." This is not for the best article on the subject "Selig's Motion Pictures." There's a difference. MOTOGRAPHY will be printing these articles after while, maybe.

It is hard work to hide your lamp in a lamp house if you are talking to 7,000,000 people through sixty-seven daily newspapers in twenty-nine states and keeping it up. It is some crowd per week and a week is only seven short days. That is the kind of audience Omer Doud has for his subject, "American Films for Americans." It is just one of the many duties of an active press representative who believes in doing a full day's work. Omer Doud, by the way, is a Chicago product. He wouldn't know a billy from a nanny goat unless you told him the difference. He knows a film from a fillum, though, and what's the odds? But being city-bred isn't a handicap if you have a good square jaw, and Doud has it. He has had a varied career, but it has been consistent and evolutionary—the ultimate being a boomer. This is something of it, caught on the fly. As a kid he whacked away at school as merely compulsory until he was sixteen, but he got all the schools had to offer for his time and he stored it away for emergency use. He ran away to Kansas City about then and got a berth as cub reporter for the *Star*. His six months in K. C. gave him courage to tackle the Chicago papers and he landed a place with the *Inter-Ocean* as special representative in Indian Territory and Oklahoma. He roughed it in the wild and woolly for eight months, blossoming out as a Sunday feature story writer and circulation boomer. He did so well that the *Inter-Ocean* brought him back to Chicago and planted him in circulation and advertising. In eighteen months he got to the editorial page, when he left and joined the *Tribune* advertising staff. From the *Tribune* he went to the *American* in the same capacity. In 1904 Doud dropped dailies and tackled trade papers. He practically had full sway with the *American Florist*, as editor, business manager and advertising director. The work was telling in a year when he joined the *Chicago Banker* force, where he was an all-around man for a year and a half. Then *Presto* took him to New York, and after the usual length of time he pined for "gold old Chi" and came back as western representative of the *New York Financier*. In all of this trade paper experience, Omer Doud's leanings were towards the advertising end. It was natural, then, for him to accept a flattering offer from the Sherman & Bryan Agency—a New York concern—to manage its western office, which was handling half a million dollars per annum. Doud was with Taylor-Critchfield Corporation as editor of *Agricultural Advertising*. He learned the difference between Shropshires and Poland Chinas and Buff Cochins. He was with the *Commercial Union* for eighteen months, promoting for the general welfare a campaign of readjusting freight tariffs in the classification of advertising matter. His petitions got respectful hearings before the Trans-Continental and Western Freight Associations and Doud won. He thinks better of this achievement than any other, for it still lives and saves the producer vast sums daily. Somewhere during his busy career, he was on *Printer's Ink* staff, which is always the merit mark for advertising men. Omer Franklin Doud was born in Chicago in February, 1882. He thinks it must have been the 30th, but it isn't quite clear to him. Men nearly always forget something. His card reads, "Manager of Publicity," but the letter heads say, "Manager of the Industrial Department, American Film Manufacturing Company." Look for his future announcements in his syndicated newspapers. He will tell you all about

Americans for Americans, but not nary one word about himself. Some men are too darned modest!

R. C. Lundgren has been appointed general manager of the Chicago office of the Feature and Education Film Company.

Giles R. Warren, formerly with the Lubin company, has severed his connection with that company and has assumed the position of manager of the scenario and publicity departments of the Powers Picture Company.

H. T. Edwards, well known in the film industry, has been appointed general manager of H. A. Mackie, Inc., dealers in motion picture supplies, located at 21 East 14th street, New York City.

C. B. Hoadley, a scenario writer and editor, also publicity man, has joined the ranks of the Great Northern Special Feature Film Company. Mr. Hoadley was formerly connecetd with the Champion Film company.

I. A. DeSomers, who for the past few years has served the Western Film Exchange of Milwaukee in the capacity of sales manager, as well as other capacities, has been appointed manager of the Western Film Exchange at Kansas City, Mo., by the owner, J. R. Freuler. As Mr. DeSomers has had considerable experience in all departments of exchange work he will no doubt make a success of his new undertaking.

Wray Physioc, formerly connected with the Pathe company and later with Eclair, has assumed the position of scenic artist with the Crystal Film Company.

Mace Greenleaf recently joined one of the Lubin stock companies, but scarcely had he entered upon his work when he contracted a heavy cold which rapidly developed into typhoid pneumonia, resulting in his death at the St. Agnes Hospital, Philadelphia, Sunday morning, March 24th. Interment in Maine, his former home. Mr. Greenleaf, handsome and well proportioned, was regarded as quite a valuable acquisition to the acting force. He took part in one picture, a drama in which he was the hero.

C. Lang Cobb, Jr., has resigned his position as general manager of the Consolidated Motion Picture Supplies Company, New York, and has joined the staff of the Reliance Company, for which company he states he will do quite a bit of traveling. Mr. Cobb has been succeeded in his former position by A. V. Cobb.

S. L. Rothapfel of the Lyric Theater, Minneapolis, was a recent visitor at Motography's office. Mr. Rothapfel is noted for the perfection of his pictures, and he talked very entertainingly on the possibilities of the art.

ROLL OF THE STATES.

ALABAMA.

Articles of incorporation have been filed for the Steel City Amusement Company, organized for the purpose of conducting a moving picture enterprise in Ensley. The incorporators and officers for the first year are as follows: President and general manager, Joe Steed; secretary and treasurer, Annie Steed; vice-president, E. R. Maynard. The authorized capital stock is $2,000 and the company begins business with that amount paid in.

ARKANSAS.

The members of the Moose Band of Batesville are making arrangements for the erection of a big airdome theater with a seating capacity of 800, for the summer amusement season.

CALIFORNIA.

A moving picture theater for children will be conducted in Oakland under the direction of Mrs. Zoe Green Radcliffe, aided by a number of the prominent women and men of the city who are interested in the welfare of the child. It is the purpose of the movement to eliminate the harm which might result from indiscriminate picture show attendance and to make it of educational value to the child, and by showing films of fairy tales and clean, humorous pictures, the right kind of amusement and benefit can be gotten. As an experiment a series of matinees will be given at the Oakland theater, on Broadway near Sixteenth street, Oakland, on Saturdays from 10 to 12 and only films approved by a special committee of prominent citizens will be shown. The committee consists of the following, while other names will be added: Mrs. Cora Jones, district chairman of civics, California Federation of Women's clubs; Mrs. L. P. Crane, district chairman of philanthropy; Miss Grace Trevor, president of the West Oakland home; Mrs. C. S. Chamberlain, president of the Oakland club; Mrs. H. D. Spencer, president of the Oakland Federation of Mothers' clubs; Mrs. H. N. Rowell, president of the Berkeley Federation of Mothers' clubs; Mrs. Elinor Carlisle, president of the Child's Welfare League; Mrs. J. B. Richardson, vice-president of the Y. W. C. A.; Rev. A. W. Palmer, pastor of the Plymouth Congregational church and member of the playground commission.

Bernardi, who are interested in a chain of motion picture houses about the Middle West, have secured a site at the southeast corner of Ninth avenue and Baymiller street, Cincinnati, in the West End, on which it is stated there will be erected a motion picture house having a seating capacity of 3,000. The ground alone cost $15,000 and the cost of the improvements is estimated at $75,000. The owners expect to have the house ready for business within four months. The admission fee will be five cents and motion pictures, vaudeville and stock productions will be presented by the management.

The Empire Theater Company is planning for the erection of a motion picture theater at 1523 Vine street, Cincinnati, which will be known as the Empire.

The Empire Moving Picture company has been incorporated at Lima by H. B. Hoffman, E. L. Dysinger, J. E. Morgan, Emma T. Hoffman and H. O. Bentley; capital stock $12,000.

The moving picture theater at the corner of Germantown and Williams streets, Dayton, formerly owned and operated by James Kennedy and Edward Stilwell, has been purchased by Dr. H. Q. Alexander, who will continue to operate it along the same line.

The United Theaters Company is the name of a new concern incorporated at Cincinnati with a capital stock of $50,000 by I. Frankel, Edward Bernardi, Thomas Reilly, May Droesch and Joseph Ante. The company will erect a motion picture theater at Ninth avenue and Baymiller street.

F. T. Montgomery, the well-known picture man of Jacksonville, Fla., has opened a moving picture theater, the Majestic, at Dayton, under the most auspicious circumstances. It was impossible to accommodate the crowds which attended the opening. As a token of their welcome, the local motion picture men presented him with an immense floral horseshoe, bearing a card from Local No. 5 Motion Picture Exhibitors of Ohio, wishing the new house "good luck" and extending a welcome.

Articles of incorporation have been filed for the Merchants' Theater Ticket Company, Cincinnati, with a capital stock of $35,000. The incorporators are Oscar C. St. Clair, Norman J. Lease, Alfred Felix, Alfred L. Heinike and William E. Wagner.

A moving picture machine has been installed in the East Technical High School, Cleveland, through the efforts of the pupils who raised the necessary funds by giving a series of entertainments. Special attention will be given to educational films and films of the classics, will be given for the English classes.

The new Royal Theater, formerly the Elite, was recently opened at Columbus Grove by William Tanner Mapel under the management of Grant Bogart.

Announcement has been made that Herbert Miles, owner of the Republic Film Company, is considering a proposition to establish a film factory in Dayton.

OREGON.

The Clatskanie Opera House Company of Clatskanie, and the Electric Theater Company of the same place have been consolidated and will hereafter be known as the Clatskanie Opera House Company and will exhibit moving pictures.

PENNSYLVANIA.

The moving picture theater at 5206 Market street, Philadelphia, will be remodeled for the Grand Amusement Company.

A new moving picture theater has been opened at Kulpmont by James McFadden.

Plans have been prepared for a motion picture theater to be erected at Germantown and Hunting Park avenues, Philadelphia, by J. Janke and T. J. Mooney, which will have a seating capacity of 1,500 and will cost $50,000.

The Motion Picture Exhibitors' Association of Northeastern Pennsylvania has been organized at Scranton with the following officers: President, M. E. Comerford, Scranton; vice-presidents, Michael Gallagher and Fred Hummier, Pittston; secretary and treasurer, F. J. Helreigel, Scranton.

The Palace theater, a motion picture and vaudeville house, was recently opened at East Greenville under the management of Pine Bird.

Fred T. Halleck will open a moving picture theater at Wellsboro.

Col. T. J. Kernan has had plans prepared for a motion picture theater to be erected at Ambridge.

The business men of Cherrytree will erect a theater which will have a seating capacity of 300.

Michael Comerford is at the head of a movement to erect a motion picture theater on Lackawanna avenue, Scranton, and plans have been prepared by Architects Blackwood and Nelson.

A new theater will be erected at Broad street and Snyder avenue, Philadelphia, by Jos. W. Gardiner, which will have a seating capacity of 3,000 and will cost $150,000.

TEXAS.

The New Majestic theater at Burnham has been purchased by G. S. Clarke, who also owns the Starlight theater, both exclusive picture houses.

The Crystal theater, recently opened at Houston, is said to be one of the handsomest moving picture houses in the South. No expense has been spared by its owner, W. Geibig, in providing for the comfort and enjoyment of his patrons.

A moving picture theater has been opened in the Sherman Street Opera House at Houston by J. D. Murphy.

Messrs. J. M. Carson, treasurer of the Agricultural and Mechanical college, Bryan, and J. R. Crum, also of the college, will conduct a moving picture theater in the Masonic Temple in that city.

R. E. McBride, Jr., Denison, is the inventor of a concave screen made of fireproof fibre which bids fair to take the place of the white canvas curtains now in general use in motion picture theaters. A number of these screens have been installed and are giving excellent service.

TENNESSEE.

The Rex is the name of a motion picture theater shortly to be opened in Knoxville by W. H. Wasserman, who operates a chain of motion picture houses in the South.

The New Elite moving picture theater was recently opened at Clarksville by Fred Irion, local manager for the Crescent Amusement company at Nashville.

The Princess is a high-class vaudeville and moving picture house recently erected in Nashville at a cost of $80,000. It is under the management of J. M. Bolling.

R. H. McCullough and J. Morse, who operate a chain of vaudeville and moving picture theaters, have leased a building at Bristol for a period of ten years and will convert the same into a theater.

WASHINGTON.

The Advertograph Company, Inc., Tacoma, has filed articles of incorporation with the secretary of state; capital stock, $50,000. The office of the company will be in the Chamber of Commerce and it is the purpose of the concern to start a motion picture producing plant, giving special attention to films for advertising purposes. Meyer Cohen is general manager.

The Elite is a high-grade motion picture theater recently opened on Pike street, near Harvard avenue, Seattle, under the management of Harry Bemis. The enterprise is backed by five prominent business men and promises to be a great success. Only the best pictures will be shown, special attention being given to educational pictures which will be taken from life in all parts of the world.

The Gem Amusement company, Spokane, recently organized by Byron E. Sharp, H. W. Sharp, H. T. Irvine and Thomas E. Clark will open at least three new motion picture theaters in that city. The first one will be located at 2014 Sprague street, and will have a seating capacity of 300.

The Scenic theater, Spokane, has been purchased by H. S. Reagan.

John H. Clemmer, owner of the Clem and Casino theaters, Spokane, and his son, James Q. Clemmer, of the Dream theater of that city will open an exclusive motion picture theater in that city with a seating capacity of 1,500.

WEST VIRGINIA.

The Central Opera House at Martinsburg has been leased by Fred H. Hable and Herman Hable, who will conduct it as a moving picture house.

The Colonial is a late addition to Wheeling's picture theaters, having been opened under the management of Charles Feinler. The house is entirely fireproof, the curtain even being of cement, and it is said to be one of the most beautiful exclusive motion picture houses to be found. The seating capacity is almost 1,000, and there are retiring rooms for both ladies and gentlemen.

WISCONSIN.

The Green Bay Motion Picture theater, Green Bay, has been purchased by Dr. J. R. Minahan, who will make extensive improvements.

The Palace moving picture theater, Oconomowoc, has been leased by Frank Erdman.

The Palace moving picture theater was recently opened at Antigo.

A moving picture theater will be opened at Chippewa Falls by F. E. Noyes.

John C. Wagner will erect a motion picture and vaudeville theater at Racine at a cost of $6,000.

WYOMING.

An amusement company has been incorporated at Sheridan with a capital stock of $25,000 to conduct an amusement place that will include vaudeville, picture shows, operas and all classes of theatrical entertainment.

The Electric theater at Sheridan has been purchased by Joe Waisner, owner of the Star theater of that place who will discontinue it.

HAWAII.

Ye Liberty is the name of a vaudeville and moving picture theater erected at Honolulu at a cost of $40,000, having a seating capacity of 1,600. The program will consist of four vaudeville acts and moving pictures.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

THE PATENTS SITUATION.

THE aftermath of the Supreme Court patent decision in the A. B. Dick case, which was reviewed editorially on page 148 of our April number, threatens to provide a cure worse than the supposed disease. The imminent flood of patent legislation is largely due to the idea prevalent among our representatives that the American public loathes the word monopoly. The decision itself merely gives legal recognition to a principle under which owners of patent rights have always operated.

That a patent right should constitute a monopoly is not in itself cause for alarm. Any true invention is the materialization of an idea as much the property of the inventor as his right to live and work. But his absolute title in that property must be transferrable to have value and any attempt to restrict the inventor's title in his invention, or its transferability, lessens the incentive to invent and consequently the progress of civilization.

The United States is the most progressive country in the world. It is the source of most of the present day marvels of applied science, and continues to produce them as fast as the patent office can pass on their novelty. To attempt to stem the tide by legislation demoralizing to the inventor's hopes and subversive of his rights would be to endanger the supremacy of this country in the mechanical arts.

The object of some of the bills now in Congress is to prohibit the manufacturer from giving protection to dealers on the retail price of patented goods. House bills 23,192 and 23,193, introduced by Congressman Oldfield, are examples. They are drawn upon the superficial impression that there is something iniquitous in a fixed price, or at least that the manufacturer is unduly benefited thereby. But the fact is, as must be apparent on a moment's consideration, the manufacturer's profit is not increased by a fixed retail price. The manufacturer fixes his own selling price; the object of the retail price cutter is to draw trade even at the cost of a loss on that particular product, which loss may be made up on other articles, or even charged to advertising expense. The only benefit to the manufacturer is the assurance of support by those responsible dealers who appreciate protection and the possibility of a reasonable profit.

We make the assertion that the manufacturer is rightly and logically entitled to fix the retail price of his product, and that he cannot properly be deprived of that right. He is responsible for the cost of manufacture, the compensation to the inventor, and the *cost of selling*. The cost of selling means the cost of placing the product in the hands of the ultimate consumer. It makes no difference whether this ultimate sale is made direct by the manufacturer or through his authorized agent. The principle remains the same. Under the patent rights he controls his product, even to the point of refusing to sell it at all. And if we grant him this right, as we must—for a man may do as he pleases with his own—it must also include the lesser right of dictating the terms of sale.

Another feature of the proposed legislation is the compulsory license to manufacture, whereby the patentee (or his assigns) may be forced after four years to license anyone desiring to produce his device for the market. Only the most brief consideration is necessary to realize that this would lead to the most chaotic condition imaginable. It virtually means a universal exchange of patent rights, so that everyone could start manufacturing every patented article by wringing a license from the patentee, or from those to whom he had assigned his rights. The principle of this arrangement is socialistic, for it wholly eliminates whatever advantage one manufacturer might gain over another by reason of his inventive ability or his foresight in securing valuable inventions. Thus no manufacturer would have any incentive to offer tempting compensation to inventors; the spirit of competition would be banished; the market for inventions would fall, and the progress of inventive art be checked.

There is no question, too, that the compulsory license would benefit the big manufacturer, with his broader equipment, his readiness to manufacture and his advantageous channels of distribution, at the expense of the small manufacturer, who would be under the necessity of installing new equipment for each new product. Under the present law, the small manufacturer may, by obtaining a valuable patent right, be placed on a basis of fair competition with his larger rivals, with the hope of growing as big as they are. Under the proposed law this would be impossible.

The compulsory license to manufacture would encourage the worst kind of monopoly—the monopoly of might. The present patent license constitutes only a monopoly of right.

A SHADOW FROM THE FUTURE.

IT IS not often that we feel moved to select any specific film out of a monthly release of some hundreds for editorial comment. That we do so implies that the film under discussion is very unusual, very good or very bad. And even now, in deliberately projecting the name of "The Coming of Columbus" on this page, we do not wish to praise a certain product or a certain producer at the expense of other products and producers, but rather to express approval of a *type* of subject of which "Columbus" is an excellent example.

This is not the place to discuss the expense, or the labor, or even the story of the Columbus film. That has been done on another page. We would only say that the subject represents the best there is in motion pictures; for it combines the acme of entertainment with the *ne plus ultra* of pedagogic value. It is

for that reason that we regard it as representative of the film of the future; an advance exponent of what the industry may produce in years to come.

Meanwhile, we regret to say, Columbus is not fitted for the highest possible commercial success under present conditions. This is not because it is too good, or too educational, but merely because it is in three reels. Where the average nickel theater owner runs a two-reel program, confusion is inevitable. If he runs the three reels one a day for three days, less than twenty per cent of his patrons see the whole subject, while the majority see only one reel of it. If he runs the three on one program, as they should be run, he disarranges his day and probably loses money because he cannot run so many shows. If he boosts his price to ten cents for the occasion, he is all right; but for some unexplained reason most five cent exhibitors are afraid of ten cent prices. That is where they make their mistake. Every man, every woman in the country would pay ten cents to see a film like Columbus, and take all the children.

The three-reel subject, however good, seems rather in advance of the times. But that is the exhibitors' fault, if any fault exists; for surely a 50 per cent longer show at a hundred per cent higher price is good business, from a purely commercial standpoint. And they need not fear the ten cent ticket; the people will pay the price if they get the best there is for it.

MORE ABOUT GERMANY'S SHOWS.

CONTINUING the United States consular reports on German theaters, some of which were given last month: Vice Consul Chas. J. Wright, Barmen, says there is scarcely a town of any size in that consular district which has not one or more theaters devoted to the exhibition of moving pictures, some of which excel the other local theaters in capacity, as well as in decorations and comfort. The programs generally last for 2 to 2½ hours and then repeat, the prices ranging from 20 pfennigs to 1.50 marks (7 to 35 cents), children and soldiers or sailors in uniform being admitted for half price. Each ticket is subject to a tax of 10 per cent, as are all theater tickets in Germany.

There are four cities of over 200,000 population, five of over 100,000, and eleven of over 35,000 in the consular district. In Barmen there are four moving-picture theaters, seven in Elberfeld, four in Duisberg, and ten in Dusseldorf. The figures for the other cities were not obtainable.

All theaters are subject to strict building regulations, and the operators are placed in fireproof compartments. Most of the theaters have orchestras and some have reciters, who explain the picture as it is thrown on the screen. Programs are generally free, but are sometimes sold at two cents. Films are rented from central exchanges, the rates being usually 10 cents per meter for "first-run" films, 8 cents for "second-run," and so on as the film loses popularity.

Most of the films shown are French; Italian coming second, and American third. Many American films are exhibited, "Wild West" and "Civil War" pictures meeting with much favor. One or two American film firms have agents there, but the country is not as well exploited as it should be. At present dramas of two or three acts seem to be the most favored. There are several firms in the district manufacturing films. The import duty on moving-picture films is 2 marks (48 cents) per kilo (2.2 pounds).

Consul Ralph C. Busser, Erfurt, says the popularity of moving-picture shows in his district continues undiminished. The price of admission ranges from 20 pfennigs (5 cents) to one mark (24 cents). Orchestrions and other forms of mechanically rendered music were formerly in vogue, but they have now mostly been displaced by improvisations on the ordinary piano.

The historical, landscape, agricultural, industrial, and other educational scenes are either explained by a lecturer or by a written description. In this manner the tone of the cinematograph theaters in the region is being elevated. Many school teachers encourage their pupils to attend, and people of refinement patronize the better class of such theaters.

The moving-picture machines or apparatus used in the local theaters are of German manufacture, those made by a firm in Dresden having the highest reputation there for noiseless operation and all-around serviceability. Local managers seem satisfied with the apparatus already installed and consider that American machines, because of the expense of transportation and tariff, would cost too much for successful sale there and elsewhere in the interior of Germany. The German machines can be bought on easy terms.

The films are rented from various agencies in Berlin and elsewhere, which procure them from the manufacturers in Europe and the United States. Frequently several theaters in the same vicinity, if they do not already belong to the same syndicate, will enter into a joint arrangement for the lease of films, which they exchange among themselves. Usually the higher-priced theaters have what is known as a monopoly arrangement with the film-supply agencies by which they are entitled to receive films for exhibition before the other theaters in the same town. Films which carry with them such a monopoly privilege rent at the rate of 29 to 36 cents per running meter (3.28 feet) per week. Films without monopoly privileges rent at 10 to 15 cents per running meter per week.

In manufacturing machines and packing films for the German market careful consideration should be given to the customary police regulations concerning the construction and preparation of the moving-picture equipment for the purpose of avoiding fires. The principal requirements may be briefly stated as follows:

The apparatus must be fitted with an automatically sliding metal sheet designed to extinguish the heat and light rays immediately upon the withdrawal of the film. The portion of the film which is in front of the lens (also in the window or opening of the apparatus) must move in a closed compartment of glass.

The film shall never be placed directly over or moved around the lamp box, and must be so arranged that it can by no chance come in contact with the lighting contrivance. It must be unrolled from a metal container hermetically closed except for the tiny opening out of which it comes and wound into another similar metal case. These cases must be undetachably fastened to the "stift" or pivot. The opening in the holder from which the film strips are unrolled must be so narrow as to render impossible the entrance of the flame.

The German market for American films promises to be better than ever, as there is a demand for landscape, historical, industrial, and other educational views. Scenes of cowboy and Indian life are always keenly appreciated; also American humorous sketches, if the humor is not too subtle or provincial. Sketches portraying the life at Atlantic City and Coney Island have found favor there.

American manufacturers in planning their pictures should remember both the police censorship and the marked improvement in the taste of the German show-going public. Some such subjects as the following would be likely to be well received here: Scenes from American history; negro life in the South, especially on the

cotton, sugar-cane, and fruit plantations; the county fairs and traveling circuses; the parades and other exciting scenes of an American political campaign; popular outdoor games and sports; student life at the great American universities; scenes from the cosmopolitan life of New York City, New York Harbor, and along the Hudson; the natural wonders of Colorado and the Yellowstone Park, and other aspects of picturesque America; hunting experiences in the great game country of the West; and illustrations of the various phases and processes of typical American industries—mining, agricultural, manufacturing, etc.

Consul Alfred W. Donegan, Magdeburg, says moving pictures are used in Magdeburg in 16 moving-picture theaters and the largest vaudeville house, and to illustrate lectures on travel, science, and medicine. Prices at the regular establishments range from 6 to 29 cents. One theater is connected with an attractive cafe and restaurant and gives daily concerts afternoon and evening.

The usual program consists of 6 to 10 pictures, with a total of 4,900 to 6,550 feet of film and lasts from one and one-half to two hours. The average length of the films is about 650 feet, but a program occasionally contains one long picture of 2,600 to 4,000 feet, supplemented by a few short pictures. The pictures are generally dramas of two to four acts, written especially for the cinematograph stage and presented by well-known theatrical stars, who are either engaged exclusively at fixed annual salaries or for a stated compensation for special pictures. A German company recently paid a well-known French actress $3,570 for her services in three dramatic pictures. Certain other popular cinematograph stars, in the regular employ of the leading European companies, are said to be receiving annual salaries of 100,000 francs ($19,300).

Pictures of American manufacture are now being shown in every program, the American dramatic picture being especially popular. The managers also praise the excellence of the American film from the technical standpoint.

Films are bought up by general distributing agencies in Berlin and other large cities in Germany at a cost of 23.8 cents per meter (3.28 feet) for plain films and from 31 to 36 cents per meter for colored films. They are then arranged into sets of one program each and rented as such to the various theaters throughout the empire. The usual rent charged for the first week is 5.9 cents per meter and each succeeding week the rent becomes cheaper. Frequently the films when old and nearly worn out are sold for one or two cents per meter.

Until recently there seems to have been no effort to introduce American machines. There is no prejudice in the district against American cinematographic products of any description, and it would seem that a demand for American machines might be created if they are able to compete with the local article. The average price paid for the machines in the larger theaters there is about $333; one theater paid $428 for its machine.

The police must inspect each list of films before they are produced. Except at special children's performances, children under 16 are not admitted to the shows unless accompanied by parents or guardians or persons explicitly authorized by them; no children are allowed to attend after 9 o'clock at night.

Consul Robert J. Thompson, Hanover, says moving-picture machines used there are almost exclusively of two German makes, prices ranging from $120 to $215. About half the theaters in the city of Hanover are "first-week" houses; that is, they rent only new films. American films, especially scenes from western life, are popular, though regarded as of poorer quality than the French. The police censorship is exercised not only against immoral pictures, but against those containing improprieties of which a foreigner is often ignorant. For instance, a film was recently rejected because it showed a policeman being overthrown by a crowd. The price of the standard film of German make is 20 to 29 cents per meter (3.28 feet).

MUSIC VERSUS PICTURES.

CHICAGO has long been known for its multitude of picture theaters, its police censorships of films and the activity of its reformative associations. There are still many good Chicagoans who look askance at motion pictures, which is mostly a figure of speech, since the objectors generally do not really look at pictures at all. At any rate, Chicago is entering upon its second season of ten cent concerts, which the newspapers have seized upon as the sign of a new and efficient way of fighting motion pictures.

There is no special indication that the purpose in establishing these concerts was to reduce the popularity of the picture, except in that healthy competitive spirit with which one entertainment may enter the field of another. Be that as it may, the ten cent concert is here and flourishing, and perhaps the motion picture theater manager can glean an idea from its handling.

It has now been established as one of the characteristic qualities of music that its cultivation in any form tends to a constant growth in appreciation and consequent elevation in taste. Thus stated, the proposition seems to be a self-evident truth. Even the unfortunate person who from habit, vocation, or ignorance spends his time in the tawdry environment of musical comedy is able to report an advance in taste, while the dealers in mechanical piano players and talking machines inform us that the demand for records shows that the man who began as a devotee of so-called popular music, is eager to enrich its automatic repertory with selections from grand opera.

An interesting phase of the musical development of the city is being manifested in the ten cent concert. The nickel theater, with its illustrated songs and its moving pictures, has found a competitor in the popular priced concert, and it now seems altogether probable that the latter may develop into a formidable rival. The ten cent concerts were inaugurated by the Chicago Woman's club in Fullerton hall, Art institute, and from the first seemed to meet a long felt need. The movement extended to concerts given at the Hebrew institute on the west side and at Lincoln center on the south side.

In all these concerts members of the Thomas orchestra are employed to form the nucleus of a small body of players. At the Woman's club concerts in Fullerton hall, Walfried Singer conducts with such well known men as Franz Itte, George Dasch, Hermann Felber, A. Quensel, Carl Meyer, Otto Schubert, and George Knacksteadt under him. Alexander Zukowsky is at the head of the west side concerts, while the direction of the Lincoln center concerts has been undertaken by A. W. Holmes, an amateur, who raised subscriptions among the merchants of Kenwood to support the undertaking.

With the assistance of a pianist, these small orchestras have an extended repertory at their command and a judicious combination of popular classics and less serious music characterizes the programs offered. At Lincoln center and the Hebrew institute soloists are also employed. Thus some of the younger artists of the city are acquiring experience that will be of profit to them aside from the small financial gain, and any one acquainted with the struggle of the rising musiican will testify to the welcome addition to the income which even a small fee affords.

All these enterprises have found ready support, and it is to be hoped that they will replace the free concerts which have from time to time been given by various philanthropic bodies in the auditoriums of the parks. It is not only immoral to give music away, but it retards the progress of the art. That there is a large general public which is wholly outside the Thomas orchestra's sphere of influence, that finds the expense of the opera and the artist's recitals prohibitive, but that will nevertheless patronize worthy music if brought within its means has been proved by these experi-

ments. It now remains to extend the scope of the inexpensive concert.

This was done in a measure at the popular priced concerts given by the orchestra and singers of the Chicago opera, which proved such attractive features of the season's beginnings. The stimulus given to the musical life of the city by these concerts is still to be discovered in the increased attendance at the events that have followed.

If popular priced music is to be the means of our next advance, and only such an interpretation is to be put upon the interest awakened by the ten cent concerts, is it not time that the Thomas orchestra assumed its part in this movement? There is, it is believed, a clause in the by laws of the Orchestral association prohibiting the giving of Sunday concerts by the Thomas orchestra, and that body always has been averse to any experiment that was associated with the word "popular."

For the public that now supports the orchestra that word has no attractions. Thomas patrons are to be divided into two classes—those that really love the best in music and those who attend the concerts because the Friday matinees are fashionable or from a sense of civic duty. Their numbers now suffice for the support of the orchestra's present activities, and the capacity of the hall makes an appreciable increase possible only through a third weekly concert.

But a popular priced Sunday concert would attract a new public. Other cities have found this to be the case. In Minneapolis the Sunday "pops," at which the best seats sell for fifty cents, are the Symphony orchestra's largest source of income. They make possible the more serious symphony concerts, for they are always sold out. With slight modification the same rule applies to St. Paul and St. Louis.

These cities have found it necessary to begin with an effort to popularize music. Thanks to the authoritative personality of Theodore Thomas these symphony concerts were founded on an ideal artistic basis, though the younger generation has forgotten the summer concerts in the old exposition building on the lake front that prefaced and made possible the establishment of the Thomas orchestra.

Now that the orchestra has grown up to the limits of its present environment would it not be a wise step toward expanding those limits to set about the development of a larger and more general following? And would not the plan that served originally, and that is now serving other cities, serve again?

The possible profits of such a series of concerts promise to be worth considering. At a scale of prices ranging from fifteen cents to fifty cents Orchestra hall has a capacity of $900 if the box seats were reserved at $1. Under their present contracts with the men there would be no additional expense to the Orchestral association in the form of increased salaries. Twenty-eight popular concerts would therefore insure a possible profit at least equal to the interest on the indebtedness that remains on the hall.

To meet that the orchestra is now obliged to undertake its present arduous tours during the seasons which so severely tax the physical powers of the men and the conductor and, in a measure, react upon the efficiency of the organization to the detriment of artistic standards. It would seem, therefore, that the scheme possesses other than financial advantage.

Its chief claim to consideration is to be found, however, in the increased service to the musical growth of the city which such a series of concerts by the Thomas orchestra would make possible. The profits of a symphony orchestra are not to be measured in money but in the number of music lovers who find satisfaction in its concerts. It is a mistake to measure its services to the community in any terms but those of music; in the standard maintained; in the number of concerts given, and in the attendance at those concerts.

The Chicago public has selected Sunday as its day of music. Against public opinion private prejudice should not prevail. The orchestra can, it seems, extend its sphere of influence only through Sunday concerts. It must move with the times or be left behind. The opportunity is here. It has by no means been fully exploited by the relatively high priced concerts of the Chicago Opera company, attractive as these have proved to be.

Toledo, Ohio, is one of the latest recruits for motion picture advertising. Its Commerce Club has had made a series of views which will be used for

Topeka Shows Commended

Secretary Guy T. Justis of the Topeka (Kans.) Provident Association has made a thorough investigation of the moving picture houses in Topeka. His report is comprehensive and interesting. Among other things he says:

"There is no amusement of modern times that comes in contact with and influences so many people as does the moving picture show. The National Board of Censorship estimates that there are over 15,000 of them in the United States. Topeka, a city of less than 50,000 population, supports six.

"Why this great hold upon the people? Is it but a fad, of which we shall soon tire, or must it be reckoned with as a permanent factor or influence upon our social life? What is the real influence and its possibilities? These are questions that should concern every individual interested in the welfare of society.

"In reply to the first question we believe there are three reasons for the large atendance. First, it furnishes satisfactory amusement for the great majority of those who attend. The dullness of school, the irritations and monotony of home, the hardship of work, are forgotten during the hours spent in this 'house of dreams,' as Miss Jane Addams calls it.

"Second, it is inexpensive. It is the most important form of cheap amusement in the country and the only one where the laboring man can afford to take his family.

"Third, it is convenient to attend. One need not make any special preparation, for the lights are dim and his presence is scarcely noticed. He need not tax himself to get there at a certain hour. He may go when he pleases and leave when he desires.

"We believe that it meets a need in our social life and must be reckoned with as a permanent institution. To date it is used only by those interested in it commercially as a means of entertainment, but its social and educational possibilities are soon to be developed."

Continuous Motographic Records Schemes

A new application of cinematography has been devised by Herr Sborowitz, a Berlin engineer, and the Gottinger Präzisionswerkstätten are at present engaged upon the practical details of the scheme. The invention provides for the installation of apparatus for taking moving pictures in the works of all public clocks. Herr Sborowitz's idea is that the apparatus—which can either be arranged to work continuously, or be set in motion when desired by wireless telegraphy from a central station—will provide the police with records of street happenings and of passersby, which will greatly facilitate the detection of crime, and the arrest of "wanted" individuals.

China to Have Theaters

A London syndicate has concluded negotiations with the Chinese government to organize an extensive system of kinematograph theaters throughout China. The capital is provided by local mandarins, and the theaters will be entirely in Chinese hands.

The syndicate is to have the right to take films in any part of China and to have special privileges for taking records of religious and social ceremonies, which hitherto could only be attempted at the risk of the operator's life.

"The Coming of Columbus"

A Selig Masterpiece

HISTORICAL novels are always popular. It is not alone that the people realize their educational value and appreciate the opportunity to absorb knowledge sugar-coated, as it were, but that the atmosphere of actuality intensifies the interest without detracting from the purely imaginative value. The criticism is offered, however, that the majority of historical novels are full of inaccuracies and deviations from fact occasioned by the fictional inspirations of the authors. So historical novels cannot properly be classified as educational literature.

It is encouraging then, to observe that the producers of motion pictures are more scrupulous than the novel writers. It is safe to say that no reputable producer today would undertake to build a thousand, or two or three thousand feet of pictures on a historical subject without an amount of study and research that would seem incredible to the layman.

Charles Clary as Christopher Columbus.

The production, for example, of Selig's "The Coming of Columbus," involved an extraordinary amount of delving into the musty records of the past. It is over four hundred years since Christopher Columbus set sail for the eastern shores of India, as he supposed. Records in those days were not so carefully kept as they are now, and the world has changed marvelously in four hundred years. Many important documents have crumbled to dust; many of the things that seem important to us now were too matter-of-fact then to be recorded.

But it must not be supposed that the producer, taking these facts as his excuse, was content to substitute fiction for fact or to gloss over the inaccuracies of history with an imaginative construction perhaps just as pleasing. To him it merely meant additional labor, more time given to preparation, deeper study. It took the house of Selig three years of constant effort, with a royal disregard for expense, to gather the material which went into the production of a motographic masterpiece which has never been surpassed, either as an intense, absorbing drama, or as an immortal record of an epoch in world history.

None are so ignorant that they do not know the story of Columbus. But few are so learned that they can picture in the mind's eye, those details which are so vital to a true comprehension of the event—the little, commonplace things that change it from a record in books to a living, sentient happening, full of human emotion, human exaltation and despair. That is what the Columbus pictures do, and what nothing but the pictures could do.

It was over three years ago that the idea for the big production was born. It took several weeks merely to make the estimate on the cost. Europe laughs because Americans are wont to judge everything in dollars and cents. Perhaps we are a little too free with the money sign. For the curious ones, however, it may be stated that the estimate was $50,000.

In the primary preparation for the big picture Mr. Selig had the co-operation of the Knights of Columbus, of whom he is one. This organization is concerned with seeing that the memory of the great explorer is properly honored. This in itself is a guarantee, to those who are so unfamiliar with Selig methods as to consider a guarantee necessary, of the authenticity of the pictures.

Full page feature stories, well illustrated, have appeared in the Chicago *Inter Ocean,* Baltimore *American, Holland's Magazine,* and numerous other large newspapers and magazines throughout the country. Several thousand Catholic publications have been interested in the films, in addition to several thousand daily newspapers which have printed news stories in regard to this film.

The first question that arose was the procuring of ships, such as those used in that memorable voyage in 1492. Then it was remembered that the ships that were presented to the United States by Spain at the time of the Chicago World's Fair were lying in a lake

in one of Chicago's parks. The governor of Illinois and the park commission of Chicago had some time before this agreed to have the ships destroyed, as they proved a menace to traffic in the lake, and the sentence had already been passed as to how the ships were to meet their fate. The Fourth of July was near at hand and the children of the public schools were anticipating a battle in the lake, in which the ships were to be burned. The joy was short-lived, however, when the news spread that the picture people had paid a handsome fee for the derelicts, which, were raised out of the lake and taken to the wild shores of Lake Michigan, where they were destined to undergo a complete reconstruction.

Careful plans were made to have the ships put into condition, to make them appear as near as possible as the Pinta, Nina and Santa Maria. Even side arms, used by seamen in those days, were made and

Threats of Mutiny—Columbus Refuses to Turn Back.

placed aboard the ships, new sails adorned the masts, and ancient tools, such as axes, hatchets and improvised windlasses used in the fourteenth century, were manufactured and laid aside to await the rehearsals of the drama.

The next question that arose was the details concerning the private and public life of Columbus, his actions before he approached the royalty for assistance and many other things that were placed on the records in Spain and other cities of Europe visited by the great navigator. After much deliberation it was found that the only way to find out the facts about the great man and the happenings of his day was to go after them. Hence a research committee was appointed and the seven men who composed it left without loss of time for the native land of Christopher Columbus. Two years were spent by the committee in Spain, Italy, Portugal and Germany, and on their return to Chicago they brought with them the original log book of Columbus, after having given a $10,000 bond for its return, and several thousand pages copied from the records, in which the lives of Columbus, Queen Isabella and King Ferdinand were described in detail. The log book, which was written in Spanish, was translated and much concerning the voyage of the discoverer and his comrades was learned. An outline of the perilous voyage, a description of the storms encountered by the vessels and of the landing at San Salvador was also written in the handwriting of Columbus on the pages of the much-prized book. The book to this day is well preserved, notwithstanding its bath in the Atlantic, where it was thrown by a jealous hand on the return to Spain, but was recovered. It still bears the marks of the water, but the writing is plain and legible. After all these things had been shown to Mr. Selig he set to work on the selection of actors. It required more than eighteen weeks to find a man who complied with the description of Columbus as given in the records of the Court of Spain. This task was finally completed, and a week later the other actors had been secured and the time for the first rehearsal was at hand.

With more than fifty members of the Knights of Columbus and the staff of actors and actresses, the party went to the shores of Lake Michigan, an appropriate stage for the acting of such a drama. The reconstruction of the ships had been completed by this time and upon the arrival of the party were launched with much ceremony. Their appearance in the waters of the lake contrasted greatly with that of the modern yachts and gasoline launches which surrounded them, and when, on the first day of the rehearsals, they were peopled with savage-looking Indians and weather-beaten seamen, they gave a weird atmosphere to the locality.

No time was lost in beginning the rehearsals. Quarters for the actors and guests had already been erected, and the work was begun. From early morn till dark, daily, except Sunday, the actors toiled with their parts. When rain kept them indoors, they acted inside, going through the scenes of Columbus at court, and the occasion when he stood an egg on end to prove the world was round. This work was kept up for more than seventeen weeks before the acting was considered perfect and then another question confronted them. What about the costumes? In what manner did royalty dress in those times? How did the peasants and seamen dress? Columbus must have been poorly dressed when he appeared before Ferdinand and Isabella, and must have been gorgeously arrayed when he returned to them. The research committee had omitted to look into these questions and the costumers could not supply the necessary material in such a great quantity as was needed by the actors. It took several weeks to find just what style of clothes to have made. When at last the actors had been measured and the clothes had been made, Columbus' wardrobe consisted of four trunks full, but his was as nothing compared with the garments to be worn by the ladies. In the course of six weeks after ordering the costumes they arrived and a dress rehearsal was next in order.

Owing to the crowds that had been daily reviewing the rehearsals, and which had been making themselves objectionable to the actors, the dress rehearsal was given late one night. Torches were stuck in the limbs of trees that stood a few yards from the beach and the scene was an impressive one to the spectators. Columbus, or rather his impersonator, on one occasion became so enraptured in the part he was playing that he was actually moved to tears. It was when the cry of land was sent up that this occurred and although he had been through the part many times before, the scene at night impressed him so that he was filled with uncontrollable emotion. This night rehearsal consisted of only the landing of Columbus, for the scenes of the court, the cabins of the vessels, etc., had to be enacted in daylight, as most of them were enacted before a background of stage setting.

Columbus Is Made an Admiral.

The great cast had become so perfect by this time that further rehearsals were not necessary and the time for taking the picture arrived. One Saturday afternoon, just as the camera man was adjusting his lens, preliminary to taking the first of his picture, the sun darkened and there was nothing to do but await the coming of another day. Many disappointments were encountered, for the first week the weather was disagreeable and just as sure as arrangements were made to do a thing on the next day, it would either be sure to rain or grow cool. After two weeks dallying with the weather and other conditions the first picture was taken. This was the landing of Columbus.

The next picture to be made was that of the departure from Portugal. While it was not necessary for the company of actors to go to Spain to have this picture made, the impersonators of Isabella, Ferdinand and Columbus had to have fac-simile scenes from the Spanish court, with the La Rabida, with its beautiful landscape as the setting. The finishing touches were put to the films. More than 20,000 feet of negative had been taken from which to select 3,000.

Aside from Christianity, the greatest fact in history, "The Coming of Columbus" was the most noteworthy event, far surpassing, in interest and effect, the two other greatest voyages of record: The doubling of the Cape and the circumnavigation of the world. It emphasized primarily that the advancement of European civilization did not come from Constantinople and Rome, but through the Spanish Arabs; secondly it reconciled Church and State in as far as that could be done, by eliminating Patristic geography. (The latter held that the earth was a flat surface bordered by the waters of the sea, on the yielding support of which rests the dome of the sky) and, finally, it gave to the old world the new, that has almost within the span of a century been the leader of the greatest progressive ideas on the globe since the world was fashioned from the elements of Divinity. The conquests of Alexander, Caesar and Napoleon are all dwarfed by the achievement of Columbus, and even the latter day triumphs of science in the utility of steam and the developments of electricity, in fact all the mighty magic of invention for labor-saving,

Columbus and His Followers Leaving the Caravels.

Columbus' Return to the Court of Spain.

distance-eliminating devices, stand with bared heads in the presence of the patience, heroism and the far-sightedness of the great discoverer.

Columbus was a Genoese mariner, who after many years' sailing in Syrian seas, in spite of his piety and likelihood of being condemned for heresy, became convinced, through his own necessarily limited observation, that the earth was round, not flat—that its surface was not too largely covered by water, and if there were lands they must be inhabited, since the scriptural command was, after the flood "man should replenish the earth."

His final resolve was quickened by a dream, in which it was whispered to him: "God will cause thy name to be wonderfully resounded through the earth, and will give thee the keys of the gates of the ocean which are closed with strong chains." It remained for a woman, Queen Isabella of Spain, to interest herself in his behalf, so far even as hypothecating her personal jewels to equip his expedition.

On April 17, 1492, he received his commission on the battlefield before Granada, just recently wrenched from the Moors, under the triumphant colors of Ferdinand and Isabella, investing him with the title of admiral and viceroy and giving him as perquisites one-tenth of all he should discover. On August 13, he sailed from Palos, Spain, with three ships, "Santa Maria," "Pinta" and "Nina," carrying the charts wrought on the basis of Toscanelli and a letter to the Grand Kahn of Tartary. Six days after sailing, he sighted the Canaries, where he remained three weeks provisioning, watering and repairing his frail ships.

On September 6, he barely escaped the war caravels that the envious government of Portugal had sent to intercept him, and then steered due West. Nothing occurred of moment until the 13th, when the magnetic needle began varying half a point to the west, and, now with no guide but the stars of the heavens, commended himself to Providence in an unknown sea far from the track of any previous navigator. On the 16th, his ship encountered some floating weed and for some days thereafter the weeds increased, retarding the progress of the ships and mystifying the crew. On the 19th, two pelicans flew aboard, and as the wind changed to the southwest, "little birds such as sing in the orchards" were encountered. Now his men became mutinous and reproached the memory of their King and Queen for committing them to "the bold Italian who wanted to make a great lord of himself at the price of their lives." Alonzo Pinzon, an associate in command, reported that he thought he saw land on September 25, but it proved to be only a bank of clouds, and seven days later Columbus, noting the drift of seaweed from East to West and observing a flight of parrots to the Southwest, turned his prow in that direction. On the evening of October 11, signs of land became so unmistakable that Columbus, after singing a vesper hymn to the Virgin, made an address of congratulation to his crew advising the strictest watchfulness. At midnight Poderigo de Friana, a sea man at the masthead, had claimed to descry land, and at sunrise Columbus saw a new world rise out of the sea, and soon lowered the yawls and was the first man of the old world to set foot on the strange shores of the tropics.

Often had he asked himself: "Is it likely that the sun shines upon nothing, and the nightly watches of the stars are wasted on the desert lands and trackless seas?" To such reasoning he had added facts more essential by his practical observations, abetted by matters of convincing consequence given by other sailors,

First Signs of Land—The Floating Branch.

that the East Indies could be reached by sailing westward. This was in 1474, and for the succeeding seventeen years, he assiduously drifted from port to port and court to court, propounding his theory and asking for aid to make it material, despite the irreligious nature of his beliefs, as stated by the Grand Cardinal of Spain.

This, in brief, is the barest recapitulation of the greatest voyage of history, epoch-making in the civilization of the world. In essaying the materializing and the visualization of such an event, the task is not only daring and dignified, but an exceedingly difficult achievement.

The Selig company has done for the education of mankind of coming generations what Columbus did for the civilization and enlightenment of our forefathers by meeting and mastering its emergencies. Mr. Selig has not only drawn upon the enlistment of the vast Polyscope plant and its great organization, but he has studied data and details with scrupulous care in order to give it historic valuation with truthful impression in types with richness in the matter of correct costuming, with atmosphere in the very environment of the tropics, and exact replicas of the caravels that brought Columbus and his followers from afar over the seas to find the new world of the West. No matter of expense has been spared nor any valuation of essentials, correct in so far as history and the chronical of that time allows, has been omitted to make "The Coming of Columbus" educationally momentous as the leader of a new era in the matter of moving pictures.

The scenario was written by C. E. Nixon, a well-known author and playwright, and produced by Otis Turner.

CAST OF PRINCIPAL CHARACTERS:

King Ferdinand.....Marshall Stedman
Queen Isabella.....Kathlyn Williams
Christopher Columbus.....Charles Clary
Diego, His Son.....George McDermott
Doctor Fernandez.....George Cox
Fra Antonio.....Joseph Sullivan
Martin Pinzon, Capt. of Pinta.....Frank Weed
Yanez, Capt. of Nina.....Rex Roselli
Francisco De Boabadilla.....William Stowell
Saracen, Arab Sheik.....Walter McCullough
A Sailor.....Jimmy O'Burrell
Cardinal.....Robert Irving
Abbott of La Rabida.....Frank Weed
Colona, King's Secretary.....Fred Eckhart
Sailors, Money-Lenders, Church Dignitaries, Soldiers, Arabs, Indians, Craftsmen, Vestal Choir, Couriers, Grandees, etc., etc.
350 People Used in the Cast.

FIRST REEL.

Christopher Columbus and his young son leave the quaint old votive shrine in Portugal and after many hardships, they find their way into Spain. Here Columbus is successful in interesting Fra Antonio, the Queen's confessor, in his maps and theories. Other ecclesiastics refuse to be-

"Anyone Can Do It When I Have Shown the Way"—Columbus Stands an Egg on End.

Reconstruction of the Three Caravels, "Santa Maria," "Pinta" and "Nina."

lieve in his ideas, but finally, through the good offices and trust of Antonio, the ambitious mariner is granted an interview with Queen Isabella. This takes place upon the battlefield of Granada. Columbus has been no more than presented to the queen, when the news of the surrender of the Moorish army unfortunately interrupts the interview, and in the time given over to rejoicing, Columbus is forced to shoulder another disappointment. He is now tried for his sanity by the wise men of Salamanca. They only marvel at his wild theories. Antonio once more visits the queen in the interests of Columbus and this time she is so impressed with his theories that she orders her jewels to be sold, that she alone may personally finance the great undertaking. She, however, is spared the sacrifice through the generosity of Fernandez, the court physician, and thus is calendared a great day in the world's history. Columbus is made an admiral, outfitted with three ships, and departs in quest of the new world which he believes to exist.

SECOND REEL.

The three ships of Palos, the "Santa Maria," the "Pinta" and the "Nina," with Columbus in charge, set sail, as tradition tells us, to "God knew where." As day after day passed by, the boats ever headed westward, a feeling of unrest surges in the breasts of the crew who have sworn their allegiance to the flag of Castile, and they demand a return to the mother country. But Columbus proves his superiority by facing the mutiny and ordering the men back to their posts. The mighty influence of this great mariner sways the discontent of his followers and in the tiny cabins a prayer is offered, mass is read, and with bowed heads all renew their vows of allegiance to their superior. Columbus in addressing says: "Men! We have set sail for the Indies across the western seas, and with God's help and blessing, to the Indies we are going. Look you to it that we have no more of this, for, grumbling or no grumbling, we are going to find the land which we have come so far to seek." On the dawn of October 12, 1492, Columbus assures his followers that he had seen lights to the westward, during the night. A few hours later a dove alights on the mast watch of the Santa Maria. This alone means to Columbus the realization of all his hopes and ambitions. Land is now sighted and the little fleet comes to anchor and Columbus plants the flag of Spain on the New World.

THIRD REEL.

Columbus remains in the New World until the middle of November and, having persuaded several of the natives of both sexes to go with him, he sets sail for Spain.

On a bright morning in April Columbus enters Barcelona and is received by a great procession composed of priests, nobles and military men. He is then led to a vast hall where, seated on their thrones, Ferdinand and Isabella wait to receive them.

Columbus enters, dresed as an admiral, the cynosure of all eyes; following him are the dusky natives. The latter carry birds of strange and brilliant plumage from the tropical lands, fruits, living alligators and many other strange objects from the far-off New World.

The sovereigns rise to receive him, and as a murmur of applause breaks from the lips of the haughty grandees, the King, moved by the simplicity of the man, knights him.

Columbus attends a feast in his honor by the grand cardinal. A courtier, moved by a narrow feeling of personal jealousy, asks the admiral, whether or not, in his opinion, any man given the same opportunities, could not have discovered the Indies, which he thought he had found. In answer to this, Columbus took an egg that was before him, and invited the courtier to make it stand on one of its ends. He could not do it. Then several others tried to do the trick, but failed.

Then the admiral struck the egg upon the table with such force as to flatten the end by fracture, and left it standing. "Anyone can do that," exclaimed the courtier. "After I have shown the way," replied Columbus. "After I have shown the way to the Indies, it is easy to follow." The courtier was answered.

Columbus returns to the New World at the close of May, 1498. Here he finds everything in confusion. His enemies have determined to ruin him and false charges are preferred against him at the Court of Spain. The great discoverer is taken back to Spain in irons, and dies before he is released.

Such, all too briefly to do it justice, is the great film story of "The Coming of Columbus." Limited space has forced us to pass lightly over the momentous details of labor and expense—those commercial factors which nevertheless must be considered first in any great undertaking. But extended comment on these subjects is unnecessary, for the part they played is apparent to the veriest novice, once he has seen the film itself. And everyone will see it; for it is safe to say there is not a community whose exhibitors will not make every effort necessary to secure it. It is of such material that the future of the industry is built.

"The Coming of Columbus" is to be released to the licensed exhibitors of the country May 6, 1912, through the medium of the General Film Company and all its branches.

Big Houses for Seattle

A proposal to build two large moving picture theaters on Second avenue, Seattle, Wash., each to have a seating capacity of 1,500, was made by J. D. Williams, head of Australian photoplay syndicate, who was in Seattle on his way to Europe. The plans were discussed at a dinner given by Mr. Williams at the Rathskeller. Those who attended the dinner were Mr. Williams, E. Lindsay Thompson and Leon Phillips, of Sydney, Australia; Eugene Levy, proprietor of the Grand Theater; Arthur S. Kane, western representative of the General Film Company; Mel Simmons, Seattle representative; P. Stephens, Oregon representative, and Alex Singelow of the Star Amusement Company of Everett.

Mr. Williams, Mr. Thompson and Mr. Phillips have left on their European trip. They will return to Seattle early in November, when the details of the theater building plan will be worked out.

The plan to have larger theaters to show the moving picture plays has worked satisfactorily in Australia, where Mr. Williams has spent the last two years and a half. He proposed to lay the plan before John Cort, who is now in San Francisco. An invitation was telegraphed to Mr. Cort to attend the conference proposed for November.

Acetyl Cellulose for Moving Picture Films

A number of inquiries have been received from our readers regarding the manufacture of uninflammable moving picture films made from acetyl cellulose. The Eastman Kodak Company has given a full explanation of the present situation in a note published in the *Journal of Industrial Chemistry,* the substance of which is reproduced here. The company explains:

"While it is a fact that those of our customers who had been using cellulose acetate film exclusively for nearly two years have returned to the use of the cellulose nitrate stock, we have not 'abandoned the manufacture of these films,' for we are still filling occasional orders for the acetate film and are prepared to manufacture on a large scale should a majority of our customers decide to return to the use of this film exclusively. The reason that the manufacture was discontinued was not because the acetyl films were inferior in lasting qualities or the general trade objected to their use. It is true that the acetyl-cellulose film which was manufactured for several months after this product was introduced was inferior in wearing quality to the nitro-cellulose film. But improvements in the process were made which resulted in a product that was in practical use substantially as durable as the nitrate film. At the time our customers gave up its use, and for a year previous, we were not getting complaints of a lack of wearing quality. So far as the product was concerned, we feel sure that our trade would have continued its use indefinitely. Having brought the acetate base to this point, we do not feel that there would have been any technically retrograde step if we had stopped its manufacture altogether. The regret is that cellulose acetate, even when manufactured in very large quantities, can not be made at a cost which would make is possible to sell the film at the same price as the nitrocellulose film. An advance of nearly 15 per cent did not more than cover the extra cost of manufacture. The film went out of general use because the trade found that it had not displaced the nitrate film. The two were used together at the theaters. The safeguards with which municipalities and insurance companies surrounded the use of the inflammable film were still required, and the fact that no serious accidents occurred during the two years that the two films were used together in the theaters, shows that the protective devices and regulations were adequate. Therefore, film manufacturers using acetyl film could see no reason why they should bear the burden of a raw material of a higher cost than used by their competitors, and returned to the use of nitrocellulose."

Chicago is Mutual Film Headquarters

The Mutual Film Corporation has chosen Chicago for its general headquarters, with J. R. Freuler as manager. The choice is to be commended for the Mutual is a western organization, and while it has been doing things farther east, western men get inspiration on their home grounds. The offices of the Mutual are at 1412 Harris Trust building.

The Kentucky League Convention

The Motion Picture Exhibitors of Kentucky met in convention at the Phoenix Hotel, Lexington, Thursday, April 25, 1912. The convention was called to order by the chairman of the local committee, L. H. Ramsey. A. B. Tracy was selected as temporary secretary. The temporary chairman introduced M. A. Neff, president of the Motion Picture Exhibitors' League of America, who addressed the convention in part as follows:

"We have met here today for the purpose of organizing the Motion Picture Exhibitors' League of Kentucky, which will affiliate with the Motion Picture Exhibitors' League of America. The aims and objects of our organization are to uplift and promote the motion picture in every way possible, and to advance everybody's interest who is engaged in or affiliated with the motion picture business, more especially the exhibition of films. We are

Banquet of the Motion Picture Exhibitors' League at Dayton, Ohio, March 27.

asking for nothing but a square deal for exhibitors throughout the country.

"The motion picture exhibitors and the motion picture have been ridiculed and abused, and in many cases misrepresented. When the business first started it was looked upon as an amusement for children, but as the industry grew and the photoplays became more popular, naturally business men and educators began to take notice. From an humble beginning, cinematography has grown until today it is educating and amusing more people and has more patrons than any other business in the world. Millions of dollars are invested and thousands of people are engaged in the making, renting and exhibiting of films, and the Motion Picture Exhibitors' League of America is doing everything in its power to educate the public and to advance the art to a high standard.

"The corner stone that was rejected and thrown away in the rubbish was found and became the chief corner stone of the building. Just so with our work. It has been looked upon as nothing but a passing fancy

The "Three Million Dollar Bunch" at Dayton, March 26. (From New York, of Course.)

to amuse children, but to the most advanced thinkers and educators the motion picture is the corner stone to our modern civilization and education. In fact, it is the philosopher's stone. It is here to stay. It is in its infancy. It has grown rapidly. In fact, it is advancing at such a rate that even those of us who are engaged in the business are often surprised at the wonderful progress it is now making. You need this organization—not only the exhibitors, but all of the people of Kentucky.

"We need every exhibitor in America and every exhibitor needs us.

"You will find the national organization ever ready to assist you in bringing about a condition that will benefit all of us."

After Mr. Neff had addressed the convention, all present were asked to join the Motion Picture Exhibitors' League of Kentucky, and every exhibitor came forward and paid his initiation fee of five dollars and became a member.

The next order of business was the electing of officers. J. H. Stamper, Jr., of Lexington, and L. J. Dittmar of Louisville, were placed in nomination. Mr. Stamper, receiving two votes more than Mr. Dittmar, was declared elected president. L. J. Dittmar was elected first vice-president. Sherman Arn of Maysville was elected second vice-president. L. H. Ramsey of Lexington was elected secretary and A. J. Wellman of Cattletsburg was elected treasurer. Orrene Parker, Covington, was elected national vice-president to represent the state in the national board of directors.

After the election of officers the following committee on the constitution and by-laws was appointed: L. J. Dittmar, Orrene Parker, H. B. Struble, J. M. Perkins, M. H. Nave.

The following committees were also appointed: Legislation—J. M. Perkins, J. C. Taylor, Max L. Simons, E. C. Tarvin, Jos. J. Ciarlo. Grievance—Geo. A. Duncan, S. C. Stephens, C. S. Graves, H. M. Hacker, F. Dolle.

After the delegates had luncheon they assembled in front of the new Orpheum theater, where a photograph and a motion picture by the Gaumont Company were taken.

Automobiles were in waiting to take the delegates sight seeing. On arriving at the noted Hagan stock farm, Gaumont's comera was again in waiting to take a motion picture. The delegates then visited the Hagan dairy, where another picture was made, and from there several of the largest racing stables of the United States were inspected and noted horses were shown.

The beautiful scenery and the grand old country homes continually reminded the visitors of that grand old song, "My Old Kentucky Home." The flowers in bloom, the trees budding, the sweet perfume of the flowers and the green waving blue stem emphasized the importance of the garden spot where, it is said, the richest soil in the world is to be found.

One of the automobiles, carrying L. D. McKinney of the Motion Picture Distributing & Sales Company, C. Lang Cobb of the Reliance Company, E. D. Powell of the Inventors' Specialty Company, and George M. Wesley, punctured a tire and the boys were left behind.

At seven o'clock p. m. the convention reconvened and received a few more members, who were late in arriving, adopted by-laws and resolutions, and selected Lexington as the next place of meeting, to meet on the second day of July, 1912. The motion was made and carried to employ G. M. Wesley of Cleveland to organize the state. A resolution was also passed thanking the editors and proprietors of newspapers in Kentucky, who assisted in bringing about the success of the convention.

After listening to a business speech and instructions from the national president, the delegates adjourned to the banquet hall in the Phoenix Hotel, where a splendid meal was served. During the banquet selections were rendered by the following: Stamper & Lyons, character singers; Miss Katherine Johnson, soprano; Arthur M. Siebrecht, pianist; Miss Mattie West, pianist of the Orpheum Theater; Ertz & Frankel, character singers; Miss Nellie Brennan, pianist; Miss Buchignani, pianist of the Colonial Theater; Vertner P. Saxton, tenor; Miss Julia Hogarty, pianist of the Princess Theater; Miss Florence Talbot, ragtime; Miss Florence Sheriff, pianist of the Star Theater; concluding with the entire vaudeville cast, with orchestra from Hippodrome.

Motion pictures were shown in the banquet room, and a general good time was had. Everybody enjoyed themselves while hundreds of people in the big lobby of the Phoenix Hotel looked through the windows with eyes wide open at the grand banquet being given in honor of the Motion Picture Exhibitors of Kentucky. Over fifty exhibitors attended the banquet. Everybody was enthusiastic and it was predicted for Kentucky that they will secure every exhibitor in the state. Louisville was represented the strongest of any city.

Photoplays From Essanay's

Another Month's Features

NO less than six mammoth three-reel subjects are now being contemplated by the Essanay Company. At present the Chicago studio is humming with the preparation of the gigantic film masterpiece, "The Conquest of Mexico, or the Fall of Montezuma," in three reels. This is one of the greatest pageants ever attempted in motion pictures and Essanay will attempt to show, in part, the vanquishing of the Aztec empire by Cortez and his brave band of followers.

The production will cover the national dances and customs of the Aztec race, the court ceremonies embodying all the magnificent splnedor of the ancient empire, the first landing of Cortez and his men on the coast, the march into the interior, the bartering and trading with the awed and superstitious natives, first meeting with Montezuma, the lavish manner in which Cortez is received at court, then the revolt of the Aztecs against the Spanish invaders, the struggle for supremacy and the final overthrow of Aztec power with the death of Montezuma. The costuming of this magnificent production will occupy the entire time of busy costumers for weeks, and the scenic work is already progressing with great rapidity. Preliminary rehearsals of the mammoth company, over two hundred in number, will soon be started, and every care and attention to detail will be given the staging of this wonderful pageant toward making it a true and absolutely accurate representation of Aztec history.

G. M. Anderson as "Arizona Kid."

The Essanay Company's famous 50 per cent of comedy subjects alone is anounced for the month of May. Nine bully funny-reels, five superb dramas and four great western dramas! Two of the nine comedy subjects are from the western company, one a roaring "Alkali" Ike adventure, and the other a burlesque-comic played by G. M. Anderson in his funniest style. One of the month's greatest western dramas is "The Sheriff and His Man," featuring Mr. Anderson in one of those gripping characterizations that have made him famous the world over. The "Arizona Kid," a notorious outlaw and gun-man, makes his escape from his prison cell by filing away the bars from the window. Immediately reward notices are scattered broadcast, offering $1,000 for his recapture and printing his photograph for identification. In a distant town across the desert Sheriff Todd of Coyote county, reads one of the notices and instantly remembers he has just seen the Kid in the town saloon. Shifting his gun, Todd goes to the saloon, strides up to a table at which the Kid is playing poker, lays the reward notice before his eyes and when the Kid attempts to draw, captures him at gun's point.

Todd now sends word back to Sheriff Matthews that he has the Kid and to come and get him. Matthews immediately saddles his horse, rides across the desert, gets the Kid and starts him back manacled. Out in the desert two renegade Mexicans see Matthews and his prisoner and, needing horses, decide on a scheme to steal them. Hailing Matthews they beg for some water, murderously strike him down as he is filling their canteen, force the Kid to dismount and gallop away. Alone on the desert without water and his hands manacled, the Kid nobly resolves to rescue Matthews and hunt down the Mexicans. Finally securing the handcuff key from Matthews' pocket, the Kid frees himself and staggers on across the desert with the wounded sheriff on his back.

After a day's terrible struggle and half fainting from thirst and exhaustion, he arrives at the cabin of a prospector who agrees to nurse Matthews through his injury. Stopping only long enough to eat a meal, secure provisions and a supply of water, the Kid borrows a horse and sets out on the trail of the Mexicans.

A week later Matthews has recovered from his wound and is busy at his desk when the Kid enters with the two Mexicans, handcuffed and sullen. Matthews is amazed when the Kid starts to remove his badge and offers to give himself up for the completion of his prison term. Realizing the outlaw's true nature, Matthews has the Mexicans led away to a cell, then pins the deputy badge back on the Kid's breast, swears him in, thanks him for the great good he has done and goes out to look after the prisoners, leaving the happy Kid to shine up

his star proudly in the resolve to become worthy of the mantle that has fallen upon him.

Mr. Anderson's portrayal of "the Kid" is one of the finest character studies this master photoplayer has ever given his audiences, and the entire production is a distinct feature. It is booked for release May 18.

"The Eye That Never Sleeps" is the first release of a great melodrama series dealing with the secret service, announced by Essanay. The good old "thriller" is still very much in demand and Francis X. Bushman, Essanay's popular leading man, is featured in the role of Howard Mayne, the greatest sleuth of two continents. At his wit's end to discover and track down a clever counterfeiting gang who are flooding the city with "phoney" money, Chief Arnold, of the secret service bureau, calls in Howard Mayne, his cleverest detective, shows him samples of the spurious bills and begs him to take the case. Mayne finally agrees to give up his vacation and run down the gang. Taking Mason, a young assistant, Mayne returns to the National Club, introduces Mason to Morton Ayers, with whom he has been playing billiards, and they finish their game. Mayne wins and Ayers hands him a five-dollar bill in settlement of their wager. Mayne is about to pocket the bill when he is amazed to discover it a counterfeit. He and Mason watch Ayers depart and see him meet a supposed vender of pencils on the steps who quietly gives him a package of spurious money. Mayne knows he has the gang almost within his grasp. Mason is put to watching Ayers, while Mayne, with the help of a police officer, disguises as a common thug, fakes a clever pursuit and is shielded by the counterfeiters who conceal him in the rendezvous on the water front. While shadowing Ayers, Mason is now captured and made a captive in the rendezvous, and feeling unsafe, the gang prepare to move. Luckily, Mayne is told to keep watch over Mason while they pack their tools. Mason is now amazed when a knife-blade appears in the supposed thug's hand, he cuts his bonds, secures a brace of guns from Mayne's pocket and the gang are nicely trapped in the twinkling of an eye, while Mayne pulls off his rough cap and reveals his identity to the startled Ayers as the greatest sleuth of two continents. The production is splendidly portrayed and is booked for release May 14.

Among the other fine releases from Essanay for May mention should be made of "A Desert Sweetheart," another gripping western drama featuring Mr. Anderson and Vedah Bertram, who has recovered from her recent illness. The plot is strong with the scenes laid in the great American desert, "the land of dead things." It will be released May 25.

"A Western Legacy," one of the two western comedies for the month, is a very funny subject in which Mr. Anderson has a great comedy role. The plot is sprightly, novel, and highly original, and the members of the cast give Mr. Anderson splendid support in unfolding the hearty laughs. Release date, May 21.

"Out of the Night," booked for release May 10, is one of the strikingly novel dramatic films of the month and is an excellent example of the photographic art of

Scene from Essanay's Comedy, "A Good Catch."

Scene from Essanay's Secret Service Melodrama, "The Eye that Never Sleeps."

double-printing or "vision" work. The story, as it is unfolded by a ragged derelict to a clubman, is double-printed over three-fourths of the camera aperture, while the two characters remain seated at a library table. Mr. Bushman is featured in the production, and Miss Cassinelli and Dwight Mead render him excellent support. Another fine drama, released May 24, is "Detective Dorothy," in which a little child is instrumental in capturing a desperate and hunted murderer. One of the best of the 50 per cent comedies for May is "A Good Catch," released May 23, in which Mr. Bushman and Miss Beverly Bayne, a charming leading lady of Essanay's eastern stock company, have the feature roles. The plot is novel and good for a string of hearty laughs from the first to last.

Preparations are being made by Essanay to send two companies of players to the Atlantic coast for the taking of some special feature subjects requiring the rugged scenery so beautiful and abundant there, and views of the sea. Another company will be sent to the famous Wisconsin Dells to produce a series of films utilizing the magnificent wonders of nature to be found in that region.

Miss Martha Russell, Essanay's former leading lady, who is well remembered for her splendid work some three years ago, has been re-engaged for a series of splendid dramatic films especially written to show her remarkable talent. Miss Russell will make her first appearance of the new series in "The Return of Wm. Marr," a virile and sensational drama soon to be released. Her second appearance is in "Signal Lights," a feature railroad melodrama affording her great opportunity for emotional acting. Release dates for these films will be announced later.

Talking for Moving Pictures

"The expounder of moving pictures has come to be a most lucrative profession in recent years, and bids fair to be more and more so as the popularity of the amusement continues to increase," says the *Far East,* published in Tokyo. "But to be a success it is necessary to speak not in many tongues but in many voices. Men qualified to do this seem few and far between, and it is only the genius in this line who can command a big salary. At Asakusa there is a famous explainer who can talk in twenty voices. His head is bald and in appearance he cannot be said to be handsome, yet he receives a salary that a high government official or university professor might envy.

"He has a soft voice for a young girl, a shrill one for a child; he can imitate the tones of an old man, of a villain, a man of low class or of high degree. His voice also runs the gamut of the emotions, and the audience weeps copiously when he makes the heroine tell some harrowing tale, or has it in roars of laughter over the antics of the funny man.

"But the reason why this particular explainer is such an adept is that in his younger days he was a teacher of singing. Later on he became an actor, but his fortunes had been on the ebb for some time until he took up the remunerative business in the moving picture theaters."

Cincinnati Exhibitors Gain a Point

Cincinnati (Ohio) Council Committee on Public Safety has adopted a motion recommending that existing moving picture theaters be granted a renewal of their licenses when they expire until a new ordinance regulating those places can be agreed on.

The matter under consideration was an ordinance requiring that the vent pipe in moving picture booths be enlarged from 8 inches to 16 inches, in order to permit of the installation of a fan to exhaust the bad air from the theater, and also requiring the use of a certain patented magazine in moving picture machines, which, it is claimed, shuts automatically and prevents fires.

Building Commissioner Rapp and his deputy, Mr. Sturtevant, were present, as were also about a hundred moving picture exhibitors and operators. A number of picture machines were brought before the committee to demonstrate how they work.

Arguments against the proposed ordinance were mdae by M. A. Neff, president of the Motion Picture Exhibitors' league of America; Charles T. Beeching, a theater owner; Attorney Haarmeyer and others. They declared that a fan would create a draft which would be very dangerous in case of fire, and that it would endanger the health of the operator by drawing the bad air into the booth. Mr. Beeching demonstrated by lighting a film and closing the booth that the fire would be extinguished by its own smoke, which, he said, is moist steam, the same as is used in fire extinguishers.

His experiment was a complete success, as the lighted film was at once extinguished when the door was closed. He maintained that there is no danger of fire when fireproof machines and fireproof booths are used, as is the case in all local picture houses. He suggested that a register be placed at the bottom of the booth to carry off the foul air, instead of having it sucked through a vent by means of a fan, which would cause a draft toward the booth. Mr. Rapp thought well of this suggestion.

Kansas Church Adopts Moving Pictures

A moving picture under the auspices of the First Methodist church of Wichita, Kan., and held in the Sunday school room of the church building was authorized by the board of trustees of the church after a stormy session. A committee was appointed to secure a fireproof booth and a picture outfit. The first show was given on Wednesday evening, April 17. The plan is being adopted to increase Sunday school attendance. To this end it is announced that all scholars reaching Sunday school on time the Sunday before the show will be given free tickets, while those who come late will be charged for tickets at the same rate as the moving picture shows. It is reported that the local moving picture men will redouble their efforts to get Sunday opening of their shows authorized, using this as an added argument.

Columbus Films at the Vatican

By Rev. J. Guiseppe Tonelli

If possible wait for letter and package to be presented to the Pope.—Selig.

SUCH a cablegram was handed to me in Rome one morning, just as I was boarding a motor to buy my return ticket to America. Mr. Selig has always been a very good friend of mine, and I was glad to have an opportunity to repay him for his many kindnesses. I cabled back, "Will wait.—Tonelli."

And one day the "Coming of Columbus" arrived—three reels of motion picture film. I took steps immediately to obtain a private audience with the Pope to present him the gift of Mr. Selig. It is rather hard at certain times to obtain a private audience right away; but somehow, through a dear friend of mine who is familiar with the Pope, I received, two days after, a letter of invitation to be at the Vatican at 12 o'clock sharp the next day. The day before the audience I invited several people, prelates, ladies and gentlemen, among these the sisters of the Pope, to come and see the film on the screen. The Sala Perosi or Sala Pia was well packed, and the history of the great discoverer with all his hardships, joys and sorrows was viewed by the illustrious spectators with the greatest interest and enthusiasm. The private secretary of the Pope, Monsignor Piscinni, and the Monsignor Ugolini, who were sitting at my side, were particularly impressed and occasionally in bursts of enthusiasm whispered, "Oh, how lovely—how grand." At the end of the exhibition the crowd gave three *Ev viva,* Mr. Selig; and then, to my confusion, they gave a few cheers for Father Tonelli.

Father Tonelli.
From a Statue Executed by a Friend.

The next day at noon sharp, I passed through the many halls where the Pope gives public audiences and was at the door of the Pope's private apartments. Brother Damaso, the director of the Sala Pia, had proceeded me to tell the Pope of the success of the exhibition; and when I entered the room, I found His Holiness standing by a kind of cabinet picking from it some small red caskets containing medals. "Come in, my son," he said, "I was just looking for some nice suitable gift for you and Mr. Selig." Then he showed me a little silver medal bearing his own likeness. "This is not pretty enough," he said. "Never mind, Your Holiness, this is all right for me," I answered. He gave it to me with three other smaller ones which I ventured to ask for, seeing how good he was to me. Then he said, "I have something better for Mr. Selig." He crossed the room and went to another cabinet and got another beautiful medal in a red plush casket. "Now, this is for Mr. Selig," he said.

The medal had been struck last year as a souvenir of the opening of the new observatory directed by the Pope Pius the Tenth in the Vatican gardens. It bears on one side the image of the Pope; on the other a matron representing astronomy sitting on a chair and pointing out the new building while the old observatory is seen back of her left shoulder. The inscription running around the artistic impression reads *"Ampliorem mihi in hortis valiconis sedem adomavit"* which is "He beautified for me a larger place or seat in the Vatican gardens."

All this was done before I presented the gift, then the good Pope bad me sit down by his desk. I presented the reels. The Holy Father examined the small pictures. He had been informed by Brother Damaso and others how beautiful they were on the screen. Then he turned to Brother Damaso who was there, and giving the reels to him for the Sala Pia, "You will have a big show now," he said, and smiled happily.

We talked awhile about the splendid exhibition of the "Coming of Columbus" then he said, "You will please extend my thanks and congratulations to Mr. Selig and my wishes for the greatest success on this 'Coming of Columbus.' I wish to encourage him to make other films of such historic and moral value."

As I knew that the Holy Father had forbidden all priests to go to moving picture shows, owing to many irreligious and immoral films exhibited in Rome, I told him that the censor in America was much more strict, especially in regard to immoral and irreligious subjects. He was very glad to hear this and said, "It is my great desire that this great invention of our day should become a school of truth, of high education, of morality, of social and domestic virtues, of real benefit to humanity and religion." After a few words about other matters, I knelt down to ask his blessing for me, my family and the many friends. He patiently waited until I was through my list, blest all of them, then he said: "Tell Mr. Selig that I bless him, his family and his work; and I thank you also, my son, for the good you tried to do through the youth of the Association of the Sac-

The Pope's Medal to Selig—Obverse and Reverse.

red Heart." I felt so abashed at these kind words that I scarcely found the door to go out. I left with the impression that I had been conversing with a saint.

In the evening Brother Damaso, in his name and in the name of the association, surprised me with another gift he had from the Pope to be presented to Mr. Selig. It was a beautiful bas relief or ceramic, the work of one of the best artists in Italy. It had been especially made for the vatican exhibition on the occasion of the golden jubilee of Pope Leo the Thirteenth. It is a copy of a large painting existing in St. Joachim, a church erected

Ceramic Presented to Selig by the Pope.

in honor of Pope Leo the Thirteenth, whose name is Joachim.

The painting, as well as the reproduction, represents St. Joachim reading the prophecy "A Virgin shall conceive," *"Virgo concipiet."* The saint looks upon her, his wife, who is inspired from heaven by little Mary feeding the lamb (which represents the Lamb of God) with lilies, and crushing under her feet the serpent. The rose which the angel presents to St. Joseph, who does not touch it, is the figure of Mary, the spouse of Joseph. Flowers of Mary are also the palm, the cedar, the platanus tree as recorded in the scriptures. A group of angels lift the veil of light, revealing Mary as the Aurora which represents the rising of the son of Justice. Again Mary, queen of heaven and earth, is represented by angels holding the crown and placing the scepter on the group. On the palm trees all around sustained by the angels are the different names which the church gives to Mary. The vision closes with the words of St. Anne, "The Lord has granted my prayer."

The day after I left Rome. When in Paris, I received from Brother Damaso the following letter for Mr. Selig:

Honorable Sir—In the name of the members of the association of the Sacred Heart, I thank you for the splendid gift, "The Coming of Columbus," presented by the Rev. Joseph Tonelli to the Holy Father for Le Sala Pia. Let the good Father be the interpreter of our gratitude and let the gift which he brings to you show how your generosity has been appreciated most sincerely.—Brother Damaso.

Many Roman papers spoke about the exhibition of the reels in Le Sala Pia and afterwards other Italian papers commented upon the exhibition. We quote a few words from one political and one religious paper. From *La Verra Roma Illustrata,* we quote as follows:

A GIFT TO HIS HOLINESS.

His Holiness deigned a few days ago to admit to his august presence the Very Rev. J. Giusseppe Tonelli, a zealous missionary in North America. Father Tonelli was the bearer to His Holiness of three magnificent and original films which Mr. W. N. Selig of Chicago sent as a gift to the Pope, His Holiness.

Il Carriere d'Italia on February 4 published as follows:

The other night before a goodly number of guests, prelates, ladies and gentlemen especially invited were shown on the screen the reels of the "Coming of Columbus" sent as a gift to the Holy Father, Pope Pius the Tenth, by Mr. W. N. Selig of Chicago.

It was the grandest thing ever seen; the only drawback to the showing being the Roman machine, which was not up-to-date to show such a film. It was the whole history of Columbus from his arrival in Palos to his return to Spain loaded with chains that was presented to the eyes of the spectators, who were deeply impressed. But most impressive and picturesque were the scenes of the caravels (the Ninta, Pinta and Santa Maria), the voyage of Columbus, the expression of his fears, his hopes, his anxieties; of his arrival finally to the promised land. Many eyes were moist in seeing the undertaking of Columbus shown so vividly, with such truth of life that it seems almost that one had participated in the vicissitudes, the perils, glory and infamy of the great Genoese.

Pictures in Central Station Advertising

The universal popularity of the moving picture show has opened up a new field of advertising for electrical central station companies which is both unique and effective, says the *Electrical Review.* Moving picture films depicting the advantages of electrical appliances in the home can be made entertaining and convincing, and are an ideal method of forcibly showing the great contrast between household conditions with the old coal stove and the absence of conveniences and the highly satisfactory results achieved by the use of the electric range, electric table utensils, washing machines and other electrical household devices.

The manufacturers of electrical appliances, appreciating the value of such advertising, both from the standpoint of the central station and for increasing the sale of their own product, have assumed the financial burden of making these films, which they offer to loan to central stations for from three to six days, the central station management arranging with a local picture theater for exhibition. Thus at practically no cost, central stations can avail themselves of a very excellent advertising scheme.

By special arrangement, the Kinemacolor pictures of the coronation were exhibited in the home of J. Pierpont Morgan, where a number of guests were being entertained.

The Playhouse of the Future

By Ford W. Eaton

THE ACOUSTICS OF ORTOGRAFY.

IN a well appointed play the sounds are as important as the scenes. However, many causes have led us to give first importance to the visual effects of the staged drama.

Drama was originally conversation illustrated, but thanks to the poor acoustics of theaters and the perverted taste of audiences, it has been superseded to a great extent by extravaganza and musical comedy, resplendent in scenery, costume and pantomime, with music and a few words interspersed. Hence we were prepared for the speechless picture, and we more often miss the colors than the dialogue. But this condition will not last, and the pictures alone, even though colored and steady, will never be entirely satisfactory.

In a previous article it was stated that in order to harmonize music, speech and other sounds with the visual aspects of a play, it is imperative that the "sounds be correct in regard to quality, intensity, synchrony and apparent source." In other words, they must be properly distributed and harmoniously in accord with the picture.

Just what quality and harmony mean, as applied to a reproduced drama to be enacted in the playhouse of the future, may only be appreciated after some study of the underlying problems. So let us consider briefly the nature of sound and the physical conditions upon which harmony depends.

THE NATURE OF SOUND.

Sound is a sense impression caused in part by the impact of air waves or vibrations upon the tympanum or ear drum which controls the intricate mechanism of the inner ear. These air waves are in turn caused by similar vibrations of such objects as piano or violin strings, the head of a drum, the shell of a horn or a bell, or anything that causes the air to vibrate between about 16 and 4,000 times per second.

In the case of stringed instruments it is customary to provide a larger vibrating surface, such as the sounding board of a piano and the hollow body of a violin. These larger surfaces vibrate in unison with the strings and give increased *volume* to the sounds by setting in motion larger masses of air.

In wind instruments and drums, bells, etc., the shell of the instrument itself is sufficiently large, and is designed to amplify the sound waves. A familiar illustration of such amplification is the megaphone and its effect in increasing the volume and carrying capacity of the human voice. The horn of the talking machine serves the same purpose, and frequently entertains an entire neighborhood with selections that the neighbors didn't order.

Sometimes a neighbor hears two concerts at once, and gathering his family together makes his escape from a simultaneous medley of the Rock of Ages and the Ragtime Violin. Perchance they go to the "nickel show" and hear a real piano and a versatile drummer with attachments mutilate a modern mazurka, while Lord Nelson breathes his last at Trafalgar.

Then when the picture has changed to the triumphant return of the victors with welcoming crowds gesticulating wildly and a whole brass band making musical motions, what do they hear? Nothing save the click of the picture machine and the hum of the audience, for the hard-working orchestra must rest some time or other, and has not this picture "action" enough to go it alone?

VIBRATIONS.

The vibrations of the air and other material objects which produce sound are only one of the many kinds of vibrations which fill all space. Some of these vibrations affect the other senses, as the waves of light affect the eye, but many kinds are known only indirectly.

Some vibrations we would think extremely slow, in fact it is difficult for us to consider them vibrations at all. For instance the rise and fall of the tides is vibration whose waves are so large that we only know them by observing the effects of small portions of them. The cause of the tides is also vibration, being the revolution of the moon about the earth and the earth about the sun, and there are still larger vibrations which we appreciate still less.

Then there are vibrations so small and rapid that we can not sense them or measure them directly, and yet scientists have learned much about them. Such are the vibrations which we term "light" and "electricity." These are not vibrations of air or matter as we ordinarily understand it, but of a much finer and subtler material called "ether" which fills all space and permeates all material substances about as water fills a sponge, only more intimately.

The vibrations of ether which, when entering the eye and striking the retina, cause us to "see," are so extremely short and rapid that they are measured in micramillimeters," or millionths of a millimeter, a millimeter being about a twenty-fifth part of an inch. Some of the vibrations or waves of electricity are much shorter still, while others, like waves of "wireless" are many feet in length.

SOUND WAVES.

An ordinary sound is made up of many different waves or vibrations. A single note of a certain "pitch" may be composed of vibrations of a dozen different rates. Strike middle C on the piano. The principal sound is caused by vibrations of the piano string at the rate of 256 per second, with a mixture of other sounds or "overtones," because between the main sound waves are other smaller waves, vibrating 512, 1024 and 2.048 times per second, etc. Then the sounding board, whose vibrations are mostly in accord with the principal note, or 256 per second, also introduce other vibrations, which in turn start other "over-tones" and "under-tones," whose relation to the pitch of middle C determines the purity of the sound.

Now play the same note, middle C, on the violin. A distinctly different sound is noticed although the pitch may seem to be the same. It is the same, as far as the principal note is concerned, but the air is also vibrating with a multitude of other sounds, which cannot be distinguished and yet add that indescribable sweetness to the pure-toned violin. Here again the purity of the sound is dependent upon the relation or harmony of the overtones with the principal tone.

Ring a bell tuned to middle C. Here the simple note seems to stand out in clear relief from all modifying sounds, and in fact a much larger proportion of the

*This is the fourth of a series of articles which began in the February number.

sound is made up of just 256 vibrations per second. On the other hand, sound C on the cornet and the mixture of sounds is very apparent.

CHORDS.

Strike middle C and the C above. The upper note of the octave vibrates 512 times per second, or just twice as fast as the lower (256). Thus for every air wave that middle C starts, treble C starts two, and these travel to the ear, "keeping step" about as a little boy takes two steps to his father's one, yet both would keep step.

The effect of an octave on the ear and on the mind is not much different from a single note, as both notes seem to blend into each other so readily.

Now, however, strike C and E. There is a new effect, at once pleasing and disquieting. We have sensed the beginning of "harmony," and the ear demands a variety of these new sounds, which the mind has learned to appreciate as "music."

THIRDS AND FIFTHS.

This combination of two tones is known as a "third" when the notes are separated so that you would count C, D, E, one, two, three, and a "fifth" when you would count from C to G, as from one to five, C, D, E, F, G.

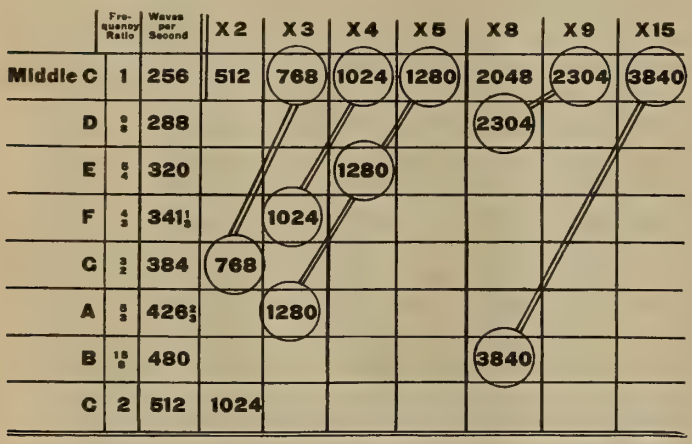

Fig. 1. Vibration Frequency Ratios. Key of C.

Now strike C and G and the effect, while fairly harmonious, is still disquieting. Then strike C, E and A, and there is a richness and fullness that was not heard before.

Without going into technicalities let us hit the piano just once more and then consider the difference between harmony and discord. Strike C and D, and the effect is not at all pleasing. It jars the nerves and disturbs the mind. There is *discord* instead of harmony, for the following very simple reason:

HARMONY AND DISCORD.

The rates of vibration or "frequency" of the notes of this octave are as shown in the figure. It will be seen that it takes only two vibrations of treble C to "catch up" to one longer vibration of middle C, and this occurs in 1/256 part of a second, or so quickly that the ear can scarcely tell that they are not the same. When C and G are sounded together G does not "catch up" to C until after three vibrations, for 3x256=768 and 2x384=768. So they are in unison every 3/256 of a second.

Now, when C and E are sounded it takes still longer for them to get in step, for 5x256=1280 and 4x320=1280, which shows that every 5/256 of a second they vibrate together. This is just a convenient interval for the ear and mind to take note of, and we are pleased to observe this evidence of order or "harmony."

Very different is the case when C and D are struck together. Here the rates of vibration are such that it is 9/256 of a second before the two are in unison and the ear gets tired waiting, and the mind receives no message but one of displeasure or "discord."

C, E and A, however, all vibrate in unison every 5/256 second, and harmony and greater richness result than when two notes only are sounded.

METER AND RHYTHM.

These very short intervals of time are appreciated by the ear without our thinking about it. We only know the effects. There is another way in which time is divided up that is readily distinguished, and that is the order and speed with which notes and chords follow each other. This is termed "meter."

You get some of this when the "leetle German band" goes "um pah pah," or when you try to pick out Home, Sweet Home with one finger. To be pleasing, the notes and chords must follow each other in a definite order and at a rate which varies regularly. We group them in "measures" and "periods" and call it a "tune."

Whether or not the tune is melodious depends upon the character of the "rhythm" as well as the meter. It is meter and rhythm that distinguish between waltz and two-step, march and rag-time although the arrangement of the notes may be similar. You can make a funeral march out of a barn dance by changing the meter and the rhythm, and to cite a current example, part of the music in Puccini's opera "The Girl of the Golden West," is practically identical with "Alexander's Ragtime Band."

Moreover, many popular songs are virtually the same in meter as well as rhythm, the only difference being that other notes have been substituted, while the same "phrasing" and the same old swing are still there.

INTERPRETATION.

Now, suppose we play a piece mechanically and accurately, giving every half note just twice the time of a quarter note, and accenting each measure regularly, each note being pure in tone and of proper pitch. We would hear something like a music box or an automatic piano, accurate but "mechanical."

Now put an artist at the piano. He strikes the same notes, he plays the same piece, but what a difference! What is it that takes that cold, lifeless, mechanical collection of sounds and transforms it into a living, appealing, enthusing force, which goes straight to your heart, or stirs your memory and your imagination so that the riches of the universe are yours once more? You march, you dance, you pray, you dream, you resolve and aspire, and all the time you *thrill,* because you have responded to some of the myriad messages that the artist has brought you from the infinite harmony, of which his playing and your memories and aspirations are each a part.

But why *his* playing any more than that of the automatic piano? Simply because he has used the music to "express" thought, and in doing so he has varied, if ever so slightly, both meter and rhythm, delicately shading the tempo, phrasing and accentuation, so that millions of new combinations have added new effects, harmonious and beautiful, under the guidance of a master of thought and feeling, until your innate sense of order and beauty has been delighted, and out of the myriads of melodious thought-waves, some at least have been in tune with yours, and you have responded.

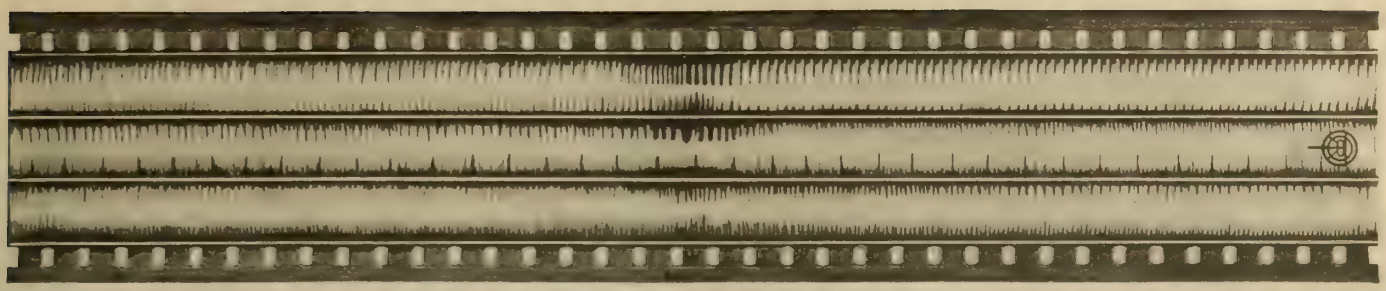

Fig. 2. Radio Type Fonogram. Sextuple Record. Quartet and Orchestra.

The artist has "interpreted" the piece, and his interpretation suited your mood and your need.

REPRODUCING SOUND.

A talking machine does not *produce* music and speech any more than a picture machine produces scenery and action. It *reproduces* them. Therefore, so far as the mechanical duties of Ortografy are concerned, the foregoing remarks on the production of sound might seem out of place. But the chief purpose of Ortografy is to provide for its audiences a perfect form of entertainment, and this necessitates the harmonizing of so many varied elements in the original productions, that the mechanical apparatus used in the reproductions is only an incidental part of the work. Its sole function is to reproduce without spoiling, so that the artist can convey his message unimpaired to the audience.

TALKING PICTURES.

Nevertheless the perfection and precision of all reproducing apparatus are absolutely essential, and fully as important as that a piano shall have a good tone and be in tune. Otherwise, however skillful the player, however masterful the composer whose genius he is trying to interpret, the performance will fall flat.

Why is it that the people didn't take to the "talking-pictures" that have roamed about the country during the past few years? The idea is immense, and everybody said so. Sometimes they drew crowded houses for a while. Audiences smiled and laughed and seemed to appreciate the "stunt." But even a good stunt gets tiresome, so bye and bye the people decreed that you should cut out the stunt and give them the dear old pictures straight.

QUALITY.

Again, how does it happen that the companies which Lyman Howe has been sending out for ten years or more have had no difficulty in filling large houses at 25 cents to $1.00, sometimes giving the same show for a week or more, while in the same town "nickelodeons" went broke trying to attract by advertising a "complete change of pictures every day consisting of three brand new reels of film." They might have added apologetically, "If you don't like it today come in tomorrow, perhaps we'll have a good one." Suppose they did have a good one, it would be gone again before the town had a chance to see it.

Mr. Howe often shows the same pictures that are shown in the nickelodeons, but selects them with care, and his operators know their business. A good, pleasing performance is the object sought, and it is achieved without informing the audience that it is all done through the medium of some "reels of fillum" and some busy ventriloquists and prestidigitators behind the screen. The audience gets only what it wants—the effect.

There are several picture houses at the present time where quality is making good, notably Mr. Rothapfel's Lyric at Minneapolis. He doesn't give you talking-pictures, but he does give you music that fits the scenes, and both music and pictures have spirit and character that betoken common sense and some management. Yet he shows no subjects that are not available for every picture house in the country, and his operators have to get along with the same type of mechanism.

TALKING MACHINES.

There are many ways of recording and reproducing sounds other than with the familiar disc and cylinder talking machines. Sound waves are just as readily photographed as a bit of scenery, and better yet, they may be electrically recorded and reproduced, so that all of the harsh, scraping noises of the phonograph are left out entirely. Moreover the music or speech can be amplified to any desired extent, so that the largest auditoriums can be filled with contented audiences who catch every word.

In the play house of the future the sounds may be produced by any one of several methods which recently have been perfected, and are nearly ready for commercial introduction. It will be impossible in the present article to reveal many details, but a general explanation should suffice to convince almost anyone that the play of the future will not be obliged to carry any live actors around with it (or "dead" ones either).

1. The sound record may be either on the film itself, or what is just as desirable, be run at exactly proportionate speed by the same mechanism. This makes it impossible for the pictures and sounds to get "out-of-step."

2. Each speaker and each instrument may make its own record so there is none of that jumble that occurs when a phonograph tries to make a dozen sounds at once.

3. The sounds are conveyed electrically to the precise spot on the screen where the speaker or instrument or other source of noise or music happens to be. This is done automatically, without the aid of the operator.

4. The quality of the sounds has been inspected and all harshness and unnatural or superfluous noises filtered out by means of magnetic devices which "choke" certain overtones and pass others.

5. In this way the "sibilate" sounds, as of hissing, may be transmitted, and scraping noises eliminated if desired. This would not be possible if ordinary telephones were used, as it is well known that one cannot distinguish the letter s over the telephone.

6. The loudness of the sounds is variable at will and there is scarcely a limit to the size of room that can be filled with clear, well defined music or perfectly articulate speech.

7. Therefore, in regard to the sounds at least, the

Ortoplay will not be an imitation of an ordinary performance, but a reproduction, vastly improved, of an exceptionally good performance under ideal conditions.

Just how long it will be after the new apparatus is available, before it is made to serve a real purpose, and help to lift the picture show to the level of true dramatic art, will depend on whether these new opportunities are taken hold of in the right spirit by those who can appreciate them, and have patience enough to forego the prospect of immediate gain in the serious and hopeful work of founding an industry on right lines.

It is the purpose of these articles to arouse a greater degree of pride and interest in the future development of the playhouse through such agencies as have been described; and it is the desire of those whose privilege it has been to assume the earlier tasks of experiment and research, to co-operate with others who realize the need of a wholly new method of attacking the problem of how to entertain the people.

Future articles will consider some novel phases of this problem, and describe more fully the apparatus which is being prepared to help in its solution.

After receiving word recently that a long-lost brother was dead, a woman of East Boston, Mass., saw him stalk out on the canvas screen of a moving-picture theater. The figure stepped out from a crowd in a naval scene, looked toward the audience, waved a hand and disappeared. An effort will be made to trace him.

Texas Educators Favor Films

At the regular meeting of the Dallas (Texas) Public School Teachers' Institute, one of the subjects treated at length was "The Educational Value of Moving Pictures." Most of the teachers discussing the question declared themselves heartily in favor of the use of moving pictures as an aid to class work. It was declared that in the study of such scientific branches as biology, physiography and zoology they could be made to be of great educational value. Profs. Charlton and Eyerly of the high school, spoke particularly of the value of moving pictures as supplements to scientific studies. Mrs. Bassett of the Ben Milam school brought out the use of the picture as an adjunct to the study of literature, declaring that pictures could be used which were reenactments of stories studied by the pupils and by seeing them reproduced they would make a much more lasting impression on the pupil's mind.

In London a photographer advertises to take moving pictures of his customers, and to furnish a hand stereoscope for working them. He will make 640 pictures in a ribbon, and furnish the hand machine for $5.25. Child pictures are said to to be particularly pleasing for the reason that the child's motion is natural and unrestrained. Many people are securing these child pictures, and also phonograph records of voices of their children for preservation.

Scene from "The Haters," an American for May 16—Fetching in Its Conception and Execution.

On the Outside Looking In

By the Goat Man

I HEARD one exhibitor offer to bet another ten dollars that he took in thirty dollars the most—naming a certain night. The houses had the same seating capacity—the place Chicago. Normally, the business of both ran about the same. The bantered one hesitated. The banterer said: "I'll make it forty dollars!" That excited suspicion. It turned out that the man who took in the most money had "views of the Titanic Disaster" and the other didn't. The "Titanic" exhibitor violated all the rules—the crowd clamored to get in—the ticket seller pulled down her wicket and the boss of the show simply grabbed the money and slipped 'em through! Can you beat it? What sort of public are we?

* * *

From all over this country comes the protest that alleged views of the greatest of all sea horrors must not be shown. Mayors in most of the principal cities have forbidden the exhibition of such pictures. And yet we are confronted with a demand that cannot be appeased. Everybody knows that there were no pictures—that anything purporting to represent the calamity is a fake, pure and simple. Pathé lost a camera man with the vessel, but exhibitors know that Pathé did not try to make capital of a loss so pathetic. There were tears in the Biograph organization with the loss of Dan Marvin, but nothing has been said about the camera that went down with him.

* * *

Frank Winch should be held responsible for the mischief that set every film exhibitor on end. Winch had the pictures—started taking 'em from a sea-going tug at midnight and kept right on turning the crank till the Carpathia picked up the last life boat and disappeared in the gloom and fog of the next day! It is just such tommy-rot that gives the game a black eye. More harm can come from an over-zealous press agent in five minutes than can be turned aside in six months by every known device.

* * *

There were seventy, twenty-seven ampere arc lamps used by the Vitagraph Company in taking the pictures of the McFarland-Wells bout in Madison Square Garden. The management provided green eye shades to the witnesses. Nothing was said about "turning on the fan," but I'll wager that the heat of those lamps would have made E. J. Willis of Cleveland holler, had he been there. But in calling attention to this extreme heat and light, I desire only to show that the making of motion pictures involves somewhat more of detail than "You push the button, we do the rest."

* * *

The impression has gone out that "The Goat Man" is a grouch. He is. There is no mistake about it. He is an alley-goat and the alley-goat diet makes him dyspeptic and pessimistic—only as it respects trade conditions. You have seen Fifth Avenue Goats hitched to beautiful little rigs and hauling the sweet children of the rich. Goats that live in such an atmosphere are well-groomed and well fed. They have forgotten their alley cousins that subsist on the labels of vegetable cans and other loose garbage. There is a difference in goats. The difference is marked. You can see it with half an eye. An inside goat and outside goat tells the whole story. I am an outsider—as rank an outsider as the rankest. But you can pet me and I'll gambol with the sleekest of the flock. I know one or two things about the inside, though I'm far from the stall where the food has been inspected by the chief warden. I'm getting along. My front feet have rested on the top of the fence and I've seen clear into the lot. I may get over some day and then you will understand how badly you have judged me. And in the meantime there are no hard feelings. A grouch can

Miss Leah Gillami, Cines Stock Company (George Kleine).

applaud those fellows who are getting on and if there is anybody in the world who has greater faith in the future of films than I have, let him send his photograph for the front cover of this keystone of optimism!

* * *

I have been intensely interested in the activity shown by some of those red blooded western men who have invaded the sanctity of Gotham, especially as it concerns the independent film business. There is no deception in the name under which these men are operating. They call themselves the Mutual. The word mutual suggests giving and taking—toting fair, if you please, and while the Mutual has shown decided liking for taking, I'm sure it has also been doing some giving. The Mutual has rounded up the control of something like twenty film

exchanges. It has established a clearing-house for old film that has sewer connections. It stands hard against junk and without "bunk." Besides it has been slipping over a factory or two or three and is dickering for more. To a man who doesn't know, at least that is the premise, this is how it seems to be working out. I have said that the Mutual was largely composed of westerners—men who shake hands at the belt line; say very little and look you straight in the face when they speak. These men were for the most part somewhat slow in developing. That is, to the speed boys of Broadway it looked that way. They had film exchanges, most of them, and when the G. F. Co. got out its jaugernaut cart they refused to take the count. They were victims of what was left and not relishing the whole program, they started a little film factory of their own. The bunch down East must have said to each other, "let's get 'em a coming and a going." And that's exactly what they did. But you can't pick all the feathers off a goose unless you take off your gray silk gloves! The westerners fell for the two-way hold-up till they got tired of it, and now they have mutually agreed to sit in at the doings. Are they in? Yes, Terese, they are. With a few factories of their very own and a string of buying exchanges they are steadying the gaze of Race-Track Charley quite considerably. There isn't the least bit of friction, either; but they do say that the second-story handshake has now been compromised to half way from the chin to the top pants button.

* * *

Nearly everybody who asks me questions go harking back to the whyness of making films. They all say there must be oceans of money in it and that money is easy to get when it can be shown that there is big possibility for its return. All of which is true. I've had to prove that I would pay back every dollar I ever borrowed before I got a cent. In the film business you can't prove anything. It isn't a theory business for a single second. The thing that goes today is as dead as a door nail tomorrow. The man who fails in one place becomes a raging success at another. And it follows all the way through. There are successful men in the film business who were failures before they got into it. There are failures in the film business who were tremendously successful before they switched their affections. The dope sheets wont stand analysis. I have referred to the two "charmed" circles that dominate the business. I have pointed out the utter futility of a "third movement." To upset the present plan of conduct would require a greater sum than could be enticed from the money centers. It would require the making of an elaborate program of films—say eighty full reels a week; the renting of those films through approximately a hundred film exchanges and the actual owning of from five to ten thousand more theaters. There is no other way to compete for the nickels and the dimes that support the industry as it stands. Better let well enough alone. It costs nothing to dream about it, but some such scheme as exists today will continue right along indefinitely. No genius will out-genius the men who are doing the present strangle-hold.

* * *

But I do think there is an opportunity to get away

A Scene from Selig's "When the Heart Rules," One of the Good Films of Last Month.

with a straight church and Sunday school proposition—at least for a time. The Sunday school lessons, if I haven't forgotten, are "released" quarterly in advance. I have a notion that a five minutes film review of next Sunday's lesson, just before the closing hymn, would induce larger attendance in those little red seats close to the superintendent's rostrum. I fancy Willie and Margaret and John and Martha would never fail to attend the lesson if they were to have the picture story as a climax. And what denomination has a Ladies' Aid Society that wouldn't pull off ten consecutive chicken dinners in their zeal to buy and install a projector in work so commendable? And where will you find a congregation without its dear brother Ebenezer Lightfoot, an electrician, who would volunteer his services for five minutes in a cause so worthy? Here is a half-million dollar chance that is being kicked around because the men who are equipped to do it are too busy counting money under the existing plan. It is all free, too. The Goat Man is too poor to do more than suggest.

* * *

The Chicago State Branch No. 2, Motion Picture Exhibitors' League of America, are working on the plans for entertaining their fellows who will visit Chicago in August. Better put big marks on the convention dates, you out of Chicago exhibitors, for the plans include your being here.

Pictures in the Air

Lieut. F. M. Kennedy, who recently took a series of motion pictures from an airship, describes the experience as follows:

"Taking pictures in the air? Well, it isn't so difficult as the onlooker might suppose, though, of course, my work was experimental and the results cannot be determined until the films are developed.

"Lieut. Arnold and I started from College park in the afternoon with the idea of carrying out a mimic scouting trip. I had the motion picture machine—a small contrivance as easy to operate as an ordinary camera—and he guided us.

"When we had reached 1,500 feet and the earth looked rather small, I began to reel off the films, pointing the camera directly toward earth, so as to cover the road. I held the camera in this position during the major portion of the flight, shifting it only a little to the right and left to get the topography in general.

"The only difficulty encountered—and it is one easily remedied—was in definitely deciding just how much territory we were covering. There was no finder on the camera, and it was, therefore, impossible to sight it as one would if taking an ordinary photograph.

"The light struck slantingly, and, as the camera was shaded, should have brought the hills and hollows below us into splendid relief. This is the first extended trip I have made with a moving picture machine on an airship. If the pictures I took prove to be a success, undoubtedly the scheme will be followed up and come into general use."

Picture Politics

A moving picture campaign is being conducted with much success in the villages of Hertfordshire, England, by the Union Defence League. The efficacy of the film as a political agent is not among the least of the surprises of this wonderfully versatile art.

Good Word for Pictures

Upon mature deliberation the Child Welfare Committee, of New York, has decided that the moving picture shows of that city are doing a good work. In one particular the committee indicates that by reason of the cheapness of the picture show children of the adolescent age have practically deserted other shows of low moral standard, and plays of alleged higher quality, where vice is gilded and made attractive by pleasant surroundings. It is also pointed out that the moving picture show is more clearly and practically under the control of the authorities than any other, and that the tendency is constantly toward improvement and a higher moral plane, rather than away from these. For these reasons the picture shows get deserved commendation.

It is the duty of good people everywhere to give encouragement to any form of entertainment that promises mental and moral profit for the children. It is, therefore, well that heed be paid to this report of the Child Welfare Committee of New York, and that public interest in every city strive to make it an object for the moving picture show to continue in well doing, and to enhance the business from the moral and educational point of view wherever that is possible.

There is no manner of doubt, at all events, that the moving picture show is with us to stay; nor is there any doubt that we have begun with it in the right way. It is by its very nature a children's show, and it only devolves upon the people as a duty to see to it that it serves the children as it should.

Takes Your Moving Picture

One of the latest novelties with which Berliners are amusing themselves is about to be introduced in America. For some weeks one of the popular pastimes among the people who loiter in the evening along the Friedrichstrasse is to get photographed by moving picture machines.

There are a number of small shops where the customer, after attitudinizing a few minutes before the camera, receives a roll of photographs packed in a small metal box.

By turning a crank rapidly the pictures are made to appear in as rapid a succession as in kineomatography. The proud owner goes around exhibiting his pocket picture shows to his friends.

Marcus Braun, port warden of New York, has decided that the idea would catch the popular fancy in American cities, and has completed arrangements to introduce it into the United States.

Washington Schools Want Pictures

School board officials of Washington, D. C., may institute a moving picture course in the local schools. A better understanding of geography, art, literature and science could be taught by views on a curtain, according to Superintendent Davidson.

Enlarged maps of foreign countries could be shown, be pointed out, and travel views would make geography more interesting for the pupils.

Dr. Davidson said that the machines would be used not only in the kindergartens, but in the graded and high schools as well. New York, Minneapolis, and other cities have found the system successful.

Current Educational Releases

The Art of Printing.—Pathe. An interesting film showing the process of printing as carried on in the United States government printing office, Washington, D. C., the most modern and up-to-date in the world.

Abaca; Its Culture and Use in the Philippines. —C. G. P. C. A subject which should be both interesting and instructive, as it shows the growth, culture and many uses of the native Manila hemp plant, which supplies a product from our new possessions with which we are somewhat acquainted.

Turtle Industry in Florida.—Lubin. A very interesting picture of a turtle farm. The monsters are handled fearlessly by the keepers, who give them their turn in the tank. A boy rides on the back of one of the turtles while a keeper prods him to increase his speed. The picture shows how they are dressed for the market, which is done on a wholesale scale.

American Lumber Mill, Albuquerque, N. M.— Nestor. A film showing the activities of what is said to be the largest lumber mill in the world, having a capacity of 300,000 feet of lumber per day. It shows how the lumber is unloaded from the cars, stored away until needed, then sawed into lumber of the desired dimensions, which is conveyed to immense yards to be stored away. It also shows a creosoting plant in action, where railroad ties are creosoted, thus adding to their length of life.

The Pygmy Circus.—Reliance. A natural history subject, showing an interesting series of little animals in their natural antics, which are very entertaining.

Fishes of the Tropics.—Eclair.

An Excursion in New Zealand.—C. G. P. C. An interesting travelogue which carries one through the tropical verdure of New Zealand—sometimes up the mountain side above the clouds and among the beautiful lakes.

Scenic Wonders of Yellowstone Park.—Imp. A series of pictures showing the wonders of the nation's playground, which includes all kinds of vegetation and natural formations as well as various animals. One picture deals with the wonderful waterfalls, another shows the geysers and hot springs in operation, and a third deals with the various animals in the park.

The Potters of the Nile.—Kalem. A very interesting series of pictures portraying the process of pottery making from beginning to end, probably as it has existed from time immemorial in this country.

Bathing Cavalry Horses.—Pathe. A subject which is both interesting and instructive, showing as it does the cavalry horses of the French army being driven into the stream, to which many of them object; consequently their antics are quite entertaining.

A Trip to Tihiti in the South Pacific.—A travelogue which gives us a glimpse of the life and customs of this interesting people.

The Alhambra, Granada.—Eclair.

Winter Logging in Maine.—Edison. This film shows the activity of a lumber camp during the winter months when the ground is covered with ice and snow making it possible to move heavy loads of logs through the woods. After the trees are cut and stripped they are gathered in huge piles along the road and when the snow falls the road is cleared with the snow plow, followed by a sprinkler, and thus a hard, icy road is formed, over which the heavy loads can be hauled to their destination —usually the bank of some river—to await the spring thaw, when they are run down to the various mills.

The Story of a Cocoanut.—Selig. A very interesting film, consisting of a series of pictures portraying the entire process of raising cocoanuts.

California Ostrich, Pigeon and Alligator Farm. —Lubin. A very interesting picture of an ostrich and pigeon farm in Lower California, also an alligator farm. There are herds of giant birds which seem to enjoy civilization, even allowing their keepers to ride on their backs. The swarms of pigeons also present a very pretty sight. There are also thousands of alligators ranging in size from a few inches to eight feet in length. When handled they will show fight, but the keeper handles them seemingly without fear, taking the top and under jaw between his hands he quickly closes the vicious looking mouth and only laughs at their wicked attempt to bite.

Tunisian Fisheries.—Eclair. A very exciting and interesting film, showing how these monsters of the finny tribe, some of which sometimes reach the enormous weight of one thousand pounds, are caught and prepared for the market.

The Blue Mountain Buffaloes.—Champion. The picture of a herd of buffalo taken in their New Hampshire winter quarters on the Blue Mountain Forest Reservation. This is an interesting film as it gives us a good view of these mighty monarchs of the plain which are fast becoming extinct on our continent.

Scenes in Korea.—Selig. An attractive travelogue which is also instructive, as it gives us some idea of the life and habits of the people of this oriental land.

The Los Angeles Fire Department.—Selig. A vivid demonstration of the daily life of the Los Angeles fire department, which has long been considered one of the most modernly equipped and best organized in the country. We see the fireman about his daily duties, both at work and at play, and the subject is one which not only entertains but instructs as well.

Last Rites of the Maine and Burial of Its Dead. —Selig. A film which should stir the patriotism of every audience.

The Charcoal Industry in Cuba.—Pathe. This film shows in an interesting manner the gathering of wood, the building of the furnace, the burning and shipping of the charcoal.

Cod Fishing Off Iceland.—C. G. P. C. A very interesting film showing forth this important industry.

Old Town, Albuquerque, New Mexico.—Nestor. A film of historic interest, as it shows some very old ruins, among them being San Felipe Church, erected about 1600 A. D.

Clever Boys.—Great Northern. An interesting subject showing the results of Swedish movements in promoting muscular development.

A Samourais' School.—Pathe. A film showing how the Japanese nobility are trained, as were the Samourais of old.

Wrasses, Dog Fish, Sole and Gurned.—C. G. P. C. This film shows all the different kind of fish mentioned, all of which are caught at a depth of 500 feet. It also shows how they are located by the fisherman; the nets are then lowered, the fish hauled up and sorted and stored away.

The Coming of Columbus.—Selig. A moving picture drama in three reels, reproducing with historic exactness the vital events in the life of the great discoverer who gave a new world to civilization. Among the scenes depicted is his appearance before Queen Isabella of Spain, where he is created an admiral, provided with three ships and starts on his journey in search of the new world which he believes exists, as well as many other scenes.

The Animated Weekly.—Sales Company. A film showing the ill-fated Titanic, her captain and officers; also the Carpathia, her rescuer, and some of the passengers on board the rescue steamer, including the picture of the mass of ice supposed to have sunk the steamer.

New Pennsylvania Convention Date

The Pennsylvania state convention that was called to meet at Harrisburg, May 6, 1912, has been called off and will be held in Pittsburg, June 24 and 25, 1912.

Every motion picture exhibitor in the state of Pennsylvania is not only invited to attend the convention at Pittsburg, but is urged to do so, as matters of great importance to every exhibitor will come before the convention.

Moving pictures as an aid to the education of the public on civic, industrial and scientific subjects were advocated by Dr. Deutsch in an address delivered before the City Club of Cincinnati at its meeting in the Gibson House. He urged that the club should use its influence toward interesting proprietors of moving-picture shows to secure films dealing with subjects of special educational value.

Scene from the American Film of May 27, "The Reward of Valor."

Scene from "The Brand," an American for May 30.

Breaks World's Record for Changing Reels

The world's record for changing reels on a motion picture machine, formerly held by a Mr. Jones of Chicago Local No. 2, I. A. T. S. E., was broken here when Roger H. Neal, in the presence of a Journal man, changed reels at the Amuzu Theater in exactly nineteen seconds. This seems remarkable, but the Journal can vouch for the fact that it was done. Mr. Neal is by all means the most expert operator ever in Winston-Salem and is a thorough gentleman withal.—Winston-Salem Journal.

Here is one of the most remarkable performances which has ever come to our attention, says the Edison Kinetogram. When one considers that it usually takes about one full minute to change reels, this nineteen-second shift is little short of marvelous. Mr. Neal, however, in a letter to the company, assures us that two stop watches timed the trick, and that it was a complete and accurate change.

The performance took place upon an Edison Kinetoscope and is cited by Mr. Neal as an instance of the great possibilities of our machine, which is unconsciously praised by another Southern newspaper which, in commenting on this remarkable feat, says:

"The efficiency of the operator is manifesting itself to the patrons of the Amuzu in a clear and distinct picture, with regular light, and dispatch in changing from one picture to another. 'Forty seconds to change reels' the sign reads, and it is very seldom that a longer time is consumed.

"This service, with other features inaugurated by the management, tends to make the Amuzu a mighty popular place, and its patronage is growing steadily."

We are publishing the account of this record-breaking change in the hope that other operators will become interested in an endeavor to break this new record—though we do not believe it can be done.

Pictures Greatest Aid to Insane

The moving picture is the greatest success yet attempted in the way of entertainment for the insane patients under treatment in the Oklahoma Sanitarium Company's hospital at Norman, Okla., according to L. H. Selsor of Guthrie, the company's president. Only comic and scenic pictures are shown, and the former are particularly entertaining to the several hundred patients who discuss them for days after they are shown and wonder what the next series of pictures will be. All modern methods of entertainment have been adopted at the sanitarium, but the moving picture, declares Mr. Selsor, surpasses them all.

Since the war started, theater managers in Turkey have entirely withdrawn Italian films from their programs, or else have cut out all trade marks and titles indicating their Italian origin.

Motography as a Medium of Education

By E. B. Lockwood

THE educational value of moving pictures is being recognized by the world at large. The great educators of the country are waking up to the fact that many branches of study can be illustrated and taught more comprehensively by their aid. The use of moving pictures in schools is still in its infancy. The great possibilities have hardly been considered, much less demonstrated. A few colleges and schools throughout the country have been equipped with moving picture machines, and where they are installed they have proven a great success.

Consider what it would mean to the student of the agricultural college if he could see the growth and development of wheat, corn or oats, day by day, pictured before him in a few minutes. Our government is spending millions of money annually to enlighten the farmer and show him how he can increase his crops. Short courses are held at all the agricultural colleges. These are attended by the farmers. With the aid of the moving pictures the teachers and professors could drive home the fundamental principles of practical and scientific farming in such a way that they would be easily comprehended by all. Geography, history and literature could be illustrated and taught to the children of the grammar schools, to say nothing of the great possibilities of illustrating the many branches of science taught in the preparatory schools and university.

Moving pictures explain and convince where the chart and word description fails. Students have been taught parrot-fashion for years, memorizing their lessons without comprehension of the subject. With the aid of moving pictures this same student would get a definite conception and advance more rapidly. The inattentive scholar would be entertained and become more interested. Moving pictures impart knowledge to those who see them. They have become a recognized necessity among all of us.

We are able to visit the most remote corners of the world and enjoy the beautiful scenery and the wonders of nature's great phenomena. We are shown the products, animal life and inhabitants of foreign countries. The modes of living, characteristics and mannerism of people from all parts of the world are depicted before us. Great industries are brought before us in minute detail. Sanitary and insanitary methods of living and preparing food are impressed upon us. The works of all the world's great authors and poets are dramatized and portrayed for us upon film. History is being reported day by day. All these subjects can be secured by the school board at a nominal expense. These subjects do not nearly cover the field. The film manufacturers have been working day and night in the past supplying the theaters with film good and bad, but the time has arrived when they will have to divide their efforts and give more time and attention to the educational field.

The Edison Company has recently perfected a small moving picture machine and film which will do a great deal in making moving pictures one of the great mediums of education. This machine makes it possible for the country school to use moving pictures. However, I think it is questionable if such a machine will ever prove practical in the city grammar or high school where there are large classes and the machine will be used several hours each day. The city schools and universities need a full size, simple, durable and practical machine.

You say, "Yes, but moving pictures are expensive." Yes, and no. Expense is not considered when a fine fireproof school building is erected and the most modern facilities for the protection and welfare of the children are installed. You will find well equipped gymnasiums costing thousands of dollars in all the schools built in the last few years. A moving picture machine and equipment, including a fireproof booth, would cost less than $500.

In several states educators have considered organizing film circulating libraries. Such libraries would make it possible for school boards to subscribe for films at a very reasonable figure. The idea of first runs, as now practiced by the commercial film renters, would not be in vogue in such a library, as an educational subject would be worth just as much at the end of a year as the first day released. These libraries could be made to pay a good interest on the investment and would be a great benefit to the schools of the state. While visiting several state universities and agricultural schools this last winter I found that the presidents were endeavoring to secure appropriations for moving picture machines, as they consider that one would be of great help and benefit in their work. It is only a matter of a short time until the subject of moving pictures in the schools will be considered by every school board in the city and country.

Ministers in various parts of the country are illustrating their sermons with moving pictures. Those who have used them have been very successful, as they draw large audiences. Superintendents of Sunday schools have demonstrated that children learn faster and easier and at the same time are entertained. Y. M. C. A.'s are installing machines and giving religious and educational entertainments. On a trip through the South a little over a year ago I met Y. M. C. A. superintendents who were very much interested in moving pictures, and after making a few inquiries they all said, "Well, next year I shall have a machine here."

Several large corporations have installed machines and are showing pictures to their employes at noon hour. Railroads are considering the use of moving pictures to educate their employes in their various duties and instructing them in first aid to the injured.

In some communities the school boards and principals have arranged with the local theater managers to show certain pictures, illustrating subjects that the children in the schools are studying. Others have even had managers hold special matinees at which they could show the children a program to illustrate their studies.

Moving pictures do more to educate the masses than any other institution. The public attends the moving picture theater to spend a pleasant hour and be entertained. The foreigner living in the ghetto, working men and their families, and the well to do, all attend the theater in their neighborhood. At the same time they are being entertained they receive lasting impressions and become informed on subjects that heretofore were foreign to them. Children will often join in a conversation and speak intelligently upon subjects which seem far

above their comprehension. Upon asking them where they receive this information they will generally say, "Why, I saw that at a moving picture show."

There is a great field that has hardly been touched. The great crops of the commercial field have been reaped. Now the producers and manufacturers will have to cultivate and work more carefully, studying conditions and endeavoring to meet the demands of the public. Just across the road lies the educational field, touched only in spots, waiting for the manufacturers and producers to reap the harvest, which promises to be a record breaker.

Films at Southern Sociological Congress

Motion pictures are expected to be an important feature of the Southern Sociological Congress to be held in Nashville, Tenn., May 7 to 10. Governor Ben W. Hooper has issued a call to the governors of sixteen southern states to send delegates to a congress and exhibition to study and improve social, civic and economic conditions in the south. The program will be made up of an array of the strongest speakers on social welfare topics from various parts of the country. In addition there will be exhibits and a special showing of graphic methods in teaching and interesting people. For this purpose national organizations possessing motion pictures have been invited to co-operate. The committee desires to learn of all high grade films treating of health, play, children, prisons, summer babies, child labor, flies, and many other subjects interesting to public officials and social workers. Correspondence may be addressed to E. G. Routzahn, Southern Sociological Congress, Nashville.

Japan's Picture Theaters

Consul General Thomas Sammons, Yokohama, says that in Yokohama, as well as throughout the empire, the moving-picture show is taking the place of the old-line theater. The price of admission is sometimes 2½ cents, but usually 5 cents. There are also numerous traveling picture shows.

These concerns do a large film-exchange business, mostly with European manufacturers. An American film is seldom seen, although investigation leads to the belief that the public would be very glad to see more characteristic American views. There is also a good opening there for American moving-picture machines and accessories.

Pictures in the Straits Settlement

Vice Consul D. Milton Figart, Singapore, says there are three moving-picture shows in Singapore and six throughout the rest of the peninsula. A French company supplies the machines and controls the film market. This company stocks about 1,000,000 meters of film (meter=3.28 feet), buying what it desires from other manufacturers and sending in about 5,000 feet of new film each week. It has had an operator in this field for some time taking pictures of rubber growing and other local industries.

Scene from Essanay's Western Comedy, "A Western Legacy."

California, the Producers' Eden

From the Los Angeles Times

SOUTHERN CALIFORNIA is the back-drop for hundreds upon hundreds of tabloid dramas and comedies presented before a daily audience of some 20,000,000 people in the United States, Canada, Mexico, South America, Australia, the countries of Europe, Japan and the Philippines. Within the city boundaries of Los Angeles, and just over the line in Glendale, is produced that vast quantity of cowboy and Indian picture-plays which enliven the moving picture programs of the world; and besides these purely western subjects some of the great moving picture dramas of the day — tremendous classical productions, dramatizations of famous novels, pantomimic adaptations of celebrated plays, startling marine films and idyllic film-fancies of mountain gorge and primeval forest—are staged against the tremendous background which those of the Southland are familiar with as the setting of their everyday lives.

In that part of Los Angeles known as Edendale, and further on, in Glendale, many of the largest moving picture producers of the world maintain what they term "Pacific Coast studios," and some of these are responsible for such a large share of their companies' output that they have become substantially the producing headquarters of the firms represented. Among the big concerns located there are the Pathe Freres of France, the Selig Polyscope company, the Biograph, Kalem and Bison, besides a host of others. An Italian concern has recently inaugurated a branch there for the manufacture of films for use in Italy exclusively.

The reasons for the centering of this picturesque industry there are traceable directly to those fundamental principles of Southern California greatness—climate and scenery. These two factors are old friends in the literature of this region and their mention is greeted by some with indulgent smiles; but they are "it" just the same; and as the lodestones which drew the picture drama producers into permanent camp in Los Angeles they are doubly "it."

A UNIQUE COLONY.

The corner-stone of that most startling and unique settlement, the cinematograph colony in Edendale—where a portion of the population can be seen any day going unconcernedly about its business in the streets clad in costumes dating all the way from the Roman empire to the Arizona cowboy—is sunshine. Constant, shadow-slaying sunshine day after day, summer and winter—how it gladdeneth the heart of the man who makes drama by the yard and swelleth the days wherein he may labor with profit!

Next in the enthusiasm of the picture-play man is the diversity of scenery that can be reached in a day from Los Angeles. From Los Angeles the producing director can move his company—often fifty people at a time, most of them trained actors and actresses—from the studio to the seashore, and from the sea up into some mountain fastness, and home again, between sunrise and sunset, enacting different scenes in a drama, or parts of several plays. Just back of the studios at Edendale he finds the rolling, unspoiled hills typical of the West; a little way up the Los Angeles river, in the San Fernando valley, he has discovered ideal thickets, fords and fearful ambushes and further on, to right and left, he can maneuver his wild cowboys, fierce Indians and desperate Argonauts over wide reaches that simulate the desert (which they are not) with fine fidelity on the flashing film. And then there are, on every hand, the magnificent homes and public buildings, deep in all the beauties of tropical vegetation and everlasting flowers and patios and pergolas and all that sort of wonderful stage settings, where may be enacted a pageant of ancient Rome or modern Italy or North Africa or old Granada, or almost any other land or time between the two arctic zones without the addition of a single foot of painted canvas or a single papier-mache palm.

STUPENDOUS SCENERY EFFECTS.

Some of the most stupendous scenery-dramas ever turned out by American film producers were made this summer by a Los Angeles troupe in Bear valley and contiguous regions of the great mountains which loom east of this city. At the same time the theatrical company of another of the big producers operating in Los Angeles, augmented to tremendous proportions for the occasion, was enacting at Redondo the largest marine picture-play ever undertaken anywhere. This gives some idea of the diversity of opportunity which is making Los Angeles the center of high class film production.

In addition to these two main factors—climate and scenery—the metropolitan characteristics of Los Angeles itself were a determining factor in bringing this strange but ever-growing industry there. The big producers must have a great modern city close at hand.

This industry has given Los Angeles one of the queerest settlements to be found in any American city. Edendale is a community which exists, apparently, just for the fun of making believe. No doubt the staid and matter-of-fact portion of its population will resent this imputation; and therefore further emphasis will be laid on that word "apparently."

A JOY TO THE TOURIST.

The place is a surprise to the average Angeleno who happens to pass that way for the first time, and a delirious joy to the eastern tourist who, coursing through on the car bound for one of the famous Spanish dinners in Glendale, suddenly finds himself in the very midst of the kind of West he had been looking for but so far had sought in vain. When his car runs through an animated, composite Remington painting of prairie schooners, cowboys, old-time cavalrymen, almost naked Indians, plodding bullwhackers and leather-clad scouts, he fairly howls with the joy of discovery and patriotically babbles the motto on the escutcheon of the great state of California, Eureka—"it is found." By that time the vision of leatherstocking delight has vanished, but the memory of that thrill never can be effaced and several delightful minutes may be allowed to elapse before his fellow passenger need to inform him that the Remingtonian band was only a phony bunch making its way to the river bottom, to can a drama of wanton pillage and gallant rescue.

Sometimes through the gate of one of the inclosures remarkable antics may be witnessed. The writer remembers entering the fine grounds of the largest concern in Edendale, one morning and bringing up with a round turn before the following remarkable sight: A lovely young lady in her nightdress, an emigrant woman with a child (dummy) in her arms, the captain of a steamship and two officers, several barefooted, ragged sailors, a

couple of gentlemen who had evidently dressed in a hurry and had only blankets over their shoulders, a young hero in open-neck shirt, and a droll looking little fat man with old-fashioned plug hat and carpet bag in one hand, all prancing around on the grass while the Jap gardener turned the hose on them. The women were screaming shrilly as the cold water ran down their necks, and the men danced, Indian-like, with a look of sullen suffering on their faces, while the Jap boy grinned delightfully at the fun of "soaking it to 'em." The explanation of it all was that the players were about to go in the studio in a shipwreck scene, where the hero drags the heroine from her flooded stateroom, the men passengers rush up half clad, the little fat passenger with the carpet bag whimpers and gets in the way, and there is generally the devil to pay. This was known as an "all wet" scene, and the Jap boy supplied the glistening effect required.

The manufacture of a moving picture drama is most interesting. Many of those which look so simple when thrown on the screen in the theater have cost large sums of money and weeks of time to produce. Sometimes a large company of players will be transferred almost from one end of the state to the other in the working out of a single play. There may be one scene in which the Yosemite may be chosen for a background, and another in which only the far southern edges of the desert will suffice to produce the realistic effect desired. The two essential tenets of the moving picture directors are realism and action. To create realistic effects he goes to limits which entail tremendous expense.

HOW IT IS DONE.

After a scenario has been accepted, the cast arranged and the details of costuming completed, the director will spend days, sometimes, in an automobile, riding around the city and surrounding country, or perhaps board a train and travel overnight before he begins the auto tour, just to hunt out suitable spots for the different outdoor scenes. Then, as the play is enacted, the company is moved from spot to spot. The entire play is seldom rehearsed beforehand, each scene being rehearsed by itself, right on the location where it is to be enacted, just before the camera is set in operation.

While actual lines for the players to speak are seldom written into the scenarios, quite an intelligent conversation is carried on among the players as they act, sentences fitted to the sentiments they are pantomiming being improvised by them as they go along, or suggested by the director. The class of talent employed in these companies is high and the class of plays produced is being constantly improved. In some instances actors of renown in the East have been brought to Los Angeles under long contract, and are displaying the same high talents before the cinematograph and against the Southern California background, that have won them fame on the legitimate stage.

The combined investment of all the picture concerns operating there is difficult to compute accurately, but one company may be taken as an example. The Selig company was the pioneer in the establishment of the Pacific Coast studios, starting its plant at Edendale about two and a half years ago. This company now controls a big plot of beautifully-laid-out grounds, including lawns, concrete swimming pool, immense glass studio, office building, property house, engine house, etc., all in mission style and surrounded by a high ornamental mission fence, which illustrates the large permanent investments which these companies are making here. The Selig local plant represents an investment of some $75,000 and the Los Angeles studio expends about $175,000 a year on the productions made here. Its regular pay roll amounts to $100,000 a year. Extra people not on the regular roll cost $15,000. Ten thousand dollars is spent annually for transportation, in addition to the above items.

THE DAILY AUDIENCE.

As has been said, these Los Angeles-made films are exhibited all over the civilized world, the daily audience of the licensed manufacturers alone being computed at 20,000,000, while the "independents" show to millions more. The reels made in Los Angeles are developed there and if found perfect when projected in the local studio, the negative is shipped immediately to the Chicago or New York headquarters, where the hundreds of positive prints are made and from there distributed to the cities of the world, each print of a play to be released simultaneously in the different cities. Two films are made of everything pictured, one for American and one for European use.

Despite the tremendous output of cowboy and Indian pictures, the local directors say that the demand for them, especially in Europe, is still greater than for any other class.

A very interesting and important development of the moving-picture industry is the power it is exerting in advertising Americanism outside of American boundaries. Just at present the British public is tremendously stirred up over what is termed the Americanization of Canada by American film makers; and the chief causes of alarm are the patriotic reels showing the heroic side of American life, such as are largely manufactured right there in Los Angeles.

A Layman Criticizes

A correspondent of the New York *Sun* claims to see some things in pictures that shouldn't properly be there. While his protest is couched in more or less humorous language, there is food for thought in what he says:

To the Editor of The Sun—*Sir*: Never mind how old I am, but suffice to say the multitude of my years should furnish me sense enough to abstain from attendance at vaudeville houses of best repute which incorporate moving pictures as items of entertainment. I still persist.

What I particularly object to is the great disparity of ages and weights between the leading men and the heroines. The latter are generally enacted by mere slips of girls in the early twenties, and the men by huge fellows close to forty, and some wrinkled and almost as bald as I am. In the marriage hunt these extremes find nothing congenial unless monetary advantage.

I desire also to protest as to the ages of the mothers of these heroines, as they need more years and noses more alike to make the relationship possible. While at it, I may as well express my contempt for the girl who will dismiss a plighted lover and accept another in several turns of the crank handle of the exhibiting mechanism. The frequent removal of the hats of the males and the ardent clasping of everybody in promiscuous confusion and sudden forgiveness as manifestation of strong emotion produces in me sensations of vertigo.

Unless the defects in production are remedied I shall institute measures of reforming myself by abstention in attendance, and the beginning of the ruin of the shows will occur.—Realism.

Motion pictures are indeed coming to be a factor in churches. A short time ago at the Highland Park M. E. Church of Chattanooga, Tenn., Ensign Rex Munselle of the Salvation Army entertained the congregation with moving pictures depicting the work of this organization and the life of Christ.

Both the church auditorium and Sunday school annex were filled to overflowing.

The pictures were excellent. They showed the life of Christ, from His birth to His death and resurrection. The work of the Salvation Army was also portrayed. Appropriate music accompanied the exhibition.

Of Interest to the Trade

MOTION PICTURE EXHIBITORS' LEAGUE OF AMERICA

Second Annual Convention, La Salle Hotel, Chicago, Aug. 11-14, 1912.

Illinois State Branch No. 2 is actively at work to make the National League Convention the biggest thing that has ever been pulled off in the film business. The convention committee is comprised of these well-known exhibitors: Wm. J. Sweeney, Chairman; Samuel I. Levin, Chris. C. Whelan, Crawford L. Hull, George Henry, Robert R. Levy, Louis Schindler, I. Natkin, L. H. Frank, Charles Abrams, A. J. Balaban, M. Hyman, Fred Schaefer, H. A. Hill, J. A. Alcock, John Miller and Charles A. Anderson. Headquarters are at 112 S. State St., Chicago, in the splendid offices of the Orpheum Theater.

"Sunlight" Metallic Cloth Curtains

It is reasonable to conclude that the specialist knows more about his subject than those persons who do not make the same study. The rule applies to all things. Motion picture exhibitors who insist upon good pictures, good projection and a pleased public are apt to frown upon their electric light bills and project their pictures on bad screens. They are too busy to study the screen problem. It is impossible to get a perfect picture on an imperfect screen. The "Sunlight" screen is the culmination of scientific application. The makers know the screen business as specialists. They know the motion picture business from the screen viewpoint. Their literature is broad in its claims and is free to every exhibitor who will ask for it. To see a demonstration doesn't cost the prospective buyer anything. These theaters, and many others, use and recommend the "Sunlight" screens:

Jones, Linick & Schaefer, Chicago, Orpheum, Bijou Dream, Willard and Premier, and fifty other theaters in Chicago and its suburbs.

Scene from Selig's Dramatic Story of a Dog's Devotion, "A Humble Hero."

Scene from the Coming American Film, "The Wandering Gypsy"—a Strong Western Drama.

Marcus Loew, New York, New Greeley Square, Herald Square and Circle.
Marcus Loew, Brooklyn, Royal.
Pearce & Scheck, Baltimore, Victoria.
Cosmos Theater Co., Washington, Pickwick.
S. M. Hexter & Co., Cleveland, Penn Square and Gordon Square.
A. Mahrer, Cleveland, Avenue.
M. Switow, Louisville, Crystal.
M. Switow, Jeffersonville, Crystal.
M. Switow, New Albany, Crystal.
F. Cosman, St. Joseph, Majestic.
Crawford-Flynn, St. Louis, St. Charles.
Frank Talbot, St. Louis, Hippodrome.
Colonial Amusement Co., Denver, Colonial.
Moore & Greaves, Denver, Princess.
E. G. Moore, Great Falls, Orpheum.
Sullivan-Considine, Butte, Majestic.
J. J. Fahay, Jacksonville, Phoenix.
Crute & Ragland, Huntsville, Lyric.
H. Fichtenberg, New Orleans, Alamo.
Joseph Hopp, Dubuque, Princess.
Starland Co., Ft. William, Ont., Corona Theater.
Louis Clarke, Moose Jaw, Sask., Savoy.
W. H. Swanson, Salt Lake City, Gem.
Savannah Photoplay Co., Savannah, Arcadia.
J. W. Sanford, Chamberlain, Motion Picture.
W. L. Gleason, Brookfield, Bijou.

The foregoing list has been made up to include a few of the well-known exhibitors in localities covering a wide area. If you are seriously considering economies that will save electric current consumption, a pleased audience and an additional asset investment, you are referred to the manufacturer of "Sunlight" screens, whose advertisement appears elsewhere in this issue.

News From the American Studio

The American Film Company, Chicago, is in the market for a new batch of scenarios in addition to those produced by its staff of writers. Strong western subjects will receive first consideration. Omer F. Doud, manager of publicity, has assumed the duties of scenario editor for the Chicago offices.

The American Company is planning a number of elaborate two-reel subjects for production in the new Chicago studio now rapidly nearing completion. Some especially good scenarios are under advisement and it is freely predicted that the American has some surprises in store for independent exhibitors. The American will soon be in position to produce subjects of every possible kind and is throwing open its doors for the consideration of every variety of good ideas.

Through the unremitting efforts of C. Ziebarth, the American's mechanic and electrician, a new device has been added to the mechanical efficiency of the company's new Chicago plant, which bids fair to surpass old-fashioned methods in polishing or burnishing film. Mr. Ziebarth has spent a number of months on the new machine which, during the last three or four weeks, has taken the place of the girls usually required to do that work.

In passing from the developing tanks films frequently shows water spots in the drying process. The new machine receives positive prints and passes them through without generating friction on the emulsion side.

Responding to the ever-increasing demand for historical subjects, the American Company announces for the near future a series of elaborate two-reel historical subjects, western in character, in accordance with the American's policy, and promise some astounding effects in the matter of large aggregations of performers. Plans have been perfected that assure the use of 300 trained horsemen.

Lubin May Build in Arizona

The erection of a $75,000 studio near Tucson, Ariz., as permanent headquarters for a corps of motion picture operators, developers and actors, is being seriously contemplated by the Lubin Manufacturing Company, according to advices given the Southern Pacific offices and the chamber of commerce by Wilbert Melville, manager of the Lubin company, which is now enacting photoplays in that vicinity. It has not yet been decided whether the studio will be built at Tucson or at some other point in the border district. The local chamber of commerce will make a serious effort to secure it for Tucson.

A studio in that region has been decided upon as necessary because of the dry, clear atmosphere which renders the pictures distinct and also because of the popularity which attaches to pictures of southwestern life in its true border setting. The demand for photoplays of this kind obliges the company now to take its actors and operators over long distances at great expense to secure the desired setting, and it is considered wise from a standpoint of economy and convenience to have a central studio located somewhere in that district.

Publicity Matter on Selig's "Columbus"

The Selig Polyscope Company publicity department has had its hands full recently preparing an extensive general publicity campaign on the "Coming of Columbus" which will be released through the exclusive control of the General Film Company on May 6, 1912.

A Columbus envelope is mailed licensed exhibitors containing descriptions, cuts, and prices of all the publicity aids available for exhibitors' uses in presenting the film.

The lithographs are pictorial and in four colors, and include two styles of one-sheet, one three-sheet and one eight-sheet. They were drawn from life and are of exceptional beauty and unique design.

The heralds are in two colors. A large assortment of cuts in both newspaper and enameled paper screens and of varying sizes have been prepared. One, two and three column ad cuts of striking design are ready.

The company is also publishing a complete piano musical score, arranged and adapted by the well-known Rothapfel, of the Lyric theater, Minneapolis,

Scene from Selig's Drama, "The Stronger Mind," the Story of a Hypnotic Detective.

Scene from Selig's Comedy, "According to Law," the Story of an Immigrant.

who is called the Belasco of moving picture presentations.

Mr. Cohn of the Selig Polyscope Company started April 18 on a flying trip across the continent to exhibit the films in conjunction with the General Film Company branches in various cities to exhibitors only. He carries samples of the advertising matter, etc., lectures the film and demonstrates how it should be exhibited.

Cross Country Tour Pictures

One of the greatest sets of touring pictures ever obtained are now ready for distribution, following the completion of the ocean-to-ocean tour of the Premier cars, driven by their amateur-owners, who are prominent New Yorkers and Philadelphians. The pictures start with the dipping of the cars in the Atlantic ocean at Atlantic City at the start and with the dipping of the same cars at Los Angeles at the finish. Between these points are shown hundreds of intensely interesting scenes.

Two expert photographers were members of the party. C. Francis Jenkins of Philadelphia, the Franklin gold medalist and inventor of the moving pictures machine, equipped his personal Premier car with one of his cameras and made the entire journey. J. C. Bell, of the William Rau photographic establishment in Philadelphia, also made the entire trip, carrying three fine cameras.

Practically all the interesting scenes in every one of the twelve states crossed in the transcontinental tour were photographed. There are pictures of the visits to President Taft, at Washington, and the various governors en route, pictures of many receptions, and miles and miles of roadway. Particular attention was given the roads, and it will be possible to determine the road conditions in all the states visited by studying the pictures. The abrupt Alleghanies in the East, the plains of the Middle West and West, and the grand and awful Rockies in the extreme West are vividly portrayed.

Although the first ocean-to-ocean tour by a party of pleasure motorists has been ended successfully, with every car and every passenger that started there at the finish, the after-effects will be long-lived. The moving picture film made by Mr. Jenkins is not only interesting in the extreme but it is instructive as well. He believes it will be in great demand during the next several months, particularly in the West, where the good roads question is vital. It will be shown in the moving picture theaters in all parts of the country.

The effect of these pictures on the "good roads" and "see America first" movements is expected to be far-reaching. The forty-odd members of the ocean-to-ocean party, including some of the most prominent residents of Philadelphia and New York, who drove their own cars, are now ardent exponents of the "see America first" doctrine. Many of them were previously well versed in the scenic wonders of Europe.

Mutual Group Buying Film Companies

C. J. Hite of Chicago is at the head of a syndicate which has just consummated the purchase of the entire plant and assets of Thanhouser Company, makers of the famous Thanhouser films. Edwin Thanhouser still remains connected with the company as its general manager. Mr. Hite has been very active in the film business in the past, and is at the present largely interested in the American, Reliance and Majestic companies, and has also large interests in the H. & H. and Majestic film exchanges in Chicago. He is now the second vice-president and director of the Mutual Film Corporation and is a member of its executive committee.

The purchase strengthens the position of the new Mutual group of producing companies in the Independent field wonderfully. Additional purchases are in contemplation. The situation is being watched with interest by the trade.

Young Marvin a Titanic Victim

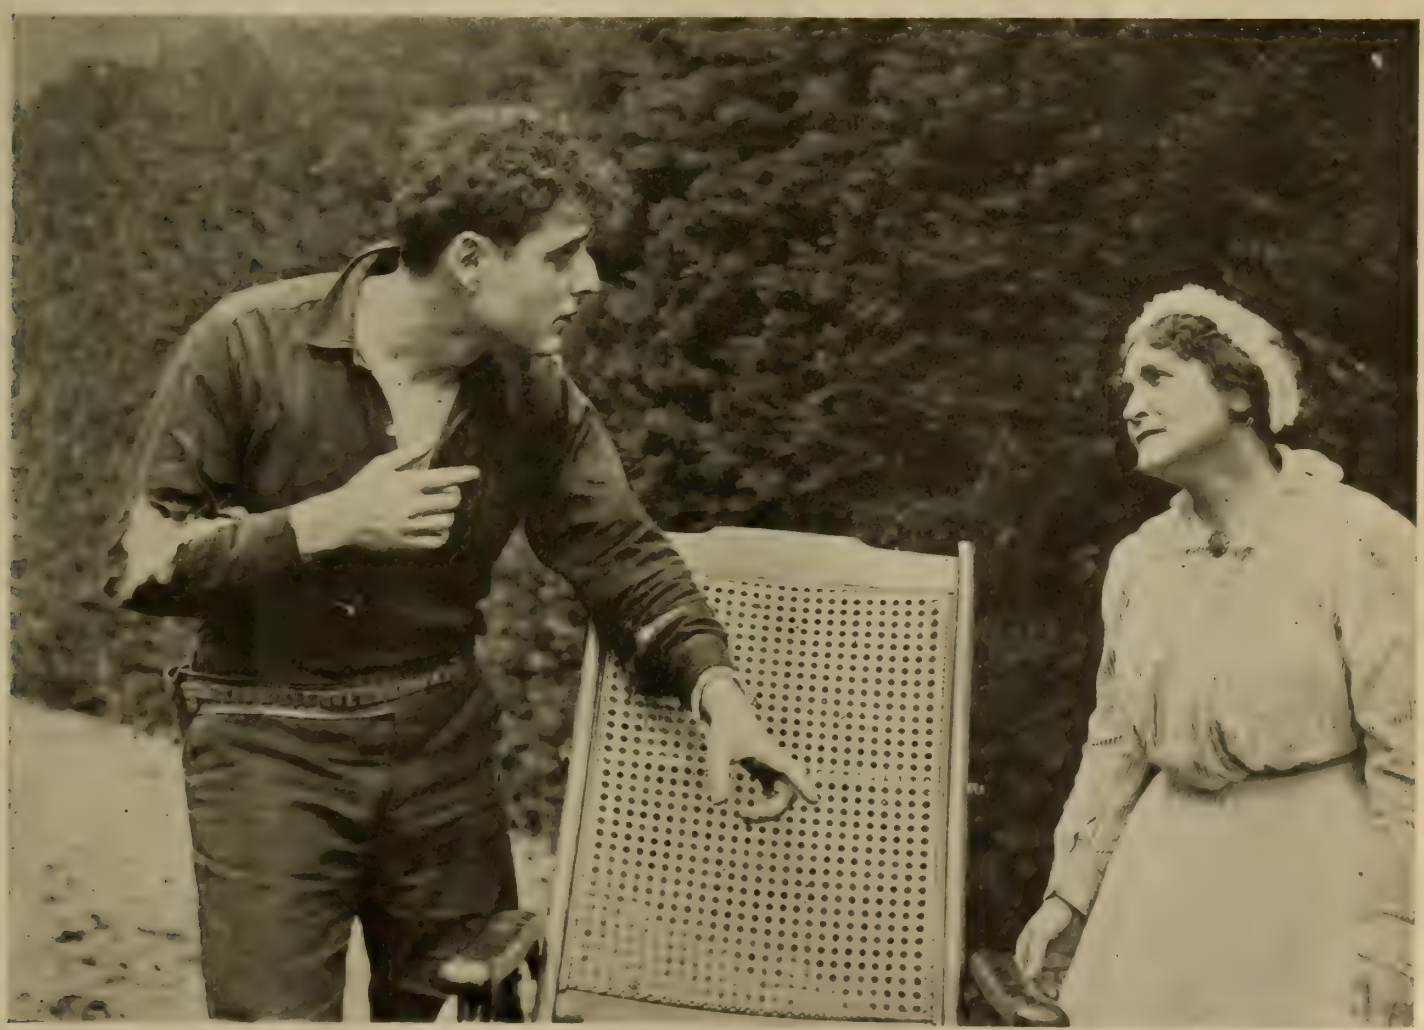
Mr. and Mrs. D. W. Marvin of the ill-fated Titanic's first cabin passenger list are the young bride and groom who a few weeks ago were married in New York with a moving picture machine taking a record of the wedding ceremony. Mr. Marvin's father, Henry N. Marvin, is president of the Biograph Company. Mrs. Marvin is among those saved, but Mr. Marvin's name did not appear among the rescued.

Announcement that the Selig Polyscope Company will not be able to supply busts of Columbus will be disappointing to hundreds of exhibitors who have placed their orders for this unique lobby display feature. The factory was destroyed by fire at a time before the Selig order was finished, entailing a severe loss to all parties.

A firm in France selling furniture at retail and taking contracts to furnish theaters and other public buildings with chairs, informs an American consulate that it would like to receive from American manufacturers catalogues and price lists of such chairs. Correspondence should be in French. Address will be furnished by the Bureau of Manufacturers, Washington, D. C., file No. 8670.

A trading company in the United States writes to the Bureau of Manufactures that it is desirous of communicating with American manufacturers of moving-picture films with a view to representing them for the sale of such products in Austria-Hungary. Correspondence is desired as soon as possible. Address Bureau of Manufactures, Washington, D. C., for further details. Refer to file No. 6259.

Huck & Co., post box 170, Calcutta, India, want (with view to representation) prices on slot machines; cinematographs and films; auxlephoneoscopes, etc.



Scene from "The Thread of Life," an American of Unusual Strength and Charm.

Among the Picture Theaters

PERSONAL NOTES.

Frank Powell, formerly with the Biograph Company, but more recently director of Pathe Freres London studio has been added to the staff of the Powers Motion Picture Company in the capacity of director. Mr. Powell's wide experience has given him athorough knowledge of the business and he will no doubt make a success of his new undertaking.

Colin Campbell, one of the directors of Selig's western studio, is now a member of the lodge of Benedicts. Mr. Campbell was married shortly after he assumed his duties at the Edendale breeding ground of Selig pictures, but his natural bashfulness prevented him from making the fact public, until one day last week when he was surrounded by the inquisitive company and forced to confess. They have taken a bungalow near the Edendale studio.

Walter Lanney Brind has resigned his position with Carl Laemmle and has assumed the duties of general manager for the World's Best Film Company, the headquarters of which have been removed from Chicago to New York.

Henery Reimers, for many years one of the best known camera men in the motion picture profession, has returned to the employ of the Selig Polyscope Company and is now located at the Chicago studio.

Lawrence S McCloskey has recently been appointed managing editor of the Scenario Department of the Lubin Manufacturing Company. Mr. McCloskey is the author of a number of excellent photoplays and has had wide experience in the editorial field. He reports a marked improvement in scenario writing. Story tellers and play-writers of ability find that the game pays and are taking it up in earnest. The consequence is that we are getting strong, melodramatic pictures and the work of the most talented players who now realize the dignity of the moving picture art.

William V. Mong who is well known to followers of the legitimate stage from his past performances of "The House Next Door," "The Clay Baker," etc., and present scenario editor of the Selig Polyscope Company, has been loaned by Mr. Selig to the theatrical producing firm of Rowland and Clifford for their forthcoming all-star production of "Divorce" which is scheduled to open at the Whitney Opera House in Chicago on April 20th.

Noel Malachard, Pathe's Weekly cameraman, was lost on the Titanic. He was assigned to take films of the first trip; was reported saved, but never showed up.

Mrs. W. N. Selig has arrived in Los Angeles for a considerable stay, and is located at the Alexandria Hotel. She brought the family touring car along for use on the beautiful highways of the Golden State.

Gustav Holmberg, inventor of motion picture machines and a close associate of Thomas Edison recently died at his home in Omaha, Nebr., at the age of 51. He had figured prominently in the progress that has been reached in the development of motion picture machines. Nine years ago he conducted the first five-cent moving picture theatre in Chicago on State street. He was a native of Sweden coming from that country to Chicago sixteen years ago and moved to Omaha five years ago.

Miss Phyliss Gordon, a vivacious, beautiful and talented blonde, has been engaged to play leading female parts with Selig's western company. Miss Gordon makes her initial bow as a regular star in the release of April 22nd entitled "The Hand of Fate" or "The Mysterious Blonde." For four years previous to entering the ranks of Selig players, Miss Gordon was a well known prima donna under Shubert management.

Oscar Eagle is to join the Selig producing staff during the month of May. Mr. Eagle bears an enviable reputation as a producer and student of stage direction, and Broadway will loose one of it's best known directors, while Selig's will gain a valuable addition to its already very excellent producing staff.

G. C. Sample will open a motion picture theater at Flandreau.

TENNESSEE.

The Tennessee Film Company has been organized at Nashville by R. W. Olsen, Robert White, Ekka Weimer, Will Myers and C. M. Silberman; capital stock, $2,000.

The Rex is the name of a new motion picture theater opened at 423 South Gay street, Knoxville, by W. H. Wassman, who operates the Crystal theater in that city.

R. H. McCullough and J. Morse, who control a chain of vaudeville and moving picture houses, will open another house in Bristol.

The Princess, a new $50,000 motion picture house, has been opened in Nashville under the management of W. P. Ready. The feature of the motion pictures which caught the audience and brought forth rounds of applause on the opening night was the representation of Manager Ready extending a welcome to the new theater.

TEXAS.

The Colonial Motion Picture Theater at Temple has been purchased by E. J. Geehan of Galveston, who will operate it under the name of the Rex.

Hart Brothers of Palestine have leased the Majestic Theater of that city and will convert it into a motion picture house. P. S. Colley, former owner of the Majestic, has leased the Imperial Theater at Waco.

A new motion picture theater will be erected at Del Rio by the Texas Theater Company.

The Crawford Feature Film Company has been incorporated at Waco with a capital stock of $2,500 by C. M. Crawford, Albert P. Birkhead, H. H. Page and G. H. Sanger.

Messrs. Harrison and Dezelle have leased the old postoffice at San Marcos and the same will be converted into a motion picture theater.

The Lyric motion picture theater in course of construction in Corpus Christi will soon be ready to open to the public, as will also the Palm Garden Theater. The latter will be opened by Charles L. Saxon.

A motion picture theater is being erected at Yoakum by J. J. Brooks.

A. J. Sloan will open a moving picture theater at Buckholtz.

A new motion picture theater will be opened at Port Arthur by Jolin I. Pittman of Beaumont.

The Princess, a new moving picture theater, has been opened at Bryan. It is owned by J. M. Carson, treasurer of the A. and M. College, J. B. Crum, of the college, and O. E. Gammill, general manager of the Bryan-College interurban railroad.

Messrs. Kneblick and Baca have leased the opera house at Bastrop and will conduct it as a moving picture theater.

The Jewell moving picture theater has been opened at 505 Travis street, Houston.

The old Dixie moving picture theater of Palestine has been opened up under new management and will be operated under the name of the Star.

The Isis is the name of the new motion picture theater opened at the corner of Main and Prairie avenues by the Fichtenburg enterprises, which operate theaters in New Orleans and Vicksburg.

The Crawford Feature Film Company of Waco has been incorporated with a capital stock of $2,500 by C. M. Crawford, Albert P. Birkhead, H. H. Page and G. H. Sanger.

UTAH.

The Vineyard Amusement Company of Vineyard has been incorporated with a capital stock of $4,000 to operate a motion picture theater. The directors are J. O. Stone, J. J. Madsen, Elmer Holdaway and Conrad Maag.

The Rex motion picture theater, said to be the handsomest in the West, was recently opened in Salt Lake City by William H. Swanson under the management of J. Rush Bronson. The house represents an expenditure of $150,000 and is all that unlimited capital, constructive experience and the latest features in theater building combined, could make it. The organ cost $20,000 and is second only to the Tabernacle organ. Other unusual features are a woman's reception room with a baby department in charge of a trained nurse, and a gentleman's smoking room.

VIRGINIA.

The American Theater was recently opened on Granby street near College place, Norfolk, the first house erected there especially for colored pictures. The house is very attractive as well as comfortable, being splendidly ventilated. It will be operated by the American Amusement Company.

WASHINGTON.

The Lyceum is a late addition to Clarkston's list of moving picture theaters.

A motion picture theater will be opened at 5346 Ballard avenue, Seattle, by M. Bagley.

Plans have been prepared for a $20,000 motion picture theater to be erected at Everett by E. P. Broschl.

The Yesler theater at Seattle has been purchased by A. T. Drake, clerk of the city council, O. A. Bilodeau, E. P. Drake, Jr., and A. M. Summer, who have remodeled the same and will conduct it as a high grade picture house.

The Cyclohomo Amusement Company has been organized in Tacoma with A. B. L. Gellerman president and Bruce Robbins secretary. The company announces its intention to own or operate houses in twenty-five cities of Washington, Oregon, Idaho, Montana and British Columbia. In addition to moving pictures, other high class attractions will be provided, and later on it is the purpose to exploit the beauty of that section by producing films of its scenery for use in their own houses and other houses throughout the country.

A new motion picture theater has been opened at Sprague and Napa streets, Spokane.

J. T. Levesque, architect of Spokane, has prepared plans for a high class moving picture house to be opened in the Bavarian block on Post street, between Main and Riverside.

The Elysian Motion Picture Company, Spokane, has been incorporated with a capital stock of $50,000. The officers are as follows: President, F. C. Descent; vice-president and general manager, F. E. Stewart; secretary and treasurer, L. I. Deffenbaugh.

Mrs. J. B. Thomas will conduct a motion picture theater in Meyer's opera house at Colville.

The Centralia Amusement Company, Centralia, is planning to erect a theater in that place at an estimated cost of $40,000 and a great part of the program will be motion pictures.

M. Ragley will open a motion picture theater at 5346 Ballard avenue, Seattle.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

MOTION PICTURES

JEANNETTE TRIMBLE
APPEARING IN KLEINE-CIN
PRODUCTIONS

KLEINE

Cines and Urban-Eclipse Films

are designed to provide exhibitors with the best of variety, quality, photographic excellence, and everything in photo plays which attract the public.

Dramas—Comedies—Magnificent Feature Productions

make up the program of our regular releases, and all progressive exhibitors are taking advantage of that fact.

Look at these HEADLINERS for June:

CINES JUNE 8, 1912

Scenes of the Italian-Turkish War

This extraordinary war production was filmed upon the actual scene of battle in Tripoli, and depicts the Italian army and navy in genuine warfare against the Turkish forces.

Ask your exchange for the special 3-sheet posters!!

CINES JUNE 11, 1912

A Soldier's Heart

A thrilling war-drama, showing deeds of bravery and kindness upon the battlefield.

Messina As It Is Today

Exhibiting the effects of the terrible earthquake which wrecked the Sicilian town, December 28 1908. The work of rebuilding is also shown.

CINES JUNE 22, 1912

Her Vengeance

A powerful story, filled with exciting climaxes, and finally depicting the fury of a woman scorned.

ECLIPSE JUNE 26, 1912

The Music Hall Singer

The story of an unfortunate man who loses the respect of his wife because of poverty. The wife later becomes a famous singer; the husband a martyr. Book this film, one of the best Eclipse productions ever placed before the public.

VOL. VII. CHICAGO, JUNE, 1912. No. 6.

NEW PROBLEMS IN CENSORSHIP.

FEATURE films, not released through the regular channels but sold on the state rights plans, have introduced a new problem in censorship. Until they appear on the screen they are seen by no one but their manufacturers, the state rights dealers and the buyers—all inefficient censors because of their nearness to the subject. These feature films, therefore, are responsible for the newly awakened demand for local censorship which has arisen in so many quarters. This does not imply by any means that anything objectionable has appeared, but that the lack of censorship has become known to those prying individuals who delight in seeking windmills at which to tilt, after the fashion of the immortal Quixote. The National Board of Censorship has its value merely as a phrase, aside from the ethical merit of the body itself.

There has been a question in some quarters as to whether the National Board of Censorship had any merit. Being unofficial and wholly voluntary in function, without power to enforce its rulings, the board has labored under a great handicap since its inception. All the more honor to it, then, for its part in the unquestioned improvement in film quality since it began its work. The question of authority need not enter. All of our minor laws are man-made, and after all it is the people, and not the police and the courts, who enforce them. The unofficial board of censorship, with public approval behind it, is just as efficacious as an official, and therefore salaried and more or less political board of similar function—and probably more so. The present board is above the suspicion of any save those who are always skeptical of human integrity. And that the present board has full public approval cannot be doubted. Almost every defense of the pictures which the lay press has felt called upon to make has harked back to the National Board of Censorship as a very Gibraltar of film morality.

Censorship, to avoid constant wrangling and difference, must be largely automatic. The ideal arrangement is that the manufacturers compete for the gratuitous approval of a representative body of men and women whose opinions they respect rather than fear. And this, within human limitations, is the present status of national censorship. Local censorship in addition must inevitably detract from the result and hamper the spirit of the work.

But this does not solve the problem of the feature film. The National Board cannot be everywhere, and all feature film companies do not work out of New York. And on the other hand, we cannot expect local censors to confine their attention to feature films, leaving the regular releases for the National Board.

We do not expect to meet the approval of film men when we say that it is up to them to go to the censors, not up to the censors to come to them. The public is the arbiter in this case, and the public—the responsible part of it—demands censored films. The film man must furnish the censorship guarantee, even if he is forced out of his way to get it. Censorship by the National Board is efficient, undemonstrative, satisfactory. Co-operation with it means less of the agitation for local censorship by ignorant but blatant reformers.

FILMATIS PERSONAE.

IT is quite obvious that the cast of characters, or dramatis personae of a film, should be placed before the public in conjunction with the film itself. We owe it not only to the artists whose good work has made the series of pictures worthy of appreciation, but to those who, witnessing and approving that work, desire closer knowledge of its devotees. The stage would be nothing today were it not for the exploiting of personality, and the photoplay parallels the stage more closely with every release. A few producers of motion pictures have recognized this, and are taking pains to bring their players to the attention of the picture theater patronage.

The most apparent place for a cast of characters on a film is following the title, just before the first scene or sub-title. This location is satisfactory to the "fan" who knows the names of all the players by heart and can identify many of them without any assistance. It is open to the objection, however, that the unacquainted derive little benefit from it, for they cannot memorize it in the time given, and when the characters themselves appear—some early, some late in the film—the cast has disappeared. It has been suggested as an alternative (by the *Dramatic Mirror*, we believe) that the cast of characters be placed at the end of the film instead of the beginning. This merely reverses the objection. It demands that the characters themselves be carried in mind, to be identified afterward. Perhaps it has some advantages over the first idea; but it means that the observer sees the whole film without knowing the characters.

The third system, now in use by one of the licensed manufacturers, provides a sort of sub-title introduction for the characters as they appear. This—to continue on our iconoclastic course—appears to us to be too mechanical in effect, as though an announcer should appear in the wings and call the name of each actor as he got his cue.

This seems to be mostly destructive criticism—which we regret, for we heartily approve the attempt to give the public the benefit of a more intimate knowledge of the players. But it must be admitted that the only satisfactory place for a cast of characters is on a program held in the hands of the audience and visible throughout the film for instant reference; just as the

best place for a title is on a card alongside the screen. This is obviously up to the exhibitor rather than the manufacturer; and under the present system only the "de luxe" shows can use the scheme. Perhaps the system will change sometime, in the evolution of things.

ANOTHER WINDMILL FIGHTER.

DARK corners in the moving picture theaters of Chicago are filled with dangers for young people, according to Mrs. Joseph T. Bowen, president of the Juvenile Protective Association. The association is preparing an ordinance, which will be presented to the city council soon, requiring the owners of all moving picture theaters to keep their places lighted, even while the pictures are being shown.

"The many dark spots of these theaters are filled with dangers for the young," said Mrs. Bowen in her address. "While the pictures are being shown all the light is concentrated upon the screen and the remainder of the theater is left in darkness. In these dark spots young men and women congregate and disaster overtakes many as a direct result. We expect the theater owners to fight the ordinance, but we hope for its passage."

This is only another example of the truth that reformers seldom have any knowledge of the objects of their attack, but rush blindly in; their blows, like the rain, falling on the just and on the unjust alike.

The possibility that Chicago might already have an ordinance requiring picture theater owners to keep their places lighted during the performance never occured to this worthy club-woman, nor to the association which received her suggestion so enthusiastically. The still more important, and much more obvious fact that the ordinance is enforced escaped them completely.

There are no dark picture theaters in Chicago. Therefore the evils of which Mrs. Bowen speaks do not exist. Consequently the Juvenile Protective Association is proven to have no knowledge of picture theaters, and therefore to be incompetent to suggest legislation governing picture theaters.

THE INDEPENDENT SITUATION.

A GREAT many exhibitors throughout the country, and not a few exchanges, have been eagerly anticipating that the recent dissension among the various manufacturers who are members of the Sales Company would bring on a price cutting campaign between the two factions, which would enable them to obtain their films cheaper.

C. J. Hite, vice-president of the Thanhouser Company, one of the active organizers in the Mutual Film Company and treasurer of the Film Supply Company of America, authorizes the following explanation of the recent upheaval which has taken place:

Mr. Hite has been financially interested in several manufacturing companies and has been a large exchange owner for several years. With the keen insight of the western business man, Mr. Hite sought for some method of getting the various film exchanges throughout the country to adopt a standard system and a standard scale of prices. In other words, he was anxious to have the exchange business put on a sound commercial basis, not only for his own protection but for the protection of other reputable exchanges having to compete with unscrupulous renters and junk exchanges.

With no designs on the manufacturing field, Mr. Hite collected about him other commonsense men engaged in the film business and obtained capital which he used in eliminating several junk film exchanges and re-organized others which had not been on a paying basis. The natural trend of this work was the organization of the Mutual Film Company, the parent, or holding organization.

There was no secret about the operations of the Mutual Film Company, nor the purposes for which it was organized, but several of the independent manufacturers thought they saw in its inception a move to deprive them of a part of the outlet for their product, and immediately formed a counter-organization to keep the balance of power among the manufacturers. The Mutual Company was therefore forced to acquire properties in the manufacturing field in order to assure itself of a program.

Mr. Hite was able to interest prominent capitalists in the scope of his ideas, with the result that they purchased the Thanhouser Company, which has long been noted for a product of superior quality.

When news of the purchase was given to the trade, the opposition forces immediately formed what is now called the Universal Film Manufacturing Company, four of the companies which had formerly enjoyed the balance of power in the Sales Company, standing sponsor for this new venture and endeavoring to induce the other members of the Sales Company to join their organization against the Mutual Film Company.

Those companies not wishing to pool their interests or share the fortunes of the Universal Film Manufacturing Company would therefore have been without an outlet for their product.

This led to the formation of the Film Supply Company of America, a combination of manufacturers cooperatively banded together, pledged to produce a high standard of film released through their own organization to insure a full program. The members of the Film Supply Company of America are as follows:

Thanhouser, Gaumont, American, Great Northern, Reliance, Solax, Eclair, Majestic, Lux and Comet, and have as officers Herbert Blache of the Gaumont Company, president; Ingvald C. Oes, Great Northern Film Company, vice-president; Harry R. Raver, Eclair Film Company, secretary; C. J. Hite, Thanhouser Company, treasurer. The board of directors is comprised of the aforementioned officers and S. S. Hutchinson of the American Film Company, William Grey of the Comet Film Company, H. E. Aitken of the Majestic, George Magie of Solax, Paul Hernaud of the Lux, and Seymour Stewart of the Reliance. The capital stock is equally divided between the various companies comprising the corporation.

The company secured an excellent location, the entire third floor of a new building at 133 West 44th street, New York, where the executive and shipping departments will be installed. It announces the following program of releases, orders for which should be sent to the Film Supply Company of America beginning Monday, June 10:

Monday—Eclair (American) Comet, American.
Tuesday—Thanhouser, Majestic, Gaumont.
Wednesday—Reliance, Solax, Gaumont Weekly.
Thursday—Eclair (American) Gaumont, Comet, American.
Friday—Lux, Solax, Thanhouser.
Saturday—Great Northern, Reliance, Comet.
Sunday—Paris-Eclair, Majestic.

In addition to the program of regular releases the

Film Supply Company announces that a regular feature film department has been established and that feature subjects will be released on an exclusive territory basis without any additional cost to the exhibitor.

The release dates will be announced from time to time on these feature films. The features will include the Eclair productions, both foreign and American. The foreign and American Gaumont features, as well as the Great Northern and Film D'Art will also furnish feature films from time to time and the regular releases will include the famous Gaumont colored pictures and the Eclair microscopic and scientific hand-colored subjects.

Any established exchange can secure service from the Film Supply Company. A new departure is promised by the company in the fact that it will lease and not sell its films. All films will be leased for a period covering the life of the copyright, but after one year from the date of the contract between the exchange and the Film Supply Company, one reel of old film must be returned for each reel of new film received. This will undoubtedly take the junk film out of the market. Treasurer Hite states for the benefit of the exhibitors if there be any section of the country where the present exchange is not able or willing to furnish a full Film Supply program a new exchange will be started there immediately to take care of the exhibitors' needs.

The Film Supply Company seems to be conducted in good faith with the earnest intention to furnish the exhibitor the best that can be had in the film market and announces there will be no cut in prices, either to the exchange men, nor by the Mutual Film Company's exchanges to exhibitors, but that the present high quality of the film will be increased as fast as possible, so that the exhibitor will undoubtedly benefit.

The officers of the Film Supply Company of America are methodically arranging their program and making ready for shipment to the exchanges which have already contracted for service, which number is increasing daily. The probable schedule of releases by the Universal Company include films from the Powers, Imp, Nestor, Victor, Republic and Champion companies. No information concerning the release date has been received.

Lecturer Prophesies School Pictures

Alfred Percival Graves, author of "Father O'Flynn" and scores of other popular songs, thinks that the cinematograph will play an important part in the work of elementary schools in the near future. In the course of a lecture which he has given to the national teachers in the training college in Dublin he pointed out that every school under the London county council has a room appropriated for teaching by lantern lectures and Sir Ray Lankaster, a leading authority on education in England, has prophesied that within a year there would be cinematographs in all these schools.

The use of the cinematograph has been made more convenient by the invention of screens upon which living pictures can be shown in broad daylight, methods by which the film can be arrested at any point for five minutes at a time, while the teacher is explaining whatever phenomenon is exhibited. In hot days the screen might be set up in a tent in the playground.

As an educational expert himself, with a long experience of schools in England, Mr. Graves is strongly convinced of the power of the cinematograph to engage and hold the attention of the pupils. The attention of city children whose minds are full of so many things is especially hard to engage, but the lantern lectures in the London schools have never failed to revive the flagging attention of the pupils. With every school a picture house there would be less need for the enforcement of the compulsory education act than there is at present, at all events until the novelty wore off.

Picture theaters are springing up like mushrooms in Dublin and they are all doing a roaring business. They are drawing the people away from the public houses, and as they are quite free from sensational or vulgar pictures their influence on the whole is elevating. This fact has helped to secure attention for the plea made by Mr. Graves for the use of the cinematograph in teaching history, geography and other subjects in the national schools.

Motion Pictures Destroying German Drama

German managers, actors and playwrights have made ready for action against the all conquering motion picture mania. At a meeting of delegates of national associations representing histronic art in Berlin this week, it was decided that heroic measures were necessary to preserve the theater from ruin at the hands of "kintopps," as motion picture shows are called there.

Reports from Berlin and the provinces revealed that many theatrical establishments are on the brink of disaster in consequence of "kintopp" competition. The craze for film shows is not only dealing box offices a deadly blow, but is tempting actors and actresses from the legitimate stage. The case was cited of a Berlin leading lady who has succumbed to the higher salaries offered by film concerns, and who did not hesitate recently to fling herself into a lake to portray the principal role in a "kintopp' melodrama entitled "Tired of Life."

The concensus of opinion was that motion pictures should be confined by law to science and education, and should be debarred from invading the sacred realm of the drama. It was decided that one of the most potent means of fighting the "kintopp" would be to place a prohibitive import duty on foreign films and the imperial government will be petitioned to that end. Meantime, "kintopps" continue to sweep all before them.

The kaiser's impresarios themselves capitulated to a seductive offer for the rental of the obsolete Royal Operetta theater, which will now be turned into a "Kintopp."

Films To Popularize Electric Service

Recently the Chippewa Valley Railway & Light Company has made use of a motion picture film entitled "Every Husband's Opportunity," to popularize the use of electric cooking and heating appliances in Eau Claire and Chippewa Falls, Wis. The picture is generally similar to that first produced for the Commonwealth Edison Company, Chicago. It depicts a young couple's troubles with their servant and their old-fashioned kitchen and laundry, but closes happily with a complete electrically equipped household. The scenes were posed in a small community so as to be more applicable to the average central-station situation than was the original Chicago company's film. The Essanay Film Company, Chicago, made the pictures for the General Electric Company, which loans copies of the film to central stations free of charge.

A. E. Peirce of the Chippewa Valley company, in

ranged with the local nickel shows to exhibt the picture free of charge, in return for electric-light company's offering prizes to be distributed to each holder of a paid admission. A prize was awarded each evening, and these prizes consisted of the winner's choice of percolators, toasters, irons, etc. The central station advertised the event in the local papers so that at each performance the picture shows were filled to overflowing, to the satisfaction of both proprietor and company. Much new interest in electric devices is traceable to this exhibition, according to Mr. Peirce, and at least two house-wiring contracts were directly due to it, for these householders won electric prizes and couldn't use them until they had ordered the wiring done. The only cost to the central station was for the prizes and newspaper advertising.

In other localities where the same film has been exhibited the central station has arranged with the picture show for a large number of tickets at half price, to be distributed among its present and prospective customers. Where necessary some rebate is allowed on the theater's bill for energy.

Railroad Teaching With Films

In the higher education of its men the Central of Georgia Railway is about to engage in the teaching of train operation by means of moving pictures. These have been taken by Dexter C. Buell, who has charge of the educational department and who will arrange the course of instruction.

Pictures a Splendid Institution

Never in the world's history had it been possible, until the era of the moving pictures, for a child or an adult to have news and history visualized for five cents, or for any other price short of tourist expenses, says the Baltimore *Evening Sun*. This one feature alone is sufficient to compensate for all the labor of invention and manufacture that has been put into the development of the moving picture. We read the telegraphic dispatches of a great Durbar, an inauguration, a coronation, world-wide movements, races, certain moving catastrophes. We go to the picture parlor and see incidents fresh from the telegraph keys thrown before us in all their actualities, and we get a sense of proportion and fact.

Again, we see old books and dramas enacted by competent casts; we put into life historical episode and allegory, tradition and fable. The beautiful story of Hans and Gretel is snatched from grand opera and put on the films, and original plays with a clean, wholesome motive and with a direct moral, written and built to modern conditions, are presented with admirable detail. Odd conceits in trick photography make us laugh and wonder, and it is entirely possible to produce straight comedy and farce without a sting or a nasty suggestion in it, worth many times the price of admission for the cheer it gives us. The moving picture, in brief, is a splendid institution. For that reason it should be protected from its worst enemy—the producer who imagines universal standards to be on a par with his own conceptions of amusement.

General League Notes

Arrangements are being made to run two special trains to the Motion Picture Exhibitors' League convention to be held at Chicago, beginning the second Tuesday in August, 1912; one to start from New York City by way of Philadelphia, Baltimore, Washington, Huntington, W. Va., Cincinnati, Indianapolis, Chicago; the other train to leave Pittsburgh by way of Cleveland and Toledo. These special trains will be solid Pullmans and will be fully equipped for the convenience and pleasure of the motion picture exhibitors. All exhibitors in adjoining territory will be notified of the schedule of the trains. Every exhibitor in the

Executive Committee, Second National Convention, Motion Picture Exhibitors' League of America.

Top Row: A. J. Balaban, secretary; H. A. Hill, C. A. Anderson, F. Schaefer, R. R. Levy, C. Abrams, center; John Miller, L. Schindler, J. A. Alcock, F. W. Hartman. Lower Row: M. Hyman, W. J. Sweeney, chairman; I. Natkin, George Henry (ex-officio), L. H. Frank, S. J. Levin and C. L. Hull, also members, are not shown.

United States and Canada is invited to attend the Chicago convention. Big preparations are being made for the accommodation and entertainment of visiting exhibitors.

Arrangements have been made with the La Salle hotel, where headquarters will be established; two large halls will be at the disposal of the exhibitors. The entire eighteenth floor of the La Salle hotel will be devoted to those who wish to make exhibits. All of those who intend displaying their goods at the convention are advised to write the La Salle hotel and make arrangements for reservation at an early date. Headquarters of the local committee at Chicago has been established on the third floor of the Orpheum Theater building.

President M. A. Neff will make a trip east in the interest of the Motion Picture Exhibitors' League of America for the purpose of organizing state organizations, and promoting the interest of the Chicago convention.

The following is the Chicago executive committee on arrangements: W. J. Sweeney, chairman; R. R. Levy, C. L. Hull, C. C. Whelan, C. A. Anderson, S. I. Levin, I. Natkin, C. Abrams, L. H. Frank, A. J. Balabin, L. A. Schindler, J. Miller, M. Hyman, F.

Officers of the Motion Picture Exhibitors League of Kentucky.
L. J. Dittmar, First Vice Pres. L. H. Ramsey, Secretary. Sherman Arn, Second Vice Pres. J. H. Stamper, Jr., President. A. J. Wellman. Orine Rapker, National Vice Pres.

Schaeffer, J. A. Olcock, H. A. Hill. Every member of the Moving Picture Exhibitors' League of America should give the Chicago convention as large publicity as possible. It is confidently expected that not less than four thousand exhibitors will attend the convention at Chicago.

As evidence of the great interest being taken in the League organization, many new states are making application for membership and the Cincinnati headquarters is a bee-hive of activity.

The Ohio State League is in a very prosperous condition. Cincinnati Local held a meeting at the Sinton hotel, Monday, May 13. M. A. Neff presented a part of the new code which is being drafted and so far as it was complete, was adopted. At the next meeting the full code is expected to be read.

The Moving Picture Exhibitors' League of America, Cincinnati Local No. 2, raised $400.00. They decided always to keep a fund in the treasury, not less than $500.00, in order that the interests of the Local might be efficiently looked after.

The state organization of Kentucky reports many new members. G. N. Wesley, organizer for the state of West Virginia, reports that all of the exhibitors in the state are joining the League.

Indiana will hold a convention in the near future. They expect a very large attendance.

The Ohio State convention is to be held at Toledo on the 16th and 17th of July. Toledo confidently reports that they will break all former records and "show the boys just how to handle a convention."

Meetings at Columbus and Cincinnati

M. A. Neff, president of the National League; C. M. Christenson, national secretary; O. B. Weaver, state treasurer, and W. A. Pittis, vice-president of the Motion Picture Exhibitors' League of Ohio, were present at a meeting of the Local Motion Picture Exhibitors' League of Columbus on Tuesday, May 14. After they visited the local organization they, with Max Stearn and the president of the Local, Mr. Maddox, held a counsel at the Chittenden hotel in the interest of the State League.

Big preparations are being made for the Toledo convention. Cincinnati Local No. 2 held a rousing meeting at the Sinton hotel Monday, May 13, at 1:30 p. m. Several visiting members were present and eight new members were added to the list. A motion was passed that every member of Local No. 2 secure the National certificate of membership signed by the president and secretary and hang the card in a conspicuous place in the front of his theater. Every member present paid the required amount, 50 cents, for the card and in the near future every local theater which is eligible in Cincinnati will have a certificate of the National League displayed in front.

The new code which is to govern the motion picture theaters of Cincinnati was read section by section and will soon be ready to present to the proper authorities.

West Virginia Meet

The Motion Picture Exhibitors' League of West Virginia met in Huntington at the Carnegie Library hall at 2 p. m. on May 1, where they held a convention and transacted a large amount of business.

The meeting was called to order by the state president, M. M. Weir, of the Colonial hotel, Charleston, W. Va., who introduced the national president, M. A. Neff, who addressed the convention. Mr. Neff advised the elimination of suggestive pictures and explained the necessity for more educational pictures and more clean comedy. He dwelt upon the importance of an organization and the co-operation of all motion picture exhibitors. His address was enthusiastically applauded.

In the evening feature pictures and high class vaudeville were given to entertain the visiting delegates. On the second the delegates again met at the Carnegie Library hall at 11 o'clock, where they transacted much important business. Members were present from all over the state and a large number of new members were taken into the organization. When the convention met at Huntington there was only one local exhibitor, E. W. Waugh, who belonged to the League. Now every exhibitor in Huntington is a member of

the Moving Picture Exhibitors' League of America They quickly fell in line after meeting the large number of exhibitors present and having the aims and objects of the organization explained to them.

The organization in West Virginia is growing very rapidly. On the evening of the second the Reliance representative, Mr. Cobb; the Gaumont representative, Mr. Kenny, and Mr. Griffin, who represented the Standard machine, were present and exhibited a large number of pictures that have not been released as yet.

A large number of letters had been sent out to the preachers and teachers of Huntington giving them a special invitation to attend the evening entertainment at Carnegie hall. The invitation was accepted by a large number. Mr. Neff addressed the meeting on the educational features and future of cinematography. It was a splendid entertainment and will have good effect, as many of those who attended the lecture and saw the pictures had never been in a picture show, but became enthusiastic and are now friendly, whereas, before they had been doubtful.

At 9:30 o'clock the members of the League and their families met at the Fifth Avenue hotel, where a sumptuous banquet was given. Speeches were made by M. A. Neff, M. M. Weir, L. R. Thomas, E. W. Waugh, A. L. Cottrill, C. A. Johnson, D. B. Hagon, Mr. McCray and others.

It is only a matter of time until every exhibitor in West Virginia will become a member of the Motion Picture Exhibitors' League. G. M. Westley was secured to organize the state and he immediately started out going to Charleston. He and Mr. Weir secured all the exhibitors in Charleston on Friday.

The State League of Ohio is daily taking in new members and in the near future every eligible motion picture exhibitor in the state will be in the Motion Picture Exhibitors' League. The next convention in Ohio will be held at Toledo on the 16th and 17th of July.

A new local Exhibitors' League was organized in Huntington, W. Va., Monday, May 6, and the following officers were elected: R. H. Karnes, Lyric Theater, president; J. A. Burns, Grand Theater, first vice-president; M. Ball, second vice-president; C. A. Johnson, It Theater, secretary, and Haskel Atkins, Royal Theater, treasurer. A. J. Wellman of Catlottsburg, Ky., was made an honorary member of the Local. The Local started out with bright prospects, with every exhibitor in Huntington as a member.

Cincinnati theaters all seem to be doing a good business. M. A. Neff, chairman of the committee elected to write a new code governing picture shows for the city of Cincinnati, reports that the committee is ready to submit the new code.

Oerne Parker of Covington, Ky., will call a meeting of the local exhibitors of Covington and Newport for the purpose of organizing a local in those two towns.

The report comes from Toledo local No. 3 that big preparations are being made to entertain the motion picture exhibitors of Ohio on the 16th and 17th of July, 1912, at their State convention.

The National convention to be held at Chicago beginning the 13th of next August will eclipse all previous efforts and it is expected that not less than four or five thousand exhibitors will attend the convention and preparations are being made accordingly.

Headquarters for the Pennsylvania State convention which will be held in Pittsburgh on the 24th and 25th of June have been established at the Monongahela house. T. J. Barbin, secretary, Millvale, Pa., states that the business men of Pittsburgh are joining in with motion picture exhibitors to make the Pennsylvania convention a grand success, and it is claimed that if the Chicago convention surpasses Pittsburgh in attendance and entertainments it will have to go some.

Pennsylvania Convention, June 24

The state convention of the Pennsylvania Exhibitors' League will be at Pittsburgh, on Monday and Tuesday, June 24 and 25. There will be business of great importance to every exhibitor in the country and the Pennsylvania exhibitors in particular taken up at this meeting. The election of state officers takes place at the convention, also the election of delegates to the National convention at Chicago in August. The state officers should be elected by the exhibitors throughout the whole state; in that way the state would be represented and not only a part thereof, so go to Pittsburgh.

The committee has made arrangements for pleasure as well as business for those who attend. There will be a banquet given by the Heinz Company, of the 57 varieties, and sight-seeing tour of Greater Pittsburgh, and on Tuesday the 25th a parade, also a boat excursion down the Ohio river. An orchestra will furnish music for those who wish to trip the light fantastic. This pleasure will be of no cost to the organization, as "Pittsburgh Promotes Progress."

Warning to Exhibitors

The following letter has been sent to members of the League by President Neff, who also authorizes its publication for the benefit of non-members:

May 7, 1912.

I wish to call attention to information which I have received. I am informed that an eastern firm has purchased a large number of condensing lenses from an Ohio manufacturing firm. These lenses, it is stated on good authority, were purchased for the sum of ten cents each and are to be sold for one dollar each. Every exhibitor is notified that these lenses are defective; too much soda was used in their manufacture, and it is claimed that after they have been used a short time the heat turns them gray and it is impossible to get a good picture as the light will not go through.

I advise all motion picture exhibitors when buying lenses to secure a guarantee that they will hold their color. This is only one of the many things the exhibitors outside of our organization should know.—M. A. Neff.

The president of the Motion Picture Exhibitors' League of America has called a meeting of New York exhibitors to be held in New York City, beginning June 19th, and continuing until a state organization has been perfected.

Illinois State Branch No. 2 lost a member in the death of Brother William Petralous. A number of exhibitors attended the funeral services at Taylor and Johnson streets, Sunday, June 2. Interment was at Elmwood.

The Exhibitors Association of Kansas City, (Local No. 1) is planning a convention July 9 and 10, at which time delegates to the Chicago convention in August will be named. J. T. Hurtt is secretary.

Scene from Essanay's "Broncho Billy and the Indian Maid."

The Exchange Meet at Cincinnati

Cincinnati was a real film center on Monday, May 27th, as representatives of exchanges from all over the country were called to meet there and arrange for a distribution of territory to eliminate the disastrous rate slashing or bonus giving war which has been going on between competing exchanges for some years past.

The Film Supply Company was represented by Secretary Raver of the Eclair Company, and Director George Magie of the Solax Company. The Universal Film Manufacturing Company was represented by Messrs. Powers and Horsley.

From the exchanges throughout the country came Messrs. McMann and Jackson of the Cincinnati-Buckeye Film Exchange of Columbus and Cincinnati; Manager Smith of the Victor Exchange at Buffalo; Manager Thompson of the Victor Exchange at Cleveland; Manager Schnitzer of the Toledo Film Exchange, Toledo; Manager Olsen of the Central Film Exchange of Indianapolis; Manager Beck of the Central Film Exchange, Cincinnati; President Plough of the Anti-Trust Film Exchange, Chicago; Manager Fleckles of the Laemmle Film Exchange, Chicago, and Joe Hopp of the Standard Film Exchange, Chicago. A number of other exchanges were represented by proxy.

After considerable argument pro and con among the rival exchange managers, a satisfactory division of territory was arrived at, each exchange man agreeing to keep out of the other fellow's bailiwick. Plough, Hopp and Fleckles had arguments galore. It was over the division of Evanston, South Chicago, Elgin and Oak Park that these three had their greatest battle. Plough lost his glasses in the mix-up and when the rivals studied the map, Plough couldn't see a thing.

At the dinner in the evening, good fellowship reigned all serene, and Plough created considerable merriment by producing a map, tearing little corners from it and distributing his territory to any who would take it.

The Mutual Film Company was not represented at that meeting.

Baltimore Censors Want Salaries

A new ordinance was introduced in the first branch city council of Baltimore, Md., by Mr. Kilmer, providing for the appointment by the mayor of five censors of moving pictures—one from each councilmanic district and one at large.

The district censors are to be paid, by the terms of the ordinance, $900 a year each, while the fifth, who is to act as president and secretary of the board of censors, is to receive $1,000. Appointments are to be for two years.

No motion pictures are to be exhibited, the ordinance provides, whether an admission fee is charged or not without a permission from the censors.

To pay the salaries and expenses of the censors a fee of $1.50 is to be charged for each film inspected.

On the Outside Looking In

By the Goat Man

I WANT every exhibitor in North America to go to Chicago in August, say about Tuesday, August 13, and stick around the town for the rest of that week. I want them all to know, among other things, there isn't a film manufacturer in that big open-faced city who won't be there with a genuine, whole-souled welcome. In Chicago the manufacturer doesn't say, "T'ell with the exhibitor."

* * *

It is different in New York. I know at least three big manufacturers down there who say that sort of thing. They are proud to say it. Puff up their chests and spell it out plain, so there can be no mistake, and then yell it! Just one of these three manufacturers will be in Chicago during the League Convention week, and he will fawn and frisk about and offer you his idle hand for a shake and tell you with tears in his eyes that he loves you. By then, if you haven't found it out already, you'll know who I mean. This man and the two others who are now so cocksure of themselves will come out of their trances sooner or later. They have been spoiled by an appalling income of gold and are not responsible for their foolish utterances.

So be wise, you exhibitor, and go to your Chicago convention in August. Rub elbows with your brothers. Wear the badges and get acquainted. Find out what problems the honest maker of films is trying to solve and help him. Let him have a clearer idea of your side of the game and watch him help you. And don't forget to drop into Room 1813, LaSalle Hotel, and get a good square look at the Goat.

* * *

Some regular storm down in little old New York, wasn't it? Or should I ask, isn't it? My dope last month about those red-blooded westerners was the near goods, I'm thinking. They've quit shaking hands at all in the neighborhood of 111 E. 14th street. What is the line-up by now—do you get it all straight? And that was some wheeze about "being good enough for somebody that was good enough for us"—yes? Why, that very same day, that "somebody" was gasping in the tired arms of Herbert Miles; he of the extensive wardrobe! Suffering cats! I never saw a great, big balloon go up so fast, did you? Here we had a group of eighteen independent film manufacturers, all turned one way, spooning in the same bed—a berth made by themselves on the co-operative plan and guaranteed to carry safely, when, bing! the bottom fell out and there wasn't a thing left but the Republic and the secretary of the Motion Picture Distributing & Sales Company. But even at that, Herb Miles will continue to draw $200 a week, so what's the odds? You can't beat any man's game who has put in a lifetime at it. However, there isn't a lot left of the Sales Company by now.

* * *

Let us ruminate. The Sales Company, up to a particular minute by the clock, was a regular institution. The last I knew about it, J. E. Brulatour was president; P. A. Powers, vice-president, and Herbert L. Miles, secretary. Maybe Carle Laemmle was treasurer and maybe he wasn't. I never saw a check, and that was the only instrument that was ever signed. I'm still outside. But think of a concern that handled the entire independent program of films being wiped out over night. And think also of the great film exchanges of this country that depended absolutely upon this same Sales Company for its weekly releases. And the first-run customers and the thousand and one other details of a business which did a gross running into millions of dollars per annum. Puff! Just like that, and not even a charred ember left!

What became of the thing? Ask the fellows who know. You have heard me say, time and again, that an outsider can dream, but that's all. This isn't a dream. I'm talking about the wiping out of a tremendously active business that existed up to an unpremeditated moment and then died. There is a corpse, all right, but no obsequies. The happy family who constituted the unity of interests known as the Sales Company just got mad and quit. One bunch sent out some telegrams, and then the other bunch sent out some telegrams—all telegrams going to the same parties, the exchanges, and we now have the Film Supply Company of America and the Universal Film Manufacturing Company. The exhibitor can take his choice of either program. But, there ain't any change in the price, which shows that these men are sensible when they are all het up!

Gertrude McCoy, in Edison Films.

* * *

Let's get at some of this thing in a sober fashion. The Film Supply Company of America at 131 W. 14th street, New York, offers this program: Eclair (American), Comet, American, Thanhouser, Majestic, Gaumont, Reliance, Solax, Gaumont Weekly, Lux, Great, Northern, Eclair (Foreign). It includes the only colored independent films and the popular "Animated weekly."

The Universal Film Manufacturing Co., 1 Union Square, New York, offers: Bison, Powers, Rex, Imp, Nestor, "Animated Weekly" (till Gaumont takes it over to the Film Supply crowd in a little while), Ambrosia, Itala, Champion. An effort is being made to revive the Gem and Victor, which may join the "Universal."

Now we'll look at the men behind. In the same order that the films have fallen in the foregoing paragraphs we find these men of the Film Supply: Raver, Grey, Hutchinson, Hite, Aitken, Blaché, Magie, Prieur, Oes.

And back of Universal there are: Bauman, Powers, Swanson, Laemmle, Horsley and Dintenfass. I am told that some of these men have sold outright to the Universal, a closed corporation which includes in

Yale Boss, in Edison Films.

its officer list Bauman, Powers, Swanson and Laemmle, as president, vice-president, secretary and treasurer.

Take your choice. You are a film man and I'm not. But they do say that Carle Laemmle is getting hump-backed lugging his lawyer around in these hurry-up days.

* * *

Please don't confuse the Mutual Film Corporation with the Film Supply Company. The Mutual is strictly an exchange proposition. The Film Supply is for the manufacturing group of independents.

* * *

It will take money to swing this split in the independent ranks—lots of money. I'm glad to know that the outsider will have a chance to get in and that money will make better films. Better films is the cry of the land. The exhibitor will glory with his public in every improvement.

* * *

It should not fall to me to take sides, and I don't mean to. I've been so far from most of the makers that they all look alike to me. But a goat has its preference, and I'm inclined to those fellows who know what the West is like and what the West likes. I want to see commendable things hammered through to a successful conclusion, and when I know that the business motives are as sound as the men themselves, I like to watch any contest that promises for the betterment of the film game. The present scrap was inevitable. The men instigating it were trying to play a square game. The old Sales Company served a useful purpose, but it outlived its usefulness the minute it started to play "hog" with any one of its individual members. I couldn't stick along on the outside of the film business if I didn't try to make the best of the conditions as I find them. I can't make the thing over. If I hadn't contributed scores of suggestions that have been kicked and cuffed and lambasted, only to be taken up and caressed and cuddled a little later on, I would join the Sales Company right away. It is ready to receive the dead ones.

* * *

There may be a reconciliation. I look for one, because the film business is logically a closely affiliated proposition. Inasmuch as there is no open announcement of price-cutting, there must be excuse for a subterranean arrangement between the two warring independent factions. I have frequently said that the shrewdest men in the world were in control of film-making. Two factions among the independents will improve film quality, if the money holds out. This disturbance can mean one thing for sure—more outside money will get in and it will take more money to improve the films. The same argument would hold with the licensed crowd, but they don't need more money. If they want to chuck from $10,000 to $100,000 into a film subject, they send the janitor into the vault with his scoop, and out comes the coin. On the other hand, if they want to ram through a mushy lot at little expense, the General Film Company must take it, and complaints count for naught.

* * *

One thing commends the Film Supply Company in my eyes particularly. I am told that it is not requiring exclusive contracts with the exchanges. It confirms my good opinion of that western spirit which has always been found willing to give and take.

* * *

Julius A. Leggett, in his suit against the Vitagraph Company, is making a record of something most film men have known for a long time, namely, that the maker got lugs of money for advertisements that appear in regular releases. He cites the case of the American Tobacco Company advertisement in the Jeffries, Johnson fight pictures at $25,000; the Wm. Wrigley, Jr., Company, which agreed to pay $15,000 for a film that showed a near view of a little girl taking a piece of Spearmint from the wrapper. Leggett wants $26,000 for commissions on these and other contracts of like kind which he claims to have landed.

* * *

For a long time we have been threatened with a limited number of strictly "educational" film exchanges where the demand for such subjects might be satisfied. About five exchanges are needed. This talk about not reaching the public will continue indefinitely unless film exchanges are accessible to those theaters which will be confined to the high-brow show. There is a lucrative business for not less than a hundred motion picture theaters which will confine their programs to educational, scenic, scientific and travel pictures, interspersed with an occasional comic or such masterpieces as Selig's "Columbus," or Edi-

son's "Martin Chuzzlewit," or a hundred others that I could name. The reason we do not have these places is very simple. In the minds of the men who control film making and distribution there is a slight doubt that the enterprise might fail, or that it wouldn't pull down the coin from the jump on anything like the basis of the present operating methods. So they pass it up. In the film business there are too few people who would be satisfied with any phase of it which paid a mere 100 per cent profit on the investment. They all fix their eyes on that portion which stacks up the shekels at the rate of 100 per cent a month. Isn't it a shame, Lizzie, that the outsider's money is all counterfeit?

* * *

The last I heard from them, this is the Los Angeles roster of Biograph Company's actor folks: Wilfred Lucas, Fred Mace, Mack Sennett, Chester Mailes, Dell Henderson, Eddie Dillon, Billy Butler, Charles Avery, Harry Hyde, "Spike" Robson, Miss Sweet, Clara McDowell, Dot Bernard, Mabel Norman, the diving girl; Mary Pickford, Grace Henderson and Kate Tanquary.

A motion picture theater has been fitted up in the Royal Palace at Bangkok. The exhibitions are, as a rule, intended only for the royal family, although at certain times the general public is admitted to the theater.

Advocate Court to Judge Films

In Indianapolis, Ind., Mayor Shank's commission voted to recommend to the mayor the formation of a court of appeals to pass on objectionable motion picture films, the decision of the court to be final on all questions appealed to it. The court, according to the plan, would consist of two members, one to be appointed by the mayor and one to be selected by the motion picture question owners and operators.

The commission took up the motion picture question for the second time since its organization after considering the published reports of Miss Kate Davis, president of the National Uniform Censorship League, who condemned some of the films displayed in the Indianapolis five-cent shows. The commission discussed the question after Miss Davis had appeared before it and declared that she would stand by her original assertion that children congregate promiscuously in the theaters, that there are improper exits, that the houses are subjects for an investigation by the city board of health and that films depicting all kinds of crimes are being shown.

The proposed court of appeals would not be to pass on all films, but to judge films to which objection is made. The proposition was suggested by Rabbi M. M. Feuerlicht, a member of the advisory commission, after a long discussion. If the mayor approves the plan, the question will be taken up with the motion picture representatives.

Pictures at Convention of Manufacturers

Several thousand employers, factory superintendents, managers and workmen, from every section of the country gathered at the seventeenth annual convention of the National Association of Manufacturers of the United States at the Waldorf-Astoria Hotel, New York City, on May 20, 21 and 22.

Among the special features arranged for the occasion were three motion picture films, each of which had its own lesson on the cause, effect and remedy. The first showed the occurrence of an accident in a factory with its attendant injury, and the logical effect of the casualty both upon the worker and his family or relatives. This film was especially prepared for the National Association of Manufacturers and was followed by a film showing the practical application and use of accident prevention devices on a great number of machines in the plant of the Brown & Sharpe Manufacturing Company, of Providence, Rhode Island. The pictures proved as clearly as would a personal visit of inspection to any plant the practicability of adopting remedies for at least seventy-five per cent of the total number of industrial accidents which occur in the United States every year.

The third motion picture film was entitled "Insuring Safety at Sea," and comprised the results of a careful investigation into the field of practical life-saving apparatus, as promoted by the various trans-Atlantic steamship companies. The pictures also included some of the latest and most adaptable forms of rescue apparatus which are of particular interest at this time.

Pictures of Vesuvius Interior

The world, which has been regaled with about everything possible in the field of action pictures, soon is to witness the display of a film showing the descent into the crater of Vesuvius while that great volcano is in semi-action. The motion picture, taken inside the crater, is the work of an operator accompanied and aided by Professor Maladra of the Vesuvius Observatory. The two men reached the bottom of the crater, a depth of 500 feet, with the utmost difficulty. At the peril of his life the operator secured pictures of the emission of vapors from the fumaroles, the fumes issuing from the fissures, and other interesting phenomena, which prelude the renewing of the volcano.

Moving Pictures For House Arguments

Moving pictures had their first tryout as arguments against legislation before a Congress committee May 27, when the House merchant marine and fisheries committee viewed pictures of hardy fishermen of Gloucester, Mass., in action. Capt. F. G. Robertson of Gloucester and Boston gave the picture show in the committee room as a protest against "beam trawling," by which millions of fish are caught with a single net. The pictures showed the operation of the trawls.

Their Arrival in America, 1840.

Dickens' "Martin Chuzzlewit" Filmed

An Edison Triumph

REPRODUCTIONS of old literary masterpieces are becoming quite the vogue in motion picture circles. It is not surprising to the student that so many of these works lend themselves readily to visualization; for after all, the dialogue is secondary to the action in most of them, and only in late years have writers learned to perform the feat of entertaining the reader with words alone.

One of the most notable film subjects of this character is the Edison Company's three-reel "Martin Chuzzlewit." Because many of us read our Dickens at so early an age that time has erased the details from our minds, the story as it appears on the screen is given here. It adheres to the original closely. The photoplay is particularly well timed for exhibition during the year of Charles Dickens' centenary.

Old Martin Chuzzlewit, in order to defeat the plans of his grasping and fawning relations, adopts an orphan, Mary Graham. Finding that his grandson and heir, young Martin Chuzzlewit, and Mary are very much in love, thus anticipating his own plans for them, he and his grandson quarrel; and accusing the latter of deceit, he drives him from home and destroys his will made in the young man's favor.

Young Martin, having read the advertisement of Mr. Pecksniff, his grandfather's cousin, for pupils in architecture, decides to study with him, and Pecksniff, thinking him to be old Martin's heir, receives him with open arms, while his two daughters, Charity and Mercy, are most attentive.

Pecksniff, however, has a rude awakening, for old Martin, learning that his grandson is in Pecksniff's care, notifies that worthy man that young Martin and he are strangers and that the former has been disinherited. Pecksniff at once returns home and makes things so unpleasant for young Martin that the young man leaves without further ceremony.

Arriving in London and being without funds or friends, he decides to go to America to make his fortune. He meets jolly Mark Tapley, who was formerly at the Blue Dragon Inn, in London, who begs to be taken along. Martin agrees and, after a farewell interview with his sweetheart Mary, he and Mark embark for America, and after a long, tempestuous voyage, land safely in New York. Here they fall in with a party of swindlers whose glowing accounts of a place out west called "Eden" induce them to invest their little fortune. Upon arriving at "Eden" they find it to be little more than a dismal swamp and Martin's heart is broken.

Meanwhile Jonas Chuzzlewit, old Martin's nephew, tiring of waiting for his father's death to obtain his inheritance, decides to get rid of him and to this end pours poison into his medicine. After the funeral, Jonas, thinking to increase his wealth by adding a comfortable dowry, decides to marry one of Pecksniff's daughters. He finally wins "the lively one," Mercy, who only accepts him to spite her sister Charity, and takes her to his home in London.

Pecksniff, having urged old Martin to come and live with him, tries to get the old man under his influence; and old Martin, seeing through the scheme, plays the part of the weakling so well that he deceives even his constant companion, Mary. Thinking to make his position doubly sure, Pecksniff proposes marriage to Mary who, true to young Martin, indignantly refuses. Mary confides her trouble to faithful Tom Finch, an old servitor of Pecksniff's who thus discovers Pecksniff's baseness. Pecksniff overhears this conversation, decides to rid himself of Pinch and at once discharges him. Tom leaves and goes to London, where he makes his home with his sister, Ruth.

The married life of Jonas and Mercy turns out to be very unhappy. Jonas, through his brutality, has succeeded in completely cowing Mercy, until now she is anything but "a lively one." Jonas reads an adver-

tisement of the Anglo-Bengalee Insurance Company and decides to insure Mercy's life very heavily, for—well—accidents may occur. At the office of the insurance company he meets Mr. Montague, formerly a hanger-on of the other relatives of old Martin but now president of the company.

By revealing to Jonas his methods of swindling the public, he soon induces Jonas to invest in the stock and become one of the directors. Being suspicious of Jonas, Montague puts Nadgett, a detective, on his track to watch his actions.

In the meantime young Martin and Mark have fared badly in Eden. First young Martin is stricken with swamp fever and scarcely has Mark nursed him back to health than he too falls a victim of the dread disease. It is here that young Martin really finds himself. Nursing his comrade night and day, he has much time for reflection; he realizes the supreme selfishness of his past life and decides to make amends. As soon as Mark is strong enough they leave Eden to return to England.

Arriving in England they are received at the Blue Dragon Inn with open arms. Learning from Mrs. Lupin, the landlady, that his grandfather is at Pecksniff's house, he decides to ask the old man's forgiveness and throw himself upon his mercy. But Pecksniff, thinking he has gained a complete control over the old man, interrupts Martin's plea and shows him the door. Mary runs to Martin trying to console him, but he, thinking old Martin has disowned him forever, sadly takes leave of her; and with Mark as his companion, he goes to London, where they are welcomed by Tom Pinch, his sister Ruth and John Westlock, a former pupil of Pecksniff's.

After a number of weeks of closest investigation, Nadgett reports to Montague that Jonas had insured his father's life and that two days previous to the old man's death he had bought a quantity of poison. With this knowledge as a lever it is an easy task for Montague to force Jonas to increase his investment and also help him inveigle Pecksniff into investing. Jonas, fearing that Montague will reveal his knowledge, decides to get rid of him and disguising himself, he follows him to the inn, where he has succeeded in selling Pecksniff a large amount of stock. Montague, escorting Pecksniff part of the way home, leaves him and turns back alone. Montague enters a wood and is seen no more, but the crouching figure of Jonas emerges and disappears in the shrubbery. What had he left within the wood?

Jonas returns home, as he thinks, unobserved; but he fails to see the silent figure of Nadgett crouching in the darkness. He changes his clothes and making a bundle of his disguise drops them into the river. But Nadgett has not lost sight of him and manages to recover the clothes.

Tom has been engaged to catalogue a gentleman's library, but his employer's name has been a mystery until one day he is surprised by the entrance of old Martin Chuzzlewit. Nadgett having recovered the bundle of clothes brings this evidence of Jonas' guilt to old Martin and also tells him that Jonas murdered his father, Martin's brother Anthony. Calling the officers they go to Jonas's house and place him under arrest. Jonas, seeing that it is impossible to escape, commits suicide.

Martin now plans a surprise for his grandson. Gathering all young Martin's faithful friends together, Tom Pinch, his sister Ruth, John Westlock, Mark Tapley, Mrs. Lupin and his faithful sweetheart Mary, young Martin is sent for and upon entering the room is clasped in the arms of his grandfather.

Pecksniff having lost his wealth in the crash of the insurance company, comes to the old man for help, but is quickly and effectively sent about his business. The picture closes with a happy group around Tom Pinch at the organ.

The story is clearly told, the wonderful Dickens types are faithfully portrayed and the photography throughout is superb. Altogether it marks a distinct step forward in film production.

Pictures O. K. For Roman Churches

Moving picture shows on religious subjects may now be given in Roman Catholic churches in America. It is reported that the Vatican has just consented thereto at the request of several bishops.

The conditions are that the Sacred Host be removed from the church during the performance; that the women be separated from the men; and that the church be sufficiently lighted. Magic lantern shows may also be given.

Jonas is Accused of the Murder.

The Relatives Hold a Council of War at Pecksniff's.

Travelogues and Topicals

By E. B. Lockwood

A COMPARATIVELY short time ago, a handful of travelogue lecturers illustrated their lectures with stereopticon views only. The public attended and supported these lectures. Later, motion pictures came into use and most prominent lecturers immediately made the most of the opportunity and began to use them as a new feature.

Moving pictures were something new and entirely different. Lecturers had been looking for a new feature to stimulate their business, and the films filled the bill. They did not realize their value other than that they proved to be a great attraction. The fact that motion pictures illustrated subjects and interested the audience where the stereopticon and description had failed in the past was not thought of. It was not long before it was realized that they not only were an attraction, but that they entertained, illustrated and explained; in fact, were the most valuable asset known in the lecture field. The lecturers saw this very soon after they began to use films, but they were not able to secure the subjects they wanted. Many of them took camera-men with them to foreign countries, where they secured motion pictures to illustrate different subjects.

Today many of them secure a large portion of their motion pictures from the manufacturers. As pictures have been taken of practically all of the most interesting parts of the world, such men as Burton Holmes, Elmendorf, Newman, McDowell, Robertson, and many others prominent in the lecture field spend several months each year securing motion pictures of out-of-the-ordinary subjects which they think will please and interest their audiences. We are familiar with the success of Lyman H. Howe and his companies exhibiting motion pictures of the wonders of the world. These men and their companies entertain hundreds of thousands of people annually; not at five or ten cents admission, but anywhere from twenty-five cents to one dollar and a half.

This demonstrates that the public appreciates this class of pictures. Should the manager of the picture theater in the smaller city or town attend a lecture given by any of the well known travelogue lectures, he could not fail to notice that the audience was made up of people whose faces he seldom has the pleasure of seeing at his theater. Why? The same people have attended a picture theater in their city. They have been entertained with slapstick comedy, western chase, blood and thunder and love romance of the past. They attended again and again, only to see the same class of pictures, and decided that it was not worth their time; but they make the most of the opportunity when they have the privilege of attending a good travelogue lecture.

Many managers doubt the entertaining and drawing qualities of even a good travelogue subject and will only take them from the exchange when they get them in the form of a split reel. Then they would not accept them except that they want the other subject on the reel, which is, in most instances, a short comedy.

I have interviewed managers on nights when they were exhibiting the "weekly" or a travelogue subject. Some are enthusiastic with their praise and claim that the pictures are very much appreciated by their audiences, and an excellent drawing card; while, on the other hand, others feel that the exchange has imposed upon them by sending out this class of subjects.

Have you ever watched the average audience closely while the "weekly" or a beautiful travelogue picture was being exhibited? You do not hear the murmur of voices and exclamations that are generally audible during the exhibition of the ordinary program. The audience is perfectly quiet; you can hear a pin drop. This denotes attentivenes, which proves that the audience is interested.

The motion pictures being released at the present time are far superior to those released in the past. They are all entertaining; some amusing, others interesting and educational. The audience appreciates them. The average manager is passing up a good thing when he fails to exhibit the "weekly" or the travelogue subjects, which would please his present patrons and at the same time solicit the patronage which supports the travelogue lectures.

The public has grown more exacting as it became more familiar with motion pictures. Manufacturers have kept abreast with the demand for a higher class of pictures, until today they are employing the best of talent and reproducing many of the world's literary masterpieces, and a great many of the most important events in history.

The censorship boards have accomplished a great deal in bringing about a high standard of motion pictures. Under present conditions the managers who study their patrons will find little trouble in selecting programs that will not only please their present patronage, but will prove very attractive in bringing new patrons, who have walked by the theater in the past because they did not consider the program worth their while.

The School Board Journal's View

A writer in the *School Board Journal* treats on the subject of "The Motion Picture Problem," based on a study of MOTOGRAPHY's Hand Book and Film Record for 1911. In his analysis he says:

The average school boy and girl are enthusiastic patrons of the motion picture playhouse. In a great many cases their parents lead the way.

While, of course, many fathers and mothers prefer to attend a higher class of amusements, the success of the illustrated lecture, the travelogue and the like, are an indication of the interest and enthusiasm of the "grown-ups."

This might as well be said, just here: that the motion picture play is today the "people's drama." Approximately five million people every day visit, in the United States alone, our five and ten cent motion picture theaters. There is an attraction in pictures and the manufactures have arranged programs which will appeal to every desire and emotion of men and women, especially of those in the more modest walks of life.

I know, Mr. Schoolman, that you are horrified at this statement. You don't like my frankness. I rather think it is the idea and not so much my method of statement. Let

us look at this problem from your point of view, and meet it, if we can.

I have before me a complete catalogue of all motion picture films issued from January 1, 1911, to December 31, last. In a word, this comprises the productions for 1911. All the companies are represented and the films are classified. These do not include films made in 1910 or earlier than that year. There are now on the market thousands of films for sale and rental. Each year marks the production of new films of unquestioned merit. The Board of Censorship does admirable work in examining new pictures and American films are, on the whole, clean.

The problem of motion pictures in the schools, from my point of view, is one of films and of machines. During the past few months, there have appeared apparatus within the reach of every school system, both mechanically and from a cost standpoint. Films can now be had of every kind and variety to meet almost every need in school use.

In the catalogue before me, I find films for history work—The Battle of Bunker Hill, The Declaration of Independence, The Death of Nathan Hale, Death of King Edward III, The Coming of Columbus, etc.

I can hardly begin to enumerate the geographical films which are classified as "Scenic." From Laborador to Africa, everything is pictured. There is scarcely a spot in either the Eastern or Western Hemisphere which has not been penetrated and recorded by the motion picture machine. Here are just a few of the oldest: Scenes in Colombo, Thibet, Heligoland, Along the Niebong River, the Danube, and hundreds of others.

For biology, there is a great variety of pictures on plant life and plant culture. For economies, there are pictures describing practically every industry and its development. For the sciences, manual training, domestic science, etc., there are pictures and others are in process of production, which very shortly will compel the attention of every school board in the country.

It is to be regretted that a complete list of all the pictures cannot be reproduced here. Space will not permit. The manufacturers, in selling equipments to schools, will be obliged to classify their lists and produce catalogues of convenient size and arrangement to meet the needs of all schools.

How films and motion pictures may be best used, educationally, is a matter of study and experiment for the pedagogue. Eventually he will be called upon to solve the problems of when and how to use the pictures, what subjects they shall illustrate, etc. Ultimately, too, he must be asked what pictures he wants, and how he wants them taken. It seems to me inevitable that every school will be equipped with a motion picture machine and that films will be held in a library at the school board offices. Principals will draw on the library for suitable films and return them immediately for further use.

What the result of the introduction of the motion picture machine will have upon school work is a matter of conjecture. Our manual arts studies were introduced to give pupils something to do. If the motion picture machine will help them to live the lives of characters in history, if in geography it will actually take the pupil around the world, if in the other studies the "doing idea" will predominate, we will progress in a new direction, not in opposition to our newer ideas and our modern conception of the school and its work.

An Aid to Mathematical Instruction

We read in *Prometheus* that L. Münch, of Darmstadt, has recently employed the kinematograph for demonstrating certain properties of geometrical figures. Thus, for instance, the transition from the circle to ellipse by the gradual spreading out of the foci from the center can be very nicely demonstrated in a way which appeals to the imagination, as yet untrained, of the novice.

A Record of the Turko-Italian War

A Kleine-Cines Topical

THE popularity of George Kleine's importations, the products of the Cines and Urban-Eclipse factories, seems to be growing rapidly. The many feature productions included among the regular releases have impressed a number of exhibitors with the advantages of using the entire list of Cines and Eclipse subjects in their bookings. Such features give added stimulus to the business, offering an excellent opportunity to advertise extensively; in this way holding the old patrons and at the same time gaining new ones.

From the Cines Subject, "Scenes of the Italian-Turkish War." Released by George Kleine June 8.

Exhibitors in all parts of the country have expressed themselves as more than pleased with the Cines product, especially releases like "Brutus," "Joseph in Egypt," "Madame Roland," "Queen Elizabeth's Ring," "The Moorish Bride," "A Christian Slave" and "Josephine." There is every reason to believe that the high reputation already established will be maintained, and we observe with more than ordinary interest the announcement of the Cines release of June 8, which is to be an authentic picture of "The Italian-Turkish War." It is seldom that photo fans have an opportunity to view reproductions of actual warfare in the world's history, and they will probably take advantage of it.

The actual booming of the cannon is all that is needed to make one believe that he is really on the field of battle, an eye witness of this great struggle. Modern warfare between the "powers" is comparatively rare, and although we believe that we are somewhat acquainted with what actual hostilities are, having read innumerable accounts of deeds of valor in prose and poetry, and having seen more or less accurate reproductions on the stage and canvas, it has fallen to the moving picture to render the most vivid portrayal of such events.

Much of the war is being fought out upon the desert plains of Tripoli, and the film opens with a setting as such. We are first ushered right into the trenches where are located the immense cannon which are bombarding the Turkish position in order to protect the advance movement of the Italian infantry and cavalry. We are so close to the guns that the work of loading and unloading is very perceptible. When we see the immense recoil we hold our breath in suspense, awaiting the deafening explosion, which, somehow, fails to come. The keen-eyed officers are directing the fire with the aid of the telemeter, and a destructive fire it must be, for no sustained response is apparent from the enemy.

Scene from the Kleine-Cines Film "The Girl and the Mayor." June 25.

Our gaze is then turned toward the horizon, where the forward march of the cavalry and infantry is in progress toward Bir Tobras. They proceed in long lines across the desert plains, exposed to the scorching rays of the sun and the danger of sudden attack from an ever-watchful enemy which is composed of excellent fighters, accustomed to desert warfare.

After showing several other land episodes of the conflict. the pictures turn to the war on the sea. We are taken on board the protected cruiser, "Carlo Alberto," whose ten-inch guns are pouring a rain of shot and shell upon the town of Zuara, on the Tripolitan coast. Again we view at close range the action of the engines of war. The begrimmed gunners are loading, firing and reloading with untiring efforts.

We then look out upon the deck where the ship officers are scanning the coast with their glasses, to ascertain the results of the cannonade. The town of Zuara appears to be in flames and pretty well destroyed, for smoke is arising from all sections, making it clear that the aim of the gunners is deadly accurate.

The film certainly ought to make quite an impression upon the moving picture public. People in general are always enthusiastic over war pictures, for they offer, of course, no limit to the possibilities of exciting and dramatic action which is so important for the success of screen productions. However, when a film has these attributes, and at the same time is an accurate portrayal of actual events in the world's history, its importance is multiplied greatly and proves all the more interesting and instructive.

Town Owns Picture Show

Kansas has one of the few municipal picture shows in the country. It is at Haven, a little town in Reno county. An officer of one of the largest American film companies who was in Topeka said that Kansas had the only house of the kind in the country.

Haven was so small that there were no moving picture shows and only occasionally would one be given there by a traveling company. Everyone in the little town enjoyed the pictures. No one was willing to risk his money in building a moving picture house, so all the business men of the town "chipped" in enough to buy the machine and the show was started a month ago. It is a great success.

The pictures are shown in the town hall every night. An admission fee is charged to pay the operator and the license on the films, which are changed twice each week. When the receipts are larger than the expenses free shows are given until the fund is exhausted or additional and special films are purchased and the show is increased and kept going with more pictures until the fund is used up.

The town is now building an airdome theater. This summer the picture shows will be given in the open air and next winter they will be returned to the town hall.

Who's Who in the Film Game

Facts and Fancies About a Man You Know or Ought to Know

OF course, everybody who goes to New York finds Broadway, sooner or later—usually later,—and they are careful to find it all the way from the Battery to Central Park, lingering longer or longingly lingering in the vicinity of say Thirtieth to Forty-second, or Forty-fifth; but it isn't often that you hear of anybody breaking the silence about Broadway as far up as 217th street. There is one thing sure about little old new york; all its people know where Broadway begins. Nobody knows where it ends. At 217th street it becomes interesting to film fans, because that is the geographic beginning of one of the largest single estates in that great city. In the center of this immense private park, standing on the top of a hill, a stately mansion rises above the trees and shrubbery, commanding an almost unobstructed view of the Hudson and Spuyten Duyvil Rivers and the surrounding country.

He Isn't as Handsome as His Picture.

The place, until recently, was known as the Seaman estate, variously estimated as being worth any sum, starting at a quarter of a million and going up. It was just a year ago when a certain independent film manufacturer encountered a disastrous fire which wiped out his plant. You may recall that at the owner's suggestion, the camera man filmed the fire and part of the loss was worked into the next week's release! That was a Powers' suggestion. Every newspaper in the country had something to say about the extraordinary procedure. You might call it advertising! This former Seaman property which you are inspecting at 217th and Broadway is the site of the present Powers' plant. The old Seaman mansion, with its massive colonial porch and chimneys, has been converted into the Powers Duplex Studios. The broad lawns, profusion of trees, rolling hills and rugged cliffs of rocks extending to the river brink, afford plenty of realism for exterior pictures. Powers' pictures are taken and developed at the Powers campus and factory—the home of Powers Picture Plays. And in all the world there is only one Powers whose name stands for motion pictures. It is about this one man you are invited to give pause.

There is always something sky-rockety about film men. None of them just happen to be identified with the industry. They evolute along strenuous lines. This one tackled the bicycle when that game first showed symptoms of doing things and he stuck to it till the craze was at its height, first as an agent and afterwards as a manufacturer. Following the bike, came public favor for phonographs, but this film fan was there first with his line of selling talk, favoring the slumber interrupter and peace disturber. His agency paid so well at Buffalo that he spread out with branches at Rochester and Syracuse and developed quickly into one of the largest dealers in the country. The phonograph led P. A. Powers into the motion picture business.

It was in 1902 when he opened a film exchange in Buffalo and after a time, another at Rochester. The Motion Picture Patents Company was responsible for these exchanges becoming independent, and deprived of the films required by a large clientele of exhibitors, the Irish in him urged the organization of a film manufacturing company. So it was that the Powers Company became the first of insurgent film makers. Starting in 1909, it prospered until 1911, when June 5th it was completely wiped out by fire.

A little incident like a fire was never intended to stop Pat Powers. He was hustling funds for a new start before the smoke had cleared away. Pat is quite as suggestive as any other part of his name. You never saw a lazy Pat anybody and you will not be disappointed when you meet Pat Powers, if you haven't had that pleasure. For Pat is popular with his fellows. He is tall and angular; has a shock of hair showing some gray; nearly shaggy eyebrows; rather rough features, but with an eye that is set steady and a chin that says do or die. He isn't as handsome as his picture. And work—why, it's a shame to see him tearing along!

Patrick Aloysius Powers was born in Ireland, October 24, 1871. He accompanied his parents to America five years later and, through no choice of his own, settled in Buffalo, where he attended the public schools until graduation. He served an apprenticeship in a machine shop and took his degrees as a full-

fledged wheelwright. No wonder he tackled the bicycle business at the start.

If Powers face betrays more age than his years, charge it to hard work. Add to this an utter abandon of care of himself. If he is up and at it, time is the essential and he has been known to hammer along without sleep for two consecutive nights and little to eat in the meantime. Get it done is his slogan. Now that he does have some time that is his very own, he wears out the nights reading ancient history and studying Shakespeare.

P. A. Powers claims to have been first in seeing the possibilities of feature films and also the first manufacturer to employ actors from the legitimate stage. He converted Col. Cody and Major Lilly to the idea of filming their shows as features. Nat Wills did Powers' tramp comedies.

As a film maker, he requires and uses automobiles. He dotes on them and drives like a fire chief. At St. Louis, last summer, something went wrong with the steering gear of a high-power car when it was answering to an imaginary hurry-up call and it took a dive over a sixty-foot embankment. That put a crimp into Powers, and his broken bones gave him opportunity to think it over for several weeks, but he's doing it over again—that driving stunt.

Pat Powers has been all over the world and he hopes to go over it again, two or three times, before he's through. It beats the band how active some men are. He is a member of the Knights of Columbus and Friars Club, New York. For further particulars see the eight sheets and smaller bills or ask Tommy Evans. Tom is Pat's ignition system.

Selig-Press Club Prizes Awarded

Chicago Press Club members have been competing for a series of cash prizes offered by the Selig Polyscope Company through Stanly H. Twist, who is one of the livest members of both the Selig organization and the club. The offer was for articles on motion pictures and the prizes were $100, $50, $25, and five of $5 each. The contest closed April 1.

The judges selected to award the prizes were William M. Roberts, Leroy T. Goble, John Pribyl, James S. McQuade and Ed J. Mock. The prize winners were as follows:

First prize, Robert A. Ward.
Second prize, H. I. Green.
Third prize, De Lysle F. Cass.
Fourth, fifth, sixth, seventh and eigth prizes, Arthur E. Ormes, Roy O. Randall, Charles Lederer, William L. Visscher and H. Bedford Jones.

The manuscripts are now being edited to a uniform style, and will be published shortly.

Booth Laws in New Jersey

"State law booths" for New Jersey picture theatres must hereafter be used in all places where the films are shown. The requirements of local bureaus are now superseded by a state law. The requirements of the state law are more rigid than those in operation heretofore.

The new law requires that booths shall be lined with "asbestos or other strong and fire resisting material" which shall be a quarter of an inch thick. Although recently all the booths built in Newark were constructed of steel and were fireproof, the new law will cause alterations, because none of the booths were built of material having the prescribed thickness.

Other requirements in the new law are that the booths must not be less than forty-eight square feet in size and seven feet high. The Newark regulations provided for booths not containing less than thirty-six square feet, although many are much larger. There are other minor provisions in the state law that differ with those in effect.

Need Permit to Show Each Film

Under a new system adopted by Patrolmen Royal Baker and Lester Potter of Detroit, Mich., censors of moving picture house productions, no film can hereafter be shown in Detroit until it has first been inspected and a permit issued.

The principal film concerns submit their films to the national board of censors before they are sent out, and comparatively few eliminations are required when they come to Detroit. The trouble came through "state right" concerns, which sell their films without submitting them to the national censors.

As there are 90 moving picture houses in Detroit, it is almost impossible to prevent some films getting several productions before word comes to the police department, and then it is necessary to make a trip to the offending theater, so that several objectionable picture plays have been put on. Hereafter, when a new film is to be put on, it will be necessary to report to police headquarters, have the film shown and get a written permit which must be kept in the theater. Any patrolman can then demand to see the permit and, if none is forthcoming, order the film discontinued.

Weather Man Predicts Cloud Films

Prof. Willis L. Moore, chief of the United States Weather Bureau, delivered the first of a series of lectures before the Royal institution in London June 1. He said in part:

"By the use of cinematography (photographing of moving objects) we are justified in believing that atmospheric phenomena fifty to 150 miles above sea level are coming within the reach of accurate meteorological observation and calculation. We shall in the near future have a more intimate knowledge of the complex operations of nature in these high altitudes than we have to-da

Alabama Sunday Shows For Charity

Picture shows in Birmingham, Ala., will not be operated on Sunday unless for some charitable purpose, and the proprietor of the show must not realize any revenue from this source. Commissioners Exum and Weatherly took occasion to say that some people had been criticising them for allowing the operation of picture shows on Sunday. They desired it distinctly understood that such action was taken for charitable purposes, and that it did not mean that the operation of the shows on Sunday would become permanent. If the moving picture show men believe they will soon be able to operate on Sunday they will be disappointed, according to statements made by the commissioners.

Canadian Censorship

The simple expedient of transferring the "approved" stamp from one film to another as a means of escaping the watchful censor board, will pass into the discard in Toronto, Can., after June 1. Every moving picture theater must post up outside certificates endorsed by the chairman of the board of censors for each film shown. Films not properly approved may be confiscated and destroyed.

This is one of a number of stringent additions to the moving picture regulations just approved by the government. The regulations have been under consideration for months and the changes and additions have received the general approval of experts in the business.

Hereafter no theater may be kept in darkness during a performance. The regulation requires that for every 350 square feet of floor space there shall be a two-candle power white light around the walls.

According to the new regulations, theaters with a seating capacity of 300 or under must have two aisles running from the front to the rear and three feet in width. With accommodations for 500 or under a theater must have two aisles each 3½ feet wide and over this capacity two aisles each 4½ feet wide. The exits running across the auditorium must be 3½ feet wide regardless of the size of the house.

Explore Amazon For Motion Pictures

A new exploring expedition to the upper Amazon will leave New York early in September for a three years' trip, under the direction of the University of Pennsylvania. It will be in charge of Professor Algot Lange.

One of the chief errands of the explorers will be to obtain motion pictures of the savages—there are about 373 tribes, of whom civilized men know next to nothing—and to make phonograph records of their speech and music.

Professor Lange will spend the summer fitting out his expedition. He will take a steam yacht of light draught, equipped with all things necessary to keep the party comfortable in the soggy weather of the Amazon valley. The boat will have its own refrigerating plant, plenty of mosquito netting at the portholes, electric fans and a wireless equipment.

The Playhouse of the Future

By Ford W. Eaton*

THE ORTOPLAY VERSUS THE STAGE.

"ALL the world's a stage." Thus did the world's greatest playwright seek to temper our conceit by making "actors" of us all. To him, the actor-philosopher, the unreality of his make-believe profession was just the thing with which to compare the hollow pretenses and vain aspirations of real folks.

Since his time, thoughtful humanity has been getting glimpses of the wonderfully beautiful gems which he found and cut for us, and which are sure to sparkle in spite of every setting that has yet been given them. Whether we dig them out of an early folio, or sit comfortably in a box seat and have them presented to us with all the ostentation of a nineteenth century tableau, we find them just the same. What matter if the trees are cardboard, the water canvas, the grass and flowers of paper, and the rainbow painted on an off-color sky? These, like the printed words of the folio, we hold to be symbols, whose defects and limitations we have learned to overlook in our eagerness to grasp the ever-beautiful, the ever-true.

THE LIMITATIONS OF THE STAGE.

But why should we tolerate defects and limitations longer than is necessary? Why encumber the delicate imagery of the artist who strives to show us truth, with the least bit of difficulty that can be avoided? The answer is two-fold. Custom and tradition have inured us to the present order, and the new media of expression are not yet perfect, so that playwrights must continue to "enter" their characters from "wings," and lead them over, under, within and around "properties," whose essential virtue is that they shall be portable; and in front of landscapes and seascapes, also portable, whose repose is broken only by seams and wrinkles, or an unwonted breeze from a ventilator, or perchance by a misdirected drive of the festive "hook."

STATIONARY SCENERY.

It isn't so bad when the eternal hills and some houses and fences comprise the stationary landscape, but those painted cows and horses and waterfalls do get on our nerves after awhile, not to mention the little bird that sits on the silhouette tree and stares at us with one eye during the entire scene, oblivious alike of the dialogue, the shooting, and the sundry temptations of yonder wheatfield. And why is the bird? Wait a minute, while the plot thickens, and the shades of evening steal over the hills, and change the colors, but not the attitudes, of the cows, and the horses, and the bird, finally shrouding them in stage-blue moonshine. Listen to the mocking-bird! (or is it a nightingale?) Hear it warble and chortle and gurgle and trill. And look! it is bobbing up and down in evident elation. Wise little bird. With such talent of voice and action, no wonder it was content to wait for its cue.

UNWIELDY PROPERTIES.

Does the story call for a large piece of property, such as a boat or a train, which must move as well as look natural? All right, get some boards and some paper and a scene painter, and build one, and train the stage hands to pull it along, but don't expect to make the audience believe that you borrowed it from the railroad or the steamship company, or that the water is the Pacific ocean. Where is the stage that would accommodate the caravels of Columbus, or the Atlantic squadron in action? How palpably unreal is every stage representation of events which occupied more space than the stage!

In short, the stage is a mixture of the tangible and the intangible, of properties and pictures, people and dummies, still waves and flat skies, artificial thunder and natural (?) voices. The impersonations and the dialogue have about the only chances of being true to life, aside from the tables and chairs and such other properties as actually are what they are supposed to represent.

THE STAGE OUTGROWN.

Think of the lengths to which theater builders will go in attempting to provide appropriate facilities for staging a play. The stage of the Hippodrome, that sinks to form the bottom of an artificial lake, costs a fortune to operate, while the audience waits and waits. In the playhouse of the future a real lake, shimmering in the glowing evanescence of a real sunset, will be revealed to delighted audiences at any desired moment without the slightest effort or inconvenience, and to a hundred or a thousand audiences as easily as to one.

Even in these days when it is desired to stage a current event or a memorial of some historic happening, such as the crowning of a king, or the bruising of a champion, or the coming of Columbus, or the exploits of Hudson and Fulton, we don't even consider the Stage as a medium through which to convey to the people the interesting and helpful messages. It is a choice between going in person to witness the event and looking at the pictures. Formerly we chose to go, now some of us choose both, but bye and bye no one will go except for the trip, or to participate, for instead of being an incidental part of the proceeding, the Ortografic record will be the one important consideration, for the whole world waits to see and hear, and posterity's needs are still more important; so step aside, eager traveler, spoil not the fleeting show, and you shall be rewarded unto the third and fourth generations. Moreover your neighbors and children will probably have seen the whole show before you can get back to your own home town.

HOW ORTOGRAFY HELPS.

The vital difference between the Ortoplay and the Stage is that although both seek to portray life by artificial means, the stage must employ several kinds of artifices which it is practically impossible to harmonize, and which, however well executed, can never create an illusion, while the Ortoplay is nothing but illusion, pure and simple, and its complete success is dependent only upon the technical perfection of the means employed, and the skill of the playwright and the producer-manager. In other words, for example, an audience will always be able to distinguish the painted setting from the people and things that move about the stage, while if *everything*, from the sky to the actors is the *same kind* of a copy, there is less likelihood of disturbing the beholder, and destroying the illusion.

*This is the fifth of a series of articles which began in the February number. Copyright, 1912.

MUSIC MADE TO ORDER.

The same is true of the sounds, and a play that must rely upon chance orchestras or portable noise-making devices, to imitate the acoustic offerings of nature, and mix them with the laryngeal soul-pourings of the prima donna, must continually remind the audience that at least two different kinds of attempts are being made to convince it that something still different is going on. On the other hand let the sounds all be produced, or rather reproduced, in the same general way, and the problem of harmonizing them is made more simple. The original sound-making apparatus if needed, can be more complete and elaborate if it does not have to be portable, and it is more likely to make one good, life-like assortment of noises after deliberate trials and rehearsals, than it would be to repeat them perfectly after the expressman, the freight-handlers and the stage hands all had been given an opportunity to help, each in his own humble but effective way.

THE UNIVERSAL MEDIUM OF EXPRESSION.

In a previous article the Ortoplay was defined briefly as "the ultimate method of depicting life." It will do this by Ortografy, which was also defined as "the art-science of causing, by artificial means, a pre-arranged series of sense impressions which resemble natural impressions so closely as to create an effect of reality in the mind of an observer." Taken together, Ortografy and the Ortoplay comprise an ideal medium for the artist, whether he be painter, poet, or composer, or shall blend such partial talents in the all-embracing privilege of the playwright, for the most important characteristics of the Ortoplay are its limitless scope and its full response to the will of the artist, who at last can express his every thought, unhampered by lack of facility, or the necessity of struggling with such cumbersome and uncertain items as portable properties, strange orchestras, and the skill and condition of his players.

UNLIMITED SCOPE.

The playwright of the future will find it literally true that all the world is his stage, and in several ways not suggested by Shakespeare's subtle and sarcastic sally. Not the world of pretense and of sham, but the world of beauty and of truth. The world of work and achievement, rather than of discord and idle strife. A world bedecked with the radiant jewels of conscious worth, and all a-glitter with the many-colored lights of triumphant endeavor, which it is the playwright's privilege to harmonize and to display, so that ignorance and apathy, groping greed and grovelling selfishness shall perforce lift up their eyes to the light, and round out the world of appreciation that ever awaits the artist who expresses aright the eternal emblems of truth.

WORLD-WIDE AUDIENCES.

Not only a world-stage but a world-audience is the prerogative of the Ortoplaywright. His actors move and speak in every clime and country, while their bodies are resting at home, or rehearsing for another play. One perfect performance is all that is required, and if it is the right sort it soon will be delighting a chain of audiences from Norway to Australia, and from Patagonia to Alaska. Japanee, Chinee and Hindustanee can be reached and entertained and educated, and in fact, they are even now in a limited way. In short the field is universal, and the destiny of the Ortoplay in addition to its power for joy and progress, is to "make all the world akin."

SOUND AND COLOR INDISPENSIBLE.

There are many scenes and occurrences which the motion-picture of today only partially reproduces, and many more which no attempt is made to record, as they would be sure to fall flat if reproduced without sounds and colors. The result is that the photoplay of today is a very peculiar kind of drama. In fact it is little more than pantomime, and the scenario writer is a one-sided specialist who must handle his characters as if they were dumb, and yet could move their lips naturally and seem to speak and seem to hear when some one seems to address them; all of this that an audience may imagine it hears what they seem to be saying.

STEREOSCOPIC RELIEF.

Most any audience can stand for this much, for have we not all seen deaf and dumb people in real life? But who has ever seen a noiseless street car or railroad train except in a picture? And where is the American who fully appreciates a flag that is black, white and black, where it should be red, white and blue? It is equally unreal to see, plastered on a flat surface, a street scene with houses, people and vehicles all in one plane. Neither these nor the other defects of motion pictures, such as flicker and unsteadiness, will annoy the patrons of the playhouses of the future.

FLORAL AND FAUNAL LIFE.

There are whole fields of opportunity that scarcely have been entered by the playwright, or in fact by any other artist. There is animal life, at once intensely interesting and instructive, especially the birds, insects and fishes, in which color plays a most important part. Then there are the plants and flowers whose life-stories are as wonderful as those of the animals and which, were it not for color, would be comparatively barren of interest, or at any rate would lose most of their wonderful beauty.

SUBMARINE LIFE.

The bottom of the ocean is teeming with life so marvelous and weird and strange that it will take us many years to get acquainted, not to say familiar with even a small part of its hidden mysteries. There are submarine gardens so vast, so grotesque and so infinitely varied as to beggar the most versatile imagination, and the same is true of the fishes and other animals that make the gardens their habitat. The scenery is varied by shells and corals and living masses and communities of polyps and crustaceans, with unnamed freaks and monsters galore. And here is color in riotous profusion, hardly surpassed by the myriad-hued butterflies and birds of the tropics.

And don't think it is an idle dream to get pictures of the bottom of the ocean, for even now you may see similar motion-pictures, as for instance one of the American educational films taken near the California coast from a glass bottomed boat, while ordinary deep-sea photographs have been taken many times.

THE TRANSITION PERIOD.

If you doubt that a new era is about to arrive in the evolution of the playhouse, just do a little observing at this day and hour of the transition period. Go and see the bi-colored pictures of the Coronation or the Durbar, and note what color alone can do, in spite of many technical handicaps, and with only two-thirds of the colors. Go and ride with Lyman Howe on his Runaway Train through the Alps, and if your apathetic agnosticism doesn't receive a jolt, you are in a more hopeless condition than the rest of his passengers, even

those to whom "interpretation" is a meaningless word. Go to Maxine Elliott's and hear the fern-filtered offerings of the far-away orchestra, and while you marvel, think!

And don't you remember the Tel-harmonium that, during its brief and brilliant turn along Fifth Avenue and Broadway, made us hear harmonies orchestral and otherwise, that came not from musical instruments, but from a machine miles away, where with one man's direction it started the essential vibrations which issued, as music such as you never heard before, from a cluster of palms at Delmonico's and the ceiling of milady's boudoir?

COMPLETE APPARATUS NECESSARY.

Now, if your skepticism is beginning to yield, perhaps you will ask "When is it coming? How is it coming? Is it colored pictures? Is it talking-pictures? Where can I see a regular sure enough sample?" Have patience! It is all of these and very much more. But Ortografy is a growth, not an accident or an isolated invention. It is the combined result of many discoveries and inventions, through years of patient research, and the Ortoplay is an evolution rather than a phenomenon. You have seen colored pictures and talking-pictures, and perhaps you have seen some fairly good ones, but a picture isn't a play, neither is the sound from a phonograph, and even if they were, there are plays *and* plays, and a really good one cannot have too much help in its production, so let us hope that nothing will be lacking in the new method, of which all the elements soon will be perfected and harmonized.

PREVIOUS AND PARTIAL ATTEMPTS.

There have been many attempts to do partially what Ortografy and the Ortoplay promise to do completely. Heroic efforts have been made to improve the cinematograph and its product, but the utmost efforts of the most skilled producers have been unable to go beyond a certain point, although the motion-picture is now twenty years old in its present form. The progress has been only in the direction of refinement, and it has reached the limit, until wholly new methods are adopted. The same may be said of the phonograph with its somewhat longer period of development and its many improvements, although the artificial sounds are more likely to deceive us than the pictures.

WHAT HAS BEEN DONE WITH TWO COLORS.

One rather startling attempt to make and show naturally colored motion pictures, by the use of two colors only, has been exploited to some extent during the past four or five years, and at least indicates what we may expect where all of the colors are shown. It is interesting to study those epoch-marking ceremonies of the Coronation of King George V of England and his queen, and the thrice-brilliant "Durbar" in India last December. Never in the history of man has there been such an opportunity for the display of color, and all concerned seem to have availed themselves of it. These events were at once a delight to the eye and the despair of photographers. "Oh! for an outfit to record those colors;" and how tame and flat are the pictures compared with the scene.

CORONATION AND DURBAR.

There are those who will tell you that they took them, and you can see what they took on the screen, but go to look at them with somebody who was there, and ask him if India skies are green and if the "Royal Blues" wear black uniforms. The scarlet uniforms and costumes everywhere in evidence appear red enough to suit anybody, and there is enough green to carpet the county of Cork. But where is the purple that everybody over here had been led to believe was the "official color" of the Coronation? And is it really true, as we are sometimes told, that only the more civilized races can appreciate that part of the rainbow which radiates blue, indigo and violet, while these colors are universally tabooed by those dark-skinned hordes, from the "Maharajah of Afghanistan" to the "Elephant-painter of Mysore?"

TWO-COLORS NOT SUFFICIENT.

If such be true it must be that the decorating committee, in acknowledgment of such aversions, eliminated all trace of these colors from everything visible. But how about the sky? Is it possible that in that land of mystery and of magic, of dematerializing mahatmas, and divinely appointed jugglers, some occult power was invoked to vanish the hated blue from the vault of heaven?

Did a rigid censorship pick out the amethysts, sapphires and turquoises from the jewels of the visitors, or did the same occult power simply change them to rubies and emeralds for the occasion?

The strange part of it seems to be that in the so-called "naturally colored" pictures of the previous Coronation ceremonies in England the same limitation of colors was observed, and there surely must have been enough civilized people there to preserve at least the official purple in their neckties, hats and gowns.

MANY COLORS MISSING.

The facts are that there is no process at present in commercial use which will record anywhere near all of the colors, and the "Kinemacolor" process which was most extensively used in photographing these ceremonies is wholly lacking in the third primary color, blue-violet, with the result that while scarlet, orange, yellow and green, with some shades of brown are plainly shown, there is nothing whatever of blue, indigo, violet or purple or the shades of crimson, lavender, maroon and a host of others, which have at least some blue-violet in them.

But even so, and in spite of frequent dimness and the strain on the eyes, look at that magnificent spectacle! Did you ever, in all your observation of the stage, and of parades, and spectacles, and pageants and ceremonies and reviews and celebrations, see anything that approached the Durbar for sheer brilliance and magnificence?

PRESENT METHODS LIMITED.

Now are you convinced that the stage has seen its best days and that we must look to the Ortoplay to satisfy the new desires which the motion-picture has already stirred up in the hearts of the people? But the motion-picture even in its most highly developed form will not satisfy as long as present methods are employed. When you have seen the Kinemacolor pictures of the Durbar you have seen the farthest advance that can be made with the kind of apparatus and film at present in use, and you have noted with some wonder that the colors, incomplete as they are, have been secured at the expense of sharpness and steadiness. This is bound to be the case, and until the new Ortografic process is ready you will have to choose between them and the fairly steady black and white pictures of the better class of producers.

THE "LIGHT" ARTILLERY—PRESENT AND FUTURE.

The camera-man who goes to film an event like the Durbar, and who has upon his shoulders the burden of

posing such a motley assemblage of creatures, and who also must struggle with the limitations and intricacies of such a process, and who succeeds in bringing forth and presenting to the world such a series of pictures as flash before our eyes by the hour at the rate of 30 or 40 per second, and in such infinite variety of arranging and grouping and lighting, cannot fail to elicit the profound sympathy as well as the congratulations of every member of the profession.

In the very near future the vastly simpler devices and apparatus used in Ortografy will do much to lighten the labors of these generals and soldiers in the army of progress, and at the same time increase their reward, for there is no delight to be compared with the joy of the photographer as he takes the first look at a successful negative, unless it be the more complete satisfaction of the Ortografer who looks at the screen and finds it *all* there—all of those delicate shades and tints as well as perfect gradation of light and shadow. All of the movements without any of those "centipede" effects in the foreground. No horses or soldiers with forty-nine pairs of red and green legs obliterating the field of view in rag-time installments.

ENTER—THE ORTOPLAY.

Just as soon as the new Ortografic processes have supplanted the present methods, the greatest educational advance in history is ensured. A million-fold has been added to the riches of mankind, and in one swift shift we have scattered enlightenment, the very keynote of education and progress, throughout the length and breadth of the earth. There still will be echoes of ancient and mediaeval mockeries, and jealousies and tragedies, whose artistic records, like the paintings of the old masters, will be preserved and worshipped by a remnant of the old school, but the great appeal of current problems, and progressive development of popular taste will create a wholly new type of drama.

EXIT, THE ITINERANT ACTOR.

"All the world's a stage!"

Repeat it once more, thou much-betraveled and otherwise overworked disciple of repetition! Thou well-meaning interpreter of the imaginary ravings of kings and princes, as woven into an erotic philosophy by an astute observer of antiquated ailments; and then come with me to an Ortoplay, where, with body at rest and senses delighted, you may encompass the whole work-a-day world-stage, with its wonderful wealth of tone, of form and of color, of acts human and inhuman, of events frivolous and momentous, of people enlightened and otherwise. First let us visit a Schoolhouse and enter one of the classrooms.

THE PEDAGOG'S IDEAL.

Look and listen! See that sunrise. Hear that symphony that seems to swell in sympathy with the dawning of the day. You cannot distinguish the sounds of the instruments any more than you can discern the "technique" of the artist who has brought the sunrise to your expanding vision, and yet the music from a hundred instruments is blended, harmonized and sifted, so that naught but the very essence is permitted to reach your ears. You do not recognize it as an effort on the part of some player or players to please, for it seems of one piece with the gloriously gilded sky, and the scintillating sapphire sea, and the ships that sail on its surface.

"To be or not to be" is no longer a question. We are content to be and to behold.

HISTORY AND GEOGRAPHY.

Look again, and see what tomorrow's sun has revealed! 'Tis a scene from a long-lost yesterday. We are in the city of Herculanaeum on the Bay of Naples. There is Mount Vesuvius with its cloud-like banner, the symbol of uncertainty. There is the Circus Maximus where Nero is wont to give free rein to his infernal appetites, but all is peaceful and serene just now, for the orgies of last night have felled the revellers, and the sun has just risen. Let us not tarry, for you know what is going to happen. How the earth will quake and rumble, and Vesuvius will pour forth liquid and gaseous rebuke, and the ashes of damnation will fall upon the heads and the haunts and the hirelings of those ancient monsters.

AROUND THE WORLD IN 30 MINUTES.

But these little ones with eager eyes and ears are having their history lesson, so let us tiptoe out and cross the street. Just a moment first. Look in here. That is geography up-to-date. We are now hovering over Central Africa and just about to leave Lake Victoria Nyanza for the headwaters of the Nile. "This, children, is where the great naturalist Roosevelt once delighted to collect faunal specimens for his country's museums. This is Abyssinia, those are the Pyramids, and here we are above Alexandria and the Mediterranean."

Come, drop out of the airship, and leave those kids to finish their trip around the world while we take in the Orto Opera across the way. Just a glimpse, my friend, and I must leave you. Let your senses absorb the inspired and inspiring melodies of sound, of motion, of form and of color, while the Muses make merry, and you learn what a real privilege it is just to live.

A POWER FOR PEACE AND PROGRESS.

When you have had your fill of inspiration and have left the opera, just scan the happy, intelligent faces that you meet everywhere. Note the confident bearing and the air of industry, and hear the whistling and the singing which mingle in the streets like echoes from the play.

And now, lest you think that we are dreaming of some far-distant Utopia, let us inform you that all of these things will be with you almost before you know it. In a few short months you will be permitted to witness the inauguration of the new era, and in less than a decade the playhouse of the future will be a privilege of the present.

Then may we say in truth, "The world is mine, and the fullness thereof," not alone with the Psalmist, nor yet with Monte Cristo, but with the little boy and girl who today sit and look at the "movies," in joyful appreciation of these crumbs of the world-feast, which they instinctively feel to be their birthright. Soon they will come into their own, and, free from the prejudices which we grown-ups have gathered from the decadent literature of moss-grown philosophies, they will meet Truth daily, face to face, and she will lead them to the feast whose host is Wisdom, and whose bounty is all that is good and wholesome in the wealth of the whole wide world.

Then will the boys and girls, and children of a larger growth, be immeasurably richer than their forebears, for literally, and in a greater and grander sense than ever had been surmised, the world is theirs.

Photoplays From Essanay's

Features for June

AFTER weeks of preparing scenery and costumes, the Essanay Co.'s special train steamed out of Chicago Wednesday morning, May 29, bearing the mammoth company who are to portray "The Fall of Montezuma," a tale of the conquest of Mexico, which will be released in three reels. Over two hundred people are employed in the taking of this stupendous film-pageant, and the "special" will be their home until the completion of the last foot. Besides the company the train carried attendants, physicians and Red Cross nurses to give immediate attention to any who may sustain injury during the staging of the picture, two cameras with their operators, the two producers who are directing the production and a small army of expert clay modelers who will fashion the massive settings required to duplicate the architecture of the ancient Aztec empire. The costumes needed for this great film taxed the capacity of one of the largest concerns in the country for the space of two solid months, and a score of carpenters were in a turmoil night and day at the big Chicago studio to get out the mammoth sets in time to put them aboard the "special." The Essanay Company is sparing neither money or energy in making this great pageant one of the finest masterpieces ever attempted in film history, and the project assuredly affords striking opportunity for brilliant production.

"Under the Wire!" Scene from "Derby Day at Churchill Downs."

For the month of June Essanay has booked seven great western dramas featuring G. M. Anderson, that master player and director, six sparkling comedies and four striking dramas from the Chicago studio.

The great Kentucky derby, run at Louisville May 11, and won by the fast three-year-old "Worth," was filmed by Essanay, which had three camera operators and a director on the scene. Excellent views of the race, the enormous crowds, glimpses of the stables, grooming of the thoroughbreds for the contest, the group of jockeys, the paddock, judge's stand and the neck-and-neck finish at the wire were secured and will be released as a regular full-reel feature on June 21 entitled "Derby Day at Churchill Downs." One camera, set up on the roof of the grandstand and mounted on a revolving platform, caught the entire race with a long-range lens from start to finish. Nothing is more exciting than a good horse-race, and the dash of the closely huddled bunch of horses into the stretch and under the wire with "Worth" leading by a nose is vividly depicted and will cause racing fans to want to mount their seats and yell themselves hoarse with enthusiasm.

A View of the Grand Stand in "Derby Day at Churchill Downs."

Miss Martha Russell's first appearance in the new Essanay subjects is in "The Return of William Marr," booked for release June 20. The plot is strong, and affords Miss Russell excellent opportunity for the dramatic acting that has won her an enviable reputation. A brief synopsis of the story shows that Marr is a drunkard and out of work. His wife refuses to give him money and he leaves her in a rage. Marr near

meets a tramp who has a flask of whiskey, and gives the fellow his clothes for the liquor. Later the tramp is killed by a train and is identified as Marr by the clothes he is wearing. Marr sees the notice in the paper and decides to allow his wife to believe him dead. Years later she is again married, this time to a man of wealth and happy in her new-found love. Marr turns up, a bearded ruffian, gains entrance to her home, reveals his identity and agrees to remain in obscurity if she will keep him supplied with money. After several visits her ready money is exhausted and she attempts to drive him away with a revolver. He

"Billy Changes His Mind."

wrests the weapon from her and is joking over the matter when the gun is accidently discharged, killing him. Her husband entering, she hysterically explains Marr was a burglar and she killed him in defense of her life, and thus the real truth is never revealed.

Miss Russel portrays the wife with gripping characterization and overcomes the difficulties of the exacting role with countless touches of personal charm. Frank Dayton is splendid as Marr and Francis X. Bushman effective and clean-cut as the wealthy husband.

The famous "Broncho Billy" western series, originated and played by G. M. Anderson, number three among the June releases. All are characteristic features, strong and vital in plot and interpretated in the heart of the far West. "Broncho Billy's Gratitude," released June 18, is a splendid example of Mr. Anderson's superb knack hitting upon gripping stories and transforming them into masterpieces of film art. Mr. Anderson's portrayal of Broncho in this photoplay is the best he has yet done throughout the series, and splendid support is rendered by Vedah Bertram and Brinsley Shaw. "Broncho Billy and the Indian Maid," released June 29, is distinctly a feature, and affords both Mr. Anderson and Miss Bertram opportunity for gripping characterizations.

One of the finest heart-interest dramas for the month is "The Passing Shadow," released June 14, and featuring Francis X. Bushman in one of the greatest roles this popular actor has yet portrayed for his host of admirers.

"Frisco" Sam, a tramp, is beaten and kicked from a farm-yard one morning when he attempts to secure a drink of water. Swearing revenge he limps off down the road and meets a little crippled girl who offers him a luscious apple. With a grim smile he thanks her and goes on to his camp. Glancing over an old paper he finds that his father, a wealthy physician, has died and lawyers are searching for him. Beating his way to the city he proves his identity and finds a fortune of fifty thousand dollars has been left him. With the one thought of securing revenge on the rustics who mistreated him, Parsons now lays his plans. Meanwhile, Farmer Rankin learns he will have to bear the expense of an operation to cure his little daughter's deformity. Not having the money he is in depair, but is crushed when a letter from his lawyer advises him that the mortgage on his farm has been taken over by a New Yorker who threatens eviction unless payment is made by noon the next day. The new owner arrives in the person of Parsons who refuses to listen to Rankin's pleas for mercy and declares his revenge has come. Rankin leaves for town to try and raise the money and Parsons is striding through the house when he suddenly comes upon the little cripple girl and recognizes her as the angel who gave him the apple in his distress. Parsons learns she canot undergo the operation necessary to cure her because Rankin cannot afford the expense. For a moment he fights it out with himself, then tiptoes from the room with the tot's fairy-book in his hand. All thoughts of vengeance leave him, he writes out a check to cover the operation expense, pins it together with the surrendered mortgage to a leaf of the book, steals back into the room, lays it on the little one's lap, kisses one of the tangled curls, then quietly leaves.

This is a beautiful story, and the Essanay Company has made the most of the striking plot. Little Eleanor Kahn, a wonderful child-actress, is splendid in her many tense scenes with Mr. Bushman, who plays Parsons, and the entire production is a distinct feature that will be long remembered by all picture-lovers who view it.

"Billy Changes His Mind," released June 7th, is one of those sparkling comedy gems that are a source of joy to all. Unique in plot, snappy in action, beautifully staged and delightfully interpreted, it is a positive revelation in pure joy. John Steppling, in his ever-popular role of Billy, is splendid, and Lillian Branscombe plays opposite him in a charming char-

Scene from Essanay's "The Return of William Marr." Featuring Miss Marthy Russell.

acterization. Lack of space prevents description of all the good things Essanay has booked for June, and it is sufficient to know that each one is novelty and there are seventeen of them.

The Modern Historic Records Association

History in the future may not be recorded in ponderous tomes and put upon a shelf for future generations to read. A new organization has been formed that proposes to take advantage of the phonograph and the moving picture machine in the work of recording history.

The honorable president of the new organization is President Taft, the acting president is Herbert L. Bridgman of Brooklyn, and the other officers and directors are: Vice presidents, Major General F. D. Grant, U. S. A.; Rear Admiral R. E. Peary, Justice Victor J. Dowling, Dr. George F. Kunz, John Barrett, Colonel D. L. Brainard, U. S. A.; Alexander Konta; treasurer, Louis Mansfield Ogden; secretary, William Trowbridge Larned; assistant secretary, Chloise H. Lee.

The new organization intends to make it possible for the future historian not only to record the fact that a battle took place at a certain place, and on a certain date, but to be able to reproduce the actual scenes of the conflict.

These are not to be imaginary pictures, but to be actual reproductions by means of the photographic camera and moving picture machine. The Modern Historic Records Association has already prompted Frenchmen to consider the possibility of preserving, by means of phonographic records, the disappearing dialects of the French provinces. The newly formed association intends to do the same thing for the American Indian. They point out that the Redman is vanishing and there is no systematic record of him. He enters largely into the moving picture show, in the innumerable spectacular scenes of wild western life, but these records are not what is desired in the way of reliability by the association.

Scientific Use for the Motion Picture

One of the most recent applications of moving picture films in scientific observation is made by L. Hartmann at Paris, and he finds that it is a great aid in the study of the deformation of metals when strongly compressed by the hydraulic press. In some cases he uses a brass tube of 3 inches diameter and 0.04 inches thickness of metal and observes the appearance of the surface when the tube is flattened out by pressure. Sometimes the tubes are filled with a liquid and then compressed. Various figures appear on the surface of the metal, and moving picture views are taken at the rate of fifteen per second. By throwing the views on a screen it is easier to study the effects than by direct observation.

The *Daily Consular and Trade Reports* chronicles a proposal to build a $75,000 picture theater in Vancouver, B. C., Can., by Aubrey M. Kennedy, formerly of the Essanay and American companies.

Current Educational Releases

A Page in Canadian History.—Vitagraph. This picture introduces us to the Duke of Connaught, Governor-General of Canada, a distinguished character, and the Duchess of Connaught as she glides across the royal skating rink, and gives us a good view of Princess Patricia, a charming royal personage. We visit the Privy Council of the House of Parliament where we see the dignitaries of the Canadian Government, also the National Library. As a historical subject this will no doubt be greatly appreciated.

Scenes in Delhi, India.—Edison. Many of the views set forth in this film are of ancient landmarks cherished by the natives because of their connection with a history that dates back for ages. Those of particular interest are views showing a portion of the ancient mosque, a temple, the memorial tower, the "Asoka Pillar" and the shell-scarred Cashmere gate which speaks of past bloodshed. A novel scene is that which shows the natives carrying water across the country on clumsy wagons drawn by domesticated buffaloes. We are also introduced to some of their forms of amusement.

Views in Calcutta.—Edison. A number of interesting views taken within the city including a beautiful temple and the great Banyan tree showing a growth of one hundred and thirty-nine years. The picture also includes views of their majesties, King George and Queen Mary, of England, upon their arrival and departure from the city. The oriental splendor is manifested in scenes from the Durbar.

Life Among the Muruts.—C. G. P. C.

Costumes of Different Periods.—C. G. P. C.

The Art of Silver-Plate Making.—Imp. This film presents an excellent series of views of the actual operations of a silver-plate factory and we see the fashioning of the rough sheet metal into the finished and highly engraved article for table or decorative purposes.

Scenes in Kent, England.—Eclipse. A series of beautiful scenes in and about the quaint towns of Canterbury, Maidstone and Yarling which are located in one of the most picturesque spots of England.

Andalusian Dancers.—Eclair. A scene in the wonderful Sevillian garden of Alcazar, showing the beautiful Spanish dancers in their characteristic poses and steps.

Messina as it is Today.—Cines. A series of scenes showing the progress made in rebuilding the city which was devastated by the terrible earthquake.

Venice, Italy.—Cines. A series of interesting views in this beautiful city including the Paglia and Rialto bridges, the celebrated St. Mark's Square, the Franchetti Palace, the Grand Canal.

Studies of Fish Life.—Eclipse. An intensely interesting and instructive subject showing many of the lower forms of fish life, including pipe fish, sea urchin, pectern, pollock, swimming crabs, lug worm, brittle stars, the Octopus and others.

The Harvest in Sicily.—C. G. P. C. A series of interesting views showing the harvest period when the crops are gathered in Sicily and everyone joins in the mirth and frolic which accompanies the season.

Scenes in Padua, Italy.—Cines. A film showing many of the interesting sights of the city, including the Valleresso Arch, St. Justine Church, the Market Square and ruins of the Roman Amphitheater.

Palace of Fontainebleau.—C. G. P. C. An exceedingly good representation of the French Court as it was during the reign of the Louis', setting forth its magnificence and beauty; including a good view of the marvelous gardens and fountains around the Palace.

Egypt as it was in the Time of Moses.—Kalem. A very interesting and instructive picture as it shows the primitive methods still in use in Egypt along the upper Nile which were used in the time of Moses. The odd system of irrigation is shown in which a native draws water from a well by means of a "shadoff"—a peculiar kind of well sweep—and the ground is irrigated by building small squares and dams which regulate the flow. Sowing and reaping are done by hand or with very crude implements. The scenes include the threshing of the grain, grinding it into flour and making it into bread, the complete process being shown. We are also shown the complete process of brick making, and the making of cloth, including the shearing of the sheep, spinning the yarn, framing, winding, the operation of the loom and the final transaction of buying and paying for the completed product.

From Grass to Glass.—Rex. An illustration of the method by which milk is brought from the model dairy farm to the city table, showing the feeding, grooming and milking; the receiving station, loading and icing cars; transferring the milk from the city railroad terminal to the pasteurizing plant; passing the pasteurized milk over the cooling pipes at the rate of 8,000 quarts per hour; washing and sterilizing cans and bottles by automatic processes; testing for bacteria, and many other interesting points.

The Fighting Dervishes of the Desert.—Kalem. Another very interesting film because it depicts the real life of the desert, the ancient water-wheel, a genuine Arab encampment, an Arabian village, the fanatical Dervishes with their fleet-footed camels, a true presentation of a Coptic religious service—one of the earliest and most primitive forms of Christianity—and the ruins of a Pagan temple of unknown antiquity.

Types of the Caucasus.—Eclair. The film gives us a glimpse into a very interesting land which is seldom visited by the traveler and introduces us to some of its inhabitants, which include timber merchants, Circassians, Persians and Bohemian Muscovites.

Fiume, Hungary.—Cines. A series of beautiful views of the town, including the theater, St. John's Cathedral and many quaint buildings and romantic waterways.

The Sponge Industry.—Lubin. A picture showing how sponges are gathered by divers and hook pole fishers. The cleaning and shipping process is also shown. A very instructive subject.

Scenes in Cuba.—Selig. An interesting and instructive travel subject made up of a series of scenes in and about the present day Cuba.

Arabian Manners and Customs.—Eclair. A very interesting travel subject consisting of a series of processions which depict very vividly some of the customs and habits of this distant people. It is headed by a procession of gaily caparisoned camels with a picture of the chief of the protocol at close range and includes both a Moslem and Jewish funeral procession, showing the notable contrast between the two. The film closes with the procession of professional mourners whose antics are quite amusing.

Tropical Creatures.—Eclipse. An exceedingly interesting film showing several species of queer creatures, resembling sticks, inhabiting the trees in the tropical regions.

Fiume, Hungary.—Cines. This film presents a series of views of this beautiful city which have been selected with an eye to beauty and picturesqueness and include St. John's church, the city markets, streets and avenues and portions of its shore line with its mossy canals, harbors and bays.

Culture of Manioco and the Making of Tapioca in the Philippines.—C. G. P. C. A very instructive and interesting film showing the complete history of this very popular food product.

Rope Making by Hand in Kent, England.—Eclipse. An extremely interesting subject showing the complete process of rope making including the preparation of the raw hemp, the weaving of the strands and the completed product.

Glimpse of Belgium.—Eclipse. A series of remarkable pictures showing views of Brussels, Liege and Namur, scenes along the canals and the picturesque countryside.

Rome on the Tiber.—Cines. A pleasing scenic showing many of the interesting parts of the Eternal city, including many of the famous bridges spanning the Tiber, which are regarded as some of the most interesting sights of the city.

Fountains of Rome.—Cines. An extremely interesting colored topical subject showing the many beautiful fountains for which the city is noted.

A Citizen in the Making.—Selig. A strong story of unusual interest and as the film is taken from actual scenes and surroundings which greet the newly arrived immigrant it is one of educational value also.

Picturesque Scenes in Padua.—Cines. A charming scenic showing a number of interesting subjects, including the Ragione Palace, St. Anthony's Church, the banks of the river Bacchiglione, and many other places.

Oil Fields of California.—Nestor. The picture gives one a very good idea of the extent of the oil industry in California. It consists of a series of views, giving a general view of the plain, studded with hundreds of derricks, also wells drilled in the surf of the ocean and others some distance from the shore. It shows a reservoir in course of construction which will have a capacity of one million barrels when completed.

Estudillo House.—Nestor. A California house made famous by the story of "Ramona," being the house in which that character's marriage took place, and is kept up for tourists to visit.

Our Lying Senses

Almost all training of the senses in children is subconscious and self-attained—generally in games and at play, say the *Scientific American*. A certain amount, also of such training is done methodically in schools. Thus, there are two tests of the sight sense; the event test and the picture test. In the first a fully enacted scene is presented before a witness; and either immediately or soon after the event he is asked to recall and describe what he has seen. The picture test was first demonstrated in America at Clark University, by Prof. William Stern of Breslau, the pioneer in this field. By this test a picture is shown the subject for a brief period, after which he describes what he has seen, and is further questioned, as in the event experiment. It is now purposed to combine these in the moving picture test.

We may not here consider further these tests, except to observe how they demonstrate that people do not see a fraction of the things they confidently believe they see; and that one person's report of what he has seen almost never coincides, not even in the main, with another's report. And yet here is demonstrated no new thing. Historians and students of human affairs find hopeless discrepancies among eyewitnesses of a given battle or any other great event. Seeing is by no means always believing. The statement of a perception can be sound only when the latter has passed muster before dispassionate reason. And it is amazing how much an individual's temperament oftentimes colors a simple fact. The senses are by no means invariably a sure guide; the very best they can do is to appreciate phenomena. Reality, that is indubitable fact, is possible only when emotionless reason, bringing memory and experience to bear upon the perception conveyed to the cerebrum, has given judgment.

Our estimable contemporary, the *Moving Picture World*, remarks editorially in its issue of June 8 that the word "photoplay" "is being so seldom used that it may soon be forgotten." The objectionable word appears in that very same number not less than twenty times, to say nothing of a few "photodramas." Have to edit closer than that to kill it.

Of Interest to the Trade

MOTION PICTURE EXHIBITORS' LEAGUE OF AMERICA

Second Annual Convention, La Salle Hotel, Chicago, Aug. 13-17, 1912.

Illinois State Branch No. 2 is actively at work to make the National League Convention the biggest thing that has ever been pulled off in the film business. The convention committee is comprised of these well-known exhibitors: Wm. J. Sweeney, Chairman; Samuel I. Levin, Chris. C. Whelan, Crawford L. Hull, George Henry, Robert R. Levy, Louis Schindler, I. Natkin, L. H. Frank, Charles Abrams, A. J. Balaban, M. Hyman, Fred Schaefer, H. A. Hill, J. A. Alcock, John Miller and Charles A. Anderson. Headquarters are at 112 S. State St., Chicago, in the splendid offices of the Orpheum Theater.

New Feature Film Company

The Crown Feature Film Company is the name of a new concern recently organized in New York City to release feature films. The organizer of the company, C. V. Henkel, is well and favorably known wherever good films are known and states that this business is going to be a regular thing for his company from now on.

Mr. Henkel is emphatic in denouncing those feature film companies which open up with one film, make the best auction price and then go out of business; and he is showing evidence of being sincere in his remarks by making the price on his first release, "St. George and the Dragon" so reasonable that he has succeeded in convincing film men in general that he is on the level and here to stay.

The Crown Company wants to get in touch with genuine state right buyers for this first release. It does not care to deal with any of the so-called buyers who exploit a state with fake features and bring disrepute on the film business, and for this reason the prices have been made low enough to attract the earnest, reputable buyers. Briefly outlined, the story is as follows:

ST. GEORGE AND THE DRAGON.

The scene of this beautiful legendary drama is laid in Italy, the land of blue skies, back in the hundreds of years before Christianity, where dragons, ogres, elfs, fairies and other mythological beings and animals infested the earth and interfered with the daily routine of mortals.

It being understood that it was the custom in those days to sacrifice the most beautiful maiden in the kingdom each year to appease the gods during the ensuing year, we can now go on with our story.

The Roman Centurion, George, is banished from Rome and the opening pictures of the film show those impressive scenes. George leaves his native land and sallies forth on his horse to new countries and adventures and soon finds himself in the Kingdom of Ozillo to which he offers his sword and services and is accepted.

The scenes of the king's court are very beautiful and illustrate the extreme care the makers of this film took to obtain realistic production.

Several beautiful pastoral scenes follow, showing the king's daughter, Angisa, with her handmaidens.

It is about the time for the priests to make the selection for the sacrifice and after due thought and deliberation they inform the king that his daughter is the most beautiful maiden in the land and therefore the one to

The Priests Tell the King of His Daughter's Fate.

The King Bids Farewell to Princess Angisa.

be sacrificed to the dragon this year according to custom.

The king is first horror stricken, then the monstrosity of the choice seizes him and he arises from his throne and clutches the high priest by the throat. At this sacrilegious act the guards rush forward and save the priest, the king exclaiming "Is there no other maiden in all this kingdom that will serve your foul purpose?" The priests claim no one else will do and remind the king that if he forbids his daughter's sacrifice he will be responsible for the awful consequences that will be visited on the populace.

The following scenes show Centurion George riding up the country road on his beautiful white horse and entering town through the arched gateway. On visiting the royal castle he hears of the choice of the priests and hastens to condole with the king.

Scenes illustrative of Angisa's happiness show her weaving flower wreaths in the royal gardens where the centurion happens upon them, and being introduced to

George Slays the Dragon.

Angisa falls desperately in love with her. Meanwhile the king emerges from the castle to inform his daughter of the priest's decree, which George overhears.

Angisa bravely tells her father that the king's daughter can not refuse to sacrifice herself where the best interests of the kingdom are at stake and tells the king she will go on with it. The strain proves too much for the king and he goes mad. Tearing the royal robes to tatters and stamping on the golden crown he seizes a torch from a light bearer and driving every one out sets fire to the tapestry, throne and rooms and rushes out into the forest.

The centurion, George, in his anxiety learns of the king's flight and with searchers finds King Ozillo and watches over him. Leading him to a sheltered nook he persuades the king to go to sleep while he stands guard over him. As the king sleeps a heavenly vision appears unto George, angels come forth and hand him a magic lance, informing him that with this lance he can slay the terrible dragon and deliver the princess.

After assuring himself that he is awake and really has a lance, he awakes the king and tells him of the heavenly visitation and the two return to the castle where Angisa has completed her preparations and is engaged in a final prayer with her handmaidens.

The old king takes a touching farewell of his daughter and she, decked with flowers, is escorted to a garlanded float drawn by two oxen and the procession to the place of sacrifice begins. Among the crowd following the float we see the faithful centurion astride his steed bearing in his hand the magic lance.

In a deep, rock strewn ravine before the fearful dragon's cave Angisa is chained to the rocks and the populace retreats to the hills, George being securely hidden behind a convenient rock.

Tremendous bursts of flame issue from the cavern and shortly the dragon comes forth—a real live dragon, snapping his tremendous jaws, glistening with rows of teeth, fire and smoke pouring from his nostrils and glaring eyes.

Sighting the chained Angisa he rushes towards her, when George spurs his steed into the clearing and rushes into battle with the terrible monster, plunging his magic lance into the dragon again and again, his frightened horse rearing and plunging to get away.

After a considerable struggle George finally vanquishes the dragon and releases the princess from her chains. The populace come down from the surrounding hills and congratulate them both.

Although not shown in the films it is accepted by the inhabitants of Italy that George married the beautiful Angisa and that the old king gave George the throne, where the two ruled long and happily over a contented people.

The film is an example of painstaking care, excellent photography and exquisite setting. Over 4,000 people are used in the scenes around the castle and in the hills around the dragon's cave.

The film, being made by Milano of Italy, needs no comment on the perfection of the acting forces. Every film man knows the Milano Company is composed of actors and actresses the best in their lines, artists everyone of them, who have formed a co-operative film producing company.

The whole story is in three reels, aggregating over 3,000 feet of film and will make an instantaneous hit wherever it is shown.

Industrial Company's Remarkable Booklet

The energetic Watterson R. Rothacker, general manager of the Industrial Moving Picture Company, Chicago, has just issued a remarkable booklet. It is, first of all, of extraordinary but delightful appearance—some feat in itself today, when someone has tried everything at least once. The covers, front and back, as well as the center two pages, are made up of replicas of some of the notable films produced so far by the company.

As to the text of the booklet, should arguments alternate with testimonial letters—and some of these are in themselves remarkable, for they show beyond parley the conversion to the method of prominent men who control industries and public utilities.

Lay the booklet down anywhere and the first man along will pick it up and look all the way through it. It is one of those sadly few works of publicity art that can not be tossed into the waste basket. That in itself is a pretty good recommendation for a company doing publicity work by any method, isn't it?

She Removed Her Hat

A man entered a picture show and was not seated long before a woman entered, moving forward under a very large hat. She sat in front of the man and she didn't remove her hat.

The man dodged to right and left, but his range of vision was like that presented by looking down a cellar hole. Then the man had a bright idea. He put on his own hat and stretched his neck.

"Take off that hat! Take off that hat!" bawled a dozen voices behind him. And the woman, thinking the voices were directed at her, removed the gaily decorated outfit she carried on her head.

Booming Home Cities With Motography

Frank Smith, manager of the Gaiety Theater, Springfield, Ill., and L. M. Rubens, manager of the Crystal Stairs Theater, Joliet Ill., have recently had moving pictures taken of their respective cities which they exhibited at their theatres, reports E. B. Lockwood. The pictures were taken by the Industrial Moving Picture Company and are exceptionally fine. The photography is excellent and the scenes very interesting.

Mr. Smith and Mr. Rubens are both public spirited men, with the welfare of their cities at heart. They were among the first to take upon themselves the expense of having pictures taken of their cities, therefore they deserve a great deal of credit. The public demonstrated its appreciation by packing the theaters while the pictures were being exhibited. Many patrons were turned away several times, but later had the privilege of seeing their city and many of its citizens projected upon the curtain.

These managers have demonstrated that moving pictures of their home cities are not only a profitable investment but that they are a great benefit to the city at large. They exploit the industries, business sections, parks and boulevards, and the beautiful residential districts.

The pictures are to be turned over to the commercial clubs to be used in promoting and advertising the cities, and will be shown to the smaller towns in the adjacent territory, in addition to their use at conventions and gatherings of commercial executives.

Picture Publicity for Australia

The government of Australia is keenly alive to the necessity for effective advertising in order that South Australia may develop her export trade and secure the full share of the emigration from the United Kingdom and other parts. With this object in view it has been decided to take a series of cinematograph views of the state and forward them to the agent-general for exhibition throughout Great Britain. It is believed that in this way the people will become better acquainted with the scenic and industrial attractions of the state.

Scene from Essanay's "Billy and the Butler."

Thanhouser's "Called Back"

The Thanhouser release of June 21 is a two-reel entitled "Called Back." Gilbert Vaughn, a wealthy young man, was suddenly stricken blind, and although his physicians told him that in time they might be able to restore his sight, he chafed bitterly at his condition. While tossing about restlessly in his room one night, he suddenly decided that he could go out in the street by himself, and eluding his nurse, he stealthily left the house.

By carefully counting his steps, and feeling his way with his cane, he found for a time that he could walk up and down the block in safety, and was much elated thereat. Finally he lost his bearings, rushed around frantically, and became more and more bewildered every minute.

At last he came to a stoop that he thought was that of his own house, and he stole up the steps. Blind though he was, there was one test—his latch key. It opened the door, and he stepped into the hall, confident that his troubles were all over. Still he had a feeling that he was in the wrong place, and when he heard a woman playing the piano and singing, he knew that his fears were justified.

Undecided whether to appeal for help or not, he stood in the hallway. The song continued. Suddenly he heard a gasp and a groan. The music ceased suddenly and the piercing cry of a woman rung out, a frightful change from melody to discord. In the excitement of the moment, Vaughn forgot that strength and courage could avail him nothing, but stumbled into the room, eager to aid the woman. He fell over a body on the floor; some one grabbed him, and he heard the click of a revolver. Then he called aloud, "Spare me, I am blind."

The assassins satisfied themselves that he told the truth, and led him out of the house, after he had taken on oath never to betray them. As a matter of precaution, they conducted him far away, and then turned him loose in the street. Later the police found him and took him home. Vaughn feared to tell his story, for he doubted if any one would believe him. Sometimes he thought, himself, that it was a dream.

The work of skilled physicians bore fruit in time, and Vaughn's sight was restored. He searched all over London, hoping that chance might lead him to the house again, but in vain. Yet often and often his thoughts turned to the crime, and the song of the woman that had suddenly turned into a piercing cry of horror.

Later, Vaughn went to Italy for a pleasure trip. There he was smitten with love at first sight when he saw a beautiful girl at prayer in a cathedral. He did not know who she was, but often thought of her, and on his return to England was surprised and delighted to meet her one day on the street. Obeying an impulse, he followed her and found that she lived in a lodging with her old uncle, and a woman servant who never left the girl out of her sight. To be near his divinity, Vaughn engaged rooms in the same house, and was at last able to make her acquaintance. He found her to be strangely apathetic, but his passion knew no bounds and he announced to the uncle that he was a suitor for the girl's hand. The uncle, after satisfying himself that Vaughn was rich, consented, on condition that the marriage be celebrated immediately. After the ceremony, the uncle disappeared and Vaughn found to his horror and despair that the woman who now bore his name was apparently hopelessly insane.

Scene from Thanhouser's "Called Back."

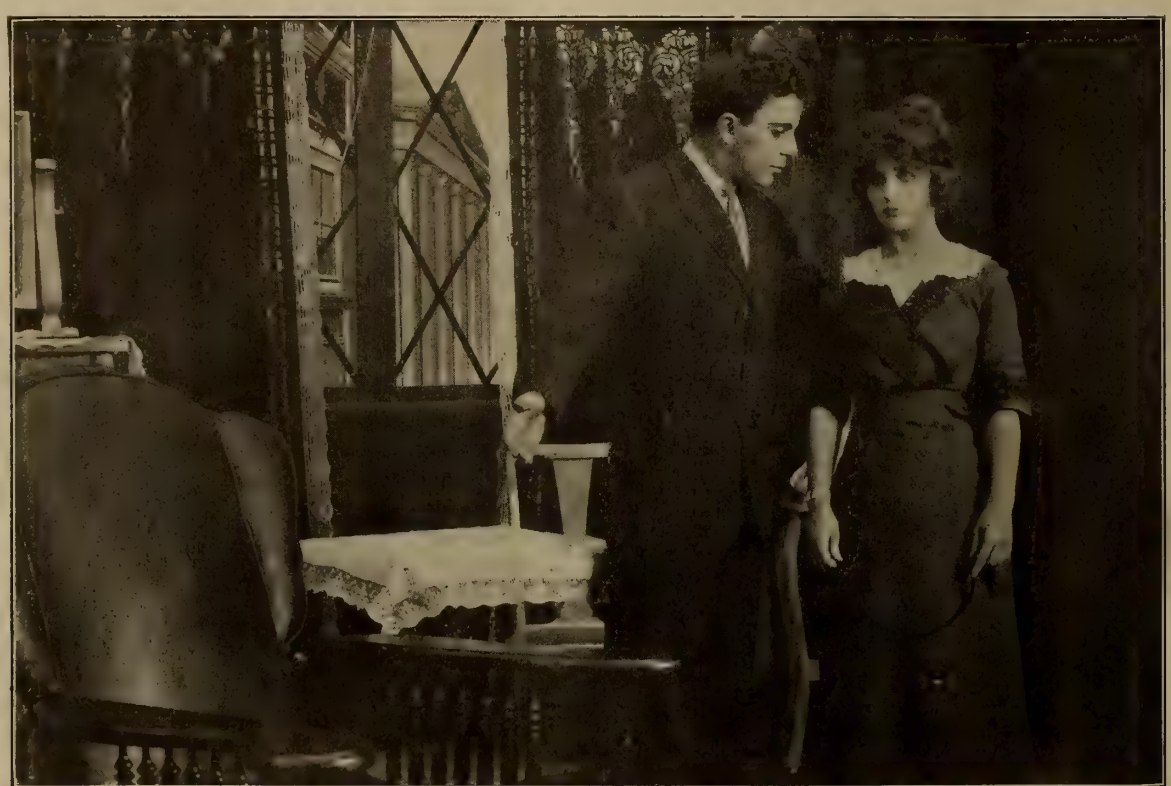
A shock restored her reason in time, and through it the mystery of the murder, heard but not seen by Vaughn, was revealed. The victim was the girl's brother, and she was in the room at the time. The shock drove her mad, and her uncle, the accomplice of the real slayer, cared for and protected her, never dreaming that some day his sin would find him out. He permitted her marriage to Vaughn, knowing she would be well provided for, and did not recognize him as the man who had stumbled into the room, crying, "spare me, I am blind."

The real slayer in the meantime had ingratiated himself with Vaughn on the plea that he was the mad woman's brother. He called one day to find that vengeance had overtaken him, and that the two persons he regarded as his dupes, were the ones who could fasten the chains of justice tightly around him. The wife, restored to reason, found her husband was the one man in the world, and reciprocated the unselfish love he had long had for her.

The photoplay follows closely the original work familiar to readers of novels.

day, June 10. It is a masterful portrayal of a heroic subject—Mother Love. A mother and her husband, two boys and two daughters, are guilty of running an illicit still in the forest. When one of the daughters has an excellent opportunity to marry the chance is almost spoiled by the dread of discovery. The mother grieves in secret—sees her two boys slowly becoming addicted to their own poisonous brew and the father more indifferent to the unlawful features of his business. Then comes the supreme test of mother love. She reports the illicit still to the United States Marshall in the hope of saving her boys from the drunkard's end and ultimately saving the father. The picture is well acted, teaches a great lesson and combines all those fine points of story-telling that go to make a memorable film.

One of the really big feature pictures of the year will be announced by the American Film Company as the product of the newly completed Chicago studio, for release in the near future. This is a two reel production, historically correct, and making use of such splendid American characters as Abraham Lincoln, Jefferson Davis, Zachary Taylor and General Winfield Scott; also an Indian whose name is a by-word in American history.



Scene from Thanhouser's "Called Back."

American Hires Actors For Big Subjects

Patrons of American films have no doubt wondered as to the identity of the new face seen in Western pictures of the American Film Manufacturing Company. The newcomer is M. A. Nillan, a young man of promising ability who has already scored a notable triumph under the "Flying A" banner. Nillan has been playing second leads for the last four or five weeks. He is well known in Western theatrical circles.

"For the Good of Her Men" is the title of a coming release of the American Company, scheduled for Mon-

Jos. I. Sullivan, formerly of the Selig forces, is the newly engaged producer under whose management the film was produced. Mr. Sullivan did some remarkably good work in the selection of well known actors to interpret the difficult parts of the play. Among those who will be seen in the role of great Americans will be the famous and inimitable Harry Lawnsdale, whose reputation in the role of Abraham Lincoln is nation-wide. Mr. Lawnsdale was formerly of the Selig forces, was with Nat Goodwin for a number of years

Scene from the American Film "The Weaker Brother," a Split Reel Subject. The Other Half is "Fifty Mile Auto Contest," June 17.

and is known for his remarkable resemblance to the great president. David Fischer plays Jefferson Davis Mr. Fischer is a splendid type, closely resembles Jefferson Davis, and will make a sensation, it is predicted, in that role. C. E. Gould, of comic opera fame, was cast for General Winfield Scott. Miss Barber plays Sarah Taylor, daughter of the then Col. Zachary Taylor, while Nell Morgan plays Elizabeth Taylor, the younger sister. George Cole, well known for his excellent work in "Paid in Full," "Man of the Hour" and "The Penalty," handles the difficult role of Zachary Taylor.

In Jos. I. Sullivan the American possess a producer of reputation and wide experience. Mr. Sullivan will be remembered as having been the leading man at the Bush Temple, Chicago, for three seasons, Thanhouser, of Milwaukee, two years, Dearborn stock, Chicago, Boyle stock, Nashville, etc.

Amid the hustle and bustle of arranging for this big two-reel subject, entitled "The Fall of Blackhawk," the American Film Manufacturing Company moved its offices from the bank floor to the fifth floor of the Ashland Block, Chicago. The new offices are beautifully appointed with a series of private offices for officials and a large ante-room.

"The Fall of Blackhawk" occurred in 1832. He surrendered to Col. Zachary Taylor after a fierce guerilla war-fare extending over a period of two years. In presenting this great subject to the American public, the American Company has felt called upon to adhere to the best reference books for historical data of those strenuous times.

The subject will create a sensation for many reasons. Not only do the great personalities of Abraham Lincoln, Jefferson Davis, Zachary Taylor and General Winfield Scott stand out as great features to advertise, but also the picture has been prepared with an eye to portraying some of those spectacular bits of work which go to make a film memorable.

There is the signing of the treaty of July 15, 1830, by which the Fox and Sac tribes relinquish all claim to lands east of the Mississippi. There follows the scenes of the white settlers arriving north of the Rock River, their quarrels with the indians and Blackhawk's decision to fight. Then comes the enlistment of troops, in which Harry Lawnsdale, impersonator of Lincoln, gathers together a handful of men and joins Scott's command.

What follows shows the days of suffering in the long march to Ft. Crawford, Wis., and it is during this journey that Lincoln gains his first fame as a wrestler.

Blackhawk, hearing that Scott is on his way, decides to surrender, and many old Wisconsin settlers repeat the incidents their fathers recited of how Blackhawk, after sending his four Indians with a peace message to Scott, waged unrelenting war when he heard that his

four Indians had been ruthlessly shot down by drunken rangers.

Those historic scenes around Ft. Crawford are reproduced as accurately as possible. The St. Louis home of Col. Zachary Taylor and his two daughters and their sudden decision to go through the Indian infested country to their father, are made a part of this subject. The capture of Sarah Taylor by the Indians, her thrilling rescue by Jefferson Davis and her sister Elizabeth who does a most remarkable lassoeing feat from the limb of a tree in a critical moment when death faces her sister, are all "thrillers."

Cines and Eclipse Releases

George Kleine's Cines players are shown in the release of Tuesday, June 11, in a very unusual war drama called a Soldier's Heart, which is based on what is said to be a true incident of the Italian-Turkish war. It is a photoplay with a keen human heart interest involving a little Arab girl whose parents fell in the attack by the Italian Army on their little village in Tripoli, and a young Italian soldier of such tender heart that he cannot see the child, bereaved of her parents, suffer, and who, in order to protect and care for the little waif, risks the displeasure of his colonel and violates army regulations. She soon becomes the pet of the regiment and the idol of all the soldiers.

A short scenic is added to complete the reel and the subject chosen is very appropriate as it describes scenes in Italy of Messina as it is today. Everyone will recall the terrible catastrophe that occurred when that picturesque city was destroyed and partially buried under an avalanche of boiling lava when Mt. Pelee poured forth its devastating rain of fire and ashes. It is a remarkable series of scenes.

The Wednesday, June 12, Eclipse is a three-subject reel containing a capital farce-comedy full of highly amusing accidents which should evoke many laughs. "Percy's First Camera" is the title and that in itself will suggest the possibilities for amusing entertainment which an awkward amateur might create in snapping views and developing his plates. On the same reel is an industrial subject which shows the process of "Making Silk Hats," an instructive as well as interesting film; taking us through one of the leading manufactories of London, England, and showing us the various operations from raw product to the finished, shiny silk beavers as turned out with the utmost care by expert workmen. To complete the reel a short scenic has been added showing views "Through Saskatchewan" on the Canadian Northern Railway. This beautiful and fertile valley, in the southwestern part of Canada, is one of the most wonderful grain-producing sections on this continent, if not in the world.

The Saturday Cines, June 15, contains two subjects on the reel, a rippling comedy and a beautifully colored scenic. "Leah, the Telephone Girl" shows this popular Cines comedienne in a new role as a switchboard operator, where she succeeds, by her laxity in so enraging the Colonel that he secures her discharge, and then has a change of heart. The scenic, "Venice, Italy," completes the reel and shows with beautifully colored

Scene from the Kleine-Eclipse Film "The Music Hall Singer." June 26.

Scene from Selig's "The Vision Beautiful," adapted from Longfellow. June 13.

views the interesting sights on the lagoons, Grand Canal, the many historic bridges, St. Mark's square and a number of palaces; street scenes and natives.

In order that the names of the popular players of the Cines stock company may become more familiar to the picture theater goers, excellent photographs have been prepared, designed for lobby display. These will, no doubt, prove a welcome addition to the publicity plans of exhibitors all over the country.

Selig's Greatest Animal Picture

The Selig Polyscope Company has announced its intention of releasing, sometime in the very near future, "Kings of the Forest," which is without a doubt the most daring and elaborate wild animal picture ever produced by the company. The story deals with the wanderings of a lost child through the jungle country. In producing this picture the Selig Company used practically every animal it owns. Every facility of the vast Selig animal farm was turned over to the producing department of the Los Angeles studio and W. N. Selig gave out word that no expense was to be spared in making this picture as thrilling and elaborate as possible. Exhibitors throughout the country have been looking forward to the release date of "Kings of the Forest" with much interest.

The energies of the Selig Polyscope Company's Pacific Coast studios are now directed toward the production of what promises to be one of the most elaborate and dramatic spectacular features ever released by the house of Selig. It is understood upon good authority that the production, when completed, will be more than one reel in length and the Selig people modestly say that it will be known as their classic masterpiece.

The Selig Company has been busily engaged recently in the production of several elaborate single-reel war pictures. Famous incidents during the Spanish-American war have been produced with realistic fidelity in the present series. The battle of San Juan will be among the first released. "Baby Betty," the first of the series, will be released on June 27.

The company will soon release a dramatic one-reel feature, written and produced by Miss Kathlyn Williams, the popular Selig leading woman. It is called "The Dancing Girl."

One of the companies of Selig players working from the Los Angeles studios was delightfully entertained at luncheon May 13, by Manager D. M. Linnard of the Hotel Maryland, Pasadena. In the course of a photoplay, based on one of the great international polo matches, for which Pasadena is famous, it became necessary for Director Campbell to use the facade and grounds of a fashionable hostelry. As the Maryland is one of the world-famous hotels of the winter resort community, which is known as "the richest suburb in America," Mr. Linnard was approached by Manager McGee of Selig's Pacific Coast branch on the subject

of allowing the players to enact scenes at the very seat of Pasadena's social activities.

Mr. Linnard not only extended the privilege, but invited the entire company to luncheon, provided the members with handsome suites of rooms in which to "make up" during the two days' work, and put the entire corps of hotel servants at the director's disposal for use in scenes. This incident gives an idea of the courtesy with which the higher class moving picture producers are received everywhere in Southern California.

Manager James L. McGee of the Selig plant at Los Angeles spent the last week of April in San Francisco making final arrangements for a spectacular three-reel production shortly to be put on by the Western forces. This production of one of the most widely known melodramas of modern times will require the entire strength of the three Los Angeles companies and hundreds of extras. A tremendous outlay of special costumes will be necessary and a full-rigged ship will be chartered on which to make shipboard scenes on the open ocean outside the Golden Gate. Colin Campbell will direct.

The Selig Polyscope Company has prepared an unusually artistic set of photographs of popular Selig players. These are not reproductions, but are original contact prints made direct from artistic retouched negatives by Sykes of Chicago, and Estep & Kirkpatrick of Los Angeles.

A convention of exhibitors of the state of New York is to be held in New York City June 19.

The "Martin Chuzzlewit" Cast

The cast of characters in "Martin Chuzzlewit," which will be released by the Edison Co., June 10, is as follows:

Martin Chuzzlewit, the elder.....William West
Young Martin Chuzzlewit, his grandson.....George Lessey
Mary, his ward.....Bessie Learn
Mr. Pecksniff, an architect and relative of Chuzzlewit....
..... Charles Ogle
Charity } His daughters..... { Elizabeth Miller
Mercy } { Mary Fuller
Tom Pinch, Pecksniff's faithful servitor.....Harold Shaw
Ruth, his sister.....Bliss Milford
Montague Tigg, afterwards Mr. Montague, president of the
Anglo-Bengelec Insurance Company....Marc Macdermott
Anthony Chuzzlewit, old Martin's brother....John Sturgeon
Jonas, his son.....Guy Hedlund
Chuffey, his clerk.....Edward Boulden
Mrs. Lupin, landlady of the Blue Dragon Inn..Marion Brooks
Mark Tapley, of the Blue Dragon.....Bigelow Cooper
John Westlock, a former pupil of Pecksniff..Frank Sylvester
Fips, a solicitor.....Robert Brower
Nadgett, detective employed by Montague...J. Charles Haydon

Chuzzlewit's Relatives, Immigrants to America, Constables, Etc.

Scene from Selig's "The Professor's Wooing," a Story of Beautiful Catalina Island. June 17.

Thanhouser Activities

Edwin Thanhouser recently stated that in an answer to a circular letter mailed by him to every independent exhibitor in this country he received over 200 replies a day from exhibitors stating that they had built up a good patronage on Thanhouser films and would insist on getting them from their exchanges. Mr. Thanhouser's reply was to the effect that if any exchange was unable or unwilling to furnish Thanhouser films that arrangements would be made to establish an exchange to take care of them.

In rearranging the Thanhouser producing forces George Nichols resigned from this company. Mr. Nichols is a valuable man and will undoubtedly be able to make connections with a good company very soon. He carries the best wishes of the company.

The Thanhouser Company has enlarged its developing rooms and is prepared to take excellent care of the increased business an additional reel per week will bring.

Thanhouser has employed a new director which now gives the company three and it intends to produce three reels a week shortly. A big historic subject is promised for the very near future. The company now has three stages and enough company to produce three excellent reels per week.

W. N. Selig Acquires a Mansion

A notable Chicago residence deal was closed in the purchase by William N. Selig, president of the Selig Polyscope Company, from the estate of Mrs. Carrie A. Vilas of the property at 2340 Lake View avenue for $52,500 cash. The lot fronts 98 feet, with an average depth of about 200 feet, and the house is a handsome three-story and basement cut stone front structure containing about twenty rooms. After extensive alterations in the building, Mr. Selig will occupy it as his residence. The deal was negotiated by Cremin & O'Connor.

An American consul in Russia reports that a business man in his district desires to obtain the sole agency, covering the territory of Siberia and Northern Manchuria, for American moving picture films. His idea is to introduce the films by means of establishing a film exchange, and with that end in view would be pleased to receive catalogues and enter into correspondence with American manufacturers of this article as to terms and conditions. —Bureau of Manufactures, Washington, D. C., file No. 8896.

An American consul in a Mediterranean country reports that a merchant in his district desires to represent American cinematograph firms. It is stated that a good business is carried on in imported films, as the moving-picture shows are some of the chief amusements. Correspondence may be in English, and full particulars should be sent as soon as possible. Bureau of Manufactures, Washington, D. C., file No. 8868.

In Alameda, Cal., the East End Improvement Club and the Lincoln School Mothers' Club have presented a motion picture projection machine to the Lincoln school.

Among the Picture Theaters

PERSONAL NOTES.

If there is another film man—a real vigorous, short-armed, short-legged—or what matters it what length his limbs? I say, if there is another film man anywhere who studied for the priesthood, will he please raise his hand or his foot, or even his voice? Not that studying for the priesthood isn't an all right sort of thing to study—dear me, no; but the drift from there to film making is rather an extraordinary cruise, I'm thinking.

But if you put in a whole year as a criminal investigator—now that's more nearly like it—and followed it up with another year as office manager of a private detective bureau, why, you get the connection without so much eye-batting and forehead wrinkling. Somehow the Patents Company stalks in upon such an occupation, and possibly there are others.

Well, anyway, Charles Simone—you pronounce that last name nearly like "some money"—did both the things, or, rather, the three things, that have been mentioned. And he did more than that. Listen! Charley Simone—and he is the shortest film man of the lot—meaning inches—was born in Castellana, Italy, November 18, 1874. He was educated over there, winning the highest honors in every class and finishing the public schools at the age of eleven. The first year out of school he studied under the direction of Prof. Nicholas Rossi, a writer of note among his people. By now, young Simone tried teaching on his own account, devoting his energies to private and night classes. It was right here that he put in a year and a half in a seminary with an ambition for the ministry. At the mature though tender age of fourteen and a half Simone came to America to subdue the red men. New York looked so good to him that he brought his adventures to a close by breaking into school for six months. At fifteen he engaged as clerk in a private bank and organized dramatic clubs. He resided in Jersey, and among the more conspicuous of his clubs were the "Edwin Booth," Newark; the "Eleonoro Duse," New York, and the "Manhattan," Brooklyn. He also found time to write monologues and vaudeville sketches. Quitting the banking business, he toured the United States, Cuba and Venezuela with various repertoire companies, playing juvenile, light comedy and character parts. When he got back to Gotham he married Miss Rosabel Metzler on the day he was nineteen years and eleven months of age. And in his own words he says: "Then I buckled down to serious work." How many of us do—when we get married! But Simone made a regular business of his seriousness. He's got five boys and a girl! Talk about your hustlers. But his real work took the form of reportorial work on New Jersey daily newspapers, which engaged his time for two years. He then tackled advertising, associating himself with a large New York piano house as office and advertising manager. He managed the business of the United States Encyclopaedia for a year before he became private secretary to Wm. M. Clemens, the American Lombroso. The following two years found him sleuthing—fitting himself for the film game—but he got enough and went back to office managing and stalling off the ad men. This time it was coal. What's the use advertising coal? Wasn't it like films? Didn't folks have to have it? Surest thing, you know. Which now brings Charley Simone to his present job with David Horsley—he of the Nestor films. If that isn't a hot-foot, zig-zag career for a little fellow only about so high, I'm a poor guesser. Simone's hobby is theatricals. He

coaches histrionic talent and stages plays and passes on scenarios and runs the Nestor plant when Horsley is out West. And he does all these things famously well. He says his biggest success is yet to come. That will be when he gets Horsley's power of attorney to sign the checks, maybe! At any rate, Simone is a good little scout—and he has to be, for his boys would put it all over him if he wasn't.

Carl L. Gregory, formerly of the Thanhouser Company, is president of the Feature Film Manufacturing Company, recently incorporated by himself at City Island, N. Y.

C. Lang Cobb, sales manager for the Reliance Company, New York, recently completed a successful business trip for the company extending from New York to the Pacific Coast and embracing some 10,000 miles of travel.

Hal Reid, the well-known actor and director, has resigned his position with the Reliance Company and, it is stated, will enter the manufacturing field on his own account.

G. P. Hamilton, general manager of the St. Louis Motion Picture Company, recently paid Chicago a flying visit.

K. W. Linn called at MOTOGRAPHY's office en route from the Pacific Coast to New York, whence he set sail June 1 for Europe, going direct to Hamburg. He will return to the United States at the close of September. Until that time his address will be Rhaunen, Bez, Trier, Germany.

George W. Peters, expert camera man, formerly with the Selig Polyscope Company, has joined the forces of the American Film Manufacturing Company.

John Bunny, the well-known comedian of the Vitagraph Company, in company with Lawrence Trimble and Arthur Ross, recently sailed for England, where it is the purpose to take pictures of some real scenes to be used in connection with Dickens' works. Mr. Bunny will assume the role of Pickwick, while Mr. Trimble and Mr. Ross will direct the work.

George Gebhart, formerly director of the Lux Company at Hollywood, but more recently leading man with the Nestor Company, has joined the Pathe Western Company and will take all the leading Indian parts, for which role he is especially fitted.

Jean Hathaway, formerly character woman with the American Company, has accepted a similar role with the Bison Company.

The Bison Company has secured Harold Lockwood, formerly with the Nestor Company, to assume the parts of leads and heavies with its Western company.

S. L. Rothapfel, formerly of the famous Lyric Theater, Minneapolis, Minn., who resigned that connection a month ago, is in Chicago, preparing to open the Lyric Theater in that city with his "de luxe" system of projection. First night will be Sunday, June 9. It is reported that admission prices will be from 25 cents up. While we fear Mr. Rothapfel has chosen an unfortunate location for his project in Chicago, we welcome him and his perfect projection.

ROLL OF THE STATES.

ALABAMA.

The Tupelo Theater Company has been incorporated at Tupelo with a capital stock of $10,000 by D. W. Robins, R. A. Weaver and others.

ARKANSAS.

Messrs. Marin and Keaton will erect an airdome at Paragould for the season.

The Olympic Theater at Camden has changed hands again, having been purchased by Messrs. W. A. Jackson and J. J. Stanley, who contemplate improving the same.

A new motion picture theater has been opened at Corning under the management of Mack Ward.

Hot Springs' oldest motion picture house, the Lyric, has been taken over by a company with a capital stock of $10,000, at the head of which is Harry H. Hale, present owner of the Lyric. The new company plans many improvements.

H. B. Ingram is preparing to open a picture theater at Conway.

ARIZONA.

A new theater will be erected at Williams at a cost of $20,000.

A new motion picture theater has been opened at Phoenix by Messrs. Marks and Cox.

CALIFORNIA.

C. F. Booth, 125 West Ocean avenue, Long Beach, and J. D. Slemons will erect a motion picture theater in that city.

A new up-to-date motion picture theater has been opened at Escondido by George Emmott. It is located at Grand avenue and Lime street.

Frank K. Mott, mayor of Oakland, is at the head of an enterprise to build a motion picture theater in that city. The building will be ambitious in design and will mean an expenditure of from $12,000 to $15,000. Others connected with the venture are Senator John W. Stetson, J. P. Edoff, Frank J. Edoff and Henry Wieking. It will be located at 1116 Broadway.

The Globe Moving Picture and Advertising Company has been incorporated at Los Angeles with a capital stock of $50,000 by William H. Lynch, E. R. John, William Pigott, D. H. Wagar and P. F. Rice.

The Walker Theater at Los Angeles will undergo extensive improvements and will be opened up about September 1 as an exclusive feature film theater, the admission price being 10, 15 and 25 cents. The name will be changed and all employees will be women. Only the best feature films will be shown and each film or set of films will be given a two weeks' showing. It is the purpose to send these feature films to the different cities with a fully equipped corps of managers, lecturers and operators, thus making each presentation complete. Harry Scott, formerly with Drew & Campbell of Cleveland, O., and Harry Davis of Pittsburg, and more recently New York representative of the Mozart circuit, are representing the enterprise. The corporation is formed of well-known theatrical promoters, who, in connection with the Walker theater, are forming a number of feature film one-night and week stand theaters.

The Globe Amusement Company, inaugurated at Los Angeles for the purpose of conducting a number of high-class vaudeville and motion picture houses, has signed a long lease on a beautiful $50,000 theater to be erected at Pablos Verdes and Sixth street, San Pedro, by Luke Kelley, and will be known as Globe Theater No. 6. This house will be in perfect harmony with the other fifteen houses the company proposes to operate. Globe Theater No. 1, Fifth and Los Angeles, one of the oldest motion picture houses in that city, will be replaced in the fall by a ten-story office building by Chapman Bros., and will have a capacity of 1,400, but the house will still be known as Globe Theater No. 1. Globe Theater No. 2, at Central avenue, near Jefferson, is rapidly nearing completion. This house will have a capacity of 800 and will cost about $35,000. Globe Theater No. 4 is being erected for the company at Eighteenth and Main streets by S. F. Spaulding at a cost of $75,000 and will be completed early in July. H. W. Nixon, general manager of the Globe Amusement Company, has had long experience in the show business. He is rapidly completing contracts for the rest of the houses to complete the circuit, and claims when completed it will be the biggest chain of moving picture theaters on the coast.

The Clune Theater Company has been incorporated at Los Angeles with an authorized capital stock of $2,000,000. The new company takes over the three Clune theaters—the Main street theater, the Broadway theater and the Pasadena theater—together with all film rights and other properties, and it is planned to construct three new theaters. The officers of the company are: President, W. H. Clune, one of the most successful motion picture men in the United States; vice-president, Theodore Newman; secretary, Don W. Carlton; directors, E. L. Leavitt and Anna Brown. Clune's Pasadena theater has a seating capacity of 1,400, and one night each week is occupied by some of the highest class theatrical companies that visit the coast.

The Los Angeles Women's Photo-Play Theater is the name of a new motion picture theater in Los Angeles to be built, owned and managed entirely by women and for women. It is being promoted by Mrs. Hester Grant Giles of the Nestor apartments of that city and the estimated cost is $80,000. The films will be scenic, educational and humorous. Mrs. Giles conceived the idea upon visiting the theaters and observing the class of films that were shown. They appealed to her as being very crude. She felt that in a theater owned and managed by and for women subjects of special interest to the feminine sex could be shown.

CANADA.

G. W. Bedell, 130 Adelaide street, Toronto, has been granted permission to erect a motion picture theater at the northwest corner of Elcor street and St. Clarens avenue, that city, at a cost of $25,000.

COLORADO.

The Lyric motion picture theater, formerly owned by Theron Crowninshield at Colorado Springs, has been purchased by Hugh King of Quincy, Ill., for a consideration of $8,000.

A new theater is being erected at Ellsworth and Broadway, Denver, by H. H. Quine at a cost of $50,000.

G. H. Graves, of the Moore-Graves Amusement Company of Denver, will erect a motion picture theater at Colorado Springs, which will be ready for business about the middle of July.

Samuel L. Baxter of Denver, owner of the Isis Theater in that city, is erecting a new motion picture theater on Curtis street, between Seventeenth and Eighteenth, that city, at a cost of $100,000.

The "La Junta" is the name of a new theater to be erected at La Junta.

CONNECTICUT.

Poli's Theater is a new motion picture theater recently opened to the public at Bridgeport by S. Z. Poli. Mr. Poli is also building a picture house at New Haven on the site of his Bijou Theater, which was destroyed by fire, which will have a capacity of 2,500. He has completed plans for the erection of about twenty-five theaters within the next two years at an estimated cost of over a million dollars.

The Century motion picture theater has been opened at East Hartford by the Century Amusement Company. The promoters of the enterprise are Philip Dunn and Erastus C. Geer, Jr., who are connected with the Western Film Exchange of New York City.

C. Ferrucci, 78 St. John street, New Haven, is erecting a new motion picture theater, the Orpheum, in that city. It will have a seating capacity of 400.

The Star motion picture theater at Putnam has been purchased by H. H. Durgin of the Spa Theater of that place.

The Circle Theater of Hartford has been purchased by Lee McPhartland.

The Bijou motion picture theater of New Britain has changed hands three times in the last six months, having just been purchased by Miller Bros

DELAWARE.

A new theater will be erected at 617 North Duncan place, Wilmington, by Nicholas Ertel.

The Bijou Amusement Company of Wilmington has been incorporated with a capital stock of $25,000 to conduct moving picture theaters and other places of amusement.

DISTRICT OF COLUMBIA.

The Circle Theater Company of Washington, which operates the Circle Theater, 2103 Pennsylvania avenue, is planning to improve and enlarge the theater, making it one of the most up-to-date, exclusive picture houses in the city, and will mean the expenditure of about $15,000. William P. Herbst is president of the company.

The Chester Avenue Amusement Company will erect a motion picture theater at Fifty-fifth street and Chester avenue, Washington.

FLORIDA.

The "Prince" is a handsome new motion picture theater erected at Main and Forsyth streets, Jacksonville. The front will be unusually attractive. It will consist of illuminated columns with white Italian marble trimmings. The house will be well ventilated by four immense exhaust fans and twelve oscillating fans, and it will be lighted by the indirect lighting system. It will be operated by the United Amusement Company under the management of O. P. Hall. A ladies' waiting room with a maid in attendance will be a feature. Music will be furnished by a six-piece orchestra.

GEORGIA.

Thirty thousand dollars a year for a period of six years is the lease contract signed by the management of the American Theater. 100 Whitehall street, Atlanta. The American under its present management is clean and wholesome and deserves the splendid support it is receiving.

ILLINOIS.

The Empress Theater Company, Chicago, has been incorporated with a capital stock of $150,000 to operate a theater. The incorporators are Edward B. Healy, Frank H. Graham and Wilbur C. Benton.

A new theater will be erected at 123 North Nineteenth avenue, Melrose Park, by Messrs. Schnerts, who are now operating the Melrose Park theater. It will be built for a moving picture theater, but will also have stage room for dramatic productions; seating capacity, 500.

The Dreamland Theater at Streator has been purchased by George Close.

The Hippodrome is a new theater recently opened at Murphysboro. It is located at Ninth and North streets and will be devoted to motion pictures, vaudeville and stock companies.

The Cuneo Amusement Company, Chicago, has been incorporated with a capital stock of $30,000 to operate theaters and other places of amusement. The incorporators are Frank Cuneo and Lawrence Cuneo.

The Adascope Company, Chicago, has been incorporated with a capital stock of $2,500 to manufacture and deal in stereopticons and other devices. The incorporators are Rudolph Mueller, James P. Coughlin and J. K. Hortubise.

A new motion picture theater has been opened in the Saul building at Lewiston by Ezra Beers of Ipava.

The Feature Film Sales Company, Ltd., Chicago, has been incorporated with a capital stock of $200 by D. I. Graham, M. E. Visen and J. E. Letts.

Messrs. Reece and Oppleman, proprietors of the Majestic Theater at Rushville, have opened another theater at Gillespie, which will be under the management of Mr. Oppleman.

D. C. McClellan has added to his chain of theaters in Pekin by leasing the Standard for the season dating from June 1.

A motion picture theater will be erected at 636 Hampshire street, Quincy, by A. Urban & Sons, having a seating capacity of 800.

The Majestic Theater at Peoria will be conducted as a motion picture house during the summer.

The Parkway Theater, North Clark street and Diversey boulevard, Chicago, erected about a year ago for a vaudeville house, has been leased for a term of ten years by F. E. Neilsen, formerly owner of the Kimball, who has made extensive improvements and reopened it as a moving picture house; admission, 10 cents. The improvements include an indirect lighting system. A $3,000 pipe organ has been purchased and in addition there will be a grand piano.

The Ole Theater at Mt. Carroll has been purchased by James F. McCray, who will conduct it as a motion picture house.

The La Salle Enterprise Company, La Salle, has been incorporated with a capital stock of $25,000 by I. Guthman, F. W. Koenig and M. N. Goldsmith.

The Warrington Theater, Oak Park, has been purchased by George H. Hines, owner of the Lydia Theater of Chicago, who will present de luxe pictures during the summer at 10 cents admission. The Lydia will also run through the summer under the management of Mrs. Hines, while the Warrington will be under the management of Mr. Hines.

The directors of the Illinois Theater Company of Urbana have decided to conduct the Illinois Theater of that city as a moving picture house during the summer, returning to vaudeville in the fall. On April 28 this theater gave a benefit performance for the survivors of the ill-fated Titanic.

The Majestic, a vaudeville house of Springfield, will be devoted to pictures during the summer.

The Family Theater, having a capacity of 250, has been opened at Princeton by William Ater.

The Glickman Amusement Company, Chicago, has been incorporated with a capital stock of $25,000 by Adolph D. Weiner, Henry S. Goldsmith and Theodore C. Mayer.

The Grant motion picture theater of Morris has been purchased by J. K. O'Neill of Chicago.

Peter Berkins, 1518 West Sixty-third street, Chicago, will erect a motion picture theater.

The Electric Theater, Manteno, has been purchased by Richard McFadden.

The Elks' Theater of Taylorville was recently reopened under the management of the Elks' Quartet, which consists of Messrs. Frank Hunter, Clifford Hunter, William Daigh and Lyle Thompson. It will be conducted as a motion picture house during the summer.

Messrs. Kaufman and Weiss have leaased the opera house at Coal City and will conduct the same as a first-class moving picture and vaudeville house.

The Lincoln-Belmont Theater Company, Chicago, has been incorporated with a capital stock of $150,000 by John P. Price, Martin C. Anderson and Theodore Johnson.

Messrs. Peterson and King will open a vaudeville and picture theater in Sycamore. The firm will also open an airdome in Genoa. They have had several years' experience in the business.

A stock company of which E. G. Newman, proprietor of the Majestic of La Salle is in charge, has been formed in that city with a capital stock of $25,000, and will erect a new vaudeville and motion picture house some time during the summer which will have a seating capacity of between 1,000 and 1,200.

C. O. Omen will erect a new motion picture theater on South Main street, Princeton.

O. M. Otloe of Pana has purchased the Star Theater at Assumption and the same will be operated in connection with the Otloe by H. C. Taylor.

The Theater De Luxe, 231 South Adams street, Peoria, has been reopened under the management of Walter W. Whitney.

IOWA.

E. M. Byers, proprietor of the Princess Theater at Cedar Rapids, will erect another motion picture house in that city.

A new motion picture theater will be erected at Estherville by F. H. Graaf.

Messrs. J. P. Broderson and J. P. Galuska, proprietors of the Pastime moving picture theater at Maquoketa, and M. Rice, owner of the Grand opera house, will erect an airdome having a seating capacity of 1,000.

"The Olympic" is the name of the new motion picture theater recently opened at South Third street and Twelfth avenue, Cedar Rapids.

A motion picture theater will be erected at Clarion by Jesse Stewart.

The Electric Theater at Rockwell City has been purchased by F. G. Winston, who will make improvements.

The Temple Grand Theater of Creston has been taken over by C. C. Struble.

W. F. Smith, who has operated the Family Theater in Clarion very successfully for several years, is planning to erect a new house, the same to be ready to open to the public about September 1. No effort will be spared to provide for the comfort of the patrons and the house will be thoroughly equipped.

The Wonderland Theater at Cherokee has been purchased by C. E. White and W. Guyon.

The Magic Theater at Fort Dodge is now devoted exclusively to moving pictures.

R. E. Benton of Albia has leased the Auditorium at Hedrick and will open the same as a motion picture theater.

The Bijou Electric Theater at Muscatine has been purchased by Clay Kneese, who has completely overhauled and improved it.

E. M. Henle will open a motion picture house in Clinton which will have a seating capacity of 1,000.

The Idle Hour Theater at Vermillion has been purchased by E. M. Valentine of Yankton.

The Electric Theater at Conrad, conducted by Murl Moore, has been purchased by Guy Fitzgerald.

F. W. Young of Cedar Rapids has contracted to lease a new motion picture theater now in course of construction at Fort Dodge, and will open same to the public about August 1. No name has yet been selected, but it is the idea to select the name by a contest.

INDIANA.

A new motion picture theater will be erected at Bluffton in the near future by Ed Foust.

Plans have been prepared by Benjamin Herman of Marion for a $50,000 vaudeville and motion picture theater to be erected in that city by the Independent Theatrical Company of Chicago, recently organized.

The Central Amusement Company, which is composed of B. B. Barton, Jesse M. Barton and Charles M. Olson, is erecting the Lyric, a new $75,000 moving picture and vaudeville theater, at 133 North Illinois street, Indianapolis, and expect to have the same ready to open by August 1. The theater is elaborately furnished and no expense has been spared to provide for the comfort and pleasure of its patrons.

A new motion picture theater will be opened at Rochester by F. S. Hubbard of Peru.

KANSAS.

The Victor Film Advertising Company has been organized at Topeka by C. H. Strawn, R. C. Strawn, H. P. Childs and O. W. Lamb. Motion pictures were taken of the various business and manufacturing concerns.

Messrs. Smith and Hartle have opened the Star Dome, a motion picture house, at Lyons.

A new motion picture theater was recently opened at Cottonwood Falls by M. K. Harman.

The Aurora moving picture theater, 814 Kansas avenue, Topeka, has been purchased by Mrs. Maude Gandy and son.

W. M. Harwood of Hutchinson will conduct a moving picture theater at Kinsley.

KENTUCKY.

The New Orpheum theater has been opened at the corner of Main and Limestone streets, Lexington, under the management of J. M. Stanger, Jr.

"The Band" was the name chosen from the list of 1,000 names submitted to the Third Kentucky Band for the moving picture theater recently opened in Hopkinsville by that concern.

The Kentucky Feature Film Company has been formed in Louisville by the consolidation of the Princess Amusement Company and the Broadway Amusement Company. The new company's headquarters will be in the Hopkins Theater Building and Irvin Simon of the Princess company will direct the affairs of the company.

Plans are being prepared for a new motion picture theater to be erected at Owensboro by George A. Bleich which will have a seating capacity of 800.

The Sun theater, a motion picture and vaudeville house was recently opened at Eighteenth and Gallagher streets, Louisville, by the Pastime Amusement Company.

The Pineville Amusement Company of Pineville has awarded the contract for a handsome new moving picture theater to be erected at a cost of $25,000; work to be completed as soon as possible. When completed it will be one of the finest theaters in that section of the state.

The Alamo is the name of an attractive new motion picture house opened at Paris by the Colonial Amusement Company of Lexington.

The New Frankfort theater is the name of a model new motion picture house recently opened at Frankfort by E. K. Lyons of Lexington.

The "Hipp" theater at Jackson has been purchased by Sewell B. Williams and Frank Osborn who will conduct it as a first class motion picture house.

The "Gem" is a high grade motion picture house opened at Maysville by Sherman Arn and is one of the handsomest houses of its kind in that section.

The People's theater at Owensboro has been leased by A. D. Rogers and Ernest Foote who will conduct it as a moving picture and vaudeville house during the summer.

The Bijou Dream, one of Louisville's prettiest and best known picture houses, has been purchased by the Princess Amusement Company who will continue to operate the same.

H. H. Phillips and Woodson Moss of Winchester, owners of the Lyric, are planning to open another motion picture theater in that city which will be one of the handsomest motion picture theaters in the central part of the state when completed.

LOUISIANA.

The Victory theater at Lutcher has been overhauled and remodeled, which has increased its capacity and added to its attractiveness.

MARYLAND.

The Northern Exhibition Company has been granted permission to erect a motion picture theater at 1627 Harford avenue, Baltimore, at a cost of $7,000.

The property at 619 Duncan place, Baltimore, has been purchased by Nicholas P. Burns, and Charles Bender who will erect a motion picture theater thereon.

The Home Amusement Company will erect a motion picture theater at Sparrow's Point, Baltimore, at a cost of $20,000.

MASSACHUSETTS.

A new motion picture house has been opened at Whitinsville by Messrs. Walker Brothers which has a seating capacity of nearly 1,000.

J. H. Finn, manager of the Walnut theater at Woburn, has purchased Lyceum hall in that place and will operate both houses.

The St. Jean Baptist Society of Webster will convert its convention hall into a motion picture theater.

The Lawler Bros. Theater Company has been incorporated at Greenfield with a capital stock of $25,000 by Nicholas J. Lawler and Thomas L. Lawler.

The Beacon Theater Company, which operates the Beacon theater in Boston, has leased the old home of the Boston Daily Herald, 255 Washington street, Boston, for a period of thirty years and will convert it into one of the most up-to-date motion picture theaters in the country.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

KLEINE

Cines and Urban-Eclipse Films

put the quality touch to the progressive theatre man's program.

July and August are going to be great months for the showmen who look out for our releases, some of which may be noted on this page.

CINES
JULY 16, 1912

Disowned

The story of a girl who marries against her parents' wishes, attempts self-destruction, but is finally restored to her parents. A well acted drama.

ECLIPSE
JULY 17, 1912

The Grandmother

A tender story of a child's innocence and a grandmother's love. The film will soften a heart of stone.

CINES
JULY 27, 1912

Too Many Sweethearts

George tries to rush all the girls, but fails to make good. A splendid comedy, well acted. Book it and give your patrons a good laugh.

CINES
JULY 30, 1912

The Inventor's Secret

A powerful, gripping drama, depicting the undoing of a genius, by the wiles of a fascinating vampire.

Ask your exchange for the special three-sheet posters!

CINES
August 10, 1912

The Danger Line

A strong society drama, telling of a charming wife, who falls into temptation through her husband's neglect, but is saved by the intervention of her brother.

Special three-sheet posters for this subject.

THE TRUTH ABOUT THE INDEPENDENT SITUATION

When the Sales Company was formed in the La Salle Hotel at Chicago it was said by a disinterested party that the Independent movement could not progress and maintain its equilibrium if the "disturbing element" of the Patents Company were to hold the balance of power in the new Independent organization.

Strange to say, not many weeks passed before certain manufacturers found themselves facing a situation which if left to expand would grant to a favored few almost absolute control of the Independent field.

THE ASSOCIATED INDEPENDENT FILM MANUFACTURERS was then formed and fifteen brands were delivered from the Sales Company until its o..cers began to see the light of day and hastened to change the policy of the Company.

The two warring factions were united after this was brought about and everything moved along more or less serene for a year.

Under the protecting cloak of the Sales Company men who knew little or nothing about film making were able to market any old kind of picture by simply owning a few film exchanges. Other manufacturers also owned exchanges, therefore an ARTIFICIAL MARKET was created which was not of the exhibitors' making.

There were a number of manufacturers who had had no exchange interests and no matter how badly an exhibitor wanted their brands of film he was unable to get them through the MANUFACTURER-OWNED EXCHANGE.

To illustrate this point, a certain maker of films who devoted most of his time to exchanges and "politics" forced the sale of his product to the extent of nearly $8,000 weekly, even though he often admitted his films were ordinary.

When the Mutual Film Corporation entered the field, realizing the necessity for exchanges that would serve the exhibitor with the goods he wanted, certain exchanges became alarmed and hurried steps were taken to throttle this new organization.

A meeting of exchanges was therefore held in Pittsburgh another in New York, an at one of these meetings—none of which was attended by manufacturers who had no exchanges, NO INVITATION BEING EXTENDED—it was agreed to appoint THREE MEN TO BUY ALL THE FILMS USED IN UPWARD OF THIRTY-FIVE EXCHANGES.

By this method each exchange manager lost his identity as a buyer.

Right on the heels of this move came the first definite assault on the Mutual exchange interests.

Forty-three cancellations were hurled at the Thanhouser Company within one week. Every exchange in the agreement deliberately deprived his customers of a popular brand of films just because a stockholder in the Mutal was also interested in the Thanhouser Company.

The next move was made by the Universal Film Manufacturing Company, a corporation formed by Messrs. Baumann, Powers, Swanson, Laemmle and Brulatour, by which the Imp, Bison, Rex and Powers were amalgamated into one operating company, the owners taking stock and bonds for their equipment and good will

The Universal plan was considered a good one by those interested because it was claimed films could be made CHEAPER and profits would be INCREASED.

BRULATOUR invested his CASH in the scheme.

All this was "pulled" while the other manufacturers were "out of the room," so to speak.

Then it was decided to deal with the "outside fellers" and emissaries were sent out to interview them one at a time.

The Eclair and Gaumont companies were the only ones in the East actually owning real estate and buildings, all other plants being operated in lofts and other "rented" locations. Solax also owned property and was erecting a fine studio.

To these three concerns the first offers were made to "come in." Mind you, the exchanges had been led to believe that the Universal was already able to furnish a program, as they knew nothing of the inside workings of the Universal.

Eclair was offered a sale of thirty copies of each release, providing a price lower than ten cents a foot would be given.

This offer presented a peculiar phase of the situation.

Evidently the Universal intended to resell Eclair films to the exchange at a profit to themselves, thus forcing the maker to reduce negative costs to the detriment of the product.

Great Northern was offered a heavy sale at a low price per foot.

Gaumont and Solax were similarly approached with the Eclair.

In other words the Universal preferred not to invite others to participate in their amalgamation on an equal basis at this stage of the game, but felt they were strongly entrenched with the exchanges and could force the "outsiders" to accept the terms offered or go without a market.

Meanwhile the Universal declared their intention of withdrawing from the Sales Company.

The same day six "outside" manufacturers formed the Prudential Film Company for mutual protection. Two days later four others became interested and the Film Supply Company of America was created as an active distribuitng agency.

Telegrams were sent to all exchanges announcing the new program just two days prior to a meeting called by the Universal, at which time contracts were to be signed by the "outside" exchanges for the Universal "program," as it was supposed to be.

It is needless to say the Chicago meeting was anything but a harmonious one, and the exchanges did not sign when they learned the true state of affairs.

The Film Supply Company began doing business without loss of time. Then the Universal sprung the famous "Sales Company being demoralized" bluff. Immediately the Sales Company became valuable to the Universal and announcements were made that certain manufacturers had withdrawn from the Sales Company and that those remaining would continue to protect its interests.

These announcements were made under the name of the Sales Company.

About this time the value of Eclair and Solax began to increase by leaps and bounds.

The Universal was sadly short of releases as well as plants. Eclair jumped from $125,000 to nearly a half-million in less than two weeks, for now the Universal were willing to deal with the Eclair on an equal basis.

Finally the president of the Eclair Company embarked for France, presumably with two contracts in his pockets, both subject to ratification of the Board of Directors in Paris.

Meanwhile the Universal, being in the majority, kept the Sales Company alive until the Eclair could act, and Eclair films were neutral until a cable was received declaring the Universal contract ratified. The Film Supply Company thus lost Eclair to the opposition and "Sales Company" announcements immediately ceased, the Universal Company taking its place as was originally intended.

The Film Supply Company is purely a clearing house for the product of those who market films through it. It does not manufacture or rent films. It insists on keeping competition for better quality alive. It intends to fight junk and keep it off the market if possible.

The Film Supply Company intends to safeguard its market by satisfying the exhibitor first of all .

To do this each manufacturer must improve his films in story, action, settings and photography so that theatregoers will easily distinguish Film Supply Company brands from others and patronize theatres where they are shown.

This will ultimately INCREASE orders through a natural demand.

Exchanges who lease films from the Film Supply Company are thoroughly investigated before an agency is granted.

The exchange must buy a sufficient number of releases weekly to supply a complete program to the average high-class theatre. The applicant must bear a good reputation and prove his ability to operate a rental office properly.

All films are leased to the exchange and not sold.

For each new film received by the exchange an old one must be sent to the Film Supply Company.

This is done to gradually eliminate junk films from the market.

WHAT DO YOU THINK ABOUT IT?

MOTOGRAPHY EVERY OTHER WEEK.

THE casual observer may not notice immediately upon picking up this number of MOTOGRAPHY, that it is different from its predecessors. Of course there is that new, handy list of releases with the spaces for exhibitors' comments, and perhaps one or two other improvements—for it is always proper to inaugurate a new volume with improvements of some sort. But the vital change is more subtle than that, and is most apparent only in the date line. "July 6" is the date of this issue—the first Saturday in July. July 20 will be the date of the next number. In short, MOTOGRAPHY will be issued hereafter *every two weeks*, instead of every month.

No need to tell a film man that his business is founded on a weekly basis. The whole amusement industry is so reckoned. A year in this field is not twelve-months, but fifty-two weeks. So MOTOGRAPHY, the monthly magazine, has been a little of a misfit—not seriously so, of course, but enough so to make it advisable to change it.

Without due consideration of the problem, we might have jumped at the conclusion that the only alternative was a weekly paper. But we may as well confess at the outset that we do not like a weekly, despite the fact that we have a number of excellent contemporaries in that class. Personally we have never had time to read any weekly paper as it should be read. They accumulate unopened on our desk—and we see them in the same condition on the desks of others. Everybody is busy nowadays, and the film man is the busiest of all.

Now, circulation is a mighty fine thing, and with a weekly we might have had an even larger circulation than we have enjoyed as a monthly. But *unopened* circulation is another thing. It has no value whatever to the advertiser—yet he has to pay for it. And editorially, we confess to a decided antipathy to the prospect of doing a lot of work in putting good material onto pages that are never opened and finally fall into the waste basket. And that is just the objection to the weekly paper.

There is no necessity for weekly publication in the motion picture field today. The only thing that happens with seven-day regularity is the release of new films. And every film manufacturer has his releases listed more than two weeks in advance—most of them four to six weeks. So the bi-weekly can give advance release listings just as well as the weekly, and perhaps better. The news feature, when real news does come along, is more apt to be reliably handled at two-week intervals than every week; for we notice that when our weekly contemporaries rush

into print with "the latest," it is generally wrong, or at least indigestible.

We have already remarked that a large proportion of the issues of a weekly paper are never read. This neglected portion will be found in actual practice to be nearly fifty per cent.; which makes the bi-weekly publication just right.

The value of advertising in any publication depends not alone on the numerical circulation, but on the kind of circulation and on the consistency with which the publication is read.

An advertisement in a bi-weekly appearing twenty-six times a year *is read* twenty-six times a year.

An advertisement in a weekly appearing fifty-two times a year is read not to average over twenty-six times a year; but if the advertisement appears only twenty-six times a year (every other number) it is still worse off, for half the readers never see it at all.

An advertisement in every number of a bi-weekly *costs only half as much* as it does in a weekly, has just as many or more readers, and is given more time and thought.

It is not our intention to change the style of Motography materially from the old monthly, because everybody seems to like it as it is. Since we went onto the newsstands of the country their demands for copies have doubled, and doubled again, and then again. The more we print the faster they go, until we cannot keep enough in the office for our files, and our best friends have to ask in vain for a few extra copies.

But that doesn't mean that we are content. To stay at the head of the class we must keep on improving—and that's what we're here for. With the more frequent issues we will have more room for improvements and new ideas. Seven hundred pages a year was the quota of the old monthly. Seems like a lot of space to fill when you look at it that way, doesn't it? But it isn't. We've got a hundred pages of good material in type now that we have never found room to use. Fifteen hundred pages a year will give us a chance to get it out of the print shop and into places where it will be useful.

Another change besides the date line, it will be noticed, is the price per copy. To preserve the old rate of two dollars a year we are making the per copy rate ten cents. So the subscriber gets twice as much reading, delivered to him twice as often, for the old price. And in spite of the prevalence of the fifteen-cent rate for newsstand copies of magazines, we still regard ten cents as the popular price. It represents a single coin, of comparatively insignificant value, which is never missed when it is spent.

As to what we have in mind for future issues of Motography, we are satisfied to let those features speak for themselves as they appear. It is enough to say that it will be all addition—no present department will be subtracted.

CHICAGO HOUSES DENIED LICENSES.

BUILDING Commissioner Ericsson of Chicago has prepared a list of eighty picture theaters which he declares are violating the strict rules of safety in one way or another. These theaters were denied license renewals for July by City Collector Cohen at the request of Mr. Ericsson. The charges are: Failure to provide sufficient exits, failure to mark exits properly, crowding of seats, blockading of exits, reduction of aisle space, insufficient stairway and fire escape width, blockading of aisles, and faults in material used in construction and repairs.

Mr. Ericsson carried his fight before the city council in the effort to get legislation prohibiting theaters above the ground floor. There are eight such theaters on the second floors and one on a third floor in Chicago.

Representatives of the Motion Picture Exhibitors' League were present, and Alderman Frank Klaus presented an order directing the city collector to issue the licenses. This order was passed and the licenses will probably issue, but it is said the fight on upper story theaters will be continued. At present they are within the law.

MOTOR DRIVEN PROJECTORS.

UP to the present time, the principal objections to motor driven projectors have been those raised by the insurance companies and municipal authorities because of the supposed increase in fire hazard, incident to motor stoppage. In view of the many advantages offered by motor drive, it seems strange that the exhibitors and manufacturers have allowed such regulations and restrictions to be passed without an effort on their part to remove the few and simple obstacles that stand in the path of this improvement.

Every exhibitor knows of the many objectionably features of hand "cranking" which are due principally to the involuntary speed variations of the operator, and to the shifting of the machine under his efforts. In hand operation it is only natural that the downward movement of the crank should be made at a higher speed than the upward, as in the former case, the speed is accelerated not only by the muscles of the arm, but by the weight of the body as well, which imparts an irregular and jerky motion to the image on the screen.

This jerking, together with the side-to-side sway, which results directly from an insecure attachment of the machine to the floor, detracts greatly from the natural effect of the pictures and tires the eyes of the spectators. Motor drive, on the contrary, is free from these defects, as a uniform speed is insured with no tendency to accentuate certain parts of the revolution nor to cause the machine to "creep" on an uneven floor.

So far nothing has been said regarding the effect of the motor on the efficiency and convenience of the operator—vital points in a successful show. We have often observed cases where considerable annoyance might have been spared the audience, had the operator both hands free, with his attention concentrated on the screen instead of on the crank.

The fact that the highly inflammable film would be ignited should it remain stationary in the concentrated rays of the arc, is no more an argument against motor drive than against the hand driven type, as carelessness in either case would have the same result; the odds being in favor of the man having both hands in readiness to cut out the light and handle the extinguisher.

In case of trouble with a hand operated machine, the operator is as likely to drop the crank and leave the switch on, as the operator of the power machine would be to leave his motor running. An accident of this kind occurs so suddenly that an easily excited operator would in our opinion have about an equal chance in either case.

While it is true that a hand driven machine automatically requires the continual attention of the operator, it is equally true that he may be present in body rather than in spirit, and while in aminated converse with a friend is just as likely to have the film break and unconsciously grind out a few hundred feet of film onto the floor or onto the lamp as is his brother operator with the motor driven machine. The law can dispense with the motor drive and can make the use of the irregular flickering crank machine compulsory, but it can never make a careless and indifferent operator attend to his business, no matter what equipment is used.

Safeguards can be easily attached to a motor that will make the presence of the operator as essential to the operation of the machine as the crank, should the law be troubled with visions of the attendant forsaking his superheated apartments, but in our opinion such attachments are superfluous.

The best safe-guard, with any type of drive, is a reliable and vigilant operator.

BAUMANN BOLTS UNIVERSAL.

WE were glad of the friendship of the man who sent us the following message from New York:

June 28, 1912.

Brulatour has withdrawn from Universal; sailed for Paris, Thursday. New York Motion Picture pulled out of Universal yesterday. Free for all fight last night between Baumann, Powers, Kessel, Laemmle and others. Mailing particulars.

Quite naturally we were anxious to hear the complete details of this latest upheaval by this kaleidoscopic acting combination in the independent ranks and print herewith as much information as we are able to glean from the various press reports, telegrams and letters that have been bombarding us since Thursday evening.

As we explained in a previous issue of MOTOGRAPHY the Universe Film Manufacturing Company was formed by a pooling arrangement between a few of the former members of the Sales Company. Their liabilities and assets were all thrown into a common company, each member supposedly sharing his pro rata allotment.

But individual profit is always a factor in any arrangement of this nature. So it was not a surprise to us to hear that there was internal dissension. One man or two men always try to get more than the others—it has never failed yet in the history of commercial combinations.

President Baumann was voted out of the presidency of the Universal Film Company on June 27. Ex-president Baumann had a come-back to that in the shape of "if I'm not president, I won't play," and the New York Motion Picture Company announced its withdrawal from the Universal group.

Now you can't expect men to sit idly by, who have spent money perfecting a combination, pooled their interests, sacrificed some personal claims for the common good of all, and then have one member crab the deal by refusing the same support that the others give: so it was quite natural that when Baumann announced his withdrawal, he was served notice that he could withdraw personally, and luck be with him; but that the plant and stock of the New York Motion Picture Company couldn't withdraw as it was pledged to the Universal or holding company.

Baumann thought otherwise and placed an embargo on the product of the New York Motion Picture Company stock of releases with the result that the other members of the Universal Company descended on the Studio building where the Bison films were kept, with the view of collecting what they felt was their own property.

Anticipating such a move Messrs. Baumann and Kessel had a guard in waiting and the result was a regular Donnybrook affair with ambulances and a hurry-up call for the reserves.

It is understood that one of the men engaged in the struggle was injured severely enough to need hospital treatment.

The conflicting parties have now taken the matter up through the courts and we trust that it will be adjudicated to the satisfaction of everyone concerned very shortly.

MOVING PICTURES IN ENGLAND

Vice Consul Rice K. Evans, Sheffield, England, says that Sheffield has 17 cinematograph theaters, whose total intake is about $7,300 per week. It is estimated that they expend an average of $1,460 a week in the rental of films.

Films are imported by the manufacturers' agents, located in London, by whom they are exhibited to managers of cinematograph houses. Some weeks before the release date they are bought by film-renting firms at an average price of 4d. (8 cents) per foot. These renting firms then offer them at auction to the playhouse managers at various prices per week rental. So keen has the competition in these auction sales become that the price of films has advanced 100 per cent within the last year or so, during which period the manufacturer's price has not risen at all. Houses of good financial standing pay quarterly for the films received; others pay on receipt of goods.

It is estimated that the life of a film is five to six weeks' running. Of course, they are run much longer, but they deteriorate with use. This, together with the keen competition for the newest goods, makes a difference of 20 per cent between the price for the first run and the second run; 15 between the second and third run; and so on down as the film is more used and becomes more generally known. It is said to be quite the usual thing for a film to go out on its seventh run at a rental of 50 per cent less than it brought on its first time out.

It is said that a film that goes out six times nets the middleman who bought it from the makers 100 to 150 per cent. Hence the managers would gladly do away with the middleman and rent direct from the agents.

More than 60 per cent of the films used are American. Italian films come next, amounting to about 15 per cent; the French 10 per cent, and British-made films 6 or 7 per cent. The reason given for the popularity of the American-made film is not that the photography is any better, but rather that the subject matter at present suits the popular taste. The American film generally portrays the so-called western drama, with stirring, forceful action, put on in the open. The French films tend more toward the comic, with close work, where facial expression and detail count. In the field of historical subjects in color the French makers easily excel. The Italian films have come on rapidly during the last year. In photography they are easily equal to the best, and in subject matter they are pioneering a new field, viz., weaving a minor plot about stirring historical events. They are also producing a class of very popular pictures dealing with actual events, where the action is rapid and excit-

ing, as, for instance, swimming Italian cavalry horses.

The greatest advance, however, as far as the British market is concerned, has been made by the British manufacturers. Their photography has improved, and their subject matter is of the higher level which the cinematograph shows are approaching. In a broad way it may be said the English makers are tending toward the military drama, maneuvers, and street scenes, and are generally along a high plane in that they educate and enlighten.

Five years ago the popular film was the home drama, where the action was built on a purely fictitious plot. Roughly speaking, two years ago the American cowboy came on the stage and rapidly became the popular hero of the moving-picture palaces. His erstwhile favor is now somewhat on the wane, and, though no bill is complete without him, he is not today the popular idol that he was six months ago. More and more is there a demand for real people and real things. Managers confidently state that the day is coming when the tragedies of history as subject matter will supersede entirely the mythical battles of the cowboys and "bad men" of the western plains, and the moving picture entertainments of the future will run more and more to the educational and instructive. Today a manager considers a bill incomplete if it does not include at least one scientific film, such as a set of pictures dealing with bird or animal life, industrial or commercial welfare.

In many picture houses films entitled "The Happenings of the Week" are now shown. These features were at first rather undervalued, but their popularity has so grown that now no manager can afford to omit them. The subjects are the political, social, and other news events of the week just passed, and the moving picture public has come to enjoy seeing their newspaper stories of yesterday enacted on the screen.

Moving Pictures in Japan

According to Deputy Consul General F. R. Eldridge, Jr., Yokohama, Japan, moving pictures are very popular in Japan. Once established, the business has continued to increase, and each year has witnessed the expansion of the enterprise.

Up to the present time most of the machines in use in Japan have been imported, although recently the manufacture was inaugurated on a very small scale. The chief virtue of these domestic-made machines seems to be their cheapness. One company, the Japan Cinematograph Company, manufactures a machine complete for $45. The cost is distributed as follows: Main lantern, $22.50; 3 to 5 inch lens, $2.50; arc lamp, gas tank, and all other appliances, $20.

That these machines are unsatisfactory is evidenced by their scarcity and the continued importation of foreign-made machines. Germany comes first as an exporter of cinematographs to Japan, followed by France, England, Italy, and the United States. The makes imported have been New Urban "P. P.," Pathe's Reliable, Gaumont's M. C. Chrono, and the Edison.

In commenting upon the American machines, one large importer states: "So far as the exhibition of the pictures on the canvas is concerned, the American machines do just as well as any other make, but they have the defect of wearing out the films much more quickly. Being a great manufacturing nation, we are sure that the United States can produce just as good machines as any other country; and if they are made cheaply enough they can be sold in great numbers in this country, for we alone can take at least 60 of them a year."

Of the 83 moving picture halls in Japan 42 are owned by Pathe & Company. The number of halls in operation is increasing almost 50 per cent a year, but how long this ratio will be maintained it is hard to predict. In addition to the regularly established halls there are numerous traveling companies which visit the halls in the country districts about once every six weeks, generally exhibiting two days in each place.

There are nearly 2,000,000 feet of moving picture films imported into Japan every year. The imports of Pathe & Company in 1910 were divided as follows: United States, 720,000 feet, both negative and positive, from the Eastman Company; France, 72,000 feet, tinted and untinted; Italy, 60,000 feet, from Itara & Company, 36,000 feet of Ambrosio films, and 36,000 feet of Mirano films, all untinted; Great Britain, 36,000 feet, from Urban Trading Company. The Yokota Shokai, in addition to manufacturing 150,000 feet of Japanese films every year, imports 250,000 feet from American, French, and English manufacturers.

The most popular kinds of pictures in Japan are pictures portraying: (1) Heroism, e. g., the story of a warrior fighting for righteousness; (2) pathos, e. g., the story of a son whose father has lost all his fortune and who strives hard, enduring many difficulties, to support and help his father; (3) magic; (4) comedy; (5) educational; (6) scenic. The kinds of films that are not welcomed in this country are: (1) Love affairs; (2) pictures of policemen or government officers fooled or mocked by the people; (3) pictures which instill revolutionary ideas in the heart of the youth.

It seems to be the opinion that American films are satisfactory as to quality of the film, but that the actors are inferior to those of other countries, especially as regards comedy and magic.

Numerous trade opportunities are being continually offered to this trade in Japan, and recently plans have been formed to utilize the foreign amusement hall in Yokohama as a cinematograph theater, leasing the films from a Manila agency. Japanese motion picture halls are being opened in great numbers and all must be supplied with machines and films and so far as the films are concerned a majority of these must be supplied from abroad.

Toronto Exhibitors Organize

An organization to be known as the Ontario Producers' and Exhibitors' Moving Picture Association is being organized in Toronto, Ontario, for the purpose of defending the picture men from hostile action taken against them by the authorities and the popular press. The idea of this organization was conceived at the meeting of moving picture exhibitors held at the Prince George Hotel of Toronto. A charter will be applied for at an early date.

The provisional officers elected at the meeting are as follows:

President, John Griffin, Toronto; vice-president, W. K. Hill Toronto; W. Roegnils, Lindsay; secretary, Charles Wellsman, Toronto; treasurer, W. L. Joy, Toronto; executive committee, J. C. Belmont, Hamilton; E. Mole, Brantford; C. H. Beattie, Barrie; G. O. Phillips, Berlin; W. A. Campbell, Toronto; J. R. Joy, Toronto; Joseph Barrett, Toronto.

Comparative Latitude of the Picture Play

By Robert A. Ward*

Copyrighted 1912, by Selig Polyscope Company

THE inventions of science serve frequently to broaden the domains of art by offering the artist new media of expression. The development of skeleton steel construction has given our architects an opportunity to imagine that new type of beauty in the art of building which has obtained consummate embodiment in the Metropolitan Tower. Photography, which began merely as a mechanical process, has developed into an art more subtle for handling elusive effects of light and shadow than even the major art of painting. The introduction of electrical illumination has revolutionized the art of stage-direction in our theaters.

As new avenues of opportunity are opened to the artist by the range of scenes, the processes of the traditional arts are required to readjust themselves to meet the new conditions. The scientific invention of the kinematograph suggested the artistic invention of the moving picture play—a novel type of narrative, wherein a fictitious story is represented in pantomime by actors and reproduced by the kinetoscope; and the new art sprang at once into competition with certain of the previously established types of drama.

The domain of criticism is co-extensive with the domain of art, and should naturally be broadened to include those new provinces which the inventions of science and the consequent inventions of art have recently discovered and annexed. It will not do for the critic to ignore a new art because its basis is mechanical. All art arises from the application of mechanism; and the hoariest of the traditional arts was new at some time in the history of mankind. The critic of architecture must accept the sky scraper; the critic of painting must consider the new art of photography; and it is surely not logical that the moving-picture play should be ignored by our critics of the novel and the drama. A new type of narrative that has achieved such immediate and such widespread popularity as the moving-picture play must certainly be worthy of serious criticism. If we should learn nothing else from a study of its material and methods, we should at least succeed in clarifying our ideas concerning those pre-existent types of narrative from which it has derived its processes.

Even a casual study of the moving-picture play will convince us of the soundness of that principle of

*This article won first prize, $100, in the Chicago Press Club contest conducted by the Selig Polyscope Company. The contest closed June 1. The other prize winning articles will be published in future issues.

Scene from Selig's "The Lake of Dreams," July 1st.

contemporary criticism that nearly every good play has for its basis, a good pantomime, and that dialogue—the purely literary element—while not the least important, is, at any rate, the least indispensible of the many elements which are compounded in that complex work of art, the acted drama. The kinematograph bereaves the drama of the spoken word; and it must be surprising to the literary theorist to learn how much is left—how vividly the essential elements of action, character and setting may convey themselves by visual means alone.

Pantomime has been recognized for many centuries as a legitimate type of drama; but it is safe to say that the variety and the extent of its adaptability as a means of story-telling were never fully understood until the invention of the kinematograph demanded of it an unprecedented exertion. The familiar French one-act pantomime entitled *"La Main,"* has been reproduced by the flitting film, and is fully as effective on the screen as on the stage. Such a classic of the art of pantomime as that wordless drama in three acts, *"L'Enfant Prodigue,"* devised by Michel Carre, which was recently revived at the Carnegie Lyceum by Mme. Pilar Morin, could be reproduced by the kinetoscope without any loss of dramatical effect, and would furnish an interesting evening's entertainment. But even the spoken drama might, in many of its classic manifestations, be kinematographed without irremediable loss.

Several of the melodramas of Sardou have already been successfully submitted to the process. and it is not impossible to imagine a wordless reproduction of even more eminent types of drama. Such a farce, for example, as *"Le Medecin Malgre Lui,"* of Moliere, could easily tell itself through the medium of the moving picture and would still awaken laughter. Moliere's humor always expresses itself through the situation or the character, and never through the mere range of the dialogue; in all his plays there is not a single witty line; and humor which is thus visual instead of auditory in its appeal may be conveyed in pantomime. The second scene of *"The School for Scandal"*—to choose an instance from high comedy—would remain clearly intelligible in all its necessary complications if it were acted without words; and if we desire an example from poetic tragedy, we need only consider that the final scene of "Hamlet" would still be thrillingly appealing if it were projected on the silent but animated screen.

The only type of drama which is absolutely unavailable for the kinetoscope is that in which the element of action is entirely subordinated to the element of character, and in which incidents are imagined off the stage for the sake of their subsequent psychological effect on the people, presenting to the eye the type that is represented by the tragedies of Corneille and Racine, and some of the social dramas of Ibsen and his imitators. But since the preponderant proportion of the existing drama conveys its message more by visual than by auditorial means, it seems strange that more of our standard plays have not been reproduced in moving pictures.

For some time we have utilized the phonograph to record the voices of our greatest opera singers. Why should we not also utilize the kinematograph to record the visual aspects of the acting of our greatest histronic artists? This available invention should surely be applied to make a permanent record of such bits of acting, for example, as Mr. Forbes-Robertson's death scene in Hamlet, that moment when his half-uplifted hands wave and flutter in the air. and his face is for the last time suffused with the ineffable smile that dawned over it in the first act at the phrase, "Methinks I see my father," and then the head sinks forward in sign that for all eternity the rest is silence—surely this, and many moments like it, should be recorded, like Caruso's voice, before the living artist is stolen from the world. But on the other hand, there is a sound critical reason why the moving picture play should not confine itself to the reproduction of the ordinary spoken drama.

In several important respects the moving picture is a more serviceable medium for story telling than the regular drama; and it can achieve its most interesting effects by flinging emphasis upon such expedients of narrative as lie beyond the reach of the actual theater. The main advantage of the moving-picture play over the traditional types of drama is that the author is granted an immeasurably greater freedom in handling the categories of place and time. The modern play must confine itself to not more than three or four definite localizations; but a story told by moving pictures may change its place as frequently as the author may desire. He may arrange his tale in fifty scenes, instead of four; and this is technically an immeasurable advantage. Instead of constraining his characters to meet at a certain place at a certain moment he may visit them at different moments in the various places where they choose to be. In this freedom the moving-picture play resembles those earlier types of drama which flourished before the stage restricted its range of narrative by adopting a definite scenic setting.

Students of the history of the theater will discern a close analogy between the moving-picture play and that type of chronicle history which was developed in the early Elizabethan period and was utilized repeatedly by Shakespeare. The battle episodes of Shakespeare's histories, vivid with alarums and excursions, wherein the scene shifts momentarily from one part of the field of conflict to another, and the characters make a rapid transit before the eye, launching hasty, incoherent lines in passing, could be suggested more emphatically by the kinematograph than on the modern scenery-encumbered stage. Furthermore, the moving picture possesses a notable advantage over the contemporary regular drama in its ability to alter in the fraction of a second the point of view from which the story shall be looked upon. As soon as a character has passed through a certain door the scene may be shifted from the room that he has left to the room that he has entered, and the eye may follow him all through the house from cellar to attic without any loss of time.

The new art of the moving-picture play is the only one of all the many arts of narrative which makes it possible for the observer to follow with the actual eye the passage of a character through a mile or more of space. In this new form of artistic presentation, a person may walk, run, ride, drive, sail, swim or fly for any distance, and yet be accompanied through his entire transit by the actual eye of the observer. This fact offers to the artist who devises a scenario for the kinematograph many possibilities of narrative which lie far beyond the range of the writer for the restricted stage of the ordinary drama.

In this freedom in handling place and time and in shifting the point of view, the moving-picture play resembles the novel much more nearly than it resembles the regular drama. The solitary horseman, dear to Scott and Cooper, could not be shown upon the stage; but he might easily be represented on the screen. If we draw on our imagination we may readily adduce a more emphatic illustration of this point. "Treasure Island,"

Photo Copyrighted 1912 by Selig Polyscope Co.
Scene from Selig's "The Last Dance." An Unusual Story. Written by Kathlyn Williams. July 4th.

for example, could not possibly be dramatized for presentation in the regular theatre, because the interest of the action is dependent on its rapid change of place from hour to hour; but the entire story, from the outset to the end, could be told in moving pictures; and many of the scenes, since there appeal to the imagination is mostly visual, would be even more effective on the screen than on the printed page.

In handling the element of action, the moving-picture play is more successful than the novel, since its appeal is made directly to the eye instead of to the imagination and it is scarcely less successful than the drama. In handling the element of setting, it is overwhelmingly superior not only to the novel but to the drama as well. In dealing with interiors, the moving-picture play remains on a par with the regular drama; but in dealing with scenes set out of doors, it passes far beyond the reach of the roofed and stationary stage. In the modern theater, the Forest of Arden is nothing but a huddled conglomeration of canvas trees; but in the moving picture play scenes like those between Shakespeare's idyllic lovers may be performed in an actual forest, drifting from place to place among trees that sift the sunlight and flutter their leafy branches in the breeze.

The kinematograph is especially successful in rendering effects of moving air and water. On the stage the sea can be suggested only by a crude and bungling mechanism, but in the moving picture play a scene may pass upon an actual sandy beach, with league-long round-back breakers creaming on the shore. Boats always look silly on the stage; but the kinematograph may fluently represent the paddling of a canoe past bend after bend of a rippling river. Animals, also, which can never be trusted to behave naturally in the theater, may be used as important agents in the plot when the scene is conducted actually out of doors. To the mind of the most contemporary artists the element of setting is not the least significant of the three necessary elements of narrative; and it is therefore an exceedingly important point that criticism is forced to concede that the local environment of a story may be exhibited more truly and more vividly in the moving-picture play than in any of the older types of narrative.

It is only in handling the element of character that the new art is at a disadvantage in competing with the novel and the drama. The many expedients that the dramatist and the novelist may use for delineating character are reduced in the moving-picture play to one. What people are may be suggested only by what they do; by their deeds, and only by their deeds, we know them. In drawing character, the moving-picture play offers a strict confinement of range in characters owing to inability to use the spoken word. Only a small minority of those innumerable characteristics which are compounded into any individual human temperament express themselves naturally in action which is obvious to the eye. Here, then—in handling the element of character—lies the weakness of the moving-picture play, considered technically as a type of narrative—just as in handling that other element of setting lies its strength.

This analysis makes it possible for us to define the type of story which may be most competently represented by the kinematograph. Obviously the most desirable narrative material for a moving-picture play is material in which the elements of action and setting are paramount, and the element of character subsidiary—in other words, a story in which incident treads upon the heels of incident and the action rushes headlong through a hurried succession of objective events, set preferably out of doors. It will be noticed at once that whereas this definition utterly fails to fit the modern regular drama, it almost exactly fits the traditional romantic novel of adventure. If we revert to an illustration that has already been adduced, we shall observe that this definition of what is necessary in a moving-picture play, points directly to that traditional type of narrative that Stevenson revivified in "Treasure Island."

In fact, a re-reading of Stevenson's "Gossip on Romance" will give us a very vivid sense of the sources of interest and charm of which the moving-picture play is particularly capable. What Stevenson says in place of the romantic novel of adventure may be applied with equal justice to that new art which did not spring into existence until after he was dead.

"The story," he says, "should repeat itself as a thousand colored picture to the eye. It was for this last pleasure that we read so closely, and loved our books so dearly, in the bright, untroub'ed period of boyhood. Eloquence and thought, character and confession, were but obstacles to brush aside as we dug blithely after a certain sort of incident, like a pig for truffles. For my part I liked a story to begin with an old wayside inn, where toward the close of the year 17—, several gentlemen in three cocked hats were playing bowls. A friend of mine preferred the Malabar coast in a storm, with a ship beating to windward, and a scowling fellow of Herculean proportions striding along the beach; he, to be sure, was a pirate. . . . One and all, at least, and each with his particular fancy, we read story-books in childhood, not for eloquence or character or thought, but for some quality of the brute instinct. Contentment is three parts of life, they say; but I think they put it high."

"There is a vast deal in life . . . where the interest turns . . . not on the slips and hesitations of the conscience, but on the problems of the body and of the practical intelligence, in clean, open-air adventure, the shock of arms or the diplomacy of life. With such material as this it is impossible to build a play, for the serious theater exists solely on moral grounds, and is a standing proof of the dissemination of the human conscience. But it is possible to build upon this ground . . . the most lively, beautiful and buoyant tales."

Here, in the words of a great artist in narrative, we have a clear and comprehensive statement of the possibilities that lie open to the maker of the moving-picture play. He cannot contend with the dramatist in working out those problems of conscience which confront the well; he cannot compete with the novelist in analyzing characters; but he may tell with a vividness beyond the reach of their last visual expedients of appeal, "the most lively, beautiful and buoyant tales," in which the interest is centered not in "eloquence or character or thought," but in "some quality of brute instinct."

It is evident, therefore, that the moving-picture play is not a play to be despised or ignored by serious criticism. It represents, in fact—to look upon it from a historical point of view—a revolution to an earlier and more perennially refreshing mode of narrative than which lately has assumed domain over the novel and the drama. The moving-picture play carries us back to the boyish age of the great art of telling tales, when stories were narrated nakedly as stories, instead of being sicklied o'er with the pale cast of thought. One can hardly imagine Mr. Henry James devising a successful scenario for the kinematograph; but the Shakespeare who wrote "Richard III," and the Homer who wrote the "Odyssey" would experience no difficulty in fulfilling the requirements.

It is only very recently that the masters of the art of friction have made war upon the optic nerve and exalted the objective over the subjective. Our modern interest in those intimate phases of character which refuse to reveal themselves in action is certainly sophisticated and excessive. It is therefore with a feeling somewhat of relief that we notice that the newest of all the arts of narrative—the moving picture play—disembarrasses its stories of psychologizing, and tells them the free and boyish spirit that vivified the epic, the drama, and the novel throughout the centuries before the world grew old.

It is not at all surprising that the moving-picture play has driven out of existence the cheap type of popular melodrama. The reason is not mere'y that the moving-picture show could under-sell the regular theater and offer a performance for five cents instead of for ten, twenty and thirty cents. In the old history of the world, no art, however, cheap, has ever annihilated a more expensive art which was basically better than itself. The real reason for the triumph of the moving-picture play is the purely critical reason that it offered a more artistic type of narrative than the old popular melodrama. In cheap melodrama, all that was worth while was the vividness and the variety of the incidents; the characters did not count, except as puppets in the plot; and the dialogue, crude and frequently absurd, was more a bother than a help. In abolishing dialogue, the moving-picture show relieved the cheap drama of the weakest element; it could suggest character with less obvious falsification than the actual popular drama; and it could easily excel it in the presentation of incidents, both on the score of variety and on the score of vividness.

The greater portion of the moving-picture plays which may now be seen are fulfilling more completely than heretofore the high artistic aims of which they are indubitably capable.

Moving Pictures in Malta

According to Consul James Oliver Laing, Valetta, two methods of introducing advertising into motion pictures have been employed. One is to show signboards advertising merchandise in the scenery or setting of a moving-picture drama. The other is to introduce the names of commercial exhibitors into films representing a country fair such as the well-known yearly fairs of England, or a market scene, such as the markets of Nizhni Novgorod. The display of the firm's name is followed by a series of pictures representing its exhibit at the fair or the working of its plant. Some criticisms have been made of the first method, the signs displayed (on account of incongruities of time, place, or situation) being sometimes ill adapted for association with the scenes in which they are placed.

The Motion Picture Exhibitors' League of America

Second Annual Convention, Chicago, Aug. 13-16-'12

General Headquarters

703 Euclid Ave., Cleveland, Ohio

OFFICERS OF NATIONAL ASSOCIATION.

President, M. A. Neff, Lock Box 15, Cincinnati, O.; Vice-Presidents, S. E. Morris, Cleveland, O.; William Ullman, Detroit, Mich.; H. S. Dickson, Winchester, Ind.; H. C. Farley, Montgomery, Ala.; H. G. Lux, Jr., Utica, N. Y.; William J. Sweeney, Chicago, Ill.; E. W. Waugh, Huntington, W. Va.; C. H. Phillips, Milwaukee, Wis.; Fred J. Harrington, Pittsburgh, Pa.; Orrene Parker, Covington, Ky.; Secretary, C. M. Christenson, Cleveland, O.; Treasurer, J. J. Rieder, Jackson, Mich.

MOTION PICTURE EXHIBITORS' LEAGUE OF OHIO.—Headquarters, 1003 Mercantile Library Bldg., Cincinnati, Ohio. President, M. A. Neff, Cincinnati; First Vice-President, W. A. Pittis, Conneaut; Second Vice-President, J. H. Broomhall, Hamilton; Treasurer, O. B. Weaver, Dayton; Secretary, J. J. Huss.

CLEVELAND LOCAL NO. 1—Headquarters, Commercial Bank Building, Cleveland O. President, S. E. Morris; First Vice-President, F. E. Simmons; Second Vice-President, C. F. Schroeder; Secretary, L. H. Wilk; Treasurer, W. C. Kaspar; Financial Secretary, F. M. Kenny.

CINCINNATI LOCAL—Headquarters, 606 First National Bank Building, Cincinnati, Ohio. President, J. J. Huss; First Vice President, A. J. Carbin; Second Vice President, M. Fishman; Secretary, A. C. Dingelstedt; Treasurer, Otto Leudeking.

COLUMBUS LOCAL—Headquarters, Princess Theater. President, J. A. Maddox; First Vice-President, W. B. Belknap; Second Vice-President, J. W. Swain; Secretary, J. R. McCoy; Treasurer, Max Stearn.

ILLINOIS STATE BRANCH NO. 2—Headquarters, Schiller Bldg., 64 W. Randolph street, Chicago, Ill. President, George Henry; Vice-President, C. A. Anderson; Secretary, Sidney Smith; Treasurer, Wm. J. Sweney; Financial Secretary, Simon Katz; Executive Committee, Robert R. Levy; Chairman, Fred W. Schaefer; Secretary, F. Natkin, L. H. Frank, C. H. Hull, Abe Balaban, C. C. Whelan.

MOTION PICTURE EXHIBITORS' LEAGUE OF INDIANA—Headquarters, Indianapolis, Ind. President, H. S. Dickson, Winchester; Vice-Presidents, H. F. Prentice, Terre Haute; Earl Rife, Logansport; Jos. Bommersheim, Ft. Wayne; Hershel Cannon, Muncie; W. R. Deaton, Warsaw; Secretary, F. J. Rembusch, Shelbyville; Treasurer, Jos. H. Gavin, Indianapolis. Chairmen of Committees: Arbitration, W. C. Yutsey, Lebanon; Grievances, Dr. J. M. Rhodes, Indianapolis; Legislation, H. W. Summer, Anderson; Insurance, Jno. A. Victor, Indianapolis.

MOTION PICTURE EXHIBITORS' LEAGUE OF PENNSYLVANIA—Headquarters, 233 Fifth avenue, Pittsburg, Pa. President, F. J. Herrington, Mt. Oliver; First Vice-President, J. H. Mercer, Monaca; Second Vice-President, Harry McGowan, Pittsburg; Secretary-Treasurer, T. J. Barbin, Millvale; Corresponding Secretary, Harry E. Reiff, Pittsburg.

MOTION PICTURE EXHIBITORS' LEAGUE OF MILWAUKEE—Headquarters, 305 Enterprise Bldg., Milwaukee. President, J. R. Freuler; Vice-President, H. S. Klein; Secretary, B. N. Judell; Treasurer, T. Saxe.

MISSOURI STATE BRANCH—Headquarters, Kansas City, Mo. President, G. H. Wiley; Vice-President, J. H. Sheldon; Secretary, Samuel Taylor; Treasurer, J. Steinens.

MOTION PICTURE EXHIBITORS' LEAGUE OF MICHIGAN—Headquarters, 302 Kirby avenue, E., Detroit, Mich. President, Peter J. Jeup, 399 Hibbard avenue, Detroit; First Vice-President, H. F. Fowser, Lansing; Second Vice-President, J. J. Rieder, Jackson; Secretary, W. Lester Levy, 302 Kirgy avenue, E., Detroit; Treasurer, Carl Ray, Muskegon.

DETROIT LOCAL—Headquarters, 399 Hibbard avenue, Detroit, Mich. President, Peter J. Jeup. Vice-President, Patrick H. Reauhine; Secretary, W. Lester Levy; Treasurer, Fred W. Rumler.

MOTION PICTURE EXHIBITORS' LEAGUE OF WEST VIRGINIA—Headquarters, Moundsville, W. Va. President, M. M. Wear, Charleston; First Vice-President, R. L. Harris, Parkersburg; Second Vice-President, A. L. Cottrill, Point Pleasant; Secretary, L. R. Thomas, Moundsville; Treasurer, P. W. Barett, Parkersburg.

MOTION PICTURE EXHIBITORS' LEAGUE OF KENTUCKY—Headquarters, Lexington, Ky. President, J. H. Stamper, Jr., Lexington; First Vice-President, L. J. Dittmar, Louisville; Second Vice-President, Sherman Arn, Maysville; Secretary, L. H. Ramsay, Lexington; Treasurer, A. J. Wellman, Cattletsburg.

WINNIPEG LOCAL—Headquarters, Winnipeg, Canada. President, W. O. Edmonds; Vice-President, J. A. Schuberg; Secretary, F. Van Alstein.

New York State Exhibitors Organize

A NEW YORK State branch of the Motion Picture Exhibitors' League of America was organized at the New York meeting on June 19, by President M. A. Neff, of the National League. The deepest interest was displayed in the proceedings of the association, which, with the exception of an hour for lunch, was in session from eleven o'clock in the morning until five at night.

President Neff, the first speaker, gave an outline of the objects and benefits to be derived from the League, and also gave an extended account of the work accomplished in other states. In his talk Mr. Neff spoke particularly of the good results accomplished by the Ohio branch, and the difficulties met in organizing it.

In regard to the antagonistic legislation that has been proposed, Mr. Neff said:

"You have to go to Albany for your legislation, notwithstanding the power your cities have. Cities cannot pass laws that conflict with those of the state, and here are many things that you are bothered with. Get your officers, and grievance committee, and let it take the matter up."

When the subject of membership fees came up, Arthur D. Jacobs made a proposition to the effect that the city association consisting of 117 members in good standing be admitted for the nominal sum of $100, as they were already organized. This proposition was accepted by the meeting, as the local organization was the principal reason for holding the meeting in New York City, forming as it did a nucleus for the state association.

The election of officers then took place, with the following result:

President, Samuel H. Trigger, president of the City Association; first vice-president, Bert M. Cornell, Syracuse; second vice-president, R. M. Davidson, Binghamton; secretary, Harold W. Rosenthal, New York; treasurer, John C. Davis, Saugerties; vice-president of the Motion Picture Exhibitors' League of America, Sydney Ashel, New York.

The following members were elected delgates to the Chicago convention, to be held August 13-16: Miss Ida Mayer, Jamaica; A. M. Day, Auburn, and Grant W. Anson, New York; alternates, Lewis Rosenthal, Robert Whitten and L. Schwartz, all of New York.

After his election, Mr. Trigger responded to the vociferous demands for remarks and made a plea for a bill that would allow children the privilege of attending moving picture shows after school hours.

At this point Mrs. Harry C. Arthur, president of the Practical Mothers' Association of Bronx Borough, arose and advocated the passage of a bill permitting any child large enough to be on the streets to attend picture shows, unescorted. As Mrs. Arthur is the mother of ten children, and claims to have attended picture shows every other night for eight

years, it is evident that she speaks with the authority of actual experience.

The subject of the Chicago convention had attention at this part of the proceedings and all members were urged to attend the Chicago affair by President Neff. He spoke of the liberality of that city in providing entertainment for the convention visitors, and of the splendid accommodations offered by the La Salle Hotel. An attendance of from three to five thousand exhibitors was predicted by Mr. Neff.

Miss Ida Mayer, who received the highest vote for delegate to the convention, and who is the first woman member of the state branch, spoke enthusiastically regarding the trip to the convention, and of the future of the film business from the exhibitor's standpoint.

Chief Wallace, of the Bureau of Licenses, who has done more for the moving picture theater in New York than any other man, was warmly received and was followed through his talk with the closest attention.

The Chief spoke of the advantages of organizing the picture men for defense against certain interests that are always ready to attack the shows when it suits their purpose. In regard to the membership, he said: "Your association should refuse to admit to membership any man who does not come up to a certain fixed standard in his method of conducting his business. In that way you will eliminate all undesirable citizens from the industry.

"It is much easier for a number of men to band themselves together and adhere to a certain line of conduct. They will not have unfair competition, nor illegal competitors,, and they will make it easier for the city officials to put the others out of business.

"We have a few kicks from people opposed to the shows, but you will generally find that they are people who don't go to the shows themselves, and say that they would not go to them, yet they will undertake to tell you all about them and their evils.

"I recall a clergyman who came to me to protest against a proposed show in the neighborhood of his church. He was one of those who rant about 'dens of vice' and 'sinks of iniquity.' My answer was this: 'If the moving picture show is not patronized by the members of your church, it will be a failure. Shops draw their trade from the locality in which they are situated, and every show reflects the character of the neighborhood. As a general proposition, it is fair to say that the show is just as good as the neighborhood it is in.'

"Go after the men who are not a credit to your industry. Get them before you at your meetings. Roast them. Don't let them conduct a moving picture business so that the front of their place looks more like a grocery store or a Chinese laundry. I am just mentioning a few knocks, for I can say plenty of good things about your industry."

At the close of the proceedings on Wednesday, a trip was made to Coney Island, dinner being served to the entire body at Henderson's restaurant, at which Arthur D. Jacobs was presiding officer. Following President Trigger, the first speaker, were Thomas Bedding, of the Universal Film Company's editorial staff; Mrs. Harry C. Arthur, and Gus Rogers, of the New York Bureau of Licenses.

At this point Miss Florence Turner, of the Vitagraph Company, joined the party, and the entire aggregation passed through the throes of a typical amusement park vaudeville show. A cabaret show was the next in line, and from that time a definite route was abandoned and the party was broken up into independent groups of investigators.

The entertainment committee having charge of this most successful division of the meeting were the City Association's "route experts," selected as follows: Arthur D. Jacobs, chairman; Harold D. Rosenthal, secretary; G. W. Anson, treasurer; Samuel H. Trigger, Sydney Asher, Adolph Baurenfreund, Lewis Rosenthal and William A. Landau.

Among the many representatives of the manufacturers were the following: Messrs. Coles and Atwater, of the Nicholas Power Company; A. H. Greenland, of the Gaumont Company; D. W. McKinney, of the Film Supply Company; C. Lang Cobb, of the Reliance Company; Eric Morison, of the Standard Machine Company; Thomas Bedding, of the Universal Film Company; F. J. Rembush and Frank Manning, of the Mirror Screen Company; H. J. Herz, of the **International News**; George Balsdon, of the Pittsburg Photoplay Advertising and Specialty Company; L. J. Dittmar, of Kinemacolor; C. B. Ford, of the Andrews Chair Company.

Pittsburgh Meeting

At the Pittsburgh meeting of the Motion Picture Exhibitors' League of Pennsylvania the following officers were nominated:

President, Walter Steumpfig; first vice-president, Cresson E. Smith; second vice-president, Mr. Miller; secretary, Mr. Roth; treasurer, F. J. Barbin; national vice-president, Fred J. Herrington; delegates, G. C. Miller, of Plymouth; Mr. Mercer, of Monaca, Pa.; John Weck, Jr., of Kittaning; Ed. Fisher; James Smith, of Hazelwood, Pittsburgh; Mr. Ellsweck, of Vandergrift; John Hayes, of Philadelphia; Silverman, of Altoona.

Alternates: Mr. Hayes, of Philadelphia; Silverman, Altoona; Mercer, of Monaca.

Motion is made by "Doc" Steumpfig that the next meeting be held at Philadelphia. Mr. Herrington seconds the motion, and motion is carried. Second annual convention of the Pennsylvania State Organization No. 3 to be held at Philadelphia the first Monday and Tuesday in June.

Washington (D. C.) Meeting

On June 22d a temporary organization of a local branch was effected at Washington, D. C., principally through the efforts of M. A. Neff, president of the national association. The following officers were elected:

President, A. J. Brylawski, who is also president of a corporation owning a number of shows; vice-president, E. S. Wertz of the Maryland Theater; secretary and treasurer, Fulton Brylawski of the Senate. Before the meeting was adjourned, the next meeting was called for June 28, at which time a permanent organization will be made. The new secretary also put into form an application for a charter from the national association.

Scene from the Kleine-Cines Subject, "The Danger Line." August 10th.

Moving Pictures in India

The principal cities in this consular district are Bombay, with a population of almost 1,000,000; Ahmedabad, 186,000; Poona, 153,000; and Baroda, 1,000,000, says Consul Edwin S. Cunningham, Bombay. There are five moving-picture shows in Bombay, four of which use Pathé machines and one a Gaumont. The majority of the films are of French manufacture, Pathé as a rule, but other films are Itala Company, Italy; Barker Motion Photography Company, London; Gaumont & Co.; Urban Manufacturing Company; Cines Company of Rome; Edison Company, and Vitagraph Company. American films are used by only one of the local theaters. There are no manufacturers of either moving-picture or cinematograph machinery in this district.

Film Supply Co. Gaining

General Manager Raver of the Film Supply Company is demonstrating his fitness for the position his associates have conferred on him by making the following announcement of agencies that have been granted:

Golden Gate Film Company, 166 Golden Gate avenue, San Francisco, Cal.; Film Supply Company of Oregon, Portland, Ore.; Continental Film Company, 902 Filbert street, Philadelphia, Pa., ,and the Mutual Film Corporation, 429 Traction Terminal building, Indianapolis, Ind.

Mr. Raver states that these agencies will carry a full program of film supply releases each week.

The Film Supply Company expects to have over fifteen new exchanges in full running order before the next sixty days. These, with the thirty or more exchanges now taking full programs from Film Supply, means that there will be hardly an exhibitor in the country but can secure excellent bookings of these films right from his own locality, where he can be sure he is not held up by delayed shipments.

It is pleasing to note the confidence that the Film Supply Company is creating in the minds of the exhibitors by its business-like methods, promptness and fairness ,and speaks well for the men behind this new organization.

Penitentiary Holiday

The Thanksgiving and Christmas entertainment at the Columbus O., penitentiary last year were in the form of motion pictures instead of minstrels and burlesque, as were given a year ago, and had originally been planned for the holidays.

Motion pictures are cheaper and afford as much entertainment and then, too, they don't take the prisoners from their work. But the moving pictures can't be of the Wild West variety. They have to be the educational variety and will be censored by Warden Jones and Chaplain Richards before the prisoners are given a look.

Moving Pictures in the Straits

The principal towns of the Malay Peninsula are Singapore, with a population of 325,000; Penang, 277,-841; Malacca, 124,029; Kuala Lumpur, 46,567; Ipoh, 23-354; Taipeng, 18,000, says Vice-Consul General D. Milton Figart, Singapore.

There are three moving picture shows in operation in Singapore and about six throughout the remainder of the peninsula. The three in Singapore are Harima Hall, the Alhambra, and the Marlborough.

Pathé Freres supply both machines and films. The machines are from the English branch of this company, while the films are not only Pathé Freres, but various other makes. This company buys up from time to time films which it desires from other manufacturers and claims to have a monopoly of this market. It stocks about 3,280,000 feet of films and receives 3,000 to 5,000 feet of the new films each week. An operator has been in this district for some time, taking views of the principal industries and other interesting features, such as rubber cultivation, tin mining, crocodile hunting, manufacture of sago flour, etc. This operator also works in the surrounding country.

As above stated Pathé Freres claim to have a monopoly of the market, and will buy interesting films at their full value if necessary, depending on the hiring out to the various shows for their profit. Many American films are shown at this time, especially those manufactured by the American Biograph Company.

A bill has been introduced into the legislative council amending the theater ordinance of 1908, which will provide for the examination by the chief police officer of every application for a license to carry on cinematograph exhibitions in the Straits Settlements. Such applications must be in writing and contain a description of every scene intended to be produced at such exhibition, and it is prohibited to advertise or produce any scene the description of which has not first been furnished to the chief police officer.

Fight Picture Shipments Prohibited

Transportation of moving picture films of prize fights is forbidden in a bill reported favorably in the senate, by Senator Bacon, for the Judiciary Committee. The bill imposes punishment or imprisonment of one year or a fine of $1,000 upon any one who wilfully ships or receives such pictures in inter-state transportation.

District Attorney Marion D. Patterson has addressed a letter to proprietors of every moving picture house in Blair county, Penn., asking each to refrain from using films that depict murders, robberies and any grade of crime, as it is likely to corrupt the morals of the youths of the country and might convert an otherwise useful member of society into a criminal. His suggestion will be followed out generally.

Scene from Essanay's Railroad Melodrama, "Signal Lights."

Photoplays From Essanay's

Features for July

THE FALL OF MONTEZUMA," a tale of the Conquest of Mexico, Essanay's big three reel photoplay-pageant, is entirely finished and is booked for release soon. Each of the three reels is replete with thrills, magnificent and massive settings, wonderful costuming and the most excellent pantomimic interpretation. The large company employed in the great production returned to Chicago a few weeks ago, having spent almost a month in completing the spectacle. No inconvenience was experienced, and the members lived in the special train, comprising twelve sleepers, a diner and three baggage cars, during the entire time. Preliminary exhibitions of the developed film reveal beautiful photographic quality throughout, the handling of the large ensemble is excellent and the scenic effects thoroughly in keeping with the splendor of the ancient Aztec empire. The entire production promises to be a splendidly attractive feature subject from every standpoint.

Scene from Essanay's "The Butterfly Net."

An accident that might have been serious occurred during the filming of the final reel. At the close of a beautiful scene, V. R. Day, manager of Essanay's Chicago office, and W. F. Lynch, Essanay's special representative, who were handling the business end of the trip, were standing talking near one of the enormous set-pieces representing a wall of Montezuma's palace when a sudden and violent windstorm arose. Without warning the set-piece was torn from its fastening and Messrs. Day and Lynch were buried beneath it as it fell. A hundred hands frantically lifted the heavy scenery and the happy discovery was made that neither of the men were seriously injured, suffering only from a number of painful scratches and the severe nervous shock. Both were assisted to places of safety, but declared it the narrowest escape of their lives.

For the month of July Essanay announces seventeen splendid releases, seven of which are western dramas with G. M. Anderson in his famous characterizations, six captivating comedies of the type that have won for Essanay the title of "The House of Comedy Hits," and four good dramas from the Chicago studio.

"The Smuggler's Daughter," released July 16, is a sterling Western dramatic subject, tense in plot, excellent in point of production, abounding with magnificent scenic views and featuring Mr. Anderson in a gripping role. Old Bragg Whipple, a mountaineer, has a pretty daughter, Vedah. Unknown to her, Whipple is engaged in smuggling goods across the Mexican border, and employs a number of helpers. Jim Craig, a young puncher, loves Vedah and gains her consent to marry him. Elated, and wishing to insure his future, Craig now becomes a deputy sheriff, is sworn in and receives his badge which he pins inside his sleeve. Sheriff Church gives him information of the smuggling going on, and tells him to run the gang down. Craig hurries to old Whipple's shack, puts the ring on Vedah's finger, finds Whipple has gone down to the barn and starts to find him and gain his consent to the marriage. As he and Vedah are passing the barn, Craig happens to see Whipple and his band preparing their goods for smuggling across the border. Determined to let nothing stand in the way of their capture, Craig tells Vedah of his discovery, draws his gun and enters the barn. He is relieving the men of the guns when Vedah disarms him from the rear in order to save her father. She now begs for Craig's life but old Whipple orders her to the shack and commands the boys to kill the deputy. Realizing what she has done, Vedah rides furiously to the sheriff, gasps out her story, leads the posse back and they arrive in time to save Craig as he is about to be shot. Rushing to the shack, Vedah warns her father of his danger, and the old smuggler crosses the border in safety. Secretly happy over Whipple's escape, Craig takes her in his arms and they watch her father's distant figure as he disappears over the hills. Mr. Anderson, as always, is splendid in the role of the deputy, Vedah Bertram plays the girl and Arthur Mackley

Scene from Essanay's Rural Comedy, "Down Jayville Way."

portrays the smuggler with characteristic strength. The entire production is a distinct Western feature.

"White Roses," released July 4, is a powerful heart-interest drama with a gripping plot and featuring Francis X. Bushman in another of the great roles that have won him such sweeping popularity. The story is strikingly original. Mary Fuller, a country girl, receives word from her city sweetheart to come and be married. At one of the stations, Mary comes upon a convict standing manacled between his guards. Pitying the poor unfortunate, she presses into his hands some white roses, whispers for him to keep them for hope and boards the train. Years later Mary lives in a wretched tenement with her sick child. She is a widow and is unable to pay her rent. The gruff old landlord shows her a note from Mr. Loring, his employer, ordering him to eject all tenants who are behind with their rent. In desperation Mary calls on Loring and pleads for mercy, not recognizing in the old man the convict back in the past years. It is not until he shows her his treasure, a faded white rose, that she identifies him. Telling her those roses gave him the courage to serve his sentence and make his way in the world, Loring writes her a note and sends her back to the tenement. The old landlord is surprised, on reading the note, to find that Loring orders him not to eject any tenants until further notice. That night Mary is kneeling beside her sick child when a messenger delivers a large box of white roses. Inside she finds a simple card on which is written "White Roses for Hope." Realizing they came from Loring, she buries her head in their sweet fragrance with a prayer of thanksgiving in her heart. Mr. Bushman plays the role of Loring with great tenderness and power, Beverly Bayne portrays Mary beautifully and the production is unquestionably a splendid one from all standpoints.

A revelation in rural comedy is "Down Jayville Way," booked for release July 12. Using the simplest of plots, the Essanay Company has constructed a rural love story rich in comedy values, perfect in production, and a triumph of artistic photography. The tale concerns two country boys who love the same girl. She cannot decide her choice; neither can her father until he says the one who gets the minister first can marry her. Of course both bring the parson back and still the question is not decided. However, the parson solves the difficulty by falling in love with her himself and they ride off to procure a license while the two boys are left behind badly stung. But they make up with their old girls and all works out happily after all. John Steppling and Howard Missimer create a barrel of laughs to the foot in the roles of the two lovers, Lillian Branscombe is captivating as the girl, Dwight Mead plays the minister, and Harry Cashman and Helen Dunbar the parents. The production is a fine feature.

Another thoroughly pleasing comedy is "The

Butterfly Net," released July 5. It is a charming summer idyl involving international complications, unusual in plot, abounding in beautiful summer scenery and featuring Mr. Bushman and Beverly Bayne in exquisite roles. "Signal Lights," released July 9, and "Hearts of Men," on July 19, are gripping dramatic subjects, the former a railroad melodrama and the latter a powerful heart-interest plot entirely out of the beaten track. "Broncho Billy's Narrow Escape," on July 6, and "Broncho Billy's Pal," released on the 30th, feature Mr. Anderson in the role he has made famous and are splendid types of this great Western series so popular with exhibitors all over the world. July is a banner month for Essanay—but watch for the announcement in MOTOGRAPHY's next issue, two weeks from today.

Pictures of the Aurora Borealis

A new camera for photographing the aurora borealis has just been constructed for Professor Carl Stormer, of Christiania University according to *Popular Mechanics*. The apparatus will be used to measure the relative brightness of the "northern lights" at different periods, and to enable a cinematograph reproduction of the phenomenon to be made afterward. The pictures are to be taken at night, and will consequently require a long exposure, which will extend from two and a half to eight minutes each. It is expected that the results will prove of the greatest scientific value.

Agricultural Motion Pictures

A number of agricultural and horticultural boards have adopted the moving-picture machines as a part of their regular equipment, according to the *Country Gentleman*. Some of the "better-farming trains" this year have been showing by means of the moving-picture films how to run the spray pump and the milking machine. During the past winter the land-boomers have been evangelizing the East with a number of moving-picture shows, with the object of informing the Eastern drygoods clerks how orchards are irrigated, how apples are packed and how money is coined on the other side of the Great Divide. There is no doubt but that the moving-picture machine is able to tell many a story which otherwise is only half told or left wholly untouched. This modern device must have considerable usefulness in agricultural teaching, and especially in the wide agricultural propaganda of the railroad industrial show and the college extension service. In such circumstances teaching must be fragmentary at best. Every exercise must be brief. People must have their attention fixed promptly and the lessons must be imparted vividly.

It may be fair to state, however, to those who are using such methods of teaching that such innovations ought to be practiced with caution. Care should be exercised to see that the moving-picture machine really has a lesson to impart. If the thing is only a show for advertisement or useless entertainment it can hardly justify the expense of the promoters or the time of the audience.

Broncho Billy's Narrow Escape.

Moving Pictures in Turkey

Trebizond has one fine theater for moving pictures, built for the purpose by the Trebizond Cinematographic Company, says Vice Consul I. Montesanto, Trebizond. It occupies a corner lot adjoining the public garden and fronts on Liberty Square, the most central part of the city. The company has spent $7,500 for the erection of this theater and $5,300 for the two oil engines and the necessary electric accessories. The nine-horsepower, two-cylinder petrol motor is from Aster, of Paris, the 12-horsepower transmission motor from Auto Dautz, and the dynamo from Gramme Company, also of Paris. The lamps are metallic filament, and there is also an arc lamp of 2,000 candlepower.

This theater has a seating capacity of 600, and it has plenty of doors, ventilators, fireproof projection-apparatus chamber, and other modern improvements.

The prices of the seats are 10, 15 and 20 cents; boxes, 80 cents and $1 each, accommodating four to six persons. There is a stamp duty (2.2 cents) for each 20-cent ticket for the benefit of the Hedjaz Railroad. Five thousand feet of films are used for each show, and the program is changed twice a week. Each new program is duly advertised in four languages, Turkish, Greek, Armenian and French.

The films are mostly of French manufacture, Gaumont and Pathé Freres, and sometimes American Vitagraph Company, etc. The company receives the films from Constantinople and occasionally from Saloniki at a cost of 6 or 8 centimes (1.16 to 1.54 cents) a meter for each program. For American films the company would be willing to pay more, because they enjoy a great popularity and are always received with much enthusiasm by the people who are very fond of subjects like detective stories, cowboy and Indian life, etc., and they appreciate the clearness of the American films.

The show usually lasts one and a half to two hours, starting about 8 o'clock each evening. Two performances are given. There are no matinees except on fete days, so profits have to be made from night performances only.

It would not pay for an American firm to send films only for the Trebizond theater, but there are many moving-picture shows in Turkey and several in this part of the country, and as their number is daily increasing there is a good chance for an American concern to establish an agency at Smyrna, Saloniki, or Constantinople and have its films make the round of several moving-picture theaters. There is no doubt that American films will be preferred and that the business will prosper.

The moving-picture theater of Trebizond has installed an American pianola, made in Indiana, which was bought from the Constantinople agency for $700, on monthly installments.

It Pays to Wait.—American

On the Outside Looking In

By the Goat Man

I was in Lincoln, Nebraska, a few weeks ago, with time enough to take in the picture shows. You may not know that Lincoln is one of the prettiest of cities, largely made up of retired agriculturalists, who made their money because of appreciating land holdings. The city is full of beautiful residences. The streets are generous in width and the business district is largely confined to O street between 10th and 16th streets. There are four exclusive picture theaters in this district; one ten cent house showing vaudeville and pictures and one m. p. theater about to open. There is also an airdome, but that hadn't come to life. For a city of 50,000 with an added student body of 4,000 or more, nine months in the year, Lincoln isn't a bad lay-out. But whisper—those exhibitors out there need some good, strong talking to. Their houses seat 500 and there is no music after you get past the entrance. The lobbies are all cluttered up with automatic pianos and vending machines and easels, resembling a street of Cairo. There is nothing within but a screen and the pictures—four full reels for a nickel! Can you beat it? The General Film, at Omaha, supplies everybody with an exception. Please note that word "an." The exception includes everybody, because the owner of the vaudeville house also owns the only independent theater. You get that, don't you? In the vaudeville house, licensed pictures are shown. In the O street exclusive m. p., you get the only independent films, all of which confirms my notion that General Film, like every other cinch proposition, wants and gets the money. What Lincoln exhibitors should do is easily apparent. The

Edward Boulden, in Edison Films.

music should be put in the house, instead of in the street. Their shows should be cut in two. By so doing, the crowd would move around and the house would double its revenue. The day of four reels of films for five cents has passed. It is too much for the money; too much for the manager; too much for the audience; too much for the express company; too much for the operator; too much for General or any other film company. Let the other fellow have a

Meriam Nesbit, in Edison Films.

chance to wear 'em out. Lincoln is another town on the map that doesn't care for pictures. Whose fault is it?

* * *

I fancy Lincoln isn't the only city that is wearing out films for the edification of manufacturers. The scheme isn't wholly to blame, but makers and renters could render a valuable service by offering to correct such an evil. The exhibitor who says: "I must have four reels, because my competitor is showing four," might better urge his competitor to come down to earth with two. I didn't see a split reel in Lincoln. Exhibitors wanted and got the full reel. And if you study the weekly releases of the licensed bunch, you'll known in a minute what films I didn't see in Nebraska's capitol.

* * *

Last month I plumb forgot that I was a guest of the entertainment committee of the Chicago Exhibitors, who were showing President Neff samples of their hospitality. Part of the program consisted of a spread at the La Salle Hotel, in the president's suite, where everybody made a stab at a speech under the direction of Chairman Sweeney. And to prove that honors rest easy, they elected me an honorary member of the M. P. Ex. League, and still I plumb forgot! However, we made a big hit with Mr. Neff, didn't we, fellows?

* * *

I attach considerable significance to the resignation of J. J. Kennedy from the presidency of General Film Company. Mr. Kennedy's excuse for relinquishing the governing reins of the G. F. is no excuse at all.

Men have used it for centuries. That "other business interests" should demand more of this gentleman's time can hardly be imagined, for it will need no elaboration to prove that G. F. required very little of his time and there was large incentive to remain at the head of such a successful institution. The General Film Company, be it known, is one of the biggest revenue producers ever thought out by man. It stands, primarily, for a betterment of film conditions, but every film man knows that its chief reason for existence is the profits it returns to its shareholders. And being the child of the Patents Company, you are allowed only one chance to name the stockholders. If P. L. Waters—the boon companion and friend of Mr. Kennedy—had not given up the general management at

Jeanette Trimble appearing in Cines productions released by George Kleine.

the same time that the presidency was cast aside for more important business affairs, there would be less reason to doubt Mr. Kennedy's reason for retiring. I can not keep the present line-up from my mind's eye. The General Film Company has J. A. Berst for president; George Kleine for vice-president; Paul Melies, secretary, and Sam Long, treasurer. Sigmund Lubin is the fifth director and rumor has it that Lubin's man will succeed Mr. Waters. There we have of the licensed makers, Pathe, Kleine, Melies, Kalm and Lubin dominating the General Film, and Selig, Biograph, Edison, Vitagraph and Essanay hanging around the edge. Does it imply that those government sleuths who have been passing around film centers have given the bunch reason to do some serious thinking?

* * *

The story follows that Messrs. Kennedy and Waters plan tremendous big things in spectacular and historical film production to be wholly aside from their old connections. Maybe so. It is barely possible that we'll hear from that old dream of educational and feature film rental exchanges for exhibitors who want that sort of thing. However, my little pile says that men who have been piling up money on a cinch proposition will never indulge in such speculation. Neither Kennedy or Waters have gone into the philanthropic lists to the extent of being able to make the detection with a microscope.

* * *

The Motion Picture Exhibitors' League has invaded Gotham and splashed over into Jersey. This is another example of the East giving way to the West. President Neff is to be congratulated in being able to effect two state organizations at a time he had only planned for one. The League has a month and a half in which to work, prior to the Chicago convention. It is my suggestion that the forenoon of August 13th be set aside to organize the scattering visitors who will come to Chicago for the second annual convention. I'm sure a roll of the states will bring responses for each, and these representatives should have full authority to sit in the meetings with powers to act. The League is a tremendously active body and members are enthusiastic.

* * *

I talked with the owner of the Royal Theater at Warsaw, Indiana, last Saturday, and he is only an example of other exhibitors who are counting the days awaiting their big show at the LaSalle Hotel, August 13-17. If anybody says the boys are not going to attend the League convention, tell 'em to guess again. The entertainment committee understand and are hustling to beat the band to provide for the visitors.

* * *

Since this magazine has found its way to the general public through the medium of the newstand, we are being constantly reminded that this is a tremendously large and active country. And as a result, we find in our press clipping service, scores of items that have been printed in all kinds of newspapers, giving Motography credit. This new channel of publicity is having a very salutary effect on the newstand sale, and if our modesty didn't prevent, we might imagine that the advertiser would find increased benefit. At any rate, we are indulging in a bi-weekly edition, beginning right now in order that you will have opportunity to pick up fourteen additional numbers a year.

* * *

The Universal Film Manufacturing Company has had an early explosion, which ought to afford very mild surprise on the part of insiders. I never saw so much fuss and fluster over such a little thing. Without inside knowledge, I trace the slit in the Sales Company; the forming of Film Supply and Universal all to that bunch of white elephant films turned out by the Bison crowd when it engaged the 101 Ranch outfit. No doubt about the cost of the product and no doubt about the mistakes that have been grouped around the performance. Fact is Bauman and Kessel bit into an overripe lemon. They put money into something that won't come out without coaxing. They wanted 15 cents a foot for this wild west stuff and the gang refused to fall for it. Even the Universal won't take to it kindly. When Ad Kessel was in town and I got to him there were tears in his eyes. He told me that the buffalo stuff was real—that he

had been bilked and buffaloed till he was lame in one leg, but that there was a way out. Kessel is one of Pop Rock's pets. He has heard Pop say: "They gotta take 'em," and he had made up his mind if Pop could make 'em take 'em, he could do the same thing. But Pop and Ad are different kind of folks. Ad can't put the same punch into his "gotta" that Pop can, and he has Bauman for ballast, which is some handicap, believe me. And then Bauman has Streyckman and Streyckman has his pipe and the Universal Weekly and Bedding. Mercy, it's a terribly balled up mess. So at a Universal meeting June 28, there was a big blow-out; not the kind where you sit around peaceably and wine and dine—the other kind with the noise. Bauman and Kessel and Streyckman and his pipe and Broulatour went over the transom, and with them went Eclair and Bison and Itala and Ambrosia and a weekly program all shot to pieces. Blamed if I wouldn't like to know what will be the next move. Pat Powers has organized so many companies of late, I fear that he'll run out of names and that great film producer—largest in the world, according to Bedding, who knows, for he, with an apology to Alf. Saunders, started 'em all—is shy several thousand feet a week as compared to its vigorous competitor. I'm glad I'm a goat in these troublesome times, for I get my program without half trying. I get some fun out of it, too, for blue-penciling the **Universal Weekly** as the changes are rung in is a bully entertainment.

* * *

The film game offers splendid opportunity for the press representatives and some of them rise up to the occasions in great shape. Stan Twist ate 'em raw when the National Press Association members were in Chicago. He invited them out to the Selig plant; put them to work in films for half a day; weighted them down with cuts, matrices, literature and sandwiches and sent them home with ideas and copy enough to fill their pages for weeks. If you imagine those fellows won't know a Diamond-S from now on you're mistaken, that's all.

* * *

All the while that Florence Turner was lost she was enjoying a well earned vacation at Santa Monica, California. But of course you knew that, didn't you?

* * *

Will the *M. P. World* please return the cut of Charles Hite that I loaned it two or three years ago? I need it, for modest Charlie is trying to duck the spot light and it isn't fair. To impress the *World* that the cut is mine, let me explain. Sykes of Chicago made the photo at my request and at my expense. Von Harleman came to me for the half tone and kicked like a Missouri mule because it was so large. To endear myself to Von, I wrapped up the cut and addressed it for him and to make it good and strong I furnished the stamps and the stuff that makes 'em stick, so I want you to send the cut home, or I'll come down there and take it away from you! That ought to fetch it, don't you think? Gee, but I'm a soft-shelled goat all right, all right!

Vacuum Cleaning Plant

The "Princess" Theater on Church street, Nashville, Tenn., which is being completed, will have a vacuum cleaning plant of its own. The contract has been awarded for this plant, which will be one of the most modern and complete in the South.

Motion Picture Clinics

A moving-picture show will be part of the curriculum of every modern medical college inside of a few years, according to Dr. W. C. G. Kirchner and Dr. Given Campbell, who spoke before members of the St. Louis Medical Society recently.

Their talks were illustrated by moving pictures, showing the circulation of the blood and the action of numerous species of bacilli. The largest crowd which has attended a meeting of the society this year was present to see the pictures and listen to the talks.

"Moving pictures can be used to replace vivisection for experimental purposes and demonstration to students," said Dr. Kirchner. "Students will be better able to investigate the methods of great surgeons if they can have a practical demonstration of their methods on canvas before them than if they merely are given a description.

"The time will come, in my opinion, when the moving picture films will be as much of a scientific necessity as the microscope is to-day. The pictures will be of especial value in the classroom."

The doctors watched the action of the bacteria shown on the screen, continually breaking out in exclamations of approbation like children who have discovered a new toy. When especially clear pictures were flashed across the screen there was spontaneous applause. After the lecture they were unanimous that the application of motion pictures to medical problems will be of great value to the profession.

Methods of inoculating different animals with disease germs were shown and the condition of their blood after the germs had gotten in their systems. The doctors said the pictures demonstrated blood circulation much more clearly than is done in the colleges with the aid of microscopes ordinarily in use.

No Sunday Shows in Wichita

There will be no Sunday moving picture shows in Wichita, Kan. The city ordinance prohibiting Sunday theatrical performances was upheld by Judge John C. Pollock of the United States District Court in Kansas City, Kan. The court ruled that moving picture shows were theatrical performances.

Recently the Colonel Theater Company filed a petition for injunction to restrain the city from enforcing the Sunday theater ordinance. The arguments in the case were heard this morning by Judge Earl Blake, city attorney, and John W. Blood, assistant city attorney, represented the city.

The Colonel company expected to secure the injunction on the ground that a moving picture show is not a theatrical performance.

Omaha Censor Appointed

Omaha is to have a theatrical censor, and he is to be Thomas Hayes, police lieutenant, acting under direction of the police department.

Lieutenant Hayes will devote his time to visiting all the moving picture shows, airdomes and other places of amusement. Not only will he visit these places with the purpose to see that no objectionable or suggestive pictures or acts are presented, but he will also be under strict orders to prevent unnecessary noises, either by automatic pianos or otherwise. This does not mean that pianos will be prohibited at such shows, but they will be allowed to run only during certain hours and with the soft pedal on.

A Choir Affair

During the sermon one of the quartette fell asleep. "Now is your chants," said the organist to the soprano, "see if you canticle the tenor."

"You wouldn't dare duet," said the contralto.

"You will wake hymn up," said the bass.

"I could make a better pun than that if my name is "Psalm," remarked the boy that pumped the organ, but he said it solo that no one quartet.—*Successful Farming.*

Pictures for Chilocco Indians

Chilocco, the Indian school, knows the value of motion pictures. So much does this school believe in them that the government purchased a motion picture camera for the school. As a result everything of importance is kept now in motion picture shows. The Indians, consisting of 530 students, line up for dress parade and go through their drills for the camera. The motion picture camera has also preserved all track meets that have taken place this spring.

Suffragettes and the Films

The suffrage moving picture plays, long threatened as a part of the general policy of the women to get down to the masses, are about to be sprung upon New York theatergoers. They are the real thing, too, so far as the suffragists are concerned, for they have given their best.

So the man in the street may growl, but he cannot escape "votes for women" these days; for it is not only in the air but in the motion pictures.

The suffragists purpose to have these pictures go all over the country, spreading the gospel of "votes for women" to eyes and hearts which could be reached in no other way. It is all very well, they say, to stand in the street and talk to the crowds going in to moving picture theaters, but it's much better to go along in, too, and talk from the stage also.

The plays are real ones, with lots of love interest and pathos. The suffrage doctrine, in fact, is a very small pill with a great deal of pink coating.

In one play Miss Jane Addams figures with Dr. Anna Howard Shaw in the conversion of a senator to their "cause." Miss Addams, though, posed for the pictures when she was in New York recently, and the picture men have made visits to all the suffrage headquarters in the city, snapping each of the famous leaders.

In the official program of the Motion Picture Exhibitor's League of Pittsburg an error was made in giving the credit of the Enterprise Optical Manufacturing Company's advertisement to the Riley Optical Instrument Company, a firm with which the Enterprise company has no connection.

To compensate for this mistake, the program committee of the Exhibitor's league issued 5,000 hand bills in which the advertisement appears as it should have appeared in the program.

Scene from Essanay's Western Drama, "A Story of Montana."

Scenes from The "Merchant of Venice."

"The Merchant of Venice" on Films

A Thanhauser Triumph

LOVERS of the classical in photoplays will welcome the release of the Shakespearian drama, "The Merchant of Venice," a magnificent two reel production of the Thanhouser company, that is to be commended both for the subject and its execution. Of all Shakespeare's plays, none perhaps, are better adapted for the moving picture machine, than this particular selection, nor have a plot that is more easily followed by the average audience.

It is encouraging, for those who have the betterment of the moving picture show at heart, to observe the awakening interest of the public in films having true literary merit and educational value, and it is still more gratifying to note the efforts of the better class of film manufacturers to supply this demand, regardless of expense or precedent. Through the medium of the picture show, the beauties of literature are unfolded to those who have lacked the interest or ability, to read the original work.

In staging this film, the most elaborate preparations, were necessary to insure its success, for the nature of the play demands the most careful attention to detail, not only in the work of the actors, but in the arrangement and character of the properties as well. The item of costuming alone, required a very considerable expenditure of money and time, in order that the pictures compare favorably with the "legitimate" productions that have been staged heretofore.

As a result of this painstaking care, the Merchant of Venice is a thoroughly artistic production from every standpoint, and the makers of the film are to be congratulated upon this undertaking. From a modern point of view there were not many problems entering into the every day life of Shakespeare's characters, that do not remain problems to this day, for Shylock still exists, although his methods have been considerably modified, and we are lead to believe, by our Suffragette friends, that Portias are the rule rather than the exception. Let us proceed with the play:

FIRST REEL.

Antonio, a nobleman, and a merchant of Venice, is asked by his kinsman, Bassanio, for a large sum of money, for Bassanio wishes to travel afar, in order to woo Portia, a woman of great fortune, as well as one of wit and beauty. Bassanio has not the necessary funds to make the trip, and therefore comes to Antonio for aid.

Antonio, although a man of wealth, finds that he has no gold, his fortune being represented in the cargoes aboard his various ships at sea. He knows that in a few weeks his ships will return and he will have ample funds, but in the meanwhile, he offers to borrow for kinsman's present need, from Shylock the Jew, the notorious money lender of Venice.

Shylock has long hated Antonio, because of his proud spirit, and when he consents to lend the money, it is only on the condition that Antonio should sign a bond, whereby, should he fail to return the money inside of three months, the Jew shall receive, in lieu of interest, a pound of his, Antonio's flesh. Antonio laughingly agrees to this bond. He knows the Jew desires his death, but feels so sure that in much less than three months time, the ships will have returned, and he can easily repay the borrowed money. With the money obtained by his kinsman on this strange bond, Bassanio travels to the home of the fair Portia. There, after passing a test imposed upon her suitors by her father, Bassanio is finally accepted, and feels that he owes all his good fortune in winning the lady of his desire, to his noble kinsman, Antonio.

SECOND REEL.

Bassanio is happily married to Portia, when he receives a message of distress from his noble kinsman, Antonio, the merchant of Venice. Antonio writes that his many ships, containing all his wealth, have been lost at sea, and that he is not able to pay to Shylock the money lender the money he borrowed for Bassanio. Because he is unable to pay, Shylock will be able to exact from Antonio, a pound of his flesh. This foolish bond Antonio signed because he felt so sure he would have no difficulty in paying the money he had borrowed.

When Portia heard of the plight in which her husband's kinsman found himself, she dispatched Bassanio with many times the amount of gold Antonio owed, in order that a noble life might be saved.

Shylock, however, refused to take the money, insisting that he be allowed to cut from near Antonio's heart the pound of flesh that had been pledged him. Thus he could kill his enemy.

Had not Portia, disguised as a Doctor of the Law, succeeded in being present at the court, Antonio's life would surely have been forfeited. Portia, however, made it plain to all that in justice to Shylock, Antonio must allow his pound of flesh. But she also warned Shylock that if, in taking the flesh, he took one drop of blood, he would be committing a crime, as no blood was nominated in the bond.

Shylock, outwitted, failed to get his revenge, and Bassanio, when he went to thank the learned lawyer who had saved his friend, found to his great joy, that "he" was none other than Portia, his own clever and beautiful wife.

Scene from Selig's "The Cat and the Canary." A Pastoral Drama. July 2d.

Motion Pictures Defended

Let us view the matter in an impartial light, with a purely unbiased mind and endeavor to firmly fix the personal benefits to be derived from visiting a motion picture show, says the *Pittsburg Leader.*

Even a prejudiced mind must concede that a visit there adds to the intelligence of the patrons, be they adult, student or child; they practically receive a lecturette, in a pleasing manner, sometimes carrying them on long travel through distant and historical lands, and their attention is riveted on the scenes as they unfold themselves.

To those who keep in distant touch with the motion picture theater, as it is conducted today, the assertion is freely made that never in the history of that powerful and far-reaching industry have the safety gates of watchfulness and carefulness more thoroughly encompassed the mental faculties of those who enter its door, and a critical observation of those patrons will, at a glance, prove that they are composed of clean and healthy minds, be they adult, student or child.

It is not true that "semi-darkness" caters to the entrance fees of motion picture habitues, and without a hint of law, or municipal observation. By the addition of a 16-candlepower light, they have made every, presumably, dark corner as bright as daylight, for motography has reached the zenith in the projection of its film and no longer requires darkness, excepting within a radius of a few feet, and the "masher" of today is an obsolete and unknown factor.

Crime we will always have with us, but nowadays it seems the proper course to blame the motion picture theater for most anything. Just because a mental incapacity has been displayed by one who has erred, why embellish the fact that he had once, was now in, or had just left a motion picture theater; if his mind, was troubled, or head bowed in grief, isn't it the most natural thing to imagine he would seek the solace of this light entertainment and of the music, to drown his sorrows? Of course, if he truly realized, they only serve to intensify his sadness, for sorrows will swim "like ducks in a frog pond."

In a motion picture entertainment, many an ideal is presented and a lesson taught to those who could not be reached in any other way. The man who is sharing his weekly income with the grog shop may have presented to him a picture of a destitute home, with sorrowing wife and ragged children: probably you could not have dragged him to a sermon by our great Gough, Sturgeon or Beecher, but what he sees depicted in the "semi-darkness" goes straight to the heart, and were there about him the brilliancy of the ball room, a tear-stained cheek might be the reward of the onlooker, as the lesson was driven forcibly home.

The word lens comes from the Latin word for lentil seeds which have a double convex shape like a lens.

Famous Indian War in Pictures

American's "Blackhawk"

THE historical two-reel features recently completed by the American Film Manufacturing Company, "The Fall of Blackhawk," will be given the public as a state rights feature. This is due to the unprecedented excellence of the subject, and the fact that a large sum of money was required to produce it in its present form.

No other subject can possess more of those features which draw the public than "The Fall of Blackhawk." The great names of Abraham Lincoln, Jefferson Davis, Zachary Taylor and General Winfield Scott are always vital in their appeal, and mean money to exhibitors. The subject has other than an exact historic appeal, in that there are an abundance of thrilling Indian fights, a glorious stockade scene in which the blockhouse and stockade are seen to burn to the ground. Lincoln and Davis are also central figures in a very unique love affair which terminates in the marriage of Jefferson Davis and Sarah Taylor, while the fort is in flames. The American is receiving offers for state rights, and will make shipments after July 6 through the Film Supply Company of America.

Much curiosity has been aroused concerning the American's historical release. "The Fall of Blackhawk" soon to be officially announced. The fact that three American presidents are central figures in the story has given it a unique interest quite out of the ordinary. There is a good story, with excitement enough to satisfy any taste, but, better than that, the student will find an interesting study in the types of Lincoln, Jefferson Davis, Zachary Taylor, and General Winfield Scott. Much thought was given to these great characters, and they are portrayed as carefully as the limited historical data of that period would permit.

Scene from The Fall of Black Hawk

For instance, all know Abraham Lincoln as he appeared in 1861, yet the public does not know the Lincoln of 1830, therefore, the idea was to retain the characteristics, gestures, facial expression, etc., that was always Lincoln's and still portray him as a young man of 24. This has been hard work, but the result is a youthful Lincoln who can ride, swim and run and who yet retains the poise and dignity of the Lincoln we know. Lincoln was 24 years old at the time of the Blackhawk uprising. The first reel shows him returning from work with an axe over his shoulder, hearing the first news of the war. We see him as the inspiration to fight for his country lights his face, his drilling of an awkward squad of volunteers, his reporting to General Winfield Scott's headquarters with his little troop of raw recruits, and his proud title of "Captain." We see him enlist as a private when that strict disciplinarian, Gen Scott, deposes him, and we follow him in the army camp as a wrestler and a fighter. These events are the lore of history, and are fittingly incorporated into a picture that would be incomplete without them. Harry Lawnsdale, whose reputation in the part of Lincoln, is nation-wide, portrays the character as faithfully as his remarkable resemblance and his years of experience will allow.

Throughout, the types represented are true to history. Zachary Taylor we know as president of the United States; the purposes of the picture was to portray him as he actually looked at the age of 45, some years before he became a national figure. This also is true of General Scott and Jefferson Davis. The latter was a boy about Lincoln's age, fresh from West Point. Davis's sensational elopement with Sarah Taylor, daughter of Zachary Taylor is a beautiful bit of work for which we have to thank history, and the impulsive temperament of that hot-headed Southerner.

There are fights with Indians, and we are trusted to an exact portrayal of that famous episode which really started the Blackhawk war. That was the story of the four drunken rangers who shot Blackhawk's warriors in mid-stream while they were ford-

ing the Rock River under a flag of truce, and ready to surrender. Davis and Lincoln play large parts as individuals, and the grand finale is the burning of Ft. Crawford, an actual, real fire, which entirely consumed a stockade and blockade.

The photography is rarely beautiful, and such superb backgrounds of dense, luxuriant foliage never before have been seen in Indian pictures. The photoplay was staged on the ground where the events actually occured, and are thus given a touch of the genuine and actual.

Clock Faces for Picture Shows

Transparent-faced clocks, lighted from behind with colored lights, are the latest innovations of motion-picture show houses, according to *Popular Mechanics*. Patrons of these amusement places complained that they could not tell the time when they were inside the houses, and hence, not knowing how long they were staying, often were late for engagements or missed their suppers.

Clocks, lighted from the front could not be used, for the reflected light rays seemed to have an injurious effect on the eyes and spoiled the effect of the pictures. Clocks lighted from behind with white light had the same effect.

When amber or green lights were placed behind the transparent face, however, the effect was not harsh, did not injure the eyes and yet was sufficient to show in silhouette the hands and hour numerals on the dial of the clock.

Show Patrons on Strike

The recent raise in price of admission from 5 to 10 cents, by the moving picture houses of Montgomery, Ala., has brought about a general dissatisfaction among the patrons. A spirit to "get back" at the show owners has been manifested, and it is understood that a petition is being generally circulated among the people of Montgomery, which will be presented to the city commission asking that they prohibit the running of the shows on Sundays.

The commissioners are empowered by the act of the legislature creating the body to regulate the amusement features of the city. The shows were granted the privilege to operate on Sunday and the commission can rescind the ordinance if they see fit.

Montclair Permits Motion Pictures

By a vote of seven to four, the town council of Montclair, New Jersey, decided in favor of permitting moving picture shows to be held under a local censorship. It seems strange with Menlo Park, the home of the inventor of motion pictures, only a short distance from Montclair, that the town council has prohibited this form of amusement for so long a time.

Scene from the American Film Manufacturing Company's Feature, "The Canyon Dweller."

A Story of International Intrigue

"The Inventor's Secret"

A powerful and dramatic Cines film story entitled "The Inventor's Secret" having many novel and sensational features, is to be released by George Kleine, on July 30, the methods employed by the secret service of foreign powers to obtain knowledge of the military developments of their rivals, is the theme of this most interesting film.

Photoplays dealing with political intrigue, and international relations, are always of the deepest interest to all classes of motion picture patrons, and we are sure that this will be no exception. The patient endeavors of the chemist-officer, Marco Vani, to produce an explosive that will revolutionize modern warfare, his success, and his final overthrow by the treachery of a spy, will hold the spectators in breathless suspense.

The ambassador of a rival country hears rumors of the discovery that will alter the destiny of nations, and determines to possess the secret at any cost. Knowing that money will not avail, he summons the fascinating Countess Florrie, and commissions her to win the secret. She is as unscrupulous as she is beautiful, and readily accepts the mission, having full confidence in the power of her charms.

The embassador gives a grand ball, to which only the elite are invited, and to the inventor's surprise, he also is included among the guests. Here the vampire has an opportunity to carry out her well-laid plans, and completely charms the man of genius, who, after an ardent courtship, ultimately proposes marriage.

The ceremony over, she immediately starts her treacherous work. She manifests a great deal of interest in her husband's work in his laboratory, and finally learns that the priceless papers are concealed in a safe. The next night she sends for her trusty confederates, and conducts them to the laboratory for the purpose of opening the strong box. They are in the midst of their efforts when they hear the inventor's footsteps in the adjoining room, and are forced to effect a hurried escape by way of the window after just having time to take a wax impression of the lock. The countess is left behind, and in an intensely dramatic scene manages, by the exertion of all her powers, to allay his suspicions temporarily.

The inventor is soon under the spell of the countess, and she, confident of final success, summons her assistants for another attempt at the safe. This proves successful, and they escape with the papers, but not entirely without again arousing her husband's suspicions. Soon afterwards, he examines the safe and finds that the papers are not there, but de does not yet attribute the disappearance to his wife.

The next day, however, he discovers a letter addressed to her, and, believing her guilty of an intrigue, opens it. To his amazement it reveals that his wife has overlooked an important paper which she must obtain that night; it therefore proves that the idol of his affections is false, and is indeed guilty of the theft. A demon possesses him, and he plans revenge. He prepares a bomb composed of his explosive, and places a fuse in readiness; and in the evening secretes himself in the laboratory.

When his wife enters and opens the safe, he approaches and seizes her in a grip of iron. With uncontrollable hatred, he accuses her of the crime, and then lights the fuse. After a short suspense there is darkness, and we then see a terrible explosion. The building is rent asunder, and the whole laboratory blown to atoms. It is, indeed, a terrible revenge.

Campaign Pictures

Chicago will witness the first of a national "moving picture political campaign," which will be a picturesque feature of the 1912 struggle for the presidency. On his recent visit to New York President Taft was motographed in a variety of speech making gestures by the Kinemacolor company, and these films in the natural colors will soon be displayed at the Olympic theater. Arrangements are under way to place Col. Roosevelt before the moving camera, and in his most strenuous fighting poses.

There is every indication that by autumn the political battle of moving pictures will be raging at its

Scenes from the Cines Feature "The Inventor's Secret." Released July 30th.

height. Not long ago Edward F. Dunne, Democratic candidate for governor of Illinois, cheerfully submitted to the moving picture man, and films of the former mayor of Chicago are in preparation for state-wide distribution. Gov. Charles S. Deneen, his rival, has not yet been placed under the glare of the motion machine, but that he is not opposed to innovations was shown in his campaign through Illinois last spring, when from his car platform he made a speech through a telephone receiver which was heard by several thousand "party line" subscribers in a western county.

Speaker Champ Clark stopped out in front of the moving picture cameras the other day and indulged in all of his customary oratorical calisthenics. One of the series of pictures for which Speaker Clark has posed shows him calling the house of representatives to order, directing the roll call and morning religious devotions, announcing the business of the day and performing the various duties incident to the day's congressional work.

Woodrow Wilson has been an involuntary actor in the "photo-play," having been trailed by a squad of moving picture men, who followed him from stump to stump.

Moving Pictures in Mexico

According to Consul T. C. Hamm, Durango, Mexico, there are at present two moving-picture theaters in Durango—Salon Golondrina and Salon Rojo. Both are members of regular film-exchange circuits, one with headquarters in Mexico City and the other in San Luis Potosi. The films are changed daily and seven to ten pictures are shown at each performance. Most of the films in use are imported from France, although a few, chiefly cowboy and "wild west" pictures are obtained from the United States. Some Spanish films depicting bull fights are shown.

The proprietor of the Salon Golondrina informs me that he attempted to import all his films from the United States, but that the length of time required and the uncertainty of regular shipment made the venture a money-losing proposition. He further stated that the explanatory matter was all printed in the English language, an innovation which proved anything but popular. A Powers machine of American make is the one now in use and is giving entire satisfaction.

In order to enter this market successfully three things at least are essential: (1) Prompt and continuous service; (2) a large variety of subjects; (3) all explanatory matter must be in the Spanish language.

Moving Pictures in China

According to Consul General Samuel S. Knabenshue, Tientsin, China, the moving picture business is much more largely developed among the treaty ports in southern China than it is from Shanghai northward or in North China. In this consular district there is but one establishment using moving picture films. This is the Arcade, located in the French concession, Tientsin. The entertainment consists usually of eight films during the evening, interspersed at times with turns from one or two variety actors. The house is a small one, the patronage not large, and the proprietors often omit the variety turns on account of the expense of bringing performers from the south. There was an amusement house of the same character in Peking, also called the Arcade, but it has been closed since last November.

The market for films and moving picture machines is almost entirely in the hands of the Pathé-Phono-Cenima-Chine, whose head office is in Paris, with branches at Calcutta, Bombay, Hongkong, Tientsin, and Shanghai. This firm has a practical monopoly of the moving picture business on the China coast and throughout the Far East generally. The Arcade rents the films it uses regularly from this house. The films as a rule are sent from house to house along the China coast until they are worn out. Occasionally an American film is shown, but it is always a second-hand one and is obtained from the above company.

Moving picture shows are increasing in popular favor in South China, and the natives are evincing a great interest in them. So far this does not appear to be true of North China. However, there is no reason why a popular liking should not be built up among the Chinese if some firm would enter the business and provide traveling cinematograph shows to be exhibited in Chinese theaters in the various native cities of North China.

Sunday in Jacksonville

Unless Mayor Jordan refuses to put his name to a bill passed at a special session of the council of Jacksonville, Fla., all theaters of the city will hereafter pull down the shades and shut off the lights between the hours of 6:30 and 8:30 o'clock p. m. each Sunday. Such a state of affairs was made possible by an amendment tacked onto a bill which was originally intended to regulate the license of moving picture machine operators. Councilman Mills was the official tacker.

Several weeks ago Councilman Peeler at the request of some of the moving picture men and a few of the operators, was asked to present a bill to the council, and the measure was finally drawn to regulate the qualifications and conduct of operators. The bill went to the laws and rules committee and came back last night for final action. It progressed to a stage where a few minutes would have sealed its fate one way or the other, when Mr. Mills got in his amendment.

In support of the measure, Mr. Mills stated that the people of Jacksonville wanted the theaters of the city to close on Sunday and that it was right and proper for the hour of church services to be observed by closing such places between 6:30 and 8:30 o'clock in the evening on Sunday. Others in the council thought that the people should have a voice in the proceedings, but as results proved, there was no chance.

Milano Joins Universal

From this time forward the famous Milan films will be released through the Universal Film Manufacturing Company.

These celebrated films are made by a company of legitimate actors and actresses who have co-operatively joined together to produce the highest expression of dramatic art. Some of these players are famous all over Europe for their dramatic ability and it is a big aid to the Universal Company that they have been able to secure these films for their program.

An announcement of release dates will be made as soon as the information can be obtained from the importers.

National Press Association in a Film Story

Another Selig Scoop

W. N. (Bill) Selig has the happy faculty of surrounding himself with men who can do things, and Stan Twist is no exception, for he is a doer with a big D. So when he announced that he had made arrangements to entertain the convention visitors of the National Press Association at the Selig plant on Wednesday, June 26, we kept our eyes open for some genuine Twist surprises.

First off the reel, you didn't go out as best you could, trusting to luck to find the plant in time for the show, for Twist had chartered special cars from the Chicago Railways Company, and loaded the cars at the door of the Sherman House, the home of the convention. The five hundred visiting editors and their wives were then transported directly to the Selig plant, without stops, until they were assembled in the big yard at the rear of the plant.

As each car load approached the plant, the visitors were massed in "column two" formation for the convenience of the moving picture operator, who photographed them, as they passed under the "Welcome" sign on the big gate. It was announced by Twist, later in the afternoon, when the pictures were shown to the crowd, that all records had been broken in film developing—three hours and forty-five minutes; the previous record made at the Gotch-Hackenschmidt match, was clipped by exactly one hour and seventeen minutes, for it was exactly two hours and twenty-eight minutes from the exposure to the time of mounting the finished film in the projector. A splendid record.

Needless to say, the visitors were enthusiastic over the pictures, for it was the first time that the majority of them ever had the exceptional privilege of witnessing themself on a moving picture screen. Screams of laughter greeted the appearance of some particularly graceful (?) individual as he ambled across the screen, and it's a dead cinch that the majority will spend time, from now on, in practicing the art of walking in the privacy of their rooms.

There is nothing like a moving picture film to recall Bobby Burns' couplet, "O, wad some power the giftie gie us, tae see oursils as ithers see us." This applies particularly to those who disregarded the camera man's lament "Please don't look at the camera." It was in line with our usual luck, that we were missing—on a light struck portion of the film.

On filing into the big yard, we were handed an envelope filled with Selig literature, and also containing a puzzle that disorganized the staff of MOTOGRAPHY

Nat'l. Press Representatives Watching Selig Players Enact Film Story.

for two days after the show. A card was issued, showing numbered half tones, and a request blank, to be filled out by those who could use the cuts, or matrices, in their home paper.

Five hundred newspapers throughout the country will detail this Selig publicity scoop, five thousand women will hear it first hand from the editors' wives, and five million people will read about it in their home papers. This is the publicity that counts, for the novelty of the entertainment among the unusual surroundings will long remain fresh in the minds of the newspaper men, and will be discussed for months after.

In order that each and every member of the association would have an opportunity to ask questions, and receive intelligent replies concerning the various manufacturing processes, the huge party was split up into groups of fifty with a Selig actress or actor at the head of each. There was no evidence that reportorial graduates had forgotten the news instinct, for the questions were fired in volleys that exhausted the compendiums of information selected as guides.

It is something to be escorted by as cheerful, intelligent and winsome a guide as Miss Greenwood or Miss

Editors as Actors for Selig

Leighton, or any one of the others, who were sacrificed on the altar of curiosity.

When the tour of studios and various departments had been completed, the guests gathered in the yard to witness the making of three scenes of a film that will probably be known as the "Miller of Burgundy." To see a play enacted in broad daylight, with the actors in their quaint costumes mingling with the crowd, was a sight never to be forgotten by those who witnessed the internals of moving picture making. Children would have been more tractable, but not more curious, than this huge crowd of news gatherers, collected from the country's ends.

Imagine yourself, with your friends, suddenly transported to far Burgundy, amid the rustic surroundings of this quaint old province. In front of you is an old grist mill, thatched, and with the characteristic over-shot wheel hanging idly in the mill pond. Buxom French girls, in provincial dress, were moving about, saboted children playing in the dust, donkeys laden with grain sacks, plodded patiently along and a rustic bridge across the mill pond, aided in creating a foreign atmosphere.

At this point we were treated to a sensational bit of action in a rescue scene that was realistic to a degree In this act the impoverished miller saves the life of the silk-hatted aristocrat who has been thrown into his mill pond by the failure of the bridge. This drew the enthusiastic applause from the spectators that the act deserved.

There is something in a name like Adrienne Troell, that harmonizes with your surroundings, and makes you think of a pretty, plump maid, in a homespun skirt and corsage, a vision of the little heroine of the Selig film story.

Of course, the visitors were asked to contribute toward the making of a film, and manager Nash soon had them engaged in the role of a crowd at a baseball game, giving a touch of realism to a film called "The Pennant Puzzle," soon to be released. Twist was everywhere, first ably seconding Oscar Eagle, one of Selig's directors, then lustily bawling his instructions through a megaphone for Chauncey Herbert, next leading the crowd through stunts for the camera men, or giving instructions to his corps of guides.

It was all wonderful to the visiting editors and their wives, wonderful to us, who have seen it time and time again, wonderful on account of the enormous publicity such an event will get in the daily press and wonderful in the way that Twist handled the whole affair. May these tired out folks of filmdom reap their reward for the cheery good natured way in which they answered the millions of questions fired at them.

W. N. Selig, in his broad-minded way is the only big film manufacturer who throws open his doors to the public, disarranging studio work, acting schedules, and everything else, to let people get a closer glimpse of how moving pictures are made.

Is it any wonder at all that Selig succeeds, not only commercially, but in surrounding himself with a band of the most loyal employes ever collected on one pay roll?

Joaquin Miller in Films

Joaquin Miller's fame and personal appearance have been rendered finally immortal by the moving picture man. Arthur W. Rice and George E. Thornton scaled the dizzy Fruitvale hills and after an hour of consultation, ending with certain signed documents and the transfer of a check, secured valuable pictures of the aged poet in his home at "The Heights."

While the Poet of the Sierras made trenchant remarks concerning films, things and events, the camera men photographed his venerable figure standing before the walls of stone which he himself had built sitting in contemplation on the vine-clad porch, standing among the roses which have inspired many of his songs, or strolling with his daughter, Juanita, through the grounds, which he spent years in perfecting for her reception.

"Take me in this grove," demanded Miller. "There wasn't a tree here when I came. I want the public to know that I have produced something beside poetry."

Miller declared that he would not go to see the pictures of himself. "I see enough of myself at home," he said. "I saw my first moving pictures on Columbus Day in Berkeley. They are beautiful, inspirational, a poem."

Of Interest to the Trade

MOTION PICTURE EXHIBITORS' LEAGUE OF AMERICA

Second Annual Convention, La Salle Hotel, Chicago, Aug. 13-17, 1912.

Illinois State Branch No. 2 is actively at work to make the National League Convention the biggest thing that has ever been pulled off in the film business. The convention committee is comprised of these well-known exhibitors: Wm. J. Sweeney, Chairman; Samuel I. Levin, Chris. C. Whelan, Crawford L. Hull, George Henry, Robert R. Levy, Louis Schindler, I. Natkin, L. H. Frank, Charles Abrams, A. J. Balaban, M. Hyman, Fred Schaefer, H. A. Hill, J. A. Alcock, John Miller and Charles A. Anderson. Headquarters are at 112 S. State St., Chicago, in the splendid offices of the Orpheum Theater.

A Powers Two Reel Picture

"Toys of Destiny," the coming two reel feature to be released by the Powers Company, is a most thrilling and highly interesting story and has the qualities essential to a drama that will live long.

Ernest Seamon and David Baldwin both love winsome Dorothy Fisher. Love is blind and the girl chooses Seamon, the dissolute young scion of a rich father. As a lover he deceives her and as husband ill treats and neglects the young wife. He goes from bad to worse and consorts with gamblers and men of shady reputation, coming home intoxicated to mistreat his wife.

Young Baldwin is a lawyer and rises in his profession until he is honored by being elected district attorney. He remains unmarried and still loves Dorothy, knowing his love to be hopeless.

One day Seamon goes to one of his old haunts and there becomes helplessly intoxicated. He is seated at a table, head on arms, sleeping off the effects of a prolonged debauch. Another man enters and seats himself at the same table and calls for drinks. Outside two villains have followed the man to the resort. They enter stealthily and there is a struggle and one of the scoundrels produces a revolver and shoots the stranger, killing him instantly. They hastily rifle his pockets and decamp. The noise of the shot is heard by those in the barroom and they rush in to find Seamon seated beside the dead man with a revolver in his hand, placed there by the murderer. The

Scene from the Powers Subject, "Toys of Destiny."

evidence is all against Seamon. He is arrested, charged with the killing, and given a trial. Baldwin, true to his sworn duty, conducts the prosecution and Seamon is convicted on circumstantial evidence, much to the sorrow of Baldwin as he sees tne grief of the wife. Seamon goes to the penitentiary and becomes a demented man.

Near death's door the real culprit comes to Baldwin and, in the seclusion of the office of the district attorney, confesses that he shot the stranger. Baldwin secures his signature to a written confession and then follows a struggle between love and duty. Baldwin knows the confession will clear Seamon and that he will return to his wife. If he suppresses the confession the wife can obtain a divorce from the worthless husband marry him. He does not waver long. Going to the wife, he shows her the paper. She is visibly affected, but bids him go and free the prisoner. Armed with a pardon from the governor Baldwin goes to the penitentiary and obtains the reaelse of Seamon.

The husband returns home a wreck. Once free he proceeds to become intoxicated and reels into the presence of his wife to upbraid her. She bars it with a fortitude that is grand. Stung by her indifference he attacks her and they struggle through a door to a porch, where he falls to the ground below to his death.

There is little more to be told. After an elapse of time Baldwin comes to the sweetheart of his youth and she welcomes his coming. He takes her in his arms and they are once more happy—all barriers to their union being removed.

Kathlyn Williams Author of Selig Feature

On July 4 the Selig Polyscope Company will release, as an Independence Day feature, a one-thousand foot drama entitled, "The Last Dance." It promises to be one of the best dramas of the season and was written by Miss Kathlyn Williams, the versatile and talented Selig leading woman. The production was staged under the direction of Oscar Eagle, a well known legitimate producer, who recently joined the Selig forces. "The Last Dance" tells in a simple, charming manner, the story of a dancing girl's romance and pathetic death. While it is filled with dramatic scenes and abounds throughout with the atmosphere of the stage and country, it is utterly void of the usual theatric sordidness which oftentimes mark productions of this nature. Miss Winnifred Greenwood plays the principal part, that of the dancing girl, and it is said that she does one of the finest pieces of emotional acting ever seen in the silent dramas, and by far the best piece of work in her career as a motion picture player.

The first production of the Selig company now working in Colorado has been received at the Selig plant in Chicago, and taking this first picture as a criterion the Colorado Company bids fair to outrival all former efforts from this locality. The Selig Colorado Company is in charge of Marshall Stedman, with O. B. Thayer in charge of the productions. Among the roster of players are Myrtle Stedman, William Duncan, Florence Dye, Rex de Roselli, Ed. Maich, Henry Riemers, camera men, and Francis West. It is understood the company will work around the Royal Gorge for the present and later is expected to stage some productions in the Cripple Creek district.

George Cox, of the Selig producing department, has taken a small company for a two weeks' cruise through the islands of Northern Lake Michigan and Superior. Some interesting marine pictures are expected as a result of this trip.

On July 18 the Selig Polyscope Company will release a one-thousand foot feature entitled "The Polo Substitute." The story of the picture revolves around the great International Polo Match, recently held at Pasadena, Cal., in which the social elite of two hemispheres were concerned. A very intense and exciting feature of this reel is the actual game between England and California. Many thrilling plays were recorded by the Selig cameras and three well known English Lords appear in close up scenes. Hobart Bosworth, himself a crack polo player, probably has the distinction of being the only moving picture producer in the world who has had three real English lords working for him at one time as supers. Lord Tweedmouth, Lord Alastir Gower (son of the Duke of Sutherland) and Lord Innes-Kerr, who was with Captain Beasley of the Horse Guards, all are seen in the game. Dr. Mallaby and the great Canadian player, Mr. W. Stevens, also take part in the breakneck sport. Colin Campbell produced the picture and Hobart Bosworth wrote the scenerio and played the leading role.

The entire energies of the Selig Polyscope Company's Pacific Coast studios are now directed toward the production of what promises to be one of the most elaborate and dramatic spectacular features ever released by the house of Selig—"The Count of Monte Cristo."

Crown's "Battle of Two Palms"

In the Battle of Two Palms, one of the stiffest encounters of Italian-Turkish war, Cav. Luca Comerio, official photographer of the King of Italy, took the most thrilling battle pictures ever presented to the public. Instead of being a specially posed sham battle scene, or a series of pictures taken before and after actual hostilities, this film shows the battle in all its details from the appearance of the enemy until their final route.

More than one thousand Arabs were killed in this particular engagement, according to Italian advices, and that they were courageous and offered stubborn resistance is demonstrated by the number of dead and wounded left on the field. It is only from a film of this character that one can realize the frightfulness and uselessness of war, and these pictures should be effective in promoting the work of the Hague Tribunal of Universal Peace, a work that has been so far ineffectual.

The attack was begun at noon, a large force of Turks and Arabs advancing from the desert opening fire on a company of engineers who were engaged in laying the foundations of a new line of forts. A lively skirmish then took place, the two battalions of the 34th Infantry stopping the Moslem advance, the 20th Infantry preventing the enemy from engaging the Italian right.

About five o'clock the Turks began their retreat, while the Italian batteries poured hundreds of shells into the broken ranks of the enemy. It should be reemmbered that the camera man was in the midst of this engagement, and that this two reel film by the

Crown Feature Film Company shows every movement and detail of the battle with a fidelity to nature that places the spectator on the field with the heroic rcfoes.

American to Release Three a Week

Beginning Wednesday, July 3, The American Film Manufacturing Company will release three instead of two western subjects. The new addition is the result of the steady, consistent demand for more western subjects which seem to be general among Independent exchanges.

The American has placed a new company in the field whose every effort will be bent toward the production of the highest possible grade of out-of-door cowboy, Indian and mining pictures.

The American has made some rapid changes in its organization recently, adding four new companies and producers.

Efforts are being directed toward the production of the highest possible grade of distinctly western subjects and three companies are now bending their energies toward that end.

It is the American's intention to place three good western subjects on the market each week; also to add a two reel subject each second week and to cover a number of scientific and educational studies as well. Some of the best negatives of a scientific nature will be announced for release in the near future.

W. D. Emerson is the name of one of the American's new producers. Mr. Emerson has just completed "An Hour of Terror," an unusually good subject of an Indian nature and will handle the third western for the American each week.

Thanhouser Increases Capital

Under the laws of the state of New York the Thanhouser company, located in New Rochelle, has filed incorporation papers at a capitalization of $400,000 for the production and manufacture of moving pictures. The following are named as incorporators: C. J. Hite, Crawford Livingston, and Dr. Wilbert Shallenberger.

Americans Moves Its Western Studio

The American Film Manufacturing Company moved its western studio last week from La Mesa to Santa Barbara, South California. The new location will give the western company equally good backgrounds for its pictures. The actuating reason for the move was the fact that nearly all good locations in and about La Mesa had been extensively used in "Flying A" pictures. Two horses were stolen from the American's stables recently. Oddly enough, this event occured the same day that two "Flying A" play-

Scene from the Kleine-Cines Film, "Too Many Sweethearts." July 27th

ers were married. Detectives failed, however, in discovering any clew that might link the disappearance of the horses with the simultaneous disappearance of the two honeymoon couples.

With its two western companies, one in Santa Barbara and the other in Chicago, the American Film Manufacturing Company announces itself in the market for some good Indian stories of one reel length. Good prices will be paid for acceptable manuscripts.

General Film Meeting

At the annual meeting of the General Film company, held at the company's offices, New York City, the following officers were elected for the coming year: J. A. Berst, president; George Kleine, vice president; S. Long, treasurer; Paul Melles, secretary. Members of the executive committee, S. Long and S. Lubin.

New Frisco Censorship Board

A reorganization of the San Francisco, Cal., board of censorship, which exercises supervision over moving picture shows, resulted from a conference between Mayor Rolph, members of the censorship board, public officials and representatives of the Society for the Prevention of Cruelty to Children.

A new board will be appointed, as the result of complaints that the censors have permitted improper pictures to be shown. The censorship board consisted of Dr. W. A. Whelan, W. P. Wobber, T. Bailey and Mrs. F. M. Malloye. Doctor Whelan and Mrs. Malloye have resigned. Detective Bailey and Wobber will follow.

Increase Use of the Orchestrion

Considerable success has been attained by the Peerless Piano Player Company, St. Johnsville, N. Y., in supplying the better class of photo-play houses with the model "De Luxe" Orchestrion, not only in this country, but in the Antipodes as well. We are informed that among the latest users is the John D. Williams Amusement Company of Sydney, Australia, who has an Orchestrion in each of its seventeen theaters.

In this country may be mentioned the string of theaters, owned and controlled by Josiah Pearce & Sons in New Orleans, La., and the two new theaters just opened by Chris Chacos at Coshocton, Ohio, in all of which an Orchestrion is installed. In addition to the above, are the almost numberless theaters throughout the country who have been supplied through the dealers.

Moving Pictures at Culver

At the recent annual outing of the Indiana society of Chicago, held at the Culver Military academy, Culver, Ind., motion pictures were taken of the various events. These will be reproduced for the first time next winter at the annual banquet of the society.

Brevities of Business

PERSONAL NOTES.

This is H. Z. Levine, all dressed up in an air-brush suit of black tweed, ready for his own funeral. He is a victim of MOTOGRAPHY'S spot-light persistence. In electing these publicity men to fall for an airing in print this great motion picture pest has bit into the hardest of all its hard propositions. Levine tried the Bertillon method and then switched to thumb-prints before he would come across with a photograph. And even then he submitted a film negative instead of a squeegee print. Can you beat that for modesty? This film negative showed him in his shirtwaist with the sleeves rolled up. It wasn't done that way to lend color to his action. No one doing publicity in the film game can bluff it out. You gotta get down to the grind and produce! Levine isn't the exception. He is all tangled up with eighty-three things to do in sixty minutes and then repeat, keeping at it for sixteen hours a day. Then he quits, with "nothing to do till to-morrow." And he's young yet! Those thumb prints that are stowed away in the films loomed up like steel prints and they were inked with a rubber stamp pad at that. They didn't show a blemish of wear, nor a scar of any kind, which proves that a southpaw, though city bred, can take care of himself. H. Z. Levine was born in New York City, August 26, 1888, when the asphalt on the pavements was bubbling with heat. He tried to spring the twittering as part of the setting to such an auspicious event, but the birds don't twitter in New York in August. They sit around with their wings extended and their tongues hanging out, waiting for a sprinkling cart. The birds in New York are like the people who live there. They know that if they stay with it long enough, somebody will come to their rescue. Erstwhile, now that Levine is born and christened—think of it—Harold Zachary Levine, and him left-handed; he grew, much as other babies grow and after a while he trundled off to school with his little slate and pencils and primer. He tugged at the three R's, and kept right along past the high-school and into the university of New York where he specialized in history, literature, sociology and economics. This was in accordance with the wish of his father who encouraged his son to study law, which he did. When Levine's father died, he dropped the cause and accepted a place with the publicity department of the City Club of New York, a semi-political club, headed by George McAneny, the present borough president of Manhattan. He remained in the position for a year, before joining the editorial force of the Brooklyn *Eagle*. This association led him into the staff of the incorporated theatrical press agents, which didn't fit his inclinations a little bit. But pencil-pushing as an occupation had taken strong hold of him and he found solace at his own desk, representing a string of weekly newspapers as special writer on subjects which he assigned to himself. He also did more serious work in contributing a series of special articles on manufacturing subjects to the good old Brooklyn *Eagle*. By now, Levine is twenty-two years young and the next year he engaged with the M. P. NEWS, but only for a little while; for *Film Reports*, under Rubenstein, was having a lot of fun and Levine jumped in there to help. He got the title of associate editor and did a whale of a lot of work. Following this short excitement, he organized the M. P. Publicity Company, with high ideals. High ideals alone don't go in the film game and the enterprise fluked before it got to going, which may be taken as a compliment, rather than a knock. It was here that Bert Adler took sick and Levine was called in to help out. He made such a splendid record for himself that the Thanhouser Company hung on to him during Adler's four months' Illness and last November the Solax Company, needing some one who could manage publicity, engaged Levine without parley. He is now publicity manager for the Solax Company and editing the house organ, *Magnet*, as a side line. Like all publicity men, Levine is proud of certain achievements. He regards "Solax Night" his happiest success. And he also believes that the film itself is the best of all advertisements.

Fred Mace, formerly one of the principal comedians with the Biograph Company, has connected himself with the forces of the Imp Company, where he will assume similar roles.

After a short engagement with another company Alvin Wyckoff, formerly cameraman with the Selig Polyscope Company, has returned to the Selig studio.

James Cooley has rejoined the Reliance forces after an absence of several months and will resume his former part of playing leading roles.

Miss Helen Lynn has been engaged as leading lady for the Diamond Film Company at Woodside, L. I. Miss Lynn has previously been connected with one of the best film companies in the country and is not only a perfect type for motion pictures, but is well equipped for the work.

M. A. Breslauer has been appointed press and publicity agent for the western branch of the Essanay Film Manufacturing Company, with headquarters at Niles, Cal.

S. S. Hutchinson, president of the American Film Manufacturing Company, accompanied by his son, will shortly leave for an extended trip to Europe in the interest of the business, spending much of his time with the company's London branch in an effort to bring it more nearly to the standard and growth attained by the American house.

Whitney Raymond, a member of the Essanay Eastern Stock Company, has just returned from a month's sojourn in Southern California and among the Canadian Rockies. Mr. Raymond is very profuse in his praise of the country visited.

George Gebhart, formerly director of the Lux Company at Hollywood and later connected with the Nestor Company as leading man, has joined the Pathe Western company and will assume the role of Indian leads, for which he is particularly adapted.

Charles L. Fuller, well known to the moving picture field, will act as representative of the Helen Gardner Feature Picture Company recently organized.

Stan Twist, who pulls the wires at Selig's publicity desk just telephoned to say he is starting on a yachting trip on Winn's power auxiliary yacht, H'Eloise. That Stan is headed for Milwaukee doesn't mean that they intend to take on a cargo of Milwaukee's most famous product, but every one knows how thirsty water makes one and it's two to one that the H'Eloise will have a long string of empties to account for on the home trip. Publicity men, as a rule, don't get vacations, which is a big pity, so Twist expects to be back on the job by time.

S. S. Hutchinson, president of the American Film Manufacturing Company, leaves Chicago Monday morning, July 1, for New York, where he will board one of the big liners for a shorp trip to Europe. Berlin, Vienna, London and Paris are a few of the villages on his itinerary. This trip is purely a business trip, but it's a safe bet he won't do all his spending Monday. We all envy him the trip and hope he has a good at Selfridge's or the *Bon Marche*.

The proverbial toughness of an advertising man's skin would account for some things; but when Mr. and Mrs. Omer Doud have an exciting spill from an auto going twenty miles an hour without even a scratch to show for it there must be some kind of a Providence that takes a hand. Anyway, the American Film Manufacturing Company came mighty near losing a "cracker-jack" publicity man last week, when Doud's auto overturned while he was hurrying out to assist at a new production the American Film is bringing out. Doud is too good a man to lose and we hope he either cuts his speed down to a walk or takes a trolley hereafter.

AMONG THE PICTURE THEATERS.

ALABAMA.

Wyatt Heflin, one of the best-known young singers in Birmingham, has acquired the Victoria theater in that city and will conduct the same as a high grade moving picture house.

The Ketcham Moving Picture Company is the name of a new organization formed at Little Rock by George Ketcham and others for the purpose of taking pictures of Arkansas scenery. Some time in September the company expects to send a crew to Mexico to get scenes of the revolution and

pictures of Mexican scenery. This trip will probably be made overland.

A motion picture theater has been opened at Warren by the J. M. Ensor Film Exchange of Little Rock.

CALIFORNIA.

The Liberty theater, a new motion picture house erected at 617 K street, Sacramento, by Charles W. Godard, is said to be one of the most beautiful on the coast. A $15,000 automatic orchestra has been installed. The house will be devoted exclusively to pictures and the admission will be ten cents to adults and five cents for children.

The Dreamland picture theater at Modesto has been purchased by G. F. Alton.

A new motion picture theatre is being erected at 16th and Valencians street, Los Angeles, by W. A. Trintz, which contemplates the expenditure of $15,000, and will have a seating capacity of 550.

The New Casino Theater is a late addition to San Diego's motion picture houses, having been erected at a cost of $15,000 and with a seating capacity of 780 persons.

Messrs. Whitmoyer and Geer, proprietors of the Lyric theater at San Bernardino, have acquired the management of the Majestic theater at Glendale and thus have a good start on a circuit of the popular moving picture houses. For the present Mr. Whitmoyer is giving all his time to the Glendale house, but expects to divide his time equally between the two houses once matters are satisfactorily settled. Only the best films will be shown and both houses will be conducted on the highest possible plane.

CALIFORNIA.

Berkeley has a new industry which will employ from 75 to 100 skilled mechanics, and about 15 or 20 girls, besides the usual number of laborers. It will be known as the American Photo-Playing Company and its principal output will be large instruments to be played in connection with biographic displays, including all kinds of moving picture shows.

A moving picture theater will be opened at 369 N. Main street, Los Angeles, by the Portala Theater Company, which will have a seating capacity of about 700.

CANADA.

A new motion picture theater, to be known as the Imperial is in process of erection at Vancouver, B. C., by the Canadian Theaters and Amusement Company, and every effort is being made to have the house ready to open to the public about July 1. The house will have a seating capacity of 1,400, and the estimated cost is $60,000.

COLORADO.

The Savoy, a new vaudeville and motion picture theater opened at 116 North Tejon street, Colorado Springs, announces that nothing but first-class vaudeville and the latest and best in moving pictures will be presented, and the opening program bore witness to the truth of this statement.

George T. Stapleton, for the past four years proprietor of the Gem theater, Rocky Ford, has exchanged his property in that place with J. A. Funk for a picture theater in Guthrie, Okla.

Ordway is to have a new motion picture theater, which will be under the management of Phil Partick, and will have a seating capacity of 250.

CONNECTICUT.

A new motion picture theater, having a seating capacity of 1,200, has been opened at New Haven by Frank Wilcox, under the management of Frank S. Terrell.

Plans have been prepared for a moving picture theater, to be erected by Manager W. M. Harris, of Highland Lake Park, Waterbury. The same will have a seating capacity of 1,000.

The "Mitchell" is the name of a motion picture house opened at New Haven by Lowell A. Mitchell, having a seating capacity of about 1,000.

The Phoenix Theater has been reopened at Danielson as a moving picture house.

DISTRICT OF COLUMBIA.

Plans have been prepared for a motion picture theater to be erected at 419 Ninth street, Washington, by the District Amusement Company.

The Feature Film Manufacturing Company has been incorporated at Washington, with a capital stock of $100,000, by Harry M. Crandall, Harry Bulkley and Robert W. Bulkley, all of Washington.

ILLINOIS.

A motion picture theater will be erected at Belleville by a company of which Walter Sternberg, of St. Louis, is the head.

The Majestic motion picture theater of Rock Island will be reopened under the management of Messrs. H. Goodwin and H. Geiserman, of the Lyric.

The Grand, a vaudeville house of Mattoon, will hereafter be conducted as a motion picture house.

A motion picture theater will be erected at Edwardsville by the Edwardsville Investment Company.

Plans are being prepared for a motion picture theater to be erected at 6251 Langley avenue, Chicago, by John Levinson, at a cost of $18,000.

The Montrose Family Theater, Roby street and Montrose avenue, Chicago, formerly conducted by Charles Svinning, has been purchased by William Kruse, who will continue to operate it.

A new amusement place to be known as the "Hippodrome" will be opened at Second and Piasa streets, Alton, under the management of W. M. Sauvage in the early fall.

The Metropolitan Theater Company, Chicago, has been incorporated with a capital stock of $10,000, by Lewis F. Jacobson. William M. Tannenbaum and Daniel L. Madden.

The Lillian Amusement Company has been incorporated at Granite City with a capital stock of $2,000, to do a general vaudeville moving picture and show business. The incorporators are Louis Landam, Jr.; Thomas Gray, Cecille Dodge, Edson A Dodge and A. E. Garvis.

The Dreamland theater at Straitor has again changed hands, having been purchased by William Pugh.

The Electric theater at Fairbury has been purchased by A. C. Main of Gibson City.

The "Kaiserhoff" is a late addition to Rockford's motion picture theaters, having been opened recently at 221 South Main street, under the management of Sam Rose. Only the best pictures will be shown.

Messrs. Isodore Burnstine and William Evans, proprietors of the Capital theater of Springfield, have dissolved partnership, Mr. Evans' interest having been taken over by Joseph W. Shepherd, who has conducted a restaurant at 611 Washington street for several years. The Capital is practically a new theater, having been opened only last September, but in that short time has proven itself to be one of the most popular picture house in Springfield.

The Garfield theater is a new motion picture house to be opened at West Madison and Kedzie avenue, Chicago, by the Kedzie Amusement Company about July 1. It will have a seating capacity of 800 and will have a sliding roof operated by hydraulic power, a feature which will no doubt be appreciated by its patrons during the hot weather. The music will be supplied by a four-piece orchestra and a large pipe organ costing $5,000.

The Twentieth Century Theater and Amusement Company, Chicago, has been incorporated with a capital stock of $15,000, by Mark D. Goodman, David McIntee and others.

MASSACHUSETTS.

The Lincoln theater at Worcester will be ready to open to the public about September.

A first-class motion picture theater will be erected at Cinton by Messrs. Gibson, Lowe and Dame, which will be ready to open about September 15.

WANTED—Records and films for chronophone, cameraphone, or cinephone. State subject, price and condition. Address C-D 26, Motography, Chicago.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

Read what one of America's Greatest Advertisers say:

SOUTHERN PACIFIC COMPANY
"SUNSET ROUTE"
TRAFFIC DEPARTMENT

NEW YORK Jan. 18th, 1910.

The Enterprise Optical Manufacturing Co.,
Chicago, Illinois.

Gentlemen:-

At the request of your Mr. F. W. Swett I write this to say that I have been using The Motiograph constantly in my lecture work for the past sixteen months, selecting it as the best of all the machines for the projection of motion pictures in the market. The original machine which was purchased through your Boston agency is still in active use and has never been sent to the shop for repairs, the occasional adjustments necessary having been made by my operator. When I state that in sixteen months this single machine has been used in projecting pictures before 925 different audiences, from Maine to Texas and throughout the British Isles, with an expenditure of only a few dollars for duplicate parts, which were easily adjusted by the operator, and that I consider it today just as good as when it was purchased, I doubt if I can express my thorough appreciation of its excellence in better terms.

My work is such that frequent jumps are necessary, lectures often being given in five or six different places in a week. The entire machine is invariably shipped in a packing trunk and although our outfit is often subjected to rough treatment in transportation The Motiograph has never been injured in transit. With other makes of machines it is usually found necessary to transport the head by hand, but in the case of The Motiograph we have never found this necessary.

Very truly yours,
J.W. Erwin.

WHY? *Because!*

MOTIOGRAPH Testimonials are **Honest** and **Sincere,** and only those from "Bona-Fide" exhibitors are used.

We do not publish what a dealer says as it is very natural to expect a boost from one benefiting financially.

GET WISE—Send for a free copy

WHY? *Because!*

It Tells You what the other fellow thinks

The 1912 Model MOTIOGRAPH

is practically fire-proof—besides which it is ***the best*** machine made—it looks better—it runs better—and it gives a better picture.

CONVENTION DAY IS COMING.

THE second annual convention of the Motion Pictures Exhibitors' League of America, the big event of the year, is not far distant. Another month and we will be right in the midst of it. It is time now to decide to go, if you have not already made up your mind—and time to change it if you have decided not to go.

Possibly you are not a member of your state league, and so have not thought of the Chicago meeting as your business. Or perhaps, being a state league member, you have elected delegates to represent you at the national convention, and let it go at that.

If the convention depended on authorized delegates its attendance would be extremely limited. You have enough pride in your business to want a big attendance. The only way to get it is to go yourself, not just those of you who have nothing else to do, but all who are ambitious to see the Motion Picture Exhibitors' League of America grow in power and influence.

And that includes not only all members of state leagues, but those exhibitors who are not, as yet, members of any league branch or association. This convention is as surely their business as it is anybody's; for the non-member is the hope of any league, the only means of growth it has.

The second convention of the league should be the biggest thing that has ever happened in the picture business. The state branches are forming as fast as the organizers can get to them, each adding to the strength of the national body, and delegates and committees already appointed are composed of alert enthusiastic men, wholly devoid of the suspicious and cynicisms of the earlier days. The keynote of the league today is *harmony*—and harmony means power and progress and success, for it is the one absolute requisite of association work.

VOCALISTIC AFFLICTIONS

We are about to resign ourselves to the fact that the the salted peanut huckster, with his bawling and yelling, is a fixture in the average picture house, for shows and peanuts seem to be one, and indivisible. Not content with this uproar we are also visited with afflictions in the form of the "Met Her in the Gloaming" songstress, and endeavors of a bum juggler picking rabbits out of silk hats. Any showman will tell you that these acts are the result of popular demand, but we know better, and what we know in regard to this feature is gained by an extended canvass among show patrons.

Good pictures, and nothing else, are the foundations of the moving picture theater, and the present popularity of this form of entertainment is entirely dependent on the films. Any one that has attended regularly, has noted the involuntary groan that passes through the audience when the spot light heralds the

coming of another frost in the way of an uncensored singer. Of course there are singers, good, bad, and indifferent, but whatever the grade of performer, he is a drawback to the show, and dispels entirely the effect of the pictures.

From the standpoint of either entertainment, or education, the moving picture singer is, in our opinion, the proverbial zero without a rim, and we have never in our experience heard of any patron repeating a visit to any show because of the virtues of the artist. While we are willing to credit the exhibitor for any attempt on his part to improve his show, or to give his audience their money's worth, we believe that any increase along vaudeville lines is a step backward. The usual soggy and mawkish sentimental song, with the name of the music publishing house in letters 12 inches high on the chorus slide, may be of value to the publisher, from a commercial point of view, but not to the moving picture show.

As a usual thing, the visitor to the moving picture house selects this show for the sake of a few moments' quiet entertainment, at least this is the case in the business districts of a city, and the show that puts up the "bing-bang," bally-hooclass of work, loses many patrons that they might otherwise attract. Let us have less racket and more pictures.

MOTION PICTURE ILLUSIONS

Those who frequent moving picture shows are familiar with the booming of cannon, the music of passing bands, etc., as displayed on the screens, says the *Literary Digest*. The sounds are generally real, and are produced behind the stage by the ingenious showman, anxious to reinforce the illusion of one sense by evidence appealing to another. Possibly we may one day have also the flooding of the auditorium with perfume when a picture of a garden in bloom appears, or air currents from motor-driven fans during the portrayal of a storm. Be this as it may, it sometimes occurs that the spectator gets the additional sensation without the showman's aid. We are apt to imagine that we see or hear what we think we should see or hear under the circumstances—hence we may hear the artillery or smell the roses of pure imagination. Dr. Ponzo, an Italian investigator, who reports some observations of this kind to the Turin Academy of Science, finds that there is generally some basis for the imagined sensation, though it may bear little relation to reality. We translate a brief account of Dr. Ponzo's discoveries from *La Nature*, to which it is contributed by Rene Merle. Says the writer:

Dr. Ponzo has collected divers curious observations made during cinematograph exhibitions, and all belonging to the category of errors—illusions of the senses and of the perceptions furnished by them.

Most of these relate to associations between the visual images of the cinematograph and independent acoustic impressions. Dr. Ponzo cites some of these associations: During the exhibition of a film representing a religious ceremony in Burma in which two young persons struck bells, he believed that he heard the tolling, and in seeking an explanation found it in the sensation of the low tones produced by the stringed instruments of the orchestra. Another time, seeing the representation of a moving automobile he seemed to hear the noise of the motor—an impression that was the interpretation of the rattle of the hall ventilator.

On several occasions he interpreted the noise of the same ventilator or of the cinematograph projector as the far-off rushing of a torrent or that of a waterfall when the film showed views of this kind. These associations easily occur when no particular attention is given to them and are very intense when they last but an instant. On the other hand, they are difficult to bring about voluntarily, and every one knows what imperfect results have attended all efforts to combine the cinematograph and the phonograph, particularly because of the impossibility of localizing visual and acoustic impressions in a single point.

It is certainly with the intention of favoring these acoustico-visual associations, and thus giving a greater impression of reality, that the promoters of moving picture shows furnish orchestral music and that they try to imitate behind the curtain certain noises such as those of the wind, of the sea, of vehicles, or falls, of the breaking of glass, etc.

It is not alone acoustic impressions that are sometimes associated with the visual images of the cinematograph all the senses equally may furnish such illusions.

Dr. Ponzo cites an impression of moisture and cold received during the representation of a scene from "Dante's Inferno," involving rain; an impression of sea air at the sight of a ship at sea, etc., all due to the temperature of the hall, but not noticed until the visual impressions had put them in evidence through association.

Odor may also furnish illusion. * * * All these phenomena are valuable in the study of the associations of sensation and of the illusions that they produce; they are worth nothing, for their observation is difficult because it cannot be made at will, the desire to notice them being sufficient to prevent their occurrence.

PICTURES AID REFEREE

Showing practically every blow struck in the Vernon arena, Los Angeles, Cal., on July 4th, the moving pictures of the Wolgast-Rivers fight were given their first presentation at a private display in the studio of a moving picture company at Edendale. The important questions raised by the unsatisfactory conclusion of the fight in the minds of the fight enthusiasts, are to a certain extent satisfied by the picture.

If Wolgast fou'ed Rivers at the finish the films fail to record it. In the thirteenth round the pictures show the men fighting head to head near the ropes. Suddenly Wolgast's arms begin working like mad at the infighting. Four body blows are delivered. They are clearly shown. First there were right and then left to the body, and then repeat with lightning rapidity.

The pictures show Rivers sagging backward, one foot stretched forward, and as the champion lunges forward his foot strikes the foot of Rivers, who is just settling back to the canvas. Wolgast stumbles forward over this foot as Rivers finally stretches out, and the champion falls over the up-raised knee of the man below him.

F. J. Balshofer, an official of the moving picture company, developed an interesting fact in connection with the pictures and the fight.

"Scientific mechanical arrangements can not lie," said Balshofer. "The machines were taking pictures at the rate of one foot of film per second. This fact cannot be disputed. The pictures by actual measurement of the film show Rivers on the floor for twelve feet of fi'm, showing that he was down for twelve seconds by actual count, whether the referee counted that number or not."

FREE MOVING PICTURES

Under the auspices of the city administration of Houston, Texas, the people of Houston are enjoying free moving picture shows, concerts by the Municipal Band and lectures by public men of the country and recitals of noted soloists brought from the Northern and Eastern musical centers.

The free entertainments are given every Sunday afternoon in the new Municipal Auditorium, which seats 7,000 persons. Popular from the inception, the shows have played to packed houses every Sunday afternoon. The entire expense is born by the city.

"The Fall of Montezuma"

Essanay's Splendid Historical Pageant

HISTORY contains no more spectacular achievement than the conquest of the mighty Mexican Empire by that sturdy Spanish invader, Hernando Cortez.

Early in the year of 1518 an expedition of four ships, under the command of Juan de Grijalva, a Spanish adventurer, landed on the shores of Mexico, at the point now called St. Juan de Ulua. Kindly received by the natives, they were loaded with costly presents of pure gold in exchange for glass beads and other baubles, and heard vague reports of the wonderful interior country, ruled by the mighty monarch, Montezuma. Grijalva at once sent back one of his ships to Cuba laden with the treasures of the newly discovered land, and Velasquez, governor of the island, dispatched the welcome tidings to Spain and instantly set about preparing an extraordinary expedition for the exploration of Mexico.

Cortez Lands on the Coast.

The man who heard these tidings with a thrill of real emotion was Mernando Cortez, then living a life of ease on his Cuban plantation.

Born in 1485, in the secluded village of Medellin, Spain, Cortez had been reared by his proud, but poor, Castilian father, to follow the honorable profession of law. But his wild nature brooked no such restraint and, at the age of sixteen, his disappointed father withdrew him from the celebrated University of Salamanca, after two years of indolent dissipation. Cortez had the blood of soldiers in his veins and at nineteen was assigned posts of profit and honor in Hispaniola. It was here he received his first schooling in methods of Indian warfare, and his courage and imperturable self-possession dominated every enterprise in which he took part. In 1511 he joined a filibustering expedition under Don Velasquez and assisted in wresting the island of Cuba from the natives. Velasquez was made governor of the conquered territory and rewarded Cortez with a wealthy plantation that brought him in a handsome income yearly.

The Great Feast in Honor of Cortez's Arrival.

Seven years later the tidings of the wonderful Mexican empire came from Grijalva, and Velasquez cast about for a man to command the expedition sent to explore the new land. Seeing the greatest opportunity of his career opening before him, Cortez brought the most powerful influences to bear upon the governor to place him at the head of the expedition. Only too well did Velasquez know that Cortez was the one man to fill the important post because of his energy and limitless courage. Only too well did he also realize that Cortez was a leader of men, not one to be in turn led by any higher authority than his own judgment. Velasquez hesitated. Would Cortez prove

submissive to his orders? He feared not.

At last he yielded to the powerful persuasions brought to bear upon him, and publicly announced Cortez as captain general of the armada for the exploration of Mexico.

Full well did Cortez realize the mighty destinies that had been placed in his hands, and the fire of enthusiasm consumed his very soul. He was to pentrate the mighty empire of Montesuma, abolish the worship of idols and establish the faith of Christianity abroad in the land by means of the bloody sword, rushing horses and artillery, things unknown in the new world that lay beyond the sea. Too late did Velasquez realize to a certainty that Cortez would follow no instructions and might, with his marvelous genius, become a formidable rival. Resolved to depose Cortez as commander of the armada, Velasquez cast about for a less intrepid adventurer to fill the place, only to have the wily Cortez anticipate his plan and set sail with his uncompleted expedition during the night. Landing at Mocaca the ships were fitted out, and provisioned, and the next stop was made at Trinidad, where Cortez raised his banner, secured volunteers, collected his military supplies and went on to Cape Antonio where a last desperate effort to stop him was made by Velasquez, but all in vain. His force consisted of some four hundred men, armed with cross bow guns, muskets, swords and spears, a few horses, and a few pieces of artillery. Such was the expedition on which Cortez relied to subjugate a nation

History tells us that Cortez was now thirty-three years of age, a handsome, finely proportioned man of medium stature, pale, intellectual features, piercing black eyes, and the most courtly manners, inherited from his proud Castilian ancestry. On the 18th day of February, 1519, the last preparations were completed and

Cortez Usurps the Throne.

The Meeting of Cortez and Marina.

the fleet set sail. Numerous stops were made at various islands, notably Cozumel, where the natives were defeated in a terrible battle and Christianity established after the destruction of the idols. Striking boldly into the unknown waters of the interminable ocean before them, Cortez turned the prows of his vessels westward and at last cast anchor in the broad mouth of the Tabasco River, which Grijalva had entered before him. Here he reduced the capital city of Tabasco and changed its name into St. Mary of Victory. The faith of the invaders was established throughout the nation.

Here it was that Cortez was presented with Marina, a beautiful Indian maiden, daughter of the chief of a subjected tribe. Marina spoke two languages, the Mexican and Yucatanese, and soon mastered Spanish. She ever

proved of the greatest value to the great invader during the later conquest of the Mexican Empire, because of her knowledge of the Aztec race, and her ability to act as his interpreter on every occasion.

Early in the month of April, 1519, the expedition at last dropped anchor in one of the great harbors of the Mexican empire near the island of San Juan de Ulua.

At last the prize for which they were braving the terrors of an unknown continent was close at hand. Some two hundred miles in the interior was the mighty capital city of Mexico, ruled by Montezuma, a monarch as powerful as ever the world had seen.

Cortez lost no time in preparing for his memorable march into the interior. Rallying a powerful Indian tribe called the Totonacs, under his banner, Cortez set at defiance all the embassies sent by Montezuma, to warn him from entering the interior, quelled a threatened mutiny among his army by sinking his ships in the harbor so that nothing was left for them to do but push on, and, on the 15th day of August, began the great march that was to terminate in the conquest of the mighty Aztec nation.

Prince Cacamatazin Demands the Beaked War Crown from Montezuma.

The Usurping Prince Attacks Cortez.

Conquering a powerful native nation called the Tlascalans, who had resisted all the efforts of Montezuma to crush and bring them under his rule, Cortez added their untold numbers to his standard and pushed on. The great city of Cholula, but some sixty miles distant from the Mexican capital, was the means by which Cortez cruelly threw defiance into the teeth of the mighty Montezuma; for, upon discovering that the city treacherously meant to overwhelm his army he sacked the place with fire and sword and slaughtered the inhabitants by the tens of thousands. Little wonder is it that Montezuma trembled upon his throne when word of the awful fate of Cholula reached his ears. He feared Cortez' entrance into his city, but realized he was helpless to prevent it. The terrible cannon and horses of the Spanish, that belched forth flaming death and rode down the Indian legions ruthlessly, caused him to become panic-stricken. In despair he sent terms to Cortez, agreeing to pay him four loads of gold, one for each of his captains, and also a yearly tribute to the King of Spain, if the invader would only turn back. But Cortez still pushed on, declaring he would meet the ruler of men face to face. Entering the great cities of Cuitlahuac and Iztapalapan, the Spaniards and their allies pressed on. It was now the 8th of November, 1519.

Arriving at the great causeway which led from the main land to the capital city, built on an island in the midst of a vast lake, Cortez was met by a procession of the principal inhabitants who announced that the Emperor Montezuma, was advancing to welcome him. A more picturesque meeting can hardly be imagined. The glittering train of Montezuma in all its barbaric splendor of waving plumes and priceless gold, bore in the center the emperor in his palanquin, covered with a canopy of exquisite workmanship, embellished with precious gems. On his head was a golden crown, surmounted

with a rich head-dress of plumes. A beautifully embroidered mantle studded with costly ornaments, graced his shoulders, and gold-fringed buskins fitted closely to his limbs . The soles of his shoes were pure gold. History tells us Montezuma was a tall, well-formed and strikingly handsome man. An interchange of courtesies, and the whole cortege turned and marched on into the imperial city.

Thus was Cortez taken into the very bosom of this mighty ruler of men, and the dark hour was fast approaching.

No sooner was he established within the walls of the city, then Cortez placed his cannon to sweep the vast streets, stationed his army in fortified positions and posted sentries at important points and marshalled a large division of his troops for instant service night or day. Little by little he encroached upon the power of Montezuma, until the harrassed emporer, driven to desperation, begged him to leave the city. But the wily Cortez, realizing the time had come in which to show his hand, now accused Montezuma of treachery and made him a prisoner in his own palace.

The die was cast! Instantly the people rose in furious revolt against this insult, while the humiliated emperor trembled in fear of his life. Cacamatzin, a nephew of the emperor, and chief of a powerful city nearby, regarding his uncle as degraded, seized the reins of power, rallied the Aztecs to his standard and headed the revolt that now spread like wildfire throughout the nation. A general order issued by Cortez to destroy the idols upreared in the shrines of the people added to their rage and the attack began. Besieged in the palace, Cortez and his troops defended themselves and their royal prisoner with bravery unsurpassed in the annals of civilized history. The Aztecs were slaughtered in countless numbers by the terrific hail of death from the Spanish cannon. The situation was desperate for Cortez and his men and, after three days and nights ceaseless conflict, he resolved upon a desperate extremity.

Gathering his men he fought his way out of the city in the terrible battle aptly termed the Noche Triste, or Battle of the Dismal Night, meeting with serious reverses that for a time threatened to overwhelm him.

But the indomtable Cortez did not despair. Montezuma was now dead, having been mortally wounded when forced to speak to his enraged people as a last resort in attempting, at Cortez' command, to quell the revolt. Humiliated and ashamed, the mighty emperor had torn the bandages from his wounds and perished from loss of blood. Guatemozin, his son-in-law, was by unanimous acclaim, placed upon the throne, and rallied his nation for the final struggle.

History now contains no more remarkable achievement than the final conquest of the imperial city by Cortez and his band. Reaching the territory of Tlascala, his

The Great Battle on the Causeway.

The Fight at the Shrine.

powerful ally tribe, he recruited his legions from all sources, returned to the assault and, in the most remarkable siege ever recorded, conquered the city, swept it with fire and sword and terminated the awful struggle in the short space of seventy-five days. Over one hundred and fifty thousand of the Aztecs perished, Guatemozin died miserably under the torture, and the great territory became a colony of Spain, with the abolishment of idol worship and establishment of Christianity. But two years had passed since Cortez had landed on the coast, and the mighty empire was conquered.

Little remains to be told. In the succeeding years Cortez rebuilt the great city, established the customs and trades of the Old World and ruled the nation wisely and well.

Such, in brief, is the bare outline of probably the greatest conquest in history. Realizing the possibilities for a film-pageant, the historical value of which would prove inestimable to the entire world, the Essanay Company began last March to plan a stupendous three reel production of "The Fall of Montezuma." Any attempt to portray the entire conquest of the ancient Mexican Empire would be impossible even in forty reels, consequently Essanay constructed a scenario based upon a series of the most important incidents leading up to the final overthrow of the nation by Cortez and his doughty band.

With this working script in hand the massive production was gotten under way. For weeks the great Chicago studio toiled day and night constructing the enormous set-pieces required to duplicate the architecture of the ancient Aztecs. A score of scenic artists labored over a month alone designing and painting fifteen thousand square feet of canvas scenery. Then came the question of costumes. Histories were ransacked in order to determine authentic styles of dress in those early days and at last an order was sent that kept one of the largest costume concerns in the country in a turmoil for another whole month filling the enormous contract, and the Essanay studio took on the appearance of a vast arsenal as the shipments of glittering armor and richly ornamented Aztec costumes arrived, together with countless numbers of cross-bow guns, muskets, swords, spears, arrows and javelins.

Early in May, after final preparations had been completed, the splendid Essanay special train, comprising of twelve sleeping cars, diners and four baggage coaches, steamed out of Chicago, bearing the great company to distant fields for the production of the gigantic pageant. For almost another month they worked unceasingly under the hot glare of a tropical sun, portraying the stupendous and difficult scenes throughout the three reels. The "special" was their home during the entire filming of the production, and returned only when

The Festival of Quetzal, God of Peace.

the last foot of film had been completed. Several weeks were now occupied at the Chicago studio in selecting 3,000 feet of the choicest film from the many thousand feet of negative taken. And it is this great 3,000-foot photoplay masterpiece that the Essanay Company will release to the world during the latter part of the coming month of August.

The scenario was prepared and written by Harry McRae Webster, Essany's chief dramatic producer, and was staged by Mr. Webster with the valuable assistance of Theodore Wharton.

CAST OF PRINCIPAL CHARACTERS:

AZTECS.

Montezuma, Emperor of Mexico.....*Mr. Frank Dayton*
Cacamatzin, his nephew, the Usurping Prince.....
.....*Mr. William Walters*
Guatemozin, His Brother.....*Mr. William Bailey*
Huitzil, High Priest of War.....*Mr. Harry Cashman*
Quetzal, High Priest of Peace.....*Mr. Howard Missimer*
Second High Priest of War.....*Mr. Roy Tyrrell*
First Priestess of Quetzal.....*Miss Florence Levy*
Second Priestess of Quetzal.....*Miss Elaine Hayman*
Montezuma's Envoy.....*Mr. Milton Newman*
Fisherman (Messenger).....*Mr. William Armstrong*
Aztec Warriors.....*Messrs. Mammeys and Mullen*
First Aztec Woman.....*Miss Luvena Buchanan*
Aztec Water Carrier.....*Miss Frances Thorp*

SPANISH.

Hernando Cortez, the Great Spanish Invader.....
.....*Mr. Francis X. Bushman*
Alvarado, His First Officer.....*Mr. E. M. Sincere*
Bernal Diaz, Second Officer.....*Mr. C. D. Faulkner*
Padre Olmedo.....*Mr. A. D. Gibbs*

High Priestesses, Flower Girls, Dancing Maidens, Lords, Embassadors, Warriors, Soldiers, Burden Bearers, Aztec Chieftains, Indian Maids, Envoys, Etc., Etc., Etc., Etc.

FIRST REEL.

Cortez and his army land on the coast of Mexico and, after holding impressive religious ceremonies, and then the march into the interior is begun. Word of the landing of the invaders is brought to Montezuma by a fisherman during the festival of Quetzal in honor of the God of Peace. Fearing the strange men from beyond the seas, Montezuma causes a peace offering to be made to Huitzil, the God of War, but the enraged high priest, desiring that Montezuma declare war against Cortez, attempts to offer up a blood sacrifice to appease his god, which is prevented by the interference of Quetzal. Declaring that Montezuma must be crowned with the beaked crown of war, Huitzil, Cacamatzin and Guatemozin appear before the emperor's throne and Huitzil warns Montezuma not to allow Cortez to enter the city. Montezuma wavers and dons the war crown as a sign of peace only. Huitzil becomes violent in his denunciation of the emperor's humility and is ejected by the guards. Once outside Huitzil and Guatemozin urge Cacamatzin to lead his people to war against the invaders, and the usurping prince agrees. Wild with thoughts of possible conflicts, the followers of the War God now indulge in fanatical and warlike games to arouse the fighting spirit of the populace, which continue with unabated ardor by the subjects. The costuming and action of this scene are magnificent.

SECOND REEL.

Reaching the capital city of Tabasco, Cortez is presented with Marina, the beautiful daughter of an Indian chief. Her knowledge of the Aztecs and ability to interpret the language later proved of the greatest value to the great invader. Four months elapse and Montezuma sends ambassadors to Cortez forbidding him to enter the imperial city. Cortez returns his helmet in defiance and declares he will meet the ruler of men face to face. In despair Montezuma refuses to consider the propositions of war urged by Cacamatzin, loads the envoy with rich gifts and bids him tell Cortez the gates of the city are open to him. Mad with fury, Huitzil warns Montezuma that his Empire will totter into oblivion at this rash step and rushes from the room. Secretly delighted at the welcome extended, Cortez and his army take up their march to the city. Arriving at the great causeway he is met by the glittering train of the emperor, courtesies are exchanged and all enter the city. That night a great feast is given in the palace in honor of Cortez' arrival. At its conclusion, Cacamatzin and Guatemozin retire, but the emperor, on attempting to leave the room, is made a captive in his own palace by the wily Cortez. Realizing his empire is lost, Montezuma sinks at the foot of the throne on which the usurping invader is now comfortably seated.

THIRD REEL.

With Cortez in power, Huitzil tears the garlands of peace from the black altar of war, commands Cacamatzin to stir up a feeling of unrest among the populace and lead them against the Spaniards. That night a party of warriors capture a Spanish sentinel and Huitzil offers him up as a blood sacrifice to the delight of the frenzied people. The alarm is given and the Spaniards, enraged at the murder of their comrade, invade the shrine and destroy the God of War, then engage in a terrific battle with the Aztecs. Later Cacamatzin and Guatemozin appear before Cortez and demand that Montezuma be brought to them. Cacamatzin now compels the emperor to give up the beaked war crown and, hurling defiance at the Spanish invader, rushes from the room. Marina is alarmed and warns Cortez to be on his guard. Amidst the ruins of the war shrine, Cacamatzin is now crowned emperor, dons the beaked crown and declares war against the Spaniards. The revolt spreads rapidly and Cortez, fearful of the outcome, forces Montezuma to publicly speak to his people in order to quell the attack. Montezuma, now an object of degradation in the eyes of his subjects, is mortally wounded by a shower of javelins hurled from the street and is carried to his room. Realizing the danger, Cortez orders the cannon trained on the Aztecs and dispatches his troops to put down the revolt. He is now suddenly assaulted by the infuriated Cacamatzin, and a desperate hand-to-hand

struggle ensues in which Cortez is victorious and hastens out to lead his men. Feeling he cannot bear to live and see the fall of his empire, Montezuma tears the bandages from his wounds and dies. The great battle at the causeway is now fought, in which Cortez and his men cut their way through the Aztecs and vanquish them with terrible slaughter. Cacamatzin is slain and his body drifts down the river. The Conquest of Mexico is ended. Years later Cortez, now the Ruler of the vast Empire, is given a magnificent ovation by both Aztecs and Spanish, who mingle in common brotherhood.

The Death of Montezuma.

Such is the wonderful and spectacular film story of Essanay's great historical pageant "The Fall of Montezuma." Unparalleled in the pages of civilized history, it forms as thrilling and beautiful a background for film-adaptation as could be desired. The Essanay Company presents this great three reel production to the world with the assurance that it has spared neither time nor money in making it as well-nigh perfect in every detail as possible. Every step in the undertaking has been carefully thought out, and the result has been gratifying. To all students of history it will prove a source of the most valuable and instructive study. To those searching for thrills and rare excitement it is a veritable bonanza, and those who are inclined to be skeptical concerning film entertainment, will witness a marvel of artistic photoplay triumph that unquestionably will go down in picture history as a masterpiece.

Another Celluloid Substitute

Without question, any substitute that can take the place of celluloid at the base for cinematograph film stock is to be welcomed. So much prejudice exists in the minds of the general public, and even the authorities, against the existing material, that a substance which can take its place with equally good results cannot but have an enlivening effect upon the industry says our English contemporary, *The Bioscope*." There have been numerous difficulties in the way of manufacturing a substance possessing all the good qualities, and none of the bad, of celluloid. What are the requirements of a film base? Transparency and longevity, it must be flexible, tough, practically unshrinkable in the process of development and fixing, and must have sufficient natural moisture to prevent shriveling in its normal passage through the relatively hot gate of the projector. Celluloid is a material that meets these requirements in most ways, and any substitute, to be of value, must, in addition to these qualities, possess that of non-inflammability, or, we had better say, of safety. Inflammability is one of degree, and it is doubtful if any substance can be manufactured which, by the attainment of sufficient temperature, cannot burn. Celluloid, however, has many of the properties of gun-cotton, and so must be a dangerous substance to handle.

We have, however, inspected a new film base which, would seem to be an ideal substitute for celluloid, possessing all the good qualities of the substance, with as great a degree of non-inflammability as we have hitherto met with. The new material is Boroid, resembling in appearance the highest class of celluloid; and a series of tests have been conducted which demonstrate these remarkable qualities. Frankly, if a match be applied to the material for a sufficient length of time, it will flame slightly, and so may not meet the requirements of some of the "hair-splitting" fraternity. However, no degree of heat concentrated upon the gate of the medicine affects this substance in any way.

With the concentrated light from a 60-ampere arc lamp, with the film stationary in the gate, the picture soon shriveled away on the screen; but, upon examination of the film, it was found that only the gelatine emulsion had in any way been affected. A piece of clean film base was next placed in the machine, with the light of the arc concentrated so much that the red marginal rays were projected upon the four corners of the screen. For a period of three minutes, under a current of 60 amperes, the base was unaffected in any way. No sign of shriveling was apparent.

As a further test, the film was cut with a pen-knife in the gate, and a sharp edge turned towards the light. It was thought that the ragged edge would be bound to scorch or show some sign of shriveling; but after a further five minutes, there was no indication of any harmful effect. We have, therefore, no hesitation in saying that in Boroid we have a substance that can take its place as a standard film base, possessing all the qualities of celluloid, but none of its disadvantages. The films and stock inspected had been in use for a period of over six months, the films having been printed and developed at the end of last year by a well-known English house.

The New Theater opened in Cincinnati by the Waldorf Amusement Company is doing a very large business. Mr. Dinglestedt of Norwood, is doing a fine business with his new Air Dome; he is a real hustler and is always on the job.

On the Outside Looking In

By the Goat Man

THERE isn't a week goes by that some one doesn't invade the sancity of my sanctum, always at the suggestion of a friend, mind you, and unfolds to me a scheme, whereby the investment of a few idle dollars can be made the bed-rock caissons of an immense fortune. I listen. That's all a fellow can do—listen. The subject varies a little from time to time, but it clings tenaciously to that main theme, that others are piling up fortunes in the film business and with "our brains and our scheme" there can be no such thing as failure. I haven't ever been able to figure out why men come to me with these things, unless they want to try it out on the goat But I sit through it all and listen. When it gets around 11:30 a. m. or 5:30 p. m. and I'm pressed for an opinion, with tears trinkling down my cheeks, I advise against it.

* * *

Being the goat of a business—a tremendous industry—is no idler's occupation. I have my reputation to sustain. I'm the goat. I'm the one man in—no Lucretia, not in—I'm the one man sticking around the edge of the game who must lose money. Then why should I drag in a competitor? Suppose the scheme has every ear-mark of success, and it is film making. Isn't it perfectly apparent that the market is tight shut—that there is no way to pry open the closed door? Suppose it *is* a new projector with inventor's claims a mile long and with a positively better picture for the goal. What has the machine maker been doing to overlook such a detail? My brother, when you have an invention, as is an invention, take it to headquarters and sell it. The men on the inside will buy it. They may not have time to adopt it, but there is a market and you won't have to beg.

* * *

Film manufacturers have reached a place where details get respectful attention. Many of the makers have experts who are paid to keep an ear on the ground. If there is anything stirring that will add to efficiency "it won't get by or a job is lost." Take my advice and sit on the lid, until we get to realize on Joe Hopp's dream of an open market. Have your scheme developed to an actuality. Give a demonstration, and when you're ready with the show I'll guarantee to fetch around a bunch of show-me fel ows who will dump their dough if it looks good. Film making, or machine making is in the hands of its friends to-day, and the only open market is for goats. Being the goat, I elect to close that.

Scene from American Film Company's "The Battle Ground."

* * *

J. D. Wi'liams, of Australia, has sent Wm. N. Selig a boxing kangaroo. Mr. Williams knew exactly what he was doing when he pulled that wheeze, and he made no mistake in sending the animal to Mr. Selig. Kangaroos are the national birds of Australia, and Mr. Williams wants a film that will get under the skins of his audience. Will Mr. Selig weave a film story around a boxing kangaroo? Will a donkey bray? And maybe Big Otto won't have fun with this new pet at Edendale. What?

* * *

This hot weather is having no damaging effect upon

the plans of committee having charge of the second annual convention of the Motion Picture Exhibitors' League of America. Chairman Sweeney and two of his aids, L. H. Frank and Louis Schindler, have invaded the east on a rallying tour. They report enthusiastic receptions wherever they go. And from letters I am receiving from officers of the various state branches, and President Neff, I conclude that exhibitors from all over the United States and Canada will be in Chicago, August 13-17 inclusive. The M. P. Ex. League will be a good thing to look at when it gets to the La Salle hotel. Better tie some bells on yourself and join the throng. You will discover that Illinois State Branch No. 2 hasn't started something it can't finish.

* * *

I'm doing a lot of gadding myself these fine corn days, when the temperature in a lower is nothing to get inquisitive about, and the breeze is usually artificial. I'll be reading this stuff in New York, where I will try to convince some of the film crowd there is a reason to tolerate me. I regret that I missed both the Muskegon and Toledo conventions, but then one man can't do everything he might want to do. These conventions are all right for the exhibitor and they offer an opportunity for the news dispensers to mingle with the trade, but it will be a long time before the m. p. press will be able to have representatives at all the meetings. Secretaries are invited to continue the sending of local interest items to this champion of exhibitors in general.

* * *

President Neff is an enthusiastic booster, alright, but in all kindness I suggest that he confine his territory to America. Not infrequently his speech soars beyond the Atlantic and Pacific oceans—a world-wide organization, if you please. Let us make it according to the original plan. America is a whale of a place when you estimate it on a two-cents a mile basis. Besides an international congress of film exhibitors would have to be held in the open and we haven't got control of the weather, just yet!

* * *

There was some talk about a third movement, you will remember. And I said it couldn't be pulled off. Yet we have a third movement right now and are threatened with a fourth. As a matter of fact, the third party isn't. It is a second movement with a hole in it. The fourth movement, then, goes to third place and a third party hasn't nearly as much chance to-day as it had a month ago.

* * *

I am truly sorry that Mr. Rothopfel has gone back to Minneapolis, taking with him all the cleverness that makes for his splendid entertainment. I saw his show at the Lyric, in Chicago—the least attractive of the Chicago theaters, and while the program was characteristic of the Rothopfel touch, his materials were new and lacked the polish that time lends. Chicago should have a theater—an immensely big picture theater for Mr. Rothapfel—one back of which might lie a sufficient fund to weather the first few months of acquaintance making. After that it would be easy going. No better proof is needed than to hark back to Minneapolis and inspect the gentleman's splendid success in an out-of-the-way place. The difference lies in the fact that up there, the people have found the house and know what to look for, or expect. In Chicago the backers got cold feet before anyone knew that Mr. Rothopfel was in town.

Scene from American Film Company's "The Meddlers."

* * *

I'm told that Mr. George Kleine contracted a severe cold at a recent meeting of the clans in New York. Don't get the wrong impression that it was a chilly affair. It wasn't that, by a long shot—quite the reverse. They

had a hot time—genuinely hot and that smooth G. K. dome wasn't thick enough to resist the fan. Simple, when you get it straight.

* * *

When you want to see 'em make motion pictures get a pass to Essanay's studio; if you can. They have a system up there that runs like the modern blower on a threshing outfit—something doing every minute. The scheme belongs to Mr. Spoor, who sits up nights watching it. And just in passing, its some regular little scheme at that. Another thing, what has become of that most popular of all m. p. actor thing. Don't you agree with me that G. M. Anderson comes nearly being the best known of 'em all? Everybody I meet says so.

* * *

There is a growing tendency to favor big paper for lobby display. If they'll buy 'em, let 'em have 'em. Give 24-sheet stands. Cut a hole in the center, or drop out 3-sheets for an entrance. Great idea! How much do you fellows make on posters, anyway? When I have my theater I won't take any of the stuff that will clutter up my lobby. Give me the current bulletins just as they come from the film manufacturer; and the photographs and the brass frames and easels. Why all the circus colors?

* * *

This much has been proven since the advent of summer. More people stay away from moving picture theaters when it is cold than when it is hot. Dull days are not necessarily confined to dog days. An electric fan is more inviting than a steam radiator.

* * *

The new retail price of Motography has made an instant hit. You can pick it up on the newsstand for ten cents. If your newsdealer doesn't have it, give me the tip and I'll see what ails him. Of course, by subscribing you save 60 cents a year and get nearly everything around the place as a premium, but if you buy it from the newsdealer we'll think just as much of you. I'm told that an ever increasing demand has followed the cut from 15 to 10 cents and the demand for this deep yellow back is the music I like to hear.

* * *

Whirling around film centers, I find that the business as a whole is showing better than it did a year ago. The improved condition is everywhere apparent. There is some complaint among independent exchanges that the battleground in New York is disconcerting, to say the least; but the ordinary dull season ought to be the time for rough-house among manufacturers, rather than the busy season, so I'm satisfied. The fellow who imagined there would never be a clash among the independent manufacturers died last week. He won't need a special badge at the Chicago convention.

* * *

I visited the Cleveland offices of the General Film Company at 1022 Superior Avenue, N. E., where I renewed acquaintance with General Manager Goff, and Special Representative J. E. Willis. Willis, you may recall, is one of those nice, round little fat men, who object to fans. He always insists that they be turned off after the mercury scores 90 degrees in the shade. He was terribly nervous when I saw him because it was only 89 and a fraction. It had been that way for several days and the force were tickled that the weather man was so tolerant. Willis couldn't yell "Turn off the fan!" You can bet Sid Smith will get this joke and maybe Dick Nehls will tumble, too.

While in Cleveland I couldn't resist dropping into Weber's—that memorial hall which was the scene of the M. P. L. A. birth. I discovered that the increased cost of living hadn't affected the price of liquids, but was told that Mandelbaum furnished the subsidy bonus. "Mandy" was out of town and I couldn't confirm this yarn. I saw his good man Malaney, who wasn't authorized to indulge in personalities.

* * *

Another thing that impresses me as I twirl my whiskers in the raging heat—the feature film. Is the feature film a winter pastime or isn't it? Has the roar of the exhibitor put the state rights men on the bum? In a certain contemporary, I find the bulk of advertising booming certain feature subjects, but in blowing around the country, I don't find the films themselves. I guess the feature has had its inning. At least I hope so. Every real reel of feature films should find itself doing duty through the regular exchange. If it is worth it, the exhibitor will be glad to pay extra to run it; but it ought to be worth it before he is asked for the difference. I want to tell you, there is still an opening to improve film quality. I saw C. D. Caspar checking his head off to find one he dared to use. Of course, he didn't see me for he was in the Willis synagogue and couldn't see anybody!

"Starved Rock" In Pictures

The American Film Manufacturing Company has made arrangements to reproduce a historic Illinois Indian tale, "The Story of Starved Rock," in moving pictures.

R. R. Nehls and Omer F. Doud were in Ottawa and have made arrangements for this big undertaking. The two representatives of the company have been at the State Park looking over the grounds and familiarizing themselves with the physical conditions and topography of the rock and canyons.

"The Story of Starved Rock" will take several weeks to reproduce and one hundred actors will be required to do the work. All the historic characters such as Joliet, Marquette, La Salle, and Tonty will be impersonated by prominent American actors. The actual work will begin the latter part of July. The cost of reproducing this story is estimated at $5,000 to $8,000.

Dowie's City Considers Shows

Rumors are again afloat in Zion City, Illinois, the home of the "Dowieites," about the much talked of theaters and this time they are stronger than ever in favor of the project. There now seems a possibility that Zion City will have a moving picture show within a few weeks. Those who want them in Zion City say there is a demand for amusement there, among the young people just the same as there is any place else.

The Zion City *Independent* laments the fact that the Zion young men and women go to Waukegan, Ill., and spend their money for moving pictures and for other amusements.

It is thought that representatives of several theatrical companies have been in Zion City in the past, and that they are seriously considering the establishment of a theater in that city.

It is hardly possible that they could secure any land for such a purpose, however, as the Zion City lease prohibits the use of Zion land for any purposes of this kind.

The Motion Picture Exhibitors' League of America

Second Annual Convention, Chicago, Aug. 13-16-'12

General Headquarters

703 Euclid Ave., Cleveland, Ohio

OFFICERS OF NATIONAL ASSOCIATION.

President, M. A. Neff, Lock Box 15, Cincinnati, O.; Vice-Presidents, S. E. Morris, Cleveland, O.; William Ullman, Detroit, Mich.; H. S. Dickson, Winchester, Ind.; H. C. Farley, Montgomery, Ala.; H. G. Lux, Jr., Utica, N. Y.; William J. Sweeney, Chicago, Ill.; E. W. Waugh, Huntington, W. Va.; C. H. Phillips, Milwaukee, Wis.; Fred J. Harrington, Pittsburgh, Pa.; Orrene Parker, Covington, Ky.; Sidney Asher, New York; Secretary, C. M. Christenson, Cleveland, O.; Treasurer, J. J. Rieder, Jackson, Mich.

MOTION PICTURE EXHIBITORS' LEAGUE OF OHIO.—Headquarters, 1003 Mercantile Library Bldg., Cincinnati, Ohio. President, M. A. Neff, Cincinnati; First Vice-President, W. A. Pittis, Conneaut; Second Vice-President, J. H. Broomhall, Hamilton; Treasurer, O. B. Weaver, Dayton; Secretary, J. J. Huss.

CLEVELAND LOCAL NO. 1—Headquarters, Commercial Bank Building, Cleveland O. President, S. E. Morris; First Vice-President, F. E. Simmons; Second Vice-President, C. F. Schroeder; Secretary, L. H. Wilk; Treasurer, W. C. Kaspar; Financial Secretary, F. M. Kenny.

CINCINNATI LOCAL NO. 2—Headquarters, 1003 Merchantile Library Building, Cincinnati, Ohio. President, J. Huss; First Vice-President, A. J. Carbin; Second Vice-President, M. Fishman; Secretary, A. C. Dongelstedt; Treasurer, Otto Leudelsing.

COLUMBUS LOCAL—Headquarters, Princess Theater. President, J. A. Maddox; First Vice-President, W. B. Belknap; Second Vice-President, J. W. Swain; Secretary, J. R. McCoy; Treasurer, Max Stearn.

ILLINOIS STATE BRANCH NO. 2—Headquarters, Schiller Bldg., 64 W. Randolph street, Chicago, Ill. President, George Henry; Vice-President, C. A. Anderson; Secretary, Sidney Smith; Treasurer, Wm. J. Sweney; Financial Secretary, Simon Katz; Executive Committee, Robert R. Levy; Chairman, Fred W. Schaefer; Secretary, F. Natkin, L. H. Frank, C. H. Hull, Abe Balaban, C. C. Whelan.

MOTION PICTURE EXHIBITORS' LEAGUE OF INDIANA—Headquarters, Indianapolis, Ind. President, H. S. Dickson, Winchester; Vice-Presidents, H. F. Prentice, Terre Haute; Earl Rife, Logansport; Jos. Bommersheim, Ft. Wayne; Hershel Cannon, Muncie; W. R. Deaton, Warsaw; Secretary, F. J. Rembusch, Shelbyville; Treasurer, Jos. H. Gavin, Indianapolis. Chairmen of Committees: Arbitration, W. C. Yutsey, Lebanon; Grievances, Dr. J. M. Rhodes, Indianapolis; Legislation, H. W. Summer, Anderson; Insurance, Jno. A. Victor, Indianapolis.

MOTION PICTURE EXHIBITORS' LEAGUE OF MILWAUKEE—Headquarters, 305 Enterprise Bldg., Milwaukee. President, J. R. Freuler; Vice-President, H. S. Klein; Secretary, B. N. Judell; Treasurer, T. Saxe.

MISSOURI STATE BRANCH—Headquarters, Kansas City, Mo. President, G. H. Wiley; Vice-President, J. H. Sheldon; Secretary, Samuel Taylor; Treasurer, J. Steinens.

WINNIPEG LOCAL—Headquarters, Winnipeg, Canada. President, W. O. Edmonds; Vice-President, J. A. Schuberg; Secretary, F. Van Alstein.

MOTION PICTURE EXHIBITORS' LEAGUE OF MICHIGAN—Headquarters, 302 Kirby avenue, E., Detroit, Mich. President, Peter J. Jeup, 399 Hibbard avenue, Detroit; First Vice-President, H. F. Fowser, Lansing; Second Vice-President, J. J. Rieder, Jackson; Secretary, W. Lester Levy, 302 Kirgy avenue, E., Detroit; Treasurer, Carl Ray, Muskegon.

DETROIT LOCAL—Headquarters, 399 Hibbard avenue, Detroit, Mich. President, Peter J. Jeup. Vice-President, Patrick H. Reauhine; Secretary, W. Lester Levy; Treasurer, Fred W. Rumler.

MOTION PICTURE EXHIBITORS' LEAGUE OF WEST VIRGINIA—Headquarters, Moundsville, W. Va. President, M. M. Wear, Charleston; First Vice-President, R. L. Harris, Parkersburg; Second Vice-President, A. L. Cottrill, Point Pleasant; Secretary, L. R. Thomas, Moundsville; Treasurer, P. W. Barett, Parkersburg.

MOTION PICTURE EXHIBITORS' LEAGUE OF KENTUCKY—Headquarters, Lexington, Ky. President, J. H. Stamper, Jr., Lexington; First Vice-President, L. J. Dittmar, Louisville; Second Vice-President, Sherman Arn, Maysville; Secretary, L. H. Ramsay, Lexington; Treasurer, A. J. Wellman, Cattletsburg.

MOTION PICTURE EXHIBITORS' LEAGUE OF GREATER NEW YORK—headquarters, 136 Third avenue, New York City. President, Samuel H. Tugger; Vice-President, James Samuels; Treasurer, Grant W. Anson; Secretary, Sydney Ascher; Financial Secretary, A. Bannerfreund; Sergeant-at-Arms, Robert C. Whitten.

MOTION PICTURE EXHIBITORS' LEAGUE OF NEW JERSEY—Headquarters, Bijou Theater, 328 Bergenline avenue, Union Hill, N. J. President, George M. Robinson; Secretary, P. M. Kirschner. Address all communications to the Secretary.

MOTION PICTURE EXHIBITORS' LEAGUE OF PENNSYLVANIA—Headquarters, 233 Fifth avenue, Pittsburg, Pa. President, Walter Steumpfig; First Vice-President, Cresson E. Smith; Second Vice-President, Mr. Miller; Secretary, Mr. Roth; Treasurer, F. J. Barbin.

ONTARIO PRODUCERS' AND EXHIBITORS' MOVING PICTURE ASSOCIATION—Headquarters, Toronto, Ontario. Provisional Officers: President, John Griffin; Vice-President, W. K. Hill; Secretary, Charles Wellsman; Treasurer, W. L. Joy.

MOTION PICTURE EXHIBITORS' LEAGUE OF NEW YORK—Headquarters, 136 Third avenue, New York. President, Sam H. Trigger, New York; First Vice-President, B. E. Cornell, Syracuse; Second Vice-President, R. Davidson, Binghamton; Secretary, H. W. Rosenthal, New York; Treasurer, John C. Davis, Saugerties.

THE meeting of the Exhibitors' League of Michigan, was called to order by President Jeup at 10 o'clock, a. m., in the convention hall at Muskegon. After the report of the committees Mr. Neff, the national president, responded to a call for a Neff, the national president, responded to acall for a speech. He dwelt upon what could be accomplished through organization. His speech brought new life into the Convention and from the time he began speaking everybody was enthusiastic and harmony prevailed throughout the proceedings of the convention. Mr. Neff told of the early strugg'e of the organization, of the many things that had been accomplished through the organization in other States and pointed out that the organization now reached from the Atlantic to the Pacific, from the Lakes to the Gulf, and all inside of one year. The states that are now organized and belong to the League contain two-thirds of the population of the United States. No other organization in the history of the world has grown so rapidly, and so strong in the same length of time as the Motion Picture Exhibitors' League of America. No other organization has ever possessed the wealth, and employed so many people as this organization. Mr. Neff stated that while the organization was not yet a year old, Australia and Canada were organized, and he predicted within another year that instead of the Motion Picture Exhibitors' League being confined to America that it would be a World wide organization and that its power for good, or dissemination of education and amusement would be appreciated in almost every civilized nation. After Mr. Neff's speech he was warmly congratulated, and many made the remark that it was easy to understand that after hearing Mr. Neff speak, why the organization had grown so rapidly. Mr. Neff urged the attendance of each and every exhibitor at the Chicago convention.

After the speech making, the next thing in order, was the adoption of the revised constitution. A motion was made by J. J. Rieder, of Jackson, National Treasurer, that the sense of the convention was that the legislature pass a law, whereby the governor of the state shall appoint a Censor Board, and that those appointed upon the board should be appointed on account of their fitness to fill the position, and not through, or by reason of affiliation, or connected with any creed, code of ethics, financial, or political interest and that they should be able to answer all questions, and be familiar with the motion picture business and cinemotography, and that their business, social and moral qualifications should be taken into consideration before the appointment should be made.

In other words, that no one should be placed but those who are qualified to serve upon the censor board to the best interest of the public at large, and those engaged in the up-lift and promotion of cinemotography. Provisions were made to secure a state organizer, and it is proposed to push the work until every exhibitor becomes a member of the organization.

After the business session, the following officers were elected to serve one year:

President, Mr. Carl Ray, Muskegon; First Vice President, Mr. B. L. Converse, Owosso; Second Vice President, J. J. Rieder, Jackson; Third Vice President, G. R. Durkins, Saginaw; Secretary, W. Lester Levy, Detroit; Treasurer, Mr. H. F. Fowser, Lansing.

After his election, Mr. Carl Ray was called to the chair to assume his official duties during the Convention. Mr. B. L. Converse, Owosso, was elected National Vice President. The following members were elected delegates to attend the Chicago Convention:

Carl Ray, Muskegon; Peter J. Jeup, Detroit; W. J. Carroll, Jackson. Alternates: A. L. Brown, Lansing; G. C. Nichols, Grand Rapids; R. P. Leahy, Bay City.

The next annual meeting will be held in Saginaw on the 8th and 9th of July, 1913. When it came to select the next place of meeting, Bay City, Jackson and Saginaw made a bid for the Convention. Saginaw won out by a majority of one vote.

C. A. Anderson of Chicago, First Vice-President of the Illinois League, one of Chicago's most earnest representatives, who was the first to call the Chicago exhibitors together in a meeting, is in attendance at the convention. He is enthusiastic over the coming convention at Chicago, and predicts a large gathering. He is a splendid mixer and is doing fine work for Chicago. Mr. Anderson has his own light-plant, and in many respects it is the only one of the kind in Chicago. Chicago is to be congratulated on having Mr. Anderson for a representative. The newly elected officers are starting with the determination of showing the rest of the states how strong Michigan will be within the next few months.

The first day J. J. Rieder, and several exhibitors arrived and found the hotels packed. They had to look around some time before they could secure lodging for the town is full of exhibitors and physicians, the latter having their convention here at the same time.

Mr. Carl Ray, the newly elected president, owns four theaters in Muskegon, and there is only one other theater in the city not owned by him. Mr. Converse elected first vice-president, is an untiring worker, a good councilor, and the right man in the right place. The delegate, Mr. Carroll, of Jackson, is a great worker in the interest of the League. Peter J. Jeup, who has served his term for one year, was re-nominated, but declined the nomination. Mr. Jeup at the Orpheum Theater, was presented by the League with a beautiful diamond ring, token of high esteem in which he is held by the League of Michigan. The presentation speech was made by Mr. Neff. Mr. Jeup was very much pleased and was very much surprised as the gift was kept a secret from him until Mr. Neff presented it.

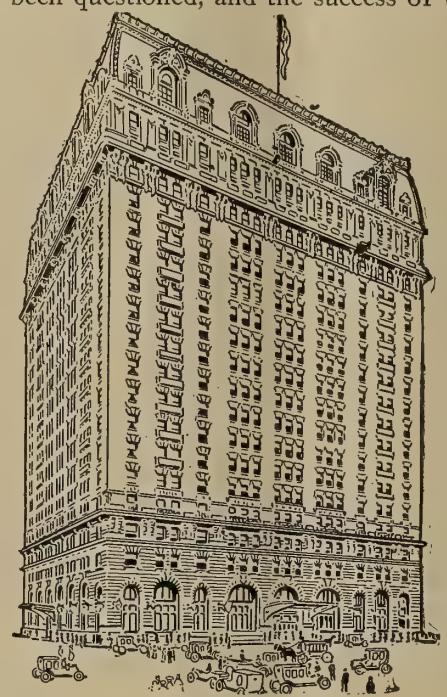
THE THIRD DAY.

The Convention was called to order at 10 a. m. and was in session until 12 o'clock. A large amount of business was transacted. After the convention adjourned, automoilbes were waiting to take them to the boat and a band of forty pieces escorted them where they were wined, dined, and fanned by the cool invigorating breezs of old Lake Michigan. The good done by the convention will be seen for many days hence.

A vote of thanks was tendered Mr. Neff for his assistance, and was also tendered Mr. Carl Ray for the efficient manner in which he handled the convention.

The Chicago Convention

The Second Annual Convention of the Motion Picture Exhibitors' League, of America, to be held in Chicago, August 11-14, will occupy the seventeenth and eighteenth floors of the La Salle Hotel, one of Chicago's finest and most modern hotels. This meeting has been widely heralded as being one of the most important ever held by the exhibitors, and it is confidently expected that the attendance will be from three to four thousand. The hospitality of Chicago in regard to convention visitors has never been questioned, and the success of this event



La Salle Hotel, Chicago.

is to be looked upon as a certainty, at least from the standpoint of entertainment.

Situated in the heart of the business district of Chicago, La Salle Hotel is close to all car lines running to every point in the city, and for this reason is the most desirable hotel for the sight seers who wish to investigate the metropolis of the Middle West. The hotel is superb in its equipment and accommodations and the accompanying cut gives but a faint idea of its size and architectural beauty, points in which it is unapproached by any hotel in this country.

Lexington Meeting

The Motion Picture Exhibitors of Kentucky met at the Phoenix Hotel, Lexington, July 2, and held an enthusiastic meeting. Delegates and alternates were elected to represent Kentucky at the National Convention to be held in Chicago in August. Louisville Branch No. 1, was represented by Mr. L. J. Dittmar and others. K. C. Branch No. 2 was represented by Orene Parker of Covington and others.

M. A. Neff addressed the meeting and reported that a large number of states are coming into the League, and urged the delegates to attend the National Convention to

be held in Chicago in August. Several new members were taken into the League and arrangements made to send an organizer to visit every exhibitor in the state of Kentucky. Mr. L. H. Ramsey entertained the visitors with a fine dinner. Speeches were made and everybody enjoyed themselves to the limit. The next meeting is to be held in Louisville, Ky., on October 15, 1912, at the Sealback Hotel. All of the exhibitors of Kentucky are enthusiastic over the good work accomplished by the League and confidently expect to have every exhibitor join the League before the next meeting.

New York League Elects Officers

After the formation of a state organization, the Motion Picture Exhibitors' League of Greater New York held its annual election of officers for the year. There was a large attendance of members and the success of the local, state and national organizations was predicted. President Samuel H. Trigger made a brief address, in which he outlined the work accomplished during the past year and held out bright hopes for the future.

The following officers were elected for the ensuing year:

Samuel H. Trigger, president; James Samuels, vice-president; Grant W. Anson, treasurer; Sidney Ascher, secretary; A. Bauernfeund, financial secretary; Robert C. Whitten, sergeant-at-arms.

The following board of directors was elected for two years: Harold W. Rosenthal, A. Coleman, F. Allen, Louis Rosenthal, E. Valenci. For one year: Robert McNabb, M. Needle, J. Coufal, William King, M. Warshauer.

After the election of officers, many matters of importance were taken up for consideration, among which were the coming national convention at Chicago, establishing a publicity bureau, the formation of locals throughout the state, coming legislation at Albany, etc. It was 4 o'clock in the morning before the meeting adjourned.

Indiana Convention

On July 22, and July 23, the Motion Picture Exhibitors of the state of Indiana will hold their convention at Indianapolis, Ind. Every effort is being made to secure the attendance of every member of the League in the state, and also secure all the new members possible. Every exhibitor, whether he be a member or not, of the Indiana association, is invited to attend the convention. Matters pertaining and affecting the business of every exhibitor of the state of Indiana, will come before the convention.

The new developments in the Motion Picture Business demands that every exhibitor attend this conven- Delegates will be elected to attend the Chicago convention and a general good time is expected, in addition to the large amount of business that will come before the convention.

Missouri State Convention

The first convention of Missouri State Branch of the Motion Picture Exhibitors' League, will be held on July 30-31, at the Sexton Hotel, Kansas City, Missouri. The visitors will be entertained by the Kansas City Local No. 1, and a successful meeting is anticipated by all members. Among the items of business to be transacted at the convention, will be the election of delegates to the national convention at Chicago.

From the success experience by the state organizer, A. P. Drennen, during his recent campaign, it is expected that the majority of the exhibitors of the state of Missouri will be members of the organization before the convention takes place. At the last meeting of the State Executives, a charter was granted to Springfield, a branch to be known hereafter, as Springfield Local No. 2.

Asks City for Moving Pictures

The State Board of Health of Portland, Ore., has petitioned the mayor and council for an appropriation of $400 with which to pay the expenses of preparing moving pictures to be exhibited at the International Congress of Hygiene and Demography in Washington, September 23-28. An exhibit is being prepared under direction of a committee appointed by Governor West consisting of Mrs. A. E. Rockey, Mrs. W. B. Ayer, Mrs. Robert H. Tate, Dr. J. C. Smith, of Pendleton, and Secretary Calvin S. White of the State Board of Health. There will be moving pictures of the state institutions, the educational system, the water supply and the disposition of garbage of cities.

Toledo Meeting

The meeting to be held at Toledo on July 16 and 17, is expected to be a record-breaker. Will C. Bettis is working over-time making arrangements to entertain the visitors. Hon. James W. Cox who is candidate for governor of Ohio, will speak. Judge Dillon of Columbus, another candidate, is expected to address the convention on the following day. The Ohio exhibitors are very anxious to hear what these men have to say along certain lines pertaining to motion picture business. Cleveland local is very enthusiastic over the coming Toledo convention and a large crowd is expected to attend.

Milwaukee Convention

The Wisconsin State Convention will be held in Milwaukee. Headquarters will be at the Plankinton Hotel. The meeting will be called to order on July 19 and will close the following Saturday night, with a big banquet. Every exhibitor in the state of Wisconsin is invited to attend this convention, where they will be royally entertained. State officers will be elected and delegates elected to attend the Chicago convention.

Covington Meeting

K. C. Local of Covington, Ky., held their regular meeting at the Colonial Theater, and elected delegates and alternates to the national convention at Chicago.

Dayton Local No. 5, held a meeting and elected Clem Kerr and Mr.Reyburn as delegates to the national convention to meet in Chicago.

Mr. M. A. Neff has returned from St. Louis where he met Mr. Christenson, national secretary of Cleveland and other members of the League. An Inter-Insurance is being arranged for, whereby the members of the Motion Picture Exhibitors' League of America can secure safe insurance. Only members of the League will be insured in this company and through the Inter-Insurance Company of St. Louis. It is stated that about one-half of the prices now paid will be saved to the members of the League.

The Schoolhouse of the Future

By Ford W. Eaton*

THE ORTO-LESSON.

IN the preceding series of articles on "The Playhouse of the Future," only a few of the more spectacular phases of the development of Ortografy were indicated in the brief descriptions of the Ortoplay. However, the wonderful educational importance is apparent in every aspect of the new method, but just as in the past we have learned the wisdom of presenting knowledge in a systematic way by means of schools and definite courses of study, so will the new methods of Ortografy evolve the Orto-lesson as the logical unit of instruction.

THE CHALKLESS BLACKBOARD.

The simplest of school aids, the blackboard, has been favored by many teachers, and is preferred to books and charts, mainly on account of the keener interest which is aroused in the minds of the pupils; for there is a surprise in every chalk-stroke, and the whole class may see at once.

The Orto-lesson will in time supplant even the blackboard in the larger class-rooms, but this will be one of the last and the least of its conquests, although it is wonderful how much can be shown in simple outline, as everyone knows who has seen the "trick" motion pictures that have been put out of late.

A. B. C. AND TWO PLUS TWO.

Even the alphabet and simple sums will some day be taught by means of Orto-lessons, and the three R's will lose most of their terrors, at least for the teacher, who can let a machine make the everlasting repetitions that sometimes are necessary, while the pupil is attaining the ability to practice, which alone "makes perfect."

THE SCOPE OF THE ORTO-LESSON.

Right here let us consider just what is the true field of the Orto-lesson. In the first place, it aids the teacher most, for he has passed the stage where repetition can aid him, and his work, like that of the actor, becomes mechanical and monotonous.

It also aids him by covering a greater range of topics in a limited time, and bringing to the class a wealth of description and illustration in a way that whole volumes of print would fail to do.

THE FORCE OF EXAMPLE.

It aids the pupils by illustration and example, but of course it will be necessary, then as now, for the pupil to "grow by doing," and the Orto-lesson will furnish the example and the inspiration.

It can no more do his work for him than the teacher can or should, but it will *show him how* in the most direct and impressive manner. These conclusions have to do with those lessons which are intended to train the pupil *to do*—to develop skill.

ABSORPTION BY OBSERVATION.

There is another kind of lessons whose sole function is to inform, and whose object is to train the mind to think, and to reason in a broad way. Of course, ultimately the pupil learns to act more intelligently by reason of his greater information, but the primary duty of the teacher of this class of lessons is to store the knowledge in the pupil's brain.

*A sequel to "The Playhouse of the Future."

HISTORY AND GEOGRAPHY.

Such studies are history and geography. In the broadest sense, history embraces all of the events of all time, and geography, (with astronomy), may be taken to cover all space. Thus the visible and audible aspects of the universe, as well as the myriad combinations and activities of all matter, organic and inorganic, and all creatures, are included under these two general heads, and the same conclusions apply to all secondary studies wherein *observation* is the principal work of the pupil.

OTHER STUDIES.

Therefore all such studies as are promoted by observation and the force of example will be aided immensely by Ortografy, while it will be a secondary and indirect aid in such studies as mathematics, literature, the fine arts and philosophy, and will simplify the work of the teacher, and permit greater progress on the part of the student. In the descriptive study of the physical sciences it will become indispensible, and even laboratory work will become much more profitable and interesting if thoroughly illustrated.

WHERE PICTURES DON'T FIT.

On the other hand the most noticeable deficiency of the ordinary motion picture, when applied to the illustration of events which have been glorified by song and story, is that it fails utterly to crystallize the heart-interest, or to make the systematic appeal to the emotions that a well told story does, whether that story be a ballad, or an epic, or a mere exchange of epigrams.

How many hearts have thrilled in tender sympathy upon reading the simple conversation of Ruth and Naomi as recorded in the Old Testament, and how much of this would be lost in a motion picture, however well posed, even if the audience already knew of the incident and the dialogue.

TO READ OR TO LISTEN.

And where is the phonograph that can match our ideal of Ruth's inflection when she said: "Entreat me not to leave thee?" Artists have painted and poets have elaborated, but the classic simplicity of that avowal of friendship never has been improved upon, and never will be until the last refinement of Ortografic art, and even then, unless we see and hear the Orto-play before reading the story we are likly to form an ideal of the scene different from that of the playwright, however true his interpretation may be.

THE MAGIC OF THE SPOKEN WORD.

Imagine a motion picture of St. Paul's epistle on "Faith, Hope and Charity." Could any amount of illustration so much as reach the foot-hills of those heights to which he lifts us when he says: "Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass or a tinkling cymbal?"

And when he adds "For now we see through a glass, darkly; but then face to face," he uses a kind of metaphor that cannot be presented to the physical eye without destroying the mind-image, which, after all, is the real one.

EVOLUTION OF ORTOGRAPHY.

These remarks of his might be taken almost literally as applying to the phonographs and picture machines of the present day, if "Charity" be likened unto the "spirit of art" which sometimes does not prevade the product of either.

But he bids us hope, for he also says:—"When that which is perfect is come, then that which is in part shall be done away." A pretty plain forecast of the evolution of Ortografy.

THE "ALL-PICTURE" STORY.

Many people have wondered why it is that the picture-stories founded upon standard fiction so often fail to arouse interest.

Some of them are elaborately and often rationally staged, and the scenarios are prepared with great care and good judgment, but you can sit through all the cantos of "The Lady of the Lake," or the film adaptation of Stevenson's "Treasure Island," and even if you are fairly familiar with the story, all you get is disenchantment and surprises during a tenth of the time, while the other nine-tenths you are wondering what it is all about. Where are the thrills and the pangs and the sighs that are ours when we read the poem and the story?

WORDLESS LITERATURE.

They are part and parcel of the printed page, and the spoken word,—fellow creatures of the harmonies of diction that the master poet and the master story-teller ordered and embellished so that we might read and think and feel. The bare facts matter less than the manner of their presentation, and to ignore the words of a literary masterpiece is like substituting a photograph of Central Park for the music of Mendelssohn's Spring Song. The meditations of Ellen and the rivalry of James Fitz James and Rhoderic Dhu were nicely done in rhyme by Scott, and they make their own appeal. The picture story is simply another piece of work with a different appeal.

A FIELD OF ITS OWN.

Other limitations of the Orto-lesson as well as the Ortoplay are due to the very realism which they force upon a class or an audience. It has been said, and justly, that the motion picture clips the wings of our imagination, and the more complete portrayals of Ortografy will supply the sounds as well, so that imagination will be supplanted by observation to a still greater extent. But is this a disadvantage? Not at all in the field which properly belongs to Ortografy.

IMAGINARY GEOGRAPHY.

It is just as if a "stay-at-home" who has studied geography from printed books which were not illustrated, should first be shown crude pictures of distant lands, and then photographs, and then taken on a trip to the places he has read about. Each approach to reality would jar his imagination and his preconceived notions, but who shall say that his incorrect fancies are to be preferred to the truth itself?

The difference between such a traveler studying geography, and the pupils of the schoolhouse of the future, is that the latter not only will have free access to every place on earth, but will be guided intelligently through the remotest recesses of "all the worlds within this world and many worlds beside."

TRUTH FIRST AND ALWAYS.

They also will start taking these trips before their imagination has been corrupted by careless wandering into the unreal realms of fancy, which are the inevitable goal of all who read without experience of observation.

The curriculum of the schoolhouse of the future will be so well balanced that the senses will be appealed to according to their normal development, and likewise all other activities of the brain, so that maximum efficiency may be attained much more quickly than by the present tedious and unbalanced methods.

OTHER WORLDS TO CONQUER.

Within the scope of Ortografy there are other worlds which science has only begun to study, and which it is very difficult to know about unless presented to us in some graphic manner. Not only is this true in the realm of astronomy, where the telescope and the camera have revealed to us other suns and planets which have been posing unheeded by earth-dwellers for untold ages, but also nearer at home, as in the worlds of the infinitely little, where the microscope is ready to do its part. Then there is the greatest study of all—the study of Life itself, particularly the fundamental problems of physiology and psychology—the body and the mind. Ortografy will so educate and enlighten the world-audience that the advanced lessons of the Ortoplay will be presented to thoughtful eyes and ears, and the playwright's most expansive efforts will have full measure of appreciation.

THE WORLD OF THE INFINITELY LITTLE.

There is a world of objects and actions so very small compared with the things to which we are accustomed that we would not know anything about them were it not for the microscope and the Ortomicroscope which photographs these minute objects on a scale so large that we can all see and marvel.

Soon we will be able to see on the screen Ortomicrografic pictures in color and stereoscopic relief, showing all of the movements as well as the forms of the inhabitants and the scenery of this miniature world, whose doings and happenings are so very important as to put a crimp in the egotism of any self-sufficient human who will take time to observe and to think. Ortografy will make this easy for us, and in fact will make a pleasurable pastime out of a serious and important study.

MAGNIFIED MUSIC.

And while we are speaking of the infinitely little, do you know that it has music all its own and in wonderful variety, although as a rule far too faint and too high in pitch to be appreciated by human ears. Scientists already have recorded and reproduced and magnified some of these sounds, and have revealed many a medley of songs and calls, and sounds of industry and emotion, which, when magnified and brought within our hearing, will remind us of everything we have ever heard, from the warbling of a South American songster to the buzz of a Kennebec River saw mill, and a piano interpretation of Wagner by De Pachman.

THE INFINITELY BIG.

Now bring the children and let us take a trip into the depths of space. You and they have heard

of planets and comets, and the suns and moons that we never see, and of other worlds than ours. You know in a general way that the planet Mars has been suspected of being inhabited, and that the earth's own moon is a burnt-out cinder of a pre-historic world. You also have read that the planet Jupiter is hundreds of times larger than the earth, and that Saturn has some large and beautiful rings, pictures of which you may also have seen. It also says in the school books that it is about 93,000,000 miles to the sun and 238,000 to the moon, and that it is so exceedingly far to the fixed stars that it takes light, traveling at the rate of 186,000 miles per second, over three and one-half years to come from the nearest of these stars, while from some of them it takes many centuries.

A TRIP TO THE STARS.

You also may know in a general way that the sun's family of planets and comets circle about him in elliptical orbits, but you only know this as you used to know history and geography, before the moving pictures showed you the reality of them, but neither you nor your professor of history know one-half so much about the discovery of America as the child of ten who has seen Selig's wonderful film-story of the Coming of Columbus.

In like manner in the schoolhouse of the future you will sail with the Columbuses of Space and see with your own eyes the million-jeweled panoply of the Pleiades; dive through the abysses of the Milky Way, and swing in a billion-mile circle through the mist-like streamers of the Great Nebula of Orion. Of course, neither your body, nor that of the astronomer who makes these trips possible need leave the earth, any more than the reconstructed caravels of Columbus had to leave Lake Michigan while the camera men were doing their part of the task of taking you, and your family, and your friends back through four centuries of time, and a couple of trips across the Atlantic.

So you see that it is no mere dream nor idle fancy to take these longer trips through time and space, in order that you and yours may realize fully and vividly all that astronomers know, or yet may learn, of the Universe.

THE MUSIC OF THE SPHERES.

Here, too, there are sounds such as mortal never heard, and the "music of the spheres" has long been known to be a reality. tI is only necessary to translate these cosmic vibrations into others which are rapid enough to suit our ears, just as the micro-cosmic sounds of insect life are slowed down for the same purpose.

Electricity and photography are the agencies by which these wonders and many more have been discovered and brought to our attention, and it is through their final development, in the art-science of Ortografy, that we will come to the fullest appreciation and enjoyment, not only of the world as we have known it heretofore, but also of the many other worlds within us and about us.

PROBLEMS TO BE DISCUSSED.

Succeeding articles will treat of many topics of interest alike to educators and those interested in the development of the picture machine and the talking machine; also to the theatrical profession, for the Ortoplay is only a kind of Orto-lesson.

The fundamental principles of censorship; the physiology of the senses as applied to education and observation; also the practical problems of equipping schoolhouses and churches with apparatus that will meet all requirements and conditions, will be taken up and discussed, together with many other phases of the work, and the daily routine in a typical schoolhouse of the future.

Moving Pictures for Engineers

Moving picture records of construction work are being shown in many cities in connection with addresses of an educational nature, and the number of such pictures is increasing so rapidly that such records of one aspect of engineering deserve to be approved as a means of interesting the public in what is ordinarily not attractive to it. A collection of such pictures taken in Baltimore recently showing the construction of portions of the sewerage system and the operation of parts of the disposal works have educational possibilities deserving thoughtful consideration. The moving pictures taken recently on the Panama canal by one of the natural color methods are particularly important, in view of the general interest shown in ordinary moving pictures.

To the engineer the illustration on a screen of a steam shovel in operation or the labors of a construction crew in putting foundations into a rapidly running stream is not of much interest, but these things are novel to the people who pay the bills for his work and it is only by pictures and explanations of them that the taxpayers are able to learn something of what their money is spent for. It is impracticable to interest the average man in the brain-taxing efforts of the designing engineer, but the representation of the execution of the plans can easily be made a peg on which to hang a short statement of the importance of the designing work. In short, these moving picture exhibitions of important pieces of construction should not be ridiculed by the engineer or contractor, because they may be a material help toward that very important end, a better appreciation of engineering among the people at large.

Cyclone Pictures Wanted in Kansas

"Why does not some enterprising motion picture syndicate locate in the mouth of a cyclone cellar and from this point of vantage get a full length photograph of a twister in action for the edification of the patrons of electric theaters?" asks the Salina, Kas., *Journal.*

For real excitement, the cyclone has the wild ride of the western mail carrier ahead of the band of desperadoes beaten several lengths and for novel surprises, the antics of the funnel shaped cloud and its concomitant breeze are all sufficient in themselves. All phases of interest that show forth to best advantage in the motion picture can be found in the genuine twister and a mile and a half of cyclone on its tortuous way would be worth the watching. Those who love tragedy would find it and if the breeze was not on its good behavior, the freakish moves of the wind would furnish all the necessary humor and the spectators could enjoy the motion picture much more fully than the original.

The man who can succeed in running the cyclone around a motion picture reel will not only get an interesting feature for the public but he will succeed in locating about the only good that this ill wind blows.

The Opportunity of the Picture

By F. DeLysle Cass

WHEN I go to a moving-picture show today and see—by way of illustration—a cowboy melodrama, I think not so much of the picture of the things upon the screen and which I have often seen in actuality, as I do of the fact that a hundred or a thousand years from now and ages after the last cowboy has been gathered to his fathers, the man of that day can see the cowboy as we see him now. And that thought leads me to other thoughts—the irrevocably lost opportunities of mankind because it could not anticipate the future fast enough, as well as the mind-staggering possibilities of things yet to come. The brain runs riot at the very thought. To try and imagine what this world, its politics, its religions, its nations and its customs would be today had the moving picture film been developed to its present perfection some ages ago, is futile; to try and peer into the future of a thousand years from now and guess at the effect it is bound to have upon the destiny of our descendants is bewildering. But let me bring to mind by way of illustration a few of its lost opportunities and future possibilities.

Imagine, for example, that our ancestors of say only two thousand years ago had been able to reproduce upon the screen the life of their day as we do our own now! Here are a few things we could lean back in our chairs and witness. Suppose we start at the year one, A. D.

We would see Jesus himself in his manger and at work at his bench; the Disciples upon their pilgrimages; the Sermon upon the Mount; the Miracles—yea, the very Crucifixion with its crown of thorns and dying thieves. We would see the sacrifice of the new believers to the beasts of the amphitheater, the burning of Rome as Nero fiddled, the influx of the barbarian hordes, the downfall of ancient civilization, the Dark Ages with their inconceivable barbarities, the rise and fall of chivalry with its bouts and jousts, Richard the Lion Heart at the head of his legions in quest of the Holy Sepulchre, Columbus upon his caravel, Pocahontas, the Pilgrim Fathers, the sacrifice of the witches at Salem, Shakespeare in his tavern, writing Hamlet; Washington, Valley Forge with its tattered and bleeding patriots in that awful winter, Commodore Perry in his home-coming, Napoleon at his solitaire upon Elba Robespierre at the guillotine, Abraham Lincoln with hand upraised freeing millions—

Scene from Selig's "The Miller of Burgundy."

* This article won the second prize of $50 in the Chicago Press Club contest conducted by the Selig Poly-scope Company. The first of the series was published in MOTOGRAPHY for July 6th.

And we would see DeSoto in search of the Eternal Fountain at the head of his steel-clad knights, Pizarro and Cortez, the Incas, Livingstone seeking the heart of the dark continent, the last charge of the buffaloes, Captain Kidd in his gallows' rig—the mind reels at the thought of it all.

And we try to think of the future with the yet unborn great it must of necessity produce, the wars it must have, the nations which must arise and fall, the secrets which will be wrested from an unwilling nature, the forces which will be utilized and the manner in which they will be tamed—when one thinks that the human eye of the future may see these very things down to the very brink of immortality he becomes aghast at the possibility.

The cave bear is gone and we can only see him as the paleontologists reconstruct him from fossil bones and fragments of hide and scattered remants. Mankind can never view him except as a manufactured conception. But a thousand years from now many ages after the last elephant and lion has left this earth, the school children of then will see these beasts crashing through their native jungles as they do today. And they will also see our puny present attempts to fly in frail machines; our ponderous battleships wallowing in the trough of the sea in deadly combat with skimming aeroplanes; our great generals, statesmen and scientists in their daily work of unraveling the tangled skein of mysteries, our modern civilization as it now hums about us, our efforts to signal our sister planets—perhaps our success and our first communication with Mars or Venus—the myriad of unthinkable miracles yet to come. The vastness of the field of the moving picture of the future is inconceiveable to the finite mind. Its scope is limited only by the universe itself.

And but few even of the alert minds of today realize more than hazily what is being done every hour along this line. From tropic jungle to polar ice the moving-picture man is scraping this world with a fine toothed comb that its wonders may be revealed to us. During our luncheon hour we have but to step around the corner and see the cannibal at his feast, the Eskimo face to face with the polar bears; the blow pipe Indian of Honduras shooting his poisoned dart; the ocean liner pounding her life out upon a coral reef and the rescue of her passengers by the Islanders of the surf. Small wonder that the high priced theaters with their feeble mimics find the moving-picture show with its realities sweeping them aside as a gale sweeps chaff. Who would pay dollars to witness a counterfeit dragon clumsily operated by men, when for a dime he could see the dragon himself?

Scene from Selig's "The Three Valises."

And day by day and night by night the moving-picture men all over this world are toiling. They are climbing the Matterhorn, scouring the seas, penetrating the jungles and riding the waves of the air to put these living things before us. Nothing is too hazardous or too

costly for their enterprise. The boldest adventurers, the wisest scientists, the cunningest craftsmen—all are impressed into the service of the moving-picture man that the world may stand at his elbow and witness his wonders. And in corner stones in a thousand places are being deposited films that may be resurrected in the ages yet to come that future generations may see our modern life as we see it out of our windows—as we might have seen the building of the pyramids.

But to produce all this involves millions of dollars of good money and thousands of alert intellects. Just as an illustration, the Selig Polyscope Company alone has, almost in the heart of Chicago, a plant that amazes one. There, day by day, in its arena are enacted its army of men and beasts the comedies and tragedies of the past and present, the tremendous feats of the hour, the anticipations of great things yet to come. Months are often spent in the perfecting of a single film, and no man or no beast is too mighty for the whirring picture machine to catch his every movement. For good and for bad, the moving picture in its perfect portrayal of things as they are will do more in the future to mould the sentiment of this earth than any one other modern miricle. A thousand years from now man will read history not from the books of opinionated and often misinformed historians, but from the moving, living life as seen through the unimpassioned eye of the camera.

Verily, wonders will never cease.

Current Educational Releases

TEN DAYS WITH A FLEET OF U. S. BATTLESHIPS.—Edison. This film, the product of a ten days cruise with a fleet of United States battleships, is one which is both instructive and entertaining, as it depicts the daily routine of sailor life aboard ship and the scenes cover the entire ship, above and below, and from stern to stern. The views include drills, which are always interesting and attractive to all, inspection of arms, sending a semaphore message, and sentencing delinquents to punishment. An imposing view is one in which the captain addresses his officers and crew assembled on the quarter deck, and it also gives a fair conception of the number on board. Not only does this film disseminate a knowledge of the life and customs of our sailors, and an idea of the vastness of these floating fortresses, but the scenic effect is equally of interest. One scene pictures the sun shining on the water making a brilliant network over the ocean in dancing shadows of black and gold through which the fleet sails, forming a picturesque background with the ships like a silhouette against the sky. Another shows a flock of sea gulls hovering over the water in quest of food, some skimming along on the surface and others riding on the crest of the swelling waves.

LONDON.—C. G. P. C. A comprehensive, entertaining, interesting, and instructive film of the largest city in the world, showing its public buildings, picturesque streets, its historic piles, etc.

WINTER LANDSCAPES IN FINLAND.—C. G. P. C. A series of beautiful winter scenes, showing snow-clad mountains, villages and trees.

PRINTING AND ENGRAVING U. S. GOVERNMENT STAMPS.—Imp. An illustration of the process of making United States postage and commercial stamps, as done at the Washington Bureau of Engraving, Washington, D. C., showing the various processes, such as, printing, perforating, cutting, etc.

LUXOR AND THEBES EGYPT.—Eclair. A beautiful travelogue showing the splendid ruins of the past civilization. The temples of Luxor and Thebes; the gigantic tombstones of Ptolomey and the Pharaohs, and the colossal statues of Memnon, all make a very interesting picture.

VIEWS OF THE VALLEY.—Powers. No river surpasses the Hudson in beauty and picturesqueness, and these views give one a good conception of the many famous historical spots, and of its wonderful natural scenery. The Palisades, the Revolutionary landmarks, many modern summer resorts and homes are included in the picture. It will prove highly interesting to those who have never visited the scenes and to those who have it will bring many a happy remembrance.

THE ISLE OF STRIFE, CUBA.—Comet. A number of views showing the most interesting historical points, including Morrro Castle and Havana harbor. The largest sugar plantation in the world is shown in full operation, giving the complete process of manufacture from the raw material in the canefield to the finished product ready for the market, and numerous other interesting and instructive views.

THE PELICAN.—Reliance. An interesting natural history subject.

MISSIONARIES IN DARKEST AFRICA.—Kalem. In this remarkable production, every scene of which was taken there, we are given glimpses of the "Dark Continent." We are shown the real life of a native tribe and are made to realize in a measure, the bravery of an American missionary in facing the perils of a savage country.

THROUGH SASKATCHEWAN.—Eclipse. This delightful little travelogue takes us a journey by rail through the southwestern part of Canada and gives us an excellent view of the country.

STUDIES OF FISH LIFE.—Eclipse. An intensely interesting as well as instructive subject, showing many of the lower forms of fish life, such as: pipe fish, sea urchin, pectern, pollack, swimming crabs, lug worm, brittle stars, the octopus, and many others.

AMONG THE BEDOUINS.—Eclair. A series of well selected views showing life among the Arabs in the desert regions of Africa.

MAKING PHOTOPLAYS IN EGYPT.—Kalem. Egypt among most ancient of lands, noted for its many monuments, never fails to interest and this film is no exception to the general rule as it enables one to spend an entire day in the heart of this distant land. The spectator not only gains some idea of the country, but also of the difficulties which must be overcome in order that

these scenes may be brought to us. There are scenes portraying native villages with their different shops which are visited by members of the company in search of appropriate costumes for the various roles. The point of departure for the day's work is Luxor, to which all return in the evening as shown. Every scene is a decided novelty.

Catching Crocodiles of the River Klang.—C. G. P. C. A very interesting series of views showing this sport in detail, and the dangers connected with it.

Cavalry Test Marches in Belgium.—C. G. P. C. A number of very interesting and instructive views of military life in Belgium, showing the training through which every young man is compelled to go.

Niagara Falls.—C. G. P. C. Who that has not seen this wonder of nature has not longed to do so, and who that has seen it has not longed to behold it again? Magnificent views of the world's most famous cataract are portrayed with such fidelity that all who see them will be carried away by their beauty and grandeur. The rapids above the falls on both the American and the Canadian sides are shown; the American and Canadian falls; scenes at the base of the rocky precipice, over which the mighty waters pour, and views showing a trip on the "Maid of the Mist." The awfulness of the whirlpool makes this picture one not soon to be forgotten.

Printing Uncle Sam's Paper Money.—Imp. A demonstration of the entire process of making paper money from beginning to end, including an illustration of the actual printing, and also the method used in disposing of defaced bills. The pictures were taken in the Bureau of Engraving at Washington, consequently the film is not only intensely interesting, but also highly instructive as comparatively few people ever have the opportunity to visit these places in person.

A Day at the Zoological Gardens.—Reliance. A very interesting natural history subject showing the exhibits of the largest and most popular zoological gardens in the world. One of the features shown is the Clarence Mackzy collection of heads, one of the finest collections of the kind ever exhibited, and which contains a moose head, the antlers of which measure 76 inches from tip to tip. Many different kinds of animals are included.

Target Practice of Atlantic Fleet, U. S. Navy.—Edison. A film of extraordinary interest. Maneuvers of any kind connected with the army or navy never fail to attract and interest, and few have ever witnessed a spectacle of this kind. A great fleet of battleships is shown, sailing along at the rate of fifteen knots an hour, silent and grim, then suddenly belch forth a terrible fire as if in actual engagement. Among the number is the U. S. S. San Marcos, formerly the U. S. S. Texas, of Spanish American War fame, now used for preliminary practice, and many scenes of intense interest showing the maneuvering of the fleet and action abroad ship.

Wild Birds at Home.—C. G. P. C. A very interesting film showing different birds and fowls in their native haunts, among which are various kinds of wild ducks dwelling together in harmony, building their nests and rearing their young.

Bergen, Norway.—Eclipse. A bird's-eye view of the harbor and fortress of Bergen, Norway's second city, and other scenes of importance including Lofetus, one of Norway's noted waterfalls.

Elephant Butte Dam at Albuquerque, N. M.—Selig. A film showing one of the world's greatest engineering projects.

Pennsylvania State Police, Troop "B."—Edison. An interesting picture which is bound to hold the attention and which is instructive as well, as it shows the nature and extent of the work required of the Pennsylvania state police by portraying the daily routine of police duty. The views include many picturesque scenes along the roadways, streams and forests, adding much to the beauty and attractiveness of the subject.

Hairdressing of Other Days.—C. G. P. C. A film that should be of interest to the ladies, as it shows the styles for dressing the hair in days past, and is proof of the fact that woman's hair has always been her pride and crown of glory.

Making Silk Hats.—Eclipse. An interesting and instructive subject, showing how silk hats are made in one of the leading factories in London. The various operations include body making, shaping, lining, and finishing, all done by expert workmen and with the greatest care.

Sheep Shearing in New Mexico.—Selig. A portrayal of one of the great industries of the southwest, setting forth the practical side of sheep raising and shearing. The film is made up of interesting scenes taken from a great sheep ranch and shows the various activities connected with the daily routine. Large flocks of sheep are brought in from the mountains and prepared for the shearing which takes place before our eyes, as does also the sacking of the wool for market.

Benaries, the Sacred City.—Ambrosia. A scenic subject of rather more than ordinary interest showing the sacred city of India, also the Ganges, the sacred river, with its hosts of bathers and quaint structures, which speak to us of past centuries.

By the Clifts of Retreat.—Lux. A splendid little scenic film, depicting the picturesque cliffs of Etretat, a well-known little town in France.

Derby Day at Churchill Downs.—Essanay. A highly entertaining and fascinating subject, and one that cannot fail to be of interest, especially to the lovers of fine horses, as it shows the life of a Kentucky race-hourse from the stock farm to the race track as taken from the great Kentucky Derby recently held at Louisville. The scenes of the actual Derby are complete in every detail, showing the complete course.

Little Old New York.—Champion. A subject which is both interesting and instructive, depicting as it does, three market places. The Jewish market place gives us an insight into the thriftiness of this remarkable race. The Italian market place also reveals the characteristics of this people. Wall Street introduces the rich man's market, presenting a contract between the market places of the rich and the poor.

Who's Who in the Film Game

Facts and Fancies About a Man You Know or Ought to Know

IF the day is extremely hot, as the days are wont to be from now on for quite a spell, seek a less violent diversion than to put a man in a hole. Especially if that man's name should be Raver—not Raven—Raver. Specifically Harry Rush Raver—a man without a nickname, and a man who doesn't rush. There prevades an unshakable sentiment, eminating in nearly all that appears in this can't-be-killed, specialized record of progress, that film men must belong. If they don't belong they cannot be film men. In that essential H. R. Raver is a film man because he belongs every minute. You can't lose him for he refuses to be lost. There is this other not-to-be-forgotten qualification—film men generally have had some previous experience in amusing the people. There are a few exceptions, but Harry Raver isn't one of them.

The Subject—Harry Rush Raver.

To begin at the beginning, Harry Rush Raver was born at Youngstown, Ohio, July 6, 1880, exactly thirty-two years before MOTOGRAPHY began to tickle the trade as a bi-weekly. As a youngster, he stuck to Youngstown, which was an all right young place for a youth. He was one of those chaps who ran pretty much to legs, and who answered when you called him "Red" or "Skinny." He never sassed back and school days offered him his first opportunity to get the other fellow's measure. His pal and playmates were more important to him than his primer and problems. He was always there with his lesson, but no one ever saw him study. And on Saturday afternoons he was first to find the swimming hole and last to leave it. Things were jogging along in this fashion, with little to break the monotony until the summer of 1895, when Leon W. Washburn's circus hit the town.

There have been times in your life when you were leaning back in a comfortable chair, your feet on the picture mou'ding, or some other elevated object, when you saw the haze of an early morning in your pipe smoke. You recall the sleepless night before, and how you scuttled into your hickory shirt and your overalls at the first suspicion of day, nd beat it across lots through the wet rag weeds and dog fennel to the place where the circus would be. Well, Raver was like that. He was there with his gawky, lanky, hulk, expectantly seeking a chance to work his way into the tent for the performance. And he got his chance—not the management of the shebang by any means—just a chance. What matters when you are only fifteen! Harry Raver went away with the Washburn show as a helper in the dining tent. He was in the show business. It looked good to him. He did everything there was to do. It didn't matter. He liked the work—he learned. Two years later he joined Frank Robbins circus as assistant property boss. After a time he shifted again to French's circus and everybody answered to him. He was boss, and a young boss.

In 1899, Raver joined Frank C. Bostwick's Philadelphia Exposition. It was a new phase of entertainment and it didn't make a very big appeal to the man who wanted all to do that was doing, so the following year he bought an Edison Kinetoscope, took it to Youngstown, and operated an advertising stunt on the public square. This enterprise was so promising that he went on tour with his machine and showed motion pictures in legitimate theaters until 1901, when he became associated with Collins' Mighty Midway, as business manager. Raver was now at maturity, but he hadn't stopped growing. He looked the six-footers straight in the eyes without bending his head. Now he looks down on them! Anyway, he staid along with Collins for two years before he accepted a place with C. W. Parker's Shows, as publicity manager for the four organizations—seventy cars, forty separate and distinct attractions, and all that sort of thing, that you have seen on posters.

This show business agreed with Harry Raver. The publicity end of it threw him in contact with other men—gave him a broader view, and in 1905, he became a lessee and general manager of the New Parker Shows, carrying 280 people—twenty-two cars, etc. At the close of 1906, Raver's circus experience came to an end, when he elected to discontinue with Parker and engage in the hotel business. He had fallen in love with western prairies, the most alluring of all illusions! He first tried at Yankton, S. D., and then at Cedar Falls, Iowa, but hotel life wasn't for him. He started a picture theater at Cedar Falls that year, and sold out everything to engage with Mr. H. Swanson as manager of the Swanson

Omaha branch in 1907. Of course, that got him into the film game with the proper introduction. He didn't have his fingers crossed, or anything; he was in according to the ethics, the rules, the constitution and by-laws. If you can't get into the film game like that, you're not in at all. Raver jumped around quite a bit for Swanson. He was in Washington, D. C., for a while, as well as Chicago.

It is always a job to keep tab on an active film man and no attempt will be made here to record the exact time of Mr. Raver's changes after he left Swanson. He opened the Consolidated Film Exchange and theater in Baltimore, for the Consolidated Amusement Company. He organized the Motograph Company of America, and built its studios and laboratories at Baltimore. He became identified with the Motion Picture Distributing and Sales Company as a director at the time it was formed. He was the secretary-treasurer of the Associated Independent Film Manufacturers after the first rupture in the Sales company. He was the general manager of the American Eclair Company and in that capacity attended personally to the sales department; wrote all the advertising matter and edited a sixteen-page house organ.

Recent events are so fresh in the mind of film men that it is hardly necessary to recall them here. Mr. Raver was one of the incorporators of the Film Supply Company of America, and is its secretary and general manager. He is a cracking good film man by now, with only one man in the business who can look down on him, viz.: Lugvald C. Oes. By which it will be observed that Raver is tall. He *is* tall. He isn't as skinny as he used to be, but he couldn't qualify for the fat man's race if he wanted to, and of course, he don't want to.

Harry Rush Raver is an Elk and a member of the Green Room Club. He was married in 1905 to a Kansas City girl, which is a rough way to refer to Mrs Raver, but can't be helped for the dope is running low. Take it home with you that neither of the Ravers will care. They are good scouts, both of them, and the game is so swift that the dreams of circus days have lost all charm. Harry Raver isn't doing chores around the cook tent to-day but that isn't saying he couldn't.

Baltimore's New Censorship Plan

A board of seven men and women, to serve without pay, is the new plan for the censorship of moving pictures suggested by Councilman Harry C. Kilmer, of Baltimore, Md., who asked that his former ordinance be held by the City Council Committee on Police and Jail until he can prepare a new ordinance along these lines. Mr. Kilmer wants the board to have three paid assistants, one a secretary and the other two detectives to catch violators of the law among moving picture theater owners.

Headed by Mrs. Charles E. Ellicott, a number of ladies had appeared before the committee to discuss the ordinance, when Mr. Kilmer made his suggestions. Mrs. Ellicott said she would be satisfied if in drawing up the new ordinance, Mr. Kilmer would consult representatives of the City Wide Congress.

Scene from Selig's "The Double Cross," a Western Romance.

Recent Patents in Motography

By David S. Hulfish

UNITED STATES Patent No. 1,007,962. Kinetoscope Projecting Machine. Thaddeus A. Nolan, Cincinnati, Ohio.

In stating the general objects of his invention, Mr. Nolan says:

My invention relates to kinetoscopes of the class adapted to use for exhibiting moving pictures, and the objects of my improvements are to provide spring actuated mechanism for moving the film intermittently; to provide automatic

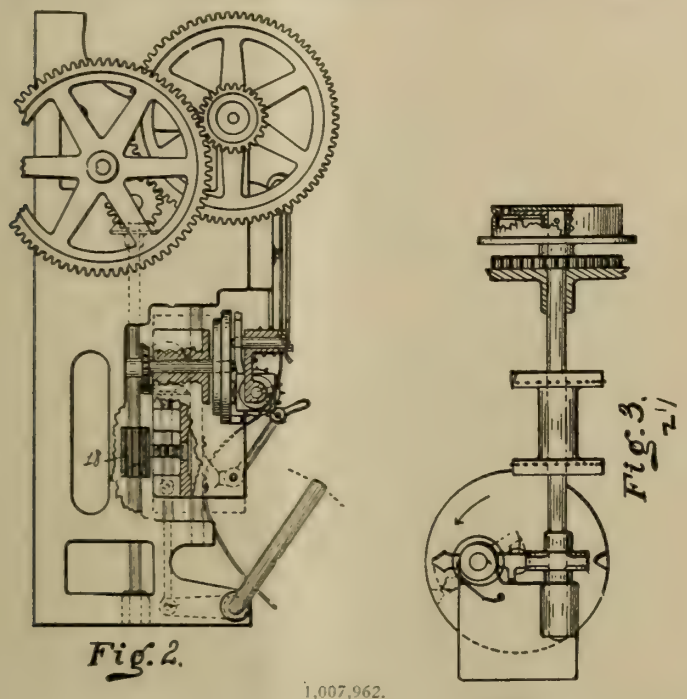


Fig. 2.

Fig. 3.

1,007,962.

positive stop mechanism for the film at predetermined points in its movement; to provide means for maintaining the actuating spring within a predetermined range of tension; to provide means for moving and maintaining the film in properly framed position.

The framing device described comprises a carriage which slides vertically and carries with it the film window and the intermittent sprocket. The feature of transmitting power to the intermittent mechanism in all positions of the carriage is attained by providing two parallel vertical shafts, one on the machine body and the other on the framing carriage, the shaft on the framing carriage being the driven shaft and carrying a spur gear, and the shaft on the machine body being the driving shaft and carrying a spur cylinder or drum, having spur teeth to mesh the framing carriage gear, the teeth upon the driving drum being so long that they will mesh the driven gear in any position of the framing carriage. In Fig. 2 of the drawings of the patent the long-tooth gear or drum is labeled 18. This feature is not covered in the claims.

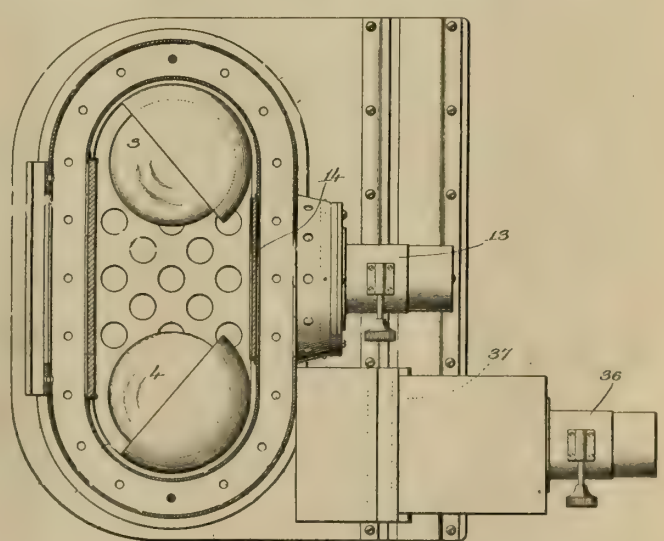
The feature of intermittent feed is attained by interposing a spiral spring between the crank handle and the intermittent sprocket, then placing a four-tooth ratchet on the intermittent and a dog to knock the detaining pawl from the ratchet at proper intervals, thus permitting the spring to jerk the film forward until the intermittent sprocket is stopped by the engagement of the next ratchet tooth with the detaining pawl. This type of intermittent mechanism is an old fundamental form, producing a very quick shift of the film, and depending for its accuracy in stopping the film in position very largely upon the accuracy with which the sprocket teeth fit the film perforations.

The details of the intermittent mechanism are set forth in three claims, of which claim No. 2 may be cited as typical of the three:

2. A kinetoscope comprising a shaft provided with a series of stops, yielding driving connections therefor, means for limiting the relative movement thereof with the shaft, a spring actuated latch arranged to automatically engage with the stops successively, and means actuated in synchronism with said shaft and in unison with the stops for positively disengaging the latch from the stops successively.

No. 1,008,134. Projecting Apparatus for Slides or Card Announcements. Emory W. Gooderich, Somerville, Mass.

The device shown evidently is intended for home use, as a toy or private amusement device. A top view of it, with the cover removed, is shown. A transparent slide may be placed in the slide holder at 37, being projected upon a screen by the lens 36; or an opague picture or announcement may be placed in



1,008,134.

the position at 14, receiving light from both lamps 3 and 4, and being projected by the lens 13.

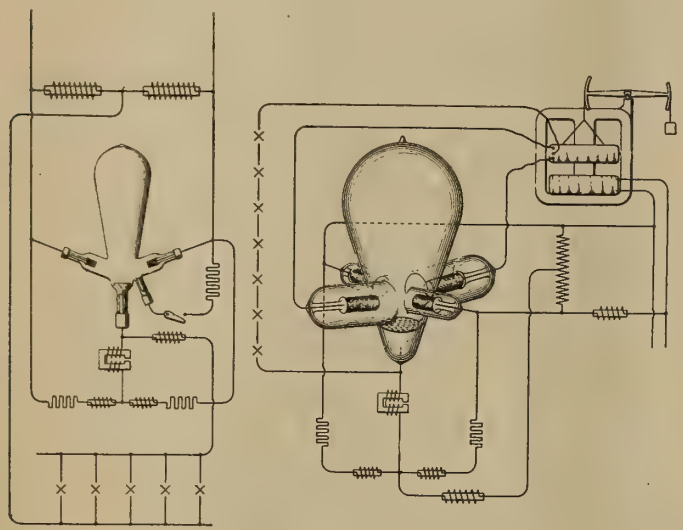
The claims of the patent read upon the construction of the lamp house.

No. 1,009,494. Vapor-Rectifier System. Samuel Ferguson, Schenectady, N. Y., assignor to General Electric Company, of same place.

The use of the vapor rectifier in connection with motion picture projecting lamps where the source of current is an alternating current system, is becoming more and more general. There are reasons for such use, both from considerations of economy and from considerations of convenience.

In the matter of convenience, it is necessary for

the operator, when using alternating current, to keep his projection out of synchronism with the current phases. If with 60 cycle current the operator should project at about 15 pictures per second, or at about 12 pictures per second, the recurrent combination of the flicker of the shutter with the flicker of the alternating arc will cause waves of light and shadow to be seen upon the screen. With 25 cycle current and with



1,009,494.

pictures projected at about 12½ pictures per second, the result is the same. Further, the 25 cycle arc is so flickery that it is difficult to handle satisfactorily in projection. The use of the vapor rectifiér gives substantially a direct current for the arc, avoiding the troubles due to the alternating arc.

In the matter of economy, projection of the same intensity with the "rectifier" current will require much less current than with the unrectified alternating current.

The circuits and devices of this patent are illustrated in the accompanying drawings.

No. 1,009,673. Reel for Moving Picture Films. Carl James Lang, Olean, N. Y.

FIG. 1.

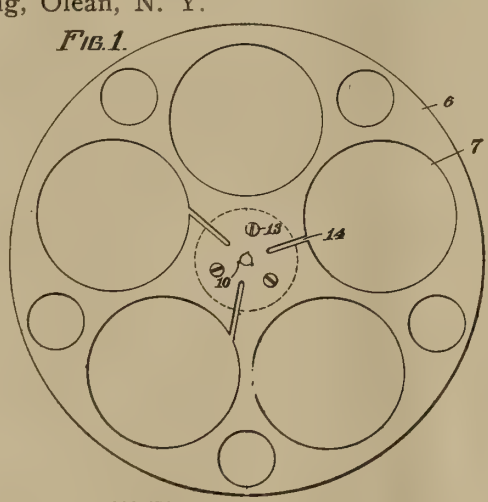


FIG. 2.

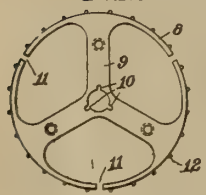


1,009,673.

By way of explanation (and perhaps apolgy) for inflicting another patent upon a suffering public, Mr. Lang recites one of the troubles which we all know eats up our leaders and tails. He says:

This invention relates to reels, and especially to reels for moving picture films, the object being to provide a reel upon which the film may be quickly put in place and having improved means for attaching the end of the film to the reel without damage to the film.

The film reels ordinarily used on moving picture machines, consist of a pair of circular sheet metal plates with a hub at the center, the hub being provided with a spring catch under which the end of the film is engaged. In attaching the film to the hub it is customary to fold the end of the film several times and then insert the folded end under the catch. This has the defect that the folds cause the film to break or crack, and in time the end of the film will become broken off and since said films are used repeatedly the result is that sooner or later part of the matter to be exhibited is broken off, by the repeated shortening of the film. To avoid this defect I provide a reel of improved construction.

In the drawings, Fig. 1 is a side elevation of the reel. Fig. 2 is a section through the hub, at a right angle to its axis.

The rim of the hub has slots 11 extending across the same, in a direction parallel to the axis, and is also provided with rows of teeth 12, properly shaped and located to engage in the sprocket holes along the side edges of an ordinary film. The side plates are fastened to the hub by means of screws 13 extending through said side plates and into the webs 9 of the hub. Said side plates also have slots 14 extending inwardly from the openings 7, and said slots 14, when the parts are assembled, register with the slots 11 in the hub.

The slots 11 are for the purpose of receiving the free end of the film which is to be wound on the reel. Said end may be entered sidewise through a slot 14 and into one of the slots 11, and the reel being then rotated the teeth 12 engage in the holes in the film, and so the film is wound on the hub, between the side plates of the reel. When the reel is placed in the machine and the film unwound, it will, when the end of the film is reached, lift or disengage from the teeth 12, and the end will slip out of the slot 11, without breaking or damaging the same. Therefore in winding or unwinding the film there is no necessity for folding or bending the end of the same, in a manner to cause breakage thereof, and another film can be conveniently placed on the reel, or the same film rewound thereon.

What I claim as new, is:—

1. A reel for films or the like, having a recessed and slotted side plate, and a hollow hub attached thereto, and having a slot registering with the slot in the side plate for the reception of the end of the film when applied laterally.

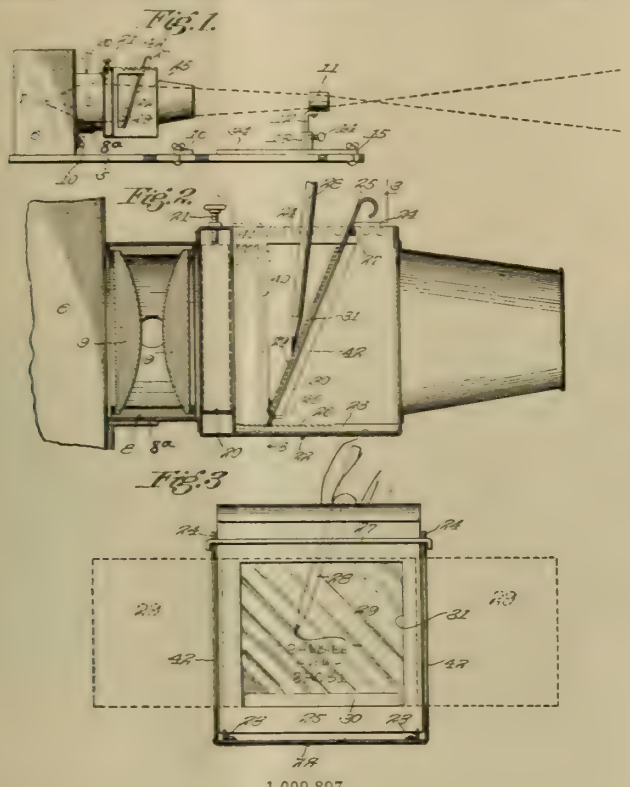
2. A reel for films or the like, comprising side disks and a hub therebetween, the hub having a slot to receive the end of the film, and one of the side plates having an opening which communicates with the end of the slot in the hub, whereby the end of the film can be inserted laterally into the slot, through said opening.

No. 1,009,897. Projection Apparatus for Announcement Slides. Nathaniel W. Dexter and Warren B. Mather, Los Angeles, Calif., assignors to United States Electrographic Company, a corporation of Nevada.

The invention provides for the projection of announcement slides, and for the making of announcement slides, more particularly providing for means whereby announcement slides may be projected upon the screen and viewed by an audience during the progress of making. This result gives a novelty in projection in cases where the slide might have been prepared before its projection, or gives a great facility in speed of making and projecting in the case of projecting news slides, there being no delay between the writing of the news and the projection of it upon the screen.

The distinguishing feature of the invention is the provision of a glass, or other transparent plate, placed in the beam of light projected and in such a position with relation to the apparatus that it can be easily

written or drawn upon with the aid of a suitable pencil or other means. At present a pencil known as a "grease pencil" is used, this being the only successful article for marking on glass of which the inventors were aware; but other media are not thus excluded from the scope of the invention. The glass plate is placed on an adjustable holder, the glass being easily accessible to the operator from above. The plate is placed directly in front of the usual slide holding member, none of the ordinary features of the projection lantern being thereby changed in the least particular. As the slide holder and glass panel are at different places with respect to the focus of the light passing through the condenser, it is necessary to



1,009,897.

change the position of the objective for the clear projection of the representations on the slide and on the glass panel. Stops are provided so that the objective may be moved quickly and accurately to each focul position, so that a change from the projection of matter on a slide to matter on the glass plate can be effected quickly. However, the distance between the ordinary slide and the glass plate is small and it is possible, with a small amount of indistinctness, to simultaneously project matter on both slide and plate. In this way novel effects are obtained.

In the figures, Fig. 1 shows a side view of the lantern, Fig. 2 shows a sectional view of the condensers and slide holder, and Fig. 3 shows the slide and the hand and pencil writing upon the slide.

The operator holds the pencil in some such position as that shown in the figures, and writes upon the glass plate in a natural manner as it appears to him when looking down upon the plate, from above, while writing or drawing. The inclined position of the plate renders the work easy, it being possible to write or draw upon the inclined glass plate anything that the operator could write or draw upon a horizontal plate. As shown in Fig. 3, writing which appears normal to the operator looking down upon the rear surface of the glass will appear reversed in both directions when viewed from the front. As the projection reverses the slide in both directions, vertically and horizontally, the writing is thrown upon the screen in a normal position as viewed from the side on which the projection apparatus is located.

In addition to the announcement slide device, the inventors place a transparent box, marked 40 in Fig. 2, in the path of the rays between the condenser and the glass plate. By filling this transparent box with water, the heat of the arc is kept from the glass plate and from the hand of the operator while writing.

There are four claims, reading upon the arrangement of the inclined glass plate, and also upon the transparent water box in connection with the inclined glass plate for making the slide announcement. The first of the claims is as follows:

1. A projection apparatus, comprising a source of light, a condenser in front of the source of light, a box arranged in front of the condenser, a transparent plate mounted in the box and inclined upwardly and away from the condenser so as to allow free access to its surface toward the condenser, and an objective arranged in front of the box.

Wants Pictures in Churches

Rev. J. Frank Smith, pastor of the Central Presbyterian Church, Dallas, Texas, a speaker at the Sunday observance meeting at the First Methodist Church declared in favor of free moving picture shows in the churches on Sunday afternoons as the best solution of the Sunday moving picture show question in Dallas. The minister made the statement after a speech on the "Observance of the Lord's Day." He spoke as one representing the churches.

Rev. Mr. Smith said at the beginning that the question of the proper manner of keeping the Sabbath had caused him more trouble than any other question. He said that as to the details of what one ought to or ought not to do, there was ground for vast difference of opinion, but that, in general, as a churchman, he thought the day should be kept as one apart, for rest for the body and as a day for thought—a day when good politics and good business and good everything should be lifted up.

At the conclusion of his speech an opportunity was given for questions, and a man in the audience asked Rev. Mr. Smith: "Don't you think there are a great many laboring men in Dallas who haven't an opportunity to see a moving picture show except on Sunday, and don't you believe they ought to be allowed to take this form of recreation?"

"I know that's the argument," said Rev. Mr. Smith, "but I deny the premise. I don't believe there are very many men in Dallas who could not take an hour or two off sometime during the week to see a moving picture show. If there are those who can't have that much time off during the week, then every white man ought to rise up and smash such conditions.

'Let every church put in a moving picture show free on Sunday afternoon and let them put on the finest educational programs. I am going to have one in my church just as certain as there is one built."

Speaking of the attitude of labor organizations toward Sunday amusement places, the speaker gave the figures of an election on the question in England in which sixty-two unions voted for Sunday amusements and 2,412 opposed.

Of Interest to the Trade

MOTION PICTURE EXHIBITORS' LEAGUE OF AMERICA

Second Annual Convention, La Salle Hotel, Chicago, Aug. 13-17, 1912.

Illinois State Branch No. 2 is actively at work to make the National League Convention the biggest thing that has ever been pulled off in the film business. The convention committee is comprised of these well-known exhibitors: Wm. J. Sweeney, Chairman; Samuel I. Levin, Chris. C. Whelan, Crawford L. Hull, George Henry, Robert R. Levy, Louis Schindler, I. Natkin, L. H. Frank, Charles Abrams, A. J. Balaban, M. Hyman, Fred Schaefer, H. A. Hill, J. A. Alcock, John Miller and Charles A. Anderson. Headquarters are at 112 S. State St., Chicago, in the splendid offices of the Orpheum Theater.

"The Relief of Lucknow"

WITHOUT losing its historical or dramatic value, "The Relief of Lucknow," presented by the Edison company, is free from those harrowing and repulsive features so common in the usual run of motion picture war scenes. The element of fiction is also entirely lacking for so spectacular are the events of this terrible war, that the imagination of the writer could improve but little on the actual episodes that are recorded in the history of the Indian Mutiny of 1857.

In a series of splendidly enacted scenes done in Edison's best style, this picture climbs from one dramatic event to another, from the time of the dissatisfaction of the Indian troops at Lucknow, and the burning of the officers' houses, until General Havelock forces his way through the narrow lanes to the relief of the heroic men and women imprisoned in Lucknow. Hospital scenes are shown, showing the work that befell the women during this memoriable siege.

At the beginning of the out-break, we are shown the burning quarters of the officers, the receipt of the news

Word of the Uprising.

of the mutiny by Sir Henry Lawrence, and the manner of that gallant officer's death and burial, amidst the shot and shell. General Havelock is a'so introduced, and with his troops is shown departing from Cawnpore for the relief of the besieged garrison. All is carried out with the military precision and spirit that characterizes the British troops.

We now are shown the garrison of Lucknow, when all hope has deserted them, and each minute seemed the last. Then the shrill notes of the bag-pipes announcing the arrival of Havelock, and the rejoicing at the approach of the relief. Can one imagine what passed

The Relief.

through the minds of the men, women and children, who a few short minutes before, had believed themselves to be the victims of torture at the hands of their barbarous enemy?

In the closing scenes are shown the fight in the streets of Lucknow, as the victorious General Havelock forced his way through the narrow streets, infested with the ambushed native sharpshooters. The details of scene and costume were studied with the most scrupulous care so that the production would be realistic to the highest degree, as is the common practice of the Edison company, and it is the opinion of all that this film will rank with the great films of the years either from the standpoint of interest or that of education.

CAST OF CHARACTERS:

General Havelock.....*James Gordon*
Major Banks.....*William Randall*
A British Officer.....*Benjamin Wilson*
The Messenger.....*Richard Neill*
The Priest.....*Charles Sutton*

Because of the intense interest of the public at large in military matters, we believe that the release of this film on July 27 will mark another dramatic triumph to the score of the Edison company.

Railroad Publicity Films

The commercial department of the Louisville & Northern Railway & Light Company, of New Albany, Ind., which in company with the United Gas & Electric Company and associated public-service companies of that city is carrying on a systematic campaign of publicity favoring Southern Indiana in general and New Albany in particular, has arranged for the use of moving pictures as part of its campaign. About 500 feet of film have been made by the Municipal & Commercial Film Company, showing scenes along the lines of the company, and featuring views of the Ohio River and Silver Hills, in the "knobs" back of New Albany. The film will be exhibited, in connection with other pictures made by the company in and around Louisville, at theaters all over the country.

On the Trail of the Germs

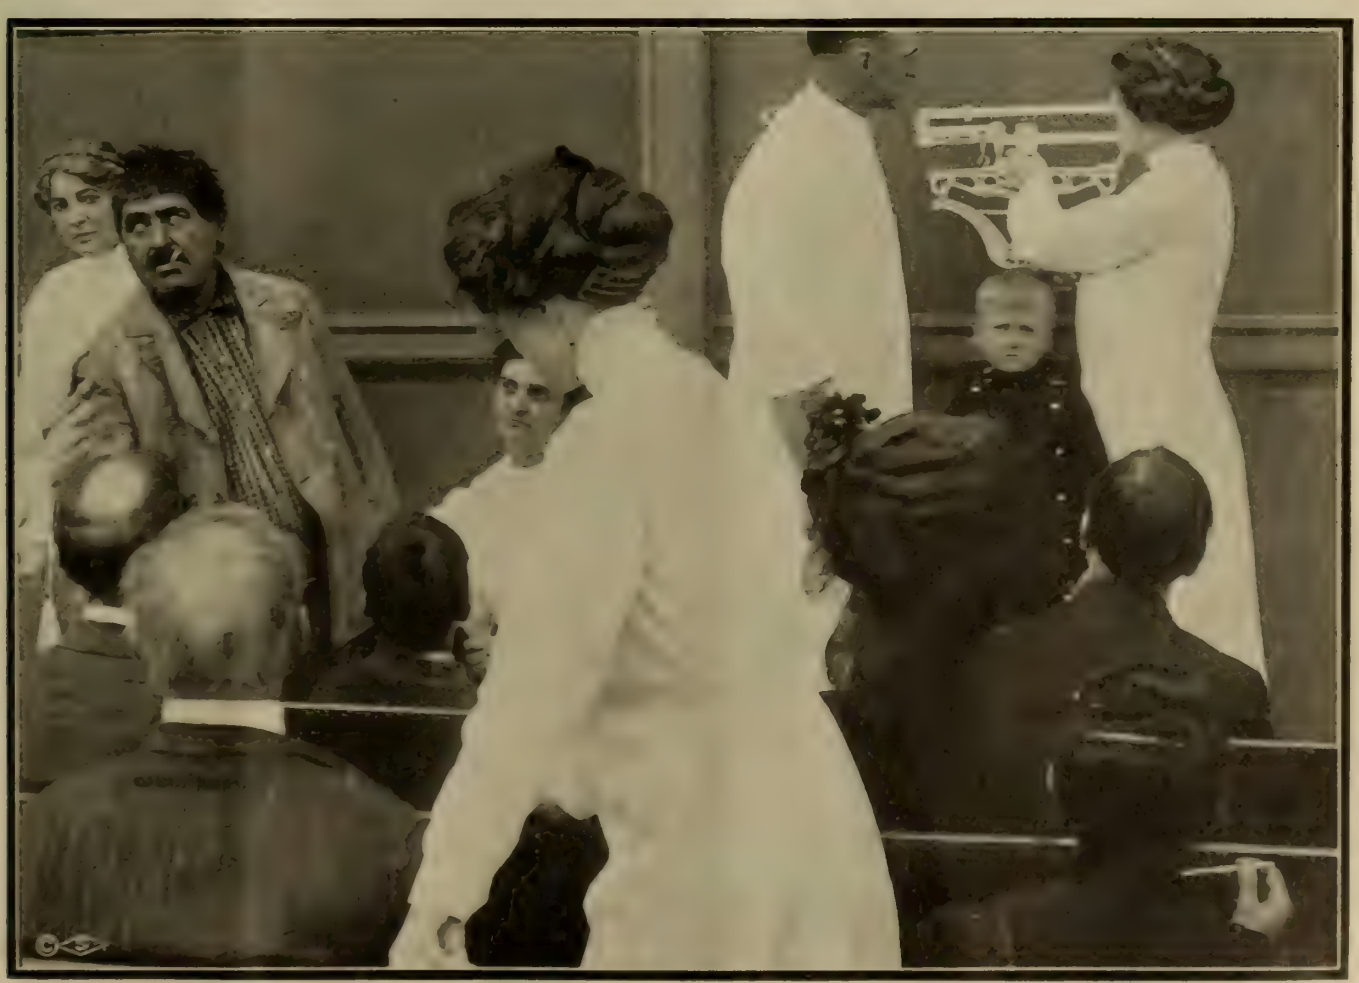
Basing the subject of the film upon the great, and good work being accomplished by the various Tuberculosis Institutes and societies of the United States, the Selig Polsycope Company has made the film 'On the Trail of the Germs" one of dramatic and human interest as well as one of scientific value. Great care has been taken to arrange the subject so that it is technically correct, and presents to the public many side lights upon the prevention and cure of the Great White Plague.

In the preparation of this semi-educational story, the able staff of the Selig company was assisted by the physicians and nurses of Municipal Tuberculosis Sanitarium of the City of Chicago.

A fruit seller is prevailed upon to visit the Tuberculosis Dispensary, he is examined thoroughly and carefully, and he is found to be tubercular. His home in the congested district of Chicago is visited by one of the tuberculosis nurses, accompanied by a young lady friend who, incidently, is a customer of the fruit seller. The home is seen to be dark, stuffy, and poorly ventilated. The man's son is taken to the clinic and, he too, is found to be tubercular. The young lady acquaintance of the nurse, playfully submits to a test by the physician in charge, and it shows that she too has a tuberculous infection. Here the trail of the germs is taken up and they are literally "run to earth." The story is carried along through a series of interesting experiments and tests, and is brought to a close with the unfortunates convalescing under the treatment of fresh air, good food, rest and sunshine.

Show Factories in Pictures

Employes of Marshall Field & Company, Chicago, Ill., with the aid of moving pictures were taken on a "tour" of several of the largest manufacturing plants of the firm at Handel hall recently. This is the first use made of films to show the different processes in the manufacture of dry goods. The pictures begin with the first handling of raw materials, and follow each step in the making to completion.



Scene from Selig's Semi-Educational "On the Trail of the Germs."

Fight "Nick Carter" Films

The "real and original" Nick Carter, hero of more detective stories than Sherlock Holmes ever dreamed of, has entered his strenuous objection to being put in moving picture detective romances by a St. Louis film concern which has not obtained the consent of his owners, Street & Smith of New York. This firm needs no more of an introduction to several million Americans than does Nick Carter himself. Its paper-back nickel novels have put to shame Sherlock Holmes in his palmiest days of cloth and gilt as one of the six best sellers. This popularity of Nick Carter is the basis of a trademark infringement suit filed in the United States District Cout of St. Louis against the Atlas Manufacturing Company, 415 Century Building, and Orlin T. Crawford.

The petition discloses that Nick Carter is a syndicate, so far as authorship of the story goes, which will be a disappointment to the boys who liked to believe that Nick wrote the thrillers himself at intervals when he was not saving the heroine from the villan's trap.

According to the publishers, Nick dates from 1885, and his weekly adventures ever since are the product of many authors, so that Nick is not even a nom de plume, they aver, but a piece of business property. He is worth $1,000,000, they assert, and to protect him from seizure they registered "Nick Carter" as a trade mark in April, 1912.

The Atlas Company has been making and selling films under the title of "Nick Carter, the Great Detective." One of these depicts how "Nick solves the $1000,-000 jewel mystery." This privilege is worth $100,000, the plaintiffs aver, and the Atlas Company is carrying on the business without their consent. One effect has been to wean the boys away from the printed stories to the films and lessen the sale of Nick Carter in print. Street & Smith ask an injunction to stop the films. They allege Crawford is behind the Atlas Company.

The pictures, Smith says, deprive the boys of the schooling in reading and spelling they acquire from the stories, which he describes as "affording a large amount of useful information in civic, metropolitan, geographic, financial and business affairs, are moral in their plots and a great educational benefit to the class they appeal to."

Crawford stated he regarded the suit as a bluff, saying anybody had a right to use the name of Nick Carter on films. He said he is indirectly connected with the Atlas Company, but is not at liberty to give the name of its officers or stockholders.

Canadian Films to Be Made

Montreal will, in the near future, see the staging on an extensive scale of open air dramas, operas, tragedies, comedies and all the various forms in which historic art finds expression. Scenes will be laid on the sides and summit of old Mount Royal, on the banks of the great St. Lawrence, around the Lachine Rapids, and at the Indian settlement at Caughnawaga; in fact, anywhere that a suitable background and surroundings can be found for the presentation of 'shows."

The British-American Film Company is the name of the organization, which is undertaking the staging of these scenes, and the scheme is now so far advanced that the news was given out by Mr. B. Greenhood, the manager of the company.

Mr. Jere Austin, the hand photographer of the new company, has been taking trips around the island and believes he has found a veritable paradise from a motion picture producer's point of view. Yesterday he discovered a stretch of natural scenery along the Lower Lachine road that cannot be surpassed as a setting for Indian tales. The old Indian block houses, of which there are quite a few still around the island, will be magnificent features to work into the pictures.

Pictures of Soliders' Home

M. A. Neff, president of the Motion Picture Exhibitors' League of America, made a trip to Dayton, Ohio, with Mr. Randall, one of Gaumont's best camera men, where a picture was taken of the old soldiers and the home surroundings on the Fourth of July. This will be a feature picture for it will appreciate in value as it grows older instead of depreciating. This picture should be preserved in the archives, not only of the state of Ohio and the home, but in those of the United States, as the old soldier is fast passing away. There are forty or more deaths every month at the National Soldiers' Home at Dayton. In anticipation of the deaths, there are eight or ten graves always in readiness to receive the old soldiers. Those unacquainted with the home cannot understand how fast the old soldier is going. Only a few years and there will be no old soldiers to meet around the camp fire and mingle with their comrades and hear the tales of army life. A picture of the oldest soldier was taken, age 102 years, a colored soldier, born in Chilicothe, Ohio.

Anti-Picture Theater Circuit

Aiming to win back from the motion picture houses to the "legitimate" theaters thousands of amusement seekers who have changed their allegiance in the past few years, a syndicate of big theatrical men, of New York, including the Shuberts, William A. Brady, Lew Fields, Marcus Loew, and others, have formed a circuit of theaters, embracing thirty cities in the east and Middle West, and will send over it a number of companies which will play at 10, 20 and 30 cents, and others which will demand the regular prices of $1.50 and $2.

The theory is that if they can draw audiences to their houses for part of the week at the lower prices, they will get them into the habit of going there to see the more expensive productions. The cheaper shows will not be the old-fashioned melodramas, it is said, but will be truly intelligent presentations of commendable works, including standard pieces and many new plays.

Rochester Health Films

A movement is on foot in Rochester, N. Y., to obtain the use of moving picture films for the furtherance of the health, and education of the public in this city. The idea is to create public sentiment for the purchase of moving picture apparatus by the city, transportable in character, for use in the various park and school playgrounds. It is also the desire of the promoters of the idea to ma ktehe health and education reels of films a feature of the intermissions at the evening concerts of the Park Band.

If the plan goes through, the exhibition of the films will probably be under the control of the Health Bureau and the Board of Education. As far as the Health Bureau films are concerned, they would for the present, at least, be principally films being used in the national campaign against tuberculosis.

Scene from Selig's "Officer Murray," a Fire Story.

Newman Fixture Company in New York

The Newman Manufacturing Company with factory and main offices at 717-19-21 Sycamore street, Cincinnati, Ohio, which manufactures a large and complete line of brass easels, brass frames, brass rails and brass theater fixtures of every description, has leased a large and spacious show room at 101 and 103 Fourth avenue, between Eleventh and Twelfth streets, New York City. The branch will be in charge of S. Newman and E. C. Newman. Brass fixtures and announcement signs and brass goods of every description is on display, and goods will be carried in New York for immediate shipment.

Sam Newman, who is associated with his four sons in business, established this concern in the year 1882, and originated brass theater fixtures, which can be seen in nearly every city and town throughout the country. A cordial invitation is extended to exhibitors and managers throughout the country, either at the New York show rooms or the main offices and factory in Cincinnati.

Oppose Picture Ordinance

The ordinance now pending before the Indianapolis, Indiana, city council for restrictions and regulations of the moving picture shows will be opposed by the Indianapolis Moving Picture Managers' Association, which met at the Claypool hotel to plan a campaign against the ordinance. The association will ask the council committee, which has the ordinance under consideration, to grant a public hearing.

The moving picture men are especially opposed to a provision of the ordinance which would eliminate from their entertainments special features such as songs, dances and monologues, and would restrict the entertainment to instrumental music and film exhibitions. They also think an annual license fee of $100 would be too much, but are willing to pay $50.

New Motiograph Hand Book

An unusually complete hand-book, giving complete instructions for operating the Motiograph, has just been issued by the Enterprise Optical Mfg. Company, of 564-572 W. Randolph St., Chicago, Ill. This book is a great advance over anything yet published on the subject, and represents a great deal of expense and tedious work in its compilation.

A small charge of ten cents per copy is made, to help defray the cost of mailing, and it will be sent to anyone interested, on receipt of that amount.

Kinemacolor Discharges Staff

Because the films produced by former employees were not to the liking of the officers of the Kinemacolor Company, a big clean up was made with the result that every actor and producer on the staff was discharged. It was the intention of the company to produce the best films in the market, and in the opinion of the company the films that were being made were not up to this standard. A producing manager will be engaged who will in turn appoint an acting staff.

Moving Pictures in Court

A unique feature of the riot trial held in Los Angeles, Calif., is the introduction of moving picture evidence, which will reproduce the riot at the Federal Building fol owing the sentence of the Magon conspirators.

It happened that a moving picture man was "on the job" at the time the riot was at its height, and his films will be the medium through whiich the entire action taken by the defendants will be shown to the jury. It is believed that this is the first time that moving pictures have been used for this purpose.

Union Pacific Pictures

The educational bureau of the Union Pacific Railroad is planning a series of motion picture exhibitions showing correct and incorrect ways in which employees do things in different branches of the service. The pictures will be accompanied by explanatory lectures to be delivered before meetings of employees at division points all over the system.

Stop Copyright Violations

A codification of the copyright laws extending the present statutes to motion picture films, and to protect composers against unpaid reproduction of their works on phonograph records and automatic piano players was passed by the House of Representatives. It was prepared by Representative E. W. Townsend, of New Jersey, an author.

Protest Against Ragtime

Residents in Broadway between Ninety-ninth and 100th streets, New York City, appealed to James G. Wallace, chief of the Bureau of Licenses, to revoke a license for a motion picture show in that block.

The residents declared that for three or four hours every evening they are compelled to vacate their homes or listen to an amazing collection of ragtime tunes drummed out on a "tin pan piano." Mr. Wallace said he would make an investigation and see what could be done.

Australian Picture Shows

The principal cities and towns of West Australia are Perth, the capital, with a population of 55,000; Kalgoorlie and Boulder, 29,000; Fremantle, 20,000; Midland Junction and Guildford, 6,000; Geraldton, 4,000; Bunbury, 4,000; and Albany, 3,000, says Consular Agent U. W. Burke, Fremantle, West Australia. Moving-picture shows are in operation in each of these places, the machines used being Pathé and Gaumont, and the films American, English, and French. Moving-picture machines are not manufactured in this state.

District Attorney Lawrence H. Rupp, of Allentown, Pa., has warned moving picture managers that he will prosecute if they do not cut out objectionable films. Where do they get them, we wonder?

Scene from Selig's "The Wreck of the Vega," a Dramatic Educational.

Brevities of the Business

PERSONAL NOTES.

William Lee is the name of a new producer recently added to the forces of the American Film Manufacturing Company. Mr. Lee formerly produced for the American, shortly after the organization of the company. He will specialize in straight Western dramas.

President S. S. Hutchinson, of the American Film Manufacturing Company, Chicago, accompanied by his wife and son, sailed July 6 on the Olympic for Europe, where he will visit his London offices and tour the continent before returning home.

Starlight, one of the Indians connected with the American Film Manufacturing Company, recently had a very strenuous day. He began the day by falling in front of an automobile, escaping with a few stray scratches. On the way home from the picture field Starlight saw smoke issuing from a second story window, he leaped upon a fire escape, crawled into a window and issued into the street again bearing the body of a badly frightened young woman, but beyond some cuts and bruises, Starlight was not hurt. W. D. Emerson, producer, greatly lamented the fact that the camera man was some ten minutes ahead of the fire and thus lost a "real touch" in the way of spectacular picture making.

Miss Virginia Skelly has been appointed office manager and secretary of the Pathe Western company, succeeding Miss Gussie Quin, resigned.

After an absence of more than a year, Miss Gertrude Clair will resume her duties as leading woman with the Nestor Company.

A. D. Flintom, manager of the General Film Company's Kansas City office, has been promoted to the position of general manager of the company's St. Louis office.

Miss Mae Marsh has been secured as leading woman by the Kalen Company's Western house, succeeding Alice Joyce, resigned.

Clem Kerr, Dayton's single-handed league organizer and all-around motion-picture man visited a while in MOTOGRAPHY's office last week and talked about things in general. Mr. Rayberd, another prominent Dayton exhibitor, was with Mr. Kerr.

ALABAMA.

Breyfogle Brothers have been granted permission to erect a motion picture theater at 3836 Troost avenue, Florence.

CALIFORNIA.

The Unique theater is a late addition to San Bernardino's list of motion picture houses.

The American Film Manufacturing Company has moved its Western studio from La Mesa to Santa Barbara which will give them a new and equally good territory in which to operate.

Another modern photoplay house is to be added to the several high-class picture theaters of Sacramento. It will be erected at 918 K street at a cost of from $10,000 to $16,000.

The Orpheum theater, a moving picture house on National avenue, between Seventh and Eighth streets, San Diego, opened a few months ago by H. L. Percy, has been purchased by E. E. Ebersole.

Tally's Broadway Theater at Los Angeles was recently taken over by Quinn Brothers who have added it to their chain of theaters and have changed the name to the "Colonial."

The Pacific Theater and Realty Company has taken over five Los Angeles motion picture theaters.

CANADA.

The Ontario Producers' and Exhibitors' League has been formed with the following officers: President, John Griffin, Toronto; vice-presidents, W. K. Hill, Toronto W. Roegnik, Lindsay; secretary, Charles Wellsman, Toronto; Executive committee, J. C. Belmont, Hamilton; E. Mole, Brantford; C. H. Beattie, Barrie; G. C. Phillips, Berlin; W. A. Campbell, J. R. Joy, and Joseph Barrett, Toronto.

COLORADO.

The Empress Theater at Salida has been purchased by K. C. Mullen, of Victor.

CONNECTICUT.

Plans have been prepared by B. E. Hausdorf for a new motion picture theater to be erected at North Main and North streets, Waterbury.

The Comique theater at Hartford has been taken over by Charles Williams of Providence, R. I.

The "Ford" is the name of a most modern and pleasant moving picture and vaudeville house opened at Cedar Rapids.

A. C. Tudor, formerly a well-known young business man of Davenport and Rock Island, has sold his interest in the Family moving picture theater in the latter city, and has purchased the Family theater in Clinton, which he will also operate as a moving picture theater.

What is planned to be one of Muscatine's most popular motion picture houses in the People's theater, which has been taken over by Fred A. Briel, of Dunnellon, Fla., who will thoroughly overhaul the house, making a number of material improvements. Mr. Briel is an experienced motion picture man and is also owner of flourishing houses in Dunnellon and Clearwater, Fla.

T. A. Bryan, of Cedar Rapids, has purchased the interest of Dwight Schneider in the Dreamland theater at Oelwein. The firm will be Schneider and Bryan, and they propose to make it one of the most popular amusement resorts in the city. The new partner has had wide experience in this line of amusement.

A new motion picture theater will be opened at Greenfield by Messrs. Bromer and Steward.

The "Cecil" is the name of a enw motion picture theater to be opened in Mason City.

The Orient Theater at Marengo has been purchased by A. W. Skersick.

Frank McMackin has opened a motion picture theater in the Armory at Clarinda. Mr. McMackin has had experience in the business, having conducted a house in Chicago, and will provide the best service possible.

The Chapin Opera House Company has been incorporated at Emmetsburg with a capital stock of $1,200.

A permit has been granted for the erection of a $7,000 moving picture theater on West Third street, between Myrtle and Marquette, Davenport, for J. Reimers.

After being thoroughly overhauled and renovated the Majestic, a vaudeville house of Waterloo, will be conducted as a moving picture house during the summer under the management of J. Jolly Jones.

That Messrs. Allender and Cramer, of Burlington, have profited by the experience of those who have gone before in building and fitting out motion picture theaters, and have made an advance upon anything in the moving picture line, was evidenced at the opening of their new house, the Nemo, as the house is really beautiful, and the films shown so far superior as to place the Nemo in a class to itself and set the pace for all moving picture theaters in the future.

Dr. J. M. Sturdivant and son will conduct a motion picture theater at Cincinnati.

Messrs. Otto Burrows and Henry J. Boka have secured the New Bismark summer theater on Sixth street, Clinton, and will conduct it as a first-class motion picture house. The house will be given a new name and a prize will be given for the best name handed in, in writing, sealed.

SOUTH CAROLINA.

The Ideal Theater, opened at Columbia by the Montgomery Theater Company, is said to be the most modernly equipped, the most convenient and the most attractive theater in the entire Montgomery series and will undoubtedly prove as successful. The front has a handsome marquise awning and a lighting arrangement to flood it with brilliancy at night. The foyer is tiled, and its mural decorations give indication of the scheme which is carried out in the auditorium. Good taste, expressed with originality is displayed everywhere, there is nothing gaudy or showy. The walls are done in Pompeian red, shaded to old rose and each mural panel, outlined by a border of connventional roses, frames the Montgomery shield studded with a handsome electric fixture. The electric chandeliers suspended from the ceiling, are of Alba marble, of the semi-direct arrangement which throws the light upward and shields the auditorium from the glare. The floor is of sufficient slope to give a clear view of the stage from any seat and the chairs are comfortable. The ventilating system is that the air is changed every ten minutes.

This change is effected by means of a very large suction fan installed underneath the stage and run by electricity. In addition to the Columbia theater, the company now has two in Jacksonville, Fla., the Grand and Savoy; two in Savannah; one in Atlanta and one in Dayton, Ohio. All are making great and successful headway under Mr. Montgomery's direct management.

TENNESSEE.

The Gay Theater, Wall avenue and Gay street, Knoxville, will be conducted as a moving picture house.

The Tennessee Fair Association will erect a motion picture theater at Nashville, to be completed by September 1.

UTAH.

The Revier moving picture theater on Twenty-fifth street, Ogden, has been leased by Messrs. Bert Syphers, Will D. Phillips and A. Bloom, who will operate it under the name of the People's Theater.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

MOTOGRAPHY, ROOM 1813.

ROOM 1813, La Salle Hotel, Chicago, will be MOTOGRAPHY's headquarters for the convention of the Motion Picture Exhibitors' League of America, August 13 to 17. We want and expect every exhibitor who attends to drop in there—not once, but several times and repeat. We want you to meet the Goat Man, who for once will be on the inside, looking out; Haase, the ad man and regular little mixer; Woodruff (sometimes called Woody), and Rathbun, the copy-grinders, and all the rest of the force, who will drop work at the office and beat it for the La Salle whenever the boss disappears for a minute.

We know there's going to be an awful mob at the convention, but we're not scared—we're tickled to death, and beginning a'ready to get excited. You see, you all know MOTOGRAPHY, but we don't know you all. The convention is where we get acquainted with those we haven't met, and re-acquainted with those we did meet once, but who have almost forgotten our personal features.

Don't stay away because you think we are busy. The picture game is what makes us busy, and you are part of it. Come in! Room 1813.

THEATRICAL MANAGERS SUCCUMB.

AT FIRST viewing the efforts of the motion picture theater with contempt, and afterwards with alarm, as the latter attraction continued to empty their high-priced seats, the leading "legitimate" managers are madly rushing into the picture field with the hope of recouping their losses. After the years spent in denouncing the films, as enemies to art, the producers at last have been compelled to see that the pictures are not only here to stay, but have always shown every evidence of a continually increasing demand.

A few of the producers have annexed the film business to their regular theatrical productions, while others have broken boldly into the game to the total exclusion of all other business, not being content to stand on the fence and reap only a portion of the reward. The present attitude taken by the theatrical profession toward the film, proves false at least three of the principal arguments heretofore leveled against the moving picture show by its carping critics.

By taking this step, the producers have not only increased their own financial returns, but have conferred a lasting benefit on the public at large, who for several reasons have been unable to witness the most prominent actors in their most celebrated plays. In the smaller cities, for instance, where it has been impossible for such actors as David Warfield, Maude Adams, Julia Marlowe, and Sothern to appear in person, the film will reproduce every gesture and movement for the edification of the cross-roads audience. In this way, a taste for the theater will be created that will result in great good to the

drama in centers which to the present time have been unable to collect audiences for high-class theatrical productions.

While actors and actresses of no mean ability and reputation have been deserting the "legitimate" stage for several years, to become affiliated with film concerns, we have yet to see the real stars of the theatrical profession in the films. That Daniel Frohman should become one of the first in this movement is significant to those who have ben interested in dramatic enterprise, and his presentation of "Monte Christo," with James O'Neil as the leading character, will be awaited with interest. It is probable that all of the great plays will be condensed and put into form for the moving pictures, and should this be accomplished by the Famous Players' Film Company, it will prove an artistic and educational blessing to the average citizen who cannot afford to see the original production.

Step by step, the moving picture show is overcoming the ignorant prejudice of the omnipresent amateur social reformer, by a steady and consistent regard for the welfare and educational advancement of its patrons. It is certain that this form of entertainment has at last reached a pinnacle from which it cannot be dislodged by the most exacting of critics.

ANOTHER VIEW.

ACCORDING to an article written by Captain J. J. Ryan for the *National Police Magazine,* the motion picture theater contributes to the delinquency of the young because the children attend the shows without escort, and therefore are free to form objectionable acquaintances. Unlike many other critics of the motion picture show, the captain does not attack the character of the pictures, nor of the management, for that would reflect on the censorship bureau, which is conducted by the police department, but he takes his fling at the show in the only way open to him. As a novelty this is a matter worthy of note.

This objection can be applied with far greater force to unescorted children in the public parks, or playgrounds, where the chance of associating with questionable characters is immeasurably greater, and where the children are not under the continual supervision of the management. In this respect our public resorts are notorious, not because of the indifference of the police, but because of character of the surroundings, and the far greater area patrolled by the officer. Evil exists in all public resorts, but is at a minimum in the show that is frequented by a neighborhood clientele.

To quote Chief Wallace of the Bureau of Licenses, New York City: "As a general proposition, the show is just as good as the neighborhood it is in." To know this is true, one only has to consider the fact that at least 90 per cent of the show patrons are residents of the district in which the show is located, as there is no need in these days to travel far for this form of amusement.

AN INTERESTING PATENT DECISION.

A DECISION handed down by the Massachusetts Supreme Court draws a sharp distinction between the monopoly granted by a patent and the monopoly created by the purchase or control of a chain of important patents covering a particular industry or art. The case related to a contract for employment, with assignment of inventions and patents, which the employee should make "during the continuance of the contract and for ten years thereafter." It is alleged that the plaintiff, the United Shoe Machinery Company, is an unlawful monopoly, controlling ninety-five per cent of the inventions pertaining to shoe machinery.

A patent, according to the decision, bestows upon the inventor the right to exclude all others from the enjoyment of his discovery for a specified term, but "the monopoly protected by the patent goes no further than the invention and contractual obligations attached to it." A patentee may annex any condition to the sale of his invention (Dick case decision, 224 *U. S.* 1) and may place the users of it under numerous obligations, but the monopoly so created is conferred solely by the patent.

But as to the monopoly produced by a combination of patents, the decision says:

"No word or phrase in the Sherman anti-trust act reveals an intent to exempt the owners of patents from its sweeping provisions against monopolistic combination. We are unable to perceive any underlying reason for supposing that by implication growing out of economic or business conditions such an exemption was intended. There appears to be no inherent natural distinction between owners of patents and owners of oil which would justify the application of the statute to one and not to the other. The conclusion seems to follow that the comprehensive condemnation of the act against every person who monopolizes interstate commerce by combination with others includes holders of patents as well as others."

In this case, or in any other parallel case, the question whether a combination in restraint of trade exists, is for the federal courts to decide. But the principle laid down by the Massachusetts court is remarkably clear, and of undoubted interest to every holder of patent rights. There is no obscurity here:

"Conditions annexed by the patentee to the enjoyment of an invention are legal, even though resulting in an extended monopoly. Combinations among patentees resulting in an extended monopoly are illegal."

WRONG AUTHOR'S NAME IN JULY 20 ISSUE.

We regret that an unavoidable error in the preceding issue of Motography gave the credit of authorship of the Selig second prize story, "The Opportunity of the Picture," to F. De Lysle Cass. This interesting article was written by H. I. Green, of the Chicago Press Club, to whom we extend our apologies for the mistake.

SCHOOL PICTURES.

Believing that the school children of the city would be greatly benefited by the use of a moving picture machine, it is probable that Supt. O. S. Thompson of the Waukegan (Ill.) city schools will ask the school board to purchase a machine.

It is possible that Mr. Thompson will ask the board to purchase one of these machines before school opens and that it will be used in connection with the playground which opened in that city.

Many cities have recently adopted the new system and they are using the films to good advantage in the teaching of botany, English lectures and the like.

It is thought that it would be a good thing if a machine could be secured during the summer months for the use of the school children, who are enjoying the playground and after they are through with their play and are all together, no better chance to introduce the educational features could be secured. The machine would be used for that purpose during the summer months and then when school opened again in the fall it would be possible to tell exactly how much good could be accomplished by this means.

MOTION PICTURE EXHIBITORS' LEAGUE OF PENNSYLVANIA—Headquarters, 233 Fifth avenue, Pittsburg, Pa. President, Walter Steumpfig; First Vice-President, Cresson E. Smith; Second Vice-President, Mr. Miller; Secretary, Mr. Roth; Treasurer, F. J. Barbin.

ONTARIO PRODUCERS' AND EXHIBITORS' MOVING PICTURE ASSOCIATION—Headquarters, Toronto, Ontario. Provisional Officers: President, John Griffin; Vice-President, W. K. Hill; Secretary, Charles Wellsman; Treasurer, W. L. Joy.

MOTION PICTURE EXHIBITORS' LEAGUE OF NEW YORK—Headquarters, 136 Third avenue, New York. President, Sam H. Trigger, New York; First Vice-President, B. E. Cornell, Syracuse; Second Vice-President, R. Davidson, Binghamton; Secretary, H. W. Rosenthal, New York; Treasurer, John C. Davis, Saugerties.

League Seeks Censorship Law

Motion picture exhibitors of Indiana, through the state branch of the Motion Picture Exhibitors' League of America, will present a bill to the next Legislature providing for a state censorship board for picture theaters. The state organization, at a meeting in the Denison hotel, took a definite stand in opposition to suggestive or immoral films in Indiana theaters, urging the use of more historical and educational subjects.

Many men from all parts of the state attended the meeting, which placed the question of censorship legislation in the hands of the state secretary, F. J. Rembush of Shelbyville, and H. W. Summers of Indianapolis.

State censorship boards are being urged by the national organization as a means of uplifting motion picture theaters, and through the state organizations, now including more than fifteen Eastern states, with several more branches to be admitted at the national convention in Chicago, Aug. 13, efforts are being made to have all the states adopt representative legislation on the subject. The Indiana bill will be drafted in accordance with the most advanced ideas of the national organization and will be pushed vigorously before the legislature.

Mr. Hubert was named local organizer for branch No. 1, and the state organization later will put an active organizer in the field to bring all Indiana motion picture exhibitors into the organization.

The state organization will hold a meeting at the call of President H. S. Dickson of Winchester within the next six months to elect officers for next year. H. F. Prentiss, first vice-president of the state organization, was present from Terre Haute, where he is making efforts thoroughly to organize the exhibitors with the expectation of forming a local branch there later.

James Rushworth of Aurora was one of the prominent workers for the organization at the meeting. The thorough success of the sessions, which were attended by members from almost every representative Indiana town, leads the Indiana men to expect considerable attendance at the national convention in Chicago.

The Toledo Convention

Among the resolutions passed at the executive session of the Toledo convention on July 17, was that requesting a petition to the legislature of Ohio to pass a law authorizingg the governor to appoint a board of censorship for all moving pictures shown in the state.

It was also moved that all moving picture films cop-

ied from vicious literature be condemned, as well as the sale of the books and display of such advertising. Delegates and alternates were appointed for the national convention at Chicago.

Motion picture men will have a friend at headquarters if Congressman James M. Cox, of Dayton, realizes his ambition by becoming governor of Ohio. Congressman Cox made it plain to the members of the Ohio branch of the Moving Picture Exhibitors' League, whose convention he addressed at Zenobia, that he approves good motion pictures, because he goes to see them.

"I always get a glimpse of something that does me good," he said. "I hope to see the day when every school house will have a moving picture machine. The motion picture is a tremendous force in awakening the impulses of the child, and is a great educational factor.

"The great developments in the art of film making enables one to get a splendid perspective of nature. The pictures enable the family of the laborer, who can't motor or play golf, to obtain entertainment, which is not only recreative, but educational. There is no question but that the moving picture has become a strong moral force for good."

Cox did not evade the Sunday show question or the proposal of a state board of censors to pass on all moving pictures, which are prominent questions confronting the Ohio picture men.

"It has been an unwritten law," said Cox, "that any man in public life should keep mum on the liquor question and Sunday observance. The time has come, however, when public men and candidates must state their position and each man must show his cards. I am heartily in favor of liquor license and I also believe that pictures of a religious character or a high moral tone will do good. Many will be benefited who do not go to church, for each is playing its part in uplifting. The right kind of pictures," he continued, "will probably attract many to the picture houses that do go to the churches."

Speaking on the regulations of the picture show and censorship of its pictures, he said:

"I subscribe to a state board of censors. If it ever comes within my purview to assist in naming such a board it will be created with men who will give the matter common-sense view."

The Wisconsin Convention

While there was not a great number of out-of-town visitors to the Wisconsin convention held in Milwaukee on July 19 and 20, it was thought that everyone was conserving their energy for the national convention in Chicago in August. A great many new members joined the organization, however, the previous number being nearly doubled.

Delegates and alternates were chosen to represent Wisconsin at the national convention. No change was made in the roster of officers. Charles Philips, president of the Wisconsin League is to appoint a state organizer.

Albany Local Organized

Forty exhibitors were present at Albany, N. Y., meeting, which was reported to be a most successful affair. The meeting was called to order by President Trigger, of the New York State branch, at 11 o'clock, July 19. After Messrs. Trigger and Ascher had spoken on the advantages of organization, and the results obtained in New York City by the exhibitors, there was an enthusiastic response, and every visitor present signed the charter list.

The following were elected officers of the permanent organization:

President, Geo. F. Wright, Albany; First Vice-President, E. O. Weinberg, Troy; Second Vice-President, L. C. Smith, Schenectady; Secretary, J. E. Weidman, Albany; Treasurer, J. C. Rosenthal, Troy.

Resolutions were adopted on the subjects of more favorable Sunday laws, and the amendment of the penal code permitting the admission of unescorted minors during certain hours.

Films in the School Room

The 10-cent mechanical vaudeville show will have no more fascinating novelties to offer than the schoolroom of the future, if plans to be discussed at one of the National Education Association round tables meet with the favor of school boards.

Use of phonographs and motion-picture machines in the conduct of class work will be considered in detail, and from the views already expressed it is believed that their adoption will resolve itself merely into a question of funds available.

Entire courses of study with outlines to accompany the records already have been mapped out with a view to the use of the machines in schoolroom work. Outlines for lectures and phonographic recitals have been prepared and will be submitted at the discussion. The use of the talking machines in school dances and on the recreation ground will also be illustrated.

Those who favor extension of this musical aid of school work state that schools in between 350 and 400 cities now use talking machines as a regular part of their curriculum. One hundred and fifty Chicago schools are thus equipped.

Of the moving pictures and their prospective use in the schools Assistant Superintendent of Schools John D. Shoop said:

"In my opinion this method of illustrating doubtless will come into general use in schoolroom instruction as soon as funds and facilities are at command to supply the means. The educational value is too apparent to warrant any other conclusion. The pioneer work that has been done by industrial organizations in illustrating the possibilities of the moving picture as an educational factor has been helpful. I believe the time is not far distant when the sensational and frivolous impressions made in our 5-cent theaters will give way to the more valuable and instructive features which are now shown to be practical."

House Passed the Film Bill

Prize fight moving pictures became a thing of the past in the United States when the house passed a senate bill prohibiting the transportation of such moving picture films between the different states and territories or from foreign countries.

Heavy fines for violation of the proposed law are fixed by the bill. The president, said to be in sympathy with the legislation, is expected to affix his signature to the measure. Southern members of congress were especially interested in the proposed law because of the race feeling stirred up by the exhibition of the Jeffries-Johnson moving pictures in their part of the country.

Senator Simmons of North Carolina and Representative Sims of Tennessee pressed the bill in the senate and house.

The Story of Rameses of Egypt

A Remarkable Cines Picture

A GORGEOUS Cines Special, released August 12, 1912, depicting a thrilling romance laid in the days of ancient Egypt.

Surrounded by a brilliant court, and his subjects only too eager to gratify his slightest wish, King Rameses reigns in Egypt, a mighty and haughty Pharaoh. One day his courtiers tell him of the beauty of Se'ime, a shepherdess dwelling near the town of Thebes, and his mind is at once inflamed with a desire to see this famous peasant girl, whose loveliness has so impressed those about him. Selime has many admirers, but only one upon whom she looks with favor, and he is but a poor shepherd named Ephraim, who spends his days tending the sheep on the mountains. The pair are madly in love with each other, and Selime often meets Ephraim in the picturesque hills around Thebes, where they exchange vows of eternal love.

The impatient king resolves to see at once this shepherdess, and straightway disguising himself as a peasant, journeys in company with several of his courtiers to the city of Thebes. Soon after his arrival, he meets Selime coming from the well with a pitcher of water upon her head, and is immediately infatuated with her sweet, rustic beauty. Approaching, he enters into conversation with her, but although he is most ardent in his addresses she rejects him, and tells him of her devoted lover, the shepherd, tending his flocks on the mountain slopes. Undeterred, Rameses determines to possess her, and instructs his followers to carry her off by force. She is taken to the palace of the King and arrayed in the finest garments, covered with costly jewels, given a magnificent suite of apartments, and surrounded with every luxury, but her heart still clings to her shepherd lover, as she repulses with horror the advances of Rameses, and begs him to allow her to return home.

Although gentle at all times, the King is determined to conquer her with lavishness. He shows her all his cherished possessions, and provides her with the best entertainment: athletes, dancers, and the most attractive Eastern entertainers are ordered to appear before her in turn, but, alas! thy fail utterly to give her the least p'easure, for her heart and thoughts remain true to her home and lover.

Meanwhile, Ephraim is told of the abduction of Selime, and learns that she has been taken to the palace of King Rameses. He is greatly incensed at this, and

Rameses the Second—The Marriage Ceremony

vows eternal vengeance against the King. Bidding farewell to his comrades on the hillside, he hastens to the king's court. The next day, in accordance with the Egyptian custom, at the hour when the King receives in person his subjects, and hears their grievances, Ephraim appears before Rameses as he sits upon his throne, surrounded by all the magnificence of his court, and tells the story of his great loss. The king laughs and vows that Selime shall remain within the palace. Ephraim, maddened by the contempt of the king, and by fear of his beloved one's terrible situation, draws a dagger, rushes up the steps to the throne, and attempts assassination, but before he has effected his purpose, he is overpowered, and cast into a dungeon with the lowest criminals of the kingdom.

Part II.

King Rameses then goes to the chamber of Selime, and tells her of the attempt upon his life by Ephraim. He again pleads for her love, and when she again rejects him with scorn, he turns in anger and swears that unless she will consent to become his, he will order the immediate execution of Ephraim. On her knees she pleads for her lover's life, but Rameses remains obdurate, and will only consent on the conditions he has laid down. Selime still defies him, and devoutly calls upon the gods to defend her lover. The king follows her into another room and watches her in silence as she casts herself at the feet of the stone deity to invoke its assistance. He then sees that all his efforts are in vain, and that the beautiful Selime is beyond all his tempting, and will remain true to her lover in spite of the magnificence and many allurements that surround her.

The King orders the release of Ephraim, who is brought before him, and in the open court he magnanimously gives up Selime to her lover, and orders the marriage to take place at once. Full of joy at their deliverance, the happy pair kneel at the king's feet and bless him for his generosity. Then, together they throw themselves before their heathen god, to whom they return thanks for their deliverance.

Following this, a scene of wonderful magnificence takes place, depicting with great fidelity all the ceremonies and gorgeousness of an Eastern wedding. Processions of maidens carrying lilies, the emblem of purity, are followed by the courtiers in their rich costumes. Crowds of people are filling the streets as the procession wends its way to the palace, where the marriage is to be celebrated. The king watches the procession from the balcony, and then retires to his private chamber. There he summons his favorite retainer, to whom he gives instructions that apparently terrify him. He is then left alone with his sad thoughts and hopeless misery. As the happy lovers return from the marriage ceremony, they are met by the king's retainer, who, as requested by his master, presents Selime with a magnificent casket as a wedding gift, which on being opened is found to contain the terrible evidence of the great love of Rameses for Selime, after which follows one of the most dramatic climaxes that ever closed a moving picture.

It is indeed a story that will not soon be forgotten.

Local Views for the Exhibitor

By E. B. Lockwood

MOST managers are on the alert to make the most of their opportunities to advertise their theater and stimulate patronage. There are several throughout the country who have caused a great deal of interest with their success exhibiting local pictures. They have demonstrated that moving pictures taken of local subjects are a great drawing feature, and a financial success. I have had the pleasure of interviewing some of these managers while the pictures of their city were being exhibited, and in every case they were doing a capacity business and turning large crowds away. This means a great deal to the manager at this season of the year when, as we all know, business is usually very slack.

In every instance, these managers were men who knew the value of advertising and general publicity One of these managers says: "I never received so much good advertising and publicity out of a feature exhibited in my house before. I interested the newspaper editors and announced that we were going to take local moving pictures which would be exhibited at our theater. In the course of a few days, we published a program in the papers announcing just what views we were going to take, and the time we would take the different scenes. We invited the citizens who were able to be present to do so, and be in the picture, as they would be able to see themselves later, projected upon the moving picture screen. We interested the merchants and managers of the manufacturing concerns and they co-operated with us, and did everything in their power to make it a success.

"We secured pictures of the public buildings, typical street scenes, city officials, police and fire departments in action, and the schools, besides many of the industries and the people employed by them. Well, I was the most surprised man of all; the streets were jammed and it was almost impossible for us to get to the scenes to take the pictures, but everyone was patient and ready to lend a hand, and assist in every possible way. We were more than busy that day, and the name of our theater was at the end of everybodys' tongue. The papers did a great deal more than we had dared to expect. Talk of publicity—it was the best ever. Then, as soon as I was able, I announced the date on which these pictures would be exhibited, and this revived the enthusiasm, which had quieted down to some extent for a couple of days. When the film arrived we held a special matinee for the newspaper men and the members of the Commercial Club, that they might have the privilege of seeing them before they were exhibited before the public. The newspapers more than demonstrated their appreciation by giving us the finest of publicity; the kind that money can't buy.

"You see our business for yourself. We have turned people away so far, and expect to pack them in for the remainder of the week. There have been people in this week who were never here before. I have made it a point to speak to them as they came out, and in most every instance they have been very enthusiastic in their praise and said that they had not realized, until then, what they had missed in the past. As you see, I am running these pictures in addition to my regular program at an advanced price. The theater managers of the surrounding towns have all asked for the film so that they may show it to their patrons, as they say the people are all anxious to see it.

"The members of the Commercial Club are so

pleased with the pictures that they are considering if it would not be worth their while to take the film off my hands and use it at conventions, and commercial executive gatherings, to show just what we have here in the way of a live, up-to-date industrious city."

I have met several of these managers who have had moving pictures taken of their city, and each and every one has met with overwhelming success. I consider this not only a very novel idea as a feature subject but also one of the finest advertising and publicity campaigns ever used by any moving picture theater manager, and I congratulate those who have scored ahead along this line.

Pictures to Supercede the Stage

The history of the stage, within a very few years, will be written, not by the erudite historian, but by the moving picture mechanician, said Mme. Alla Nazimova recently in the Chicago *Examiner*. Instead of reading in books the impressions of some perhaps prejudiced or overly enthusiastic critic, the coming generations will see on the screen of the moving picture theater what the stage figures of the present day really did, instead of reading about it. They will see, not hear, and seeing is believing.

Mark me, in an incredibly short time every stage artist, no matter of what renown or position, will be appearing before the lens and shutter, for they will realize that only by doing so will they be able to make any enduring mark upon the artistic scrolls of their time.

I am crazy to appear before the machines myself; I want to perpetuate whatever art I have; I want to be known to generations yet to come, as well as to this. Just think what it will mean!

As the greatest operatic art of the world is now preserved for all time by the phonograph, so will the dramatic art be handed down by that marvelously potential little machine which spins through its message of entertainment and instruction.

What a prospect it unfolds! What a thing to dream of! The immortality of the painter is secure in his painting; he can lay down his brush with the knowledge that his name will ring through the succeeding centuries, and in its ultimate development the invention of your wonderful Mr. Edison will bring an equal fame to the great player.

Take the young actor or actress, whose artistic schooling is just in progress. Could the principles of pantomime, the value of action as opposed to dialogue, which is so hard to learn that many actors never know it at all, ever be brought home as conclusively in any other way?

A prominent critic in one of your interior cities wrote of Mme. Bernhardt, on her last tour of America, that to watch the movements of her fingers in one scene would be a liberal education to the ordinary actress.

With the photographic lens those movements could be caught and with them the countless others which so glorify a Bernhardt impersonation, and they could be a factor in the training of generations of actresses. Bernhardt, supreme genius that she is, recognizes this and

Scene from Essanay's "The Adamless Eden."

Scene from Selig's "An Unexpected Fortune," a Comedy Drama, August 5. Copyright 1912, Selig Polyscope Co.

she has already posed for the "little pictures.' She is perfecting her title to immortality, so that when, for the last time, she ennobles her art in life, it will live for ages after her.

Rejane, too, has glimpsed the future and several of her most famous impersonations have been preserved to posterity by the celluloid films.

Another direction in which the new movement, for it soon will be that, will be tremendously beneficial, will be that of self-study and improvement. As the mirror is so essential in obtaining the proper effects in make-up, adornment and the like, so will the pictures be in framing the visualization of an important role. When an effect in make-up does not please us, we can change it and keep on trying until we secure the result we wish, but we can tell nothing about the acting picture we present to our audience—not at least until the next day, and then it is often too late.

To see yourself as your audience will see you—what a wonderful help it will be!

Acting is sometimes considered impulsive and spontaneous, and the more it partakes of these qualities, the more it is real acting, but an effect, seemingly natural, is oftentimes the result of long and careful thought, and even then it might seem wrong or incomplete if we could see it ourselves.

We hear a great deal about the lack of dignity that would be entailed by the appearance of the foremost people of the stage before the camera. All what you call "moonshine."

What difference is there, ethically, between acting into a lens and singing into a funnel? Haven't Caruso and all of the other great operatic stars of the world been doing the latter for years? And what one has suffered in dignity or public regard? Rather has their art been given a distribution to the most remote sections of the country, where it could never have penetrated otherwise. The music-loving cowboy on the plains of the West, the miner in frozen Skagway, or the orange grower on his porch in Riverside, can enjoy Caruso's golden notes simultaneously with the millionaire in his box at the Metropolitan Opera House.

And so, too, it will be with the great artists of the dramatic stage, for it will not be long until the individual moving picture machine will be found in as many homes as the phonograph is today.

People do not go to the opera to see the dramatic exposition of the great roles, except in the case of Mary Garden, they go to hear them sung, and it is for that, solely, that they buy their phonograph records; with the artists of the drama, they will buy their picture reels to see them act, and the dialogue will be of as little consequence as it is in the moving pictures of today.

I shall be doing it soon, and while I may be the first in a prominent position in America, to do it, I surely will not be the last. All the others will follow.

Mr. A. A. Davison, auditor for the Selig Polyscope Co., is visiting the Los Angeles branch of the Selig Company at present.

On the Outside Looking In

By the Goat Man

I HAVE been to Gotham again. One is always safe in going there in the summer time—the alleged dull season in the film business—because film men have not attained that point of affluence where they lock up their homes, give the key of their business place to the office boy and hike to the country. They are still making theirs. From what I can gather, they will go right along for years and years, piling up money. They haven't learned the trick of assigning heavy work to subordinates. The average film man reasons that the whole film firmament revolves around his particular line of endeavor and that if he turned his back, the thing would stop. It is therefore safe to call on the trade in dog days, or any other days for that matter. If Mr. Man isn't in, just flop down in the first vacant chair and wait. He'll blow along right away, with a cigar in his teeth; his hands full of papers; his hat on the back of his head and be surprised that you want to see him. Shocking! Why, he doesn't want you. He didn't send for you, did he? Can't you see that he's terribly busy? But then, if you insist, he'll see you. He has been known to pick up an idea, even from a goat, and he takes a chance.

* * *

New York has taught me a new thing, this trip. Funny I never knew before, because it is another goat characteristic. This is it: I am a mighty poor defensive

From Powers' "The Burglar and the Rose."

fighter. In which respect I am not like a goat. You know that Old Billy plants his feet, bows his neck, tilts his horns with defiance and blats out, "come on you fellows." He doesn't bat an eye on the impact. I do. I go crazy with the heat. I feel that I am doing a serviceable work and that I offer a helpful selling scheme. It would be better, I'll grant you, if conditions were somewhat different in this country; but those conditions were man-made and the men who fixed up the scheme were film men. I can't afford to quarrel with them, but it doesn't seem quite right that Americans—film making Americans—should cater almost wholly to the open foreign market; depend upon that same market for their profits and then skim the cream right here at home. If the open market is good enough to entice Carl Laemmle and his family, for the Universal, and Sam Hutchinson and part of his family for the Film Supply, for a summer sojourn abroad, it smacks like a crack on the

From Nestor's 'The Fortunes of War."

wrist for the rest of us who take off our hats to the tune of the "Star Spangled Banner." But as I am always saying—the film business belongs to film men—the fellows who make 'em and have an eye on the renting. They know it belongs to them, what is more, and their code of ethics proves that they are unselfish in it. The thing that lies wide open to criticism is their combined selfishness. They rather resent encroachment of outsiders. Their unselfishness, one with the other, precludes the elimination of some of their numbers who should be cast out. Their selfishness denies admittance of first-class men who would help the game in its progress.

* * *

But I hesitate to call it progress. If the present method of marketing the manufactured product is genuine progress, I can't see it. The retention of nearly every manufacturer in organizations planned to help him make more money is all commendable enough, but more concerns that have been dropped, either for cause or not, seem to be getting along. Insiders hoot the idea that an outsider has a chance. I've done a lot of work along that line, but being an outsider, I have made it a point to find out. The insider has a restricted American market. He has created that condition. He has tried hard to make it invulnerable. General Film Company shows how it works when there are no leaks. And in General Film there *are* no leaks—by which is meant there isn't a market place there for anything other than licensed

brand stuff. If the licensed brand leaks *out* of General Film, that's another story. Independent stuff doesn't leak *in*. The success of this plan lies in the absolute ownership of film exchanges.

* * *

The Universal is following the General Film's precedent. If the ownership is not complete, the exchange

From Victor's "The Mill Buyers."

man is held under agreement, of one sort or another, to abide by the whole program. If he takes the entire program that is as much as either of the independent branches can hope for. Inasmuch as outright ownership, or controlling interest, is avowed in the film exchanges listed by Universal, it is evident that buying stops when the program for the week is brought in. But that doesn't hold good and what is more it won't obtain. The exhibitor who was served by the old Sales Company had a larger variety than the split program offers. His people had a choice in the larger program and their insistence to see their preference has forced the exchange to serve him. It is not unusual then, to see the Film Supply and Universal films on the same screen, and what is more, you are apt to continue seeing them that way in spite of a condition which points otherwise.

* * *

And then there are Bison and Rep—the former cast out of Universal and the latter left weeping at the church. You wonder about them? So did I. You remember that I said you couldn't lose Herb Miles. Well, you haven't. Rep films find a market right around the corner. Big Bill Steiner and Bernstein are still on the job and Herb himself gets down to his desk with a new suit every morning and a shave and shampoo and fluffy silk shirts and flowing cravats. He's making films and running theaters and doesn't care nary a ding whether he is officially in or out. He knows the game. He simply plays the foreign market stunt on the big G string and sneaks in on the American end without restriction.

* * *

I met big Dick Edmonson, who takes Rep sight-unseen for London, and Uncle Jo Koster, who snakes it out in broad daylight for Germany. These men know the open market backwards and they swap brands here before they take 'em across. They buy here at the foreign market price. When Dick sailed on the Mauretania, a hundred men went down to the Cunard docks to see that he was prepared for the ravages of sea-sickness. Edmonson has a capacity that measures about eighty inches at the equator. There was a wedding on board that night and the gang drank to the bride as well as to each other—and you know a hundred is a lot—but Dick and his staying quality was attested when he toasted the bride with: "Girls, beautiful girls, who never attain womanhood till they reach manhood." At least that's what I thought he said, though I wasn't there! This much I know. Dick was there, even after they drew up the gang plank.

* * *

But as I was saying, it is a play for the foreign market at eight cents or less per foot. Everybody's doing it, and making monkeys of the American by trying to control program-making, exhibiting, renting, censor boards, press and heaven knows what all. I am cynical, but these tendencies will force an open market if there isn't some sanity shown by the men "higher up." I believe in the meritorius film declaring its right to be seen by all people in all theaters. It has no chance today. Maybe Joe Hopp is right.

I have met all sorts of people in the New York film game. They are the busiest lot ever. Among them were men I knew and others I should have known long ago. I have pled my cause in places that were magnificent and in places that were mean. They haven't

From Champion's "What a Woman Will Do."

had time to put up a front in some places and in others they haven't had anything else to do. I have been from Elm avenue on the Brighton Beach line in Brooklyn to New Rochelle—up twenty stories and down the subway all in a day. I have bearded Blackton and Smith, and Spedon and Heddon in their dens and found them beardless. Neither were like I expected to find them. Messrs. Blackton and Smith were at lunch and the important

thing before them was canteloupe and the thing on their minds was yesterday's motorboat races. I know less about speed boats than I do about films, but I never missed a George Fitch story, so that helped. It was worth while to see the only plant in this country that does 'em five a week. I'll get around to tell you how they do it when the screaming eagle plays into my hands with the mint mark on it. This thing of always fiddling while the rest dance has its drawbacks. That's why I had to deny that Selig, Edison, Essanay and the American owned this paper. I fiddle up to beat the band when there's a chance for me to get into the grand march. I lie back like a sand crab when there is nothing doing. A goat of the four-footed variety can live on posters and cans, but I dearly love iced melons myself!

* * *

It beats the band what goes to make up the film game. I heard with extreme interest, the fascinating story of three different importations of Cines reels, showing actual battle scenes at Tripoli. The first consignment of sixty full reels were sold at ten cents a foot before they reached New York City. Their sale was confined largely to New York's Italian exhibitors. The buyer would show it in his theater till the interest lagged and then he would rent it to a fellow exhibitor at approximately $50 a day. One of the buyers—an operator—took his entire savings out of bank and borrowed a small sum to complete the payment. He cleaned up $500 on his investment in less than two weeks. All of which goes to show that you can never tell.

* * *

In my last contribution, I threw cold water on feature films. I didn't think much of the proposition in any of its aspects. I argued that good films—near features—should go into the regular programs and share in boosting the exhibitors' receipts. If they're worth it, an increased rental would be acceptable to the exhibitor, provided it was within reason. Let me elucidate. I know an exhibitor who found out when General Film would let him have Selig's "The Coming of Columbus." He then advertised it by every known method and ran the

full three reels, starting on the hour, beginning at 1 o'clock in the afternoon. It wasn't his way of doing things. He has a sp'endid little house giving three evening shows. Well, along came the notable day and the big film and the added expenses and the thrills of the gamble. When the eight o'clock show started, I spoke to the proprietor and asked him how he fared. He told me the extra rental of the feature was $30 and that he had just cleaned it up. His regular evening show would give him his usual profit over the regular rental. His afternoon's work, the risk, the excitement that chance contributes, all went into the coffers of the G. F. Co. My

idea would be to share profits with the man who performs, but I may be wrong.

* * *

In conversation with another exhibitor, on my recent ramble, I learned that he owned six theaters and was operating them all with so-called feature films—two changes a week. He proved by his receipts that the item of film rental was tiding him through the warm weather with a more satisfactory profit than the regular exchange rental ever offered under the most favorable conditions. This man was finding about $1,000 a week, all to the good, and the feature film or state rights man was his best bet. Which only goes to show that what I know about this business wouldn't make much of a book.

When I went out to that famous forty-five minutes from Broadway resort which Ed Thanhouser put on the film map, I saw the biggest little plant of 'em all. Just how Thanhouser can grind three-a-week without slipping a cog, is more than I am able to figure out. Nobody was in a hurry; all were busy; no waste room; bells on the walls; signs on the doors; props in their places. At a signal, a lot of Cossacks were rehearsing a scene for "Lucile." I didn't find out where they came from, or where they went after the command: "We'll make it

now." It proved to me that there was splendid system at New Rochelle. I met Charley Hite and Ed Thanhouser and Bert Adler and lots of others, including that clever little woman, Marguerite Snow, who has been with the house so long she ca ls it home. It was hurry in and hurry out, good morning and good-bye, but the memory of it will always linger with me when I see the pictures.

But of surprises that surprise, it was the general offices of the Film Supply Company of America. Sol Bloom it was, maybe, at least it was Sol somebody, had a lot on 44th between Broadway and Sixth avenue. Just up a little to your right, as you go north on Broadway. There is Rector's, you know—just a ways up that street at Nos. 133-35. On this lot, Sol put up a nifty three-story lease-holder and hired a lantern-jawed coon to run

the elevator. Upon the third floor the Film Supply Company found what they wanted and it is about the most home-like, welcome shop I found in my travels. When you can wake up that hatchet-faced Arab, who was born with an ingrown grouch, and get up three flights, you are at home. I saw nearly everybody there, including the program fellows—Blache, McGee, Hite, Freuler, Hernand, Oes and Graham; and there were Raver and McKinney on the job all the time. The furnishings are plain and business-like, all golden oak. There is a reception room and a place where you herd the sheep from the goats—which gave me a little pen by my lonesome; a directors' room with real glass in the partitions—no iron bars; and a safe as big as that old one that Pop Rock keeps his in down at 116 Nassau. I didn't see anything to suggest as improvement for the clearing-house factor of the Film Supply. It's a bully lay-out.

One thing I didn't find out. Why would C. J. Hite buy an automobile in Waterloo, Iowa, and have it driven through from there to his hotel in New York? Unless, and I'll bet 8 to 5 I'm right, Hite wanted to make sure the blamed thing would run! You seldom put 'em across on C. J., although Dr. Shallenberger hasn't a bit of feeling for hats.
